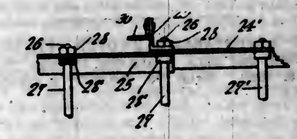
1. A unilateral directive radio system comprising an antenna, circuit containing uniform and non-uniform directional absorption structure serially connected.

1,394,027. [WITHDRAWN.]

1,394,028. SUPPORTING STRUCTURE FOR PACKING-BOXES. EDWARD A. KRING, Pasadena, Calif. Filed Aug. 11, 1919. Serial No. 316,871. 19 Claims. (Cl. 100—57.)

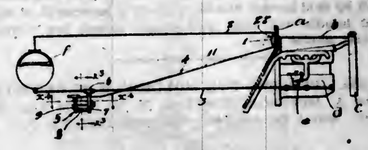
1. A packing box supporting apparatus comprising a supporting frame, a swinging box-carrying member carried by said frame, and mechanical means for rotating said box-carrying member to reverse the position of the box with reference to said supporting frame.



18. A packing box supporting apparatus comprising a supporting frame, a swinging box-carrying member carried by said frame, a fixed stop element engaging one end of said carrying member, a movable latch engaging the other end of said carrying member and coöperating with said stop element to temporarily prevent rotation of said member, means operative to impart an initial endwise movement to said carrying member to disengage said stop element and thereafter rotate said member to reverse the position of the box with reference to said supporting frame, said latch being arranged to permit said rotary movement in one direction and thereafter automatically latching said carrying member against reverse rotation, stop means acting automatically to limit said rotary movement to a half-revolution, and means operating automatically after said rotating action to impart a reverse endwise movement to said carrying member to re-engage the same with said stop element and allowing said stop means to return to inoperative position.

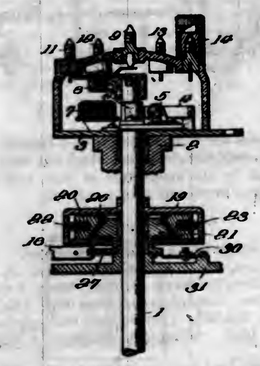
1,394,029. PLATE-ATTACHING MEANS. EDWARD H. LAWS, Cincinnati, Ohio, assignor to The Gustave Fox Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 24, 1920. Serial No. 361,051. 6 Claims. (Cl. 40—20.)

1. In plate attaching means, a plate, a tongue secured thereon at right angles thereto and having a vertically inclined slot therein extending downwardly toward said plate at an acute angle, a coupling member adapted to be inserted in said slot and projecting to each side of said tongue, and a base having a slot to receive said tongue and coupling member whereby said coupling member is adapted to wedge itself between said tongue and base to bind said plate to said base.



1,394,030. HARROW. WILLARD O. LONG, Mansfield, Ohio. Original application filed July 8, 1918, Serial No. 243,848. Divided and this application filed July 7, 1919. Serial No. 309,138. 2 Claims. (Cl. 55—3.)

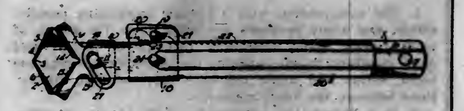
1. The combination with a harrow comprising parallel strips, and angle members supported upon the strips, of teeth having stems extending through the strips and angle members, means engaging the stems for securing the teeth, strips and angle members together, and connections between the angle members.



2. In a harrow the combination with strips, extension strips lapping the same, brackets, and connections between the brackets, of harrow teeth having threaded stems extending through the lapping portions of the strips and through the brackets, and means engaging the stems for holding the teeth strips and brackets assembled.

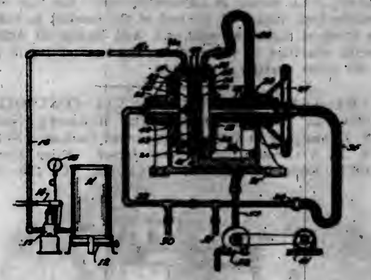
1,394,031. LIQUID-LEVEL GAGE. MATTIAS O. LUNDIN, Los Angeles, Calif. Filed June 1, 1920. Serial No. 385,781. 1 Claim. (Cl. 73—54.)

A liquid level gage comprising a conduit having a U-shape trap, means to adjustably space the legs of the U-shape trap, means at one end of the conduit to indicate the level of liquid at said end, and liquids of different specific gravities in the conduit, the heavier liquid being in the lower portion of the trap.



1,394,032. ELECTRIC-CIRCUIT-CONTROLLING DEVICE. SAMUEL CHRISTOPHER MCKNOWN, Newark, N. J., assignor to Splitdorf Electrical Company, Newark, N. J., a Corporation of New Jersey. Filed May 11, 1917. Serial No. 167,901. 11 Claims. (Cl. 175—355.)

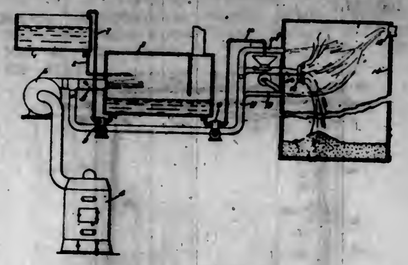
1. The combination with an electric circuit of a pair of make and break contacts for periodically interrupting said



circuit, actuating means for said contacts, normally open circuit controlling means in said circuit independent of said contacts and frictional means controlling the circuit and controlling means to close said circuit upon operation of the actuating means.

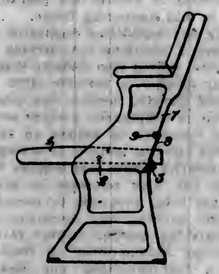
1,394,033. ADJUSTABLE JAR-COVER OPENER. JOHN A. MCLEOD and ELLA A. DAUTON, Chicago, Ill. Filed Sept. 13, 1920. Serial No. 409,907. 2 Claims. (Cl. 81—3.1.)

1. An adjustable jar cover opener comprising a handle having a jaw at one end, a second jaw slidably mounted on said handle, a slidable member mounted on said handle, adjacent said second jaw, yieldable locking means carried by said slidable member adapted to engage said first named handle, a second handle pivotally mounted on said slidable member and adapted to engage said second jaw, and means carried by said second handle whereby a movement of said second handle will slide said second named jaw toward said first named jaw.



1,394,034. PROCESS FOR MOLDING WAX RECORDS. JOHN A. MCVICKAR, New York, N. Y. Filed Aug. 20, 1920. Serial No. 404,741. 6 Claims. (Cl. 18—5.3.)

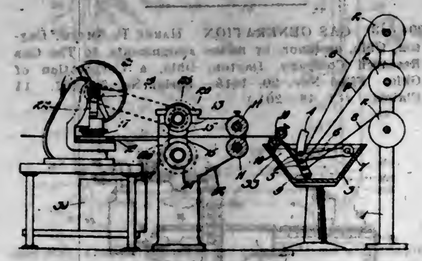
1. A process for molding blank wax records consisting of rapidly forcing wax compound which has been reduced to a liquid state by the application of heat, into a suitable mold which has previously been vacuumed.



1,394,035. GRANULAR FOOD PRODUCT. JOHN C. MACLACHLAN, St. Paul, Minn., assignor to Standard Food Products Company, St. Paul, Minn., a Corporation of Delaware. Original application filed Aug. 21, 1916, Serial No. 115,997. Divided and this application filed Mar. 19, 1919. Serial No. 283,545. 1 Claim. (Cl. 99—5.)

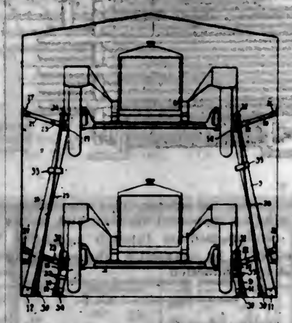
A condensed food base made from milk, said base consisting of a multiplicity of granules which, in themselves, have an irregular formation and each of which consists of a plurality of loosely connected fine and small particles of irregular spongy character, the food base being thus

readily soluble in water and having as an entirety a homogeneous open character.



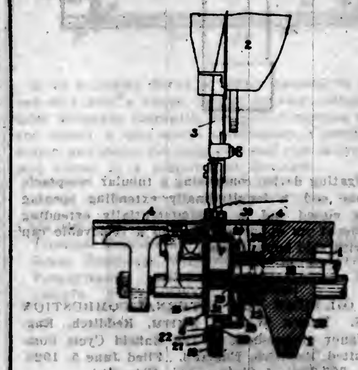
1,394,036. TIP-UP SEAT. ALFRED MAIN, Aberdeen, Scotland. Filed Sept. 22, 1920. Serial No. 411,974. 4 Claims. (Cl. 155—85.)

1. Means for holding a tip-up seat in an intermediate, substantially horizontal position before occupation, comprising in combination a flexible rod member, fixed to the rear of the seat, and projecting from the side thereof, a cam member, juxtaposed to the free end of said flexible rod, a recessed face on said cam member, shaped to receive said free end, a contiguous face on said cam member arranged in the path of said free end of the flexible rod when the seat is being tilted to the intermediate position, said contiguous face having a configuration to first distort said pin, and then, in the intermediate position of said seat, to allow the pin to jump into said recessed face, and a fixed abutment arranged above said recessed face to prevent the pin jumping across the recessed face, and to guide it thereinto, the recessed face having a configuration permitting the free end of said pin to ride away from under said abutment and out of said recessed face when the seat is occupied, thereby leaving the seat free to rise to a vertical position when the seat is vacated.



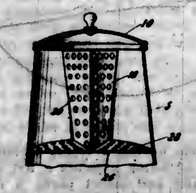
3. Means for holding a tip-up seat in an intermediate, substantially horizontal position, comprising in combination a flexible rod fastened underneath and toward the rear of said seat and projecting from one side, a slotted member fixed to the under side of said seat, and sleeved over the projecting free end of the flexible rod to limit the movement thereof, and a fitting formed as a single casting fixed adjacent the projecting free end of said flexible rod, comprising a cam member having a top recessed face and contiguous convex and concave faces, and an abutment arranged above said recess substantially as and for the purpose set forth.

1,394,037. APPARATUS FOR MAKING PAPER SPOONS AND OTHER FLAT PAPER UTENSILS. GEORGE P. MALLORY, Yorklyn, Del., assignor, by mesne assignments, to Sanitary Products Corporation of America, Philadelphia, Pa., a Corporation of Virginia. Filed Sept. 20, 1919. Serial No. 326,599. 2 Claims. (Cl. 18—19.)



1. An apparatus for forming paper spoons or other articles, having a pair of cooperating rotary embossing rolls between which a sheet of material from which the articles are to be formed is fed, each roll having on its periphery an embossing die, said dies extending only partially around the circumference of the roll and being raised above the surfaces of the roll so that there is a space between the two ends of the die which does not engage with the sheet, thereby causing a dwell in the movement of the sheet between the time that the last engaging portion of the die passes out of engagement with the sheet and the time when the first engaging portion of the die again comes in contact with the sheet, in combination with a pair of cutting dies between which the sheet is fed from the embossing rolls, said cutting dies being shaped to a contour to cut out the embossed blank from the sheet, and means for driving the embossing dies and the cutting dies in such timed relation to each other that the cutting dies will be operated during the dwell in the travel of the sheet occasioned by the blank spaces between the two ends of the embossing dies.

1,394,038. CAR-LOADING SYSTEM. GILBERT P. MARINIER and EDWARD E. CHEVELER, Pontiac, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 16, 1919. Serial No. 330,932. 5 Claims. (Cl. 105—368.)



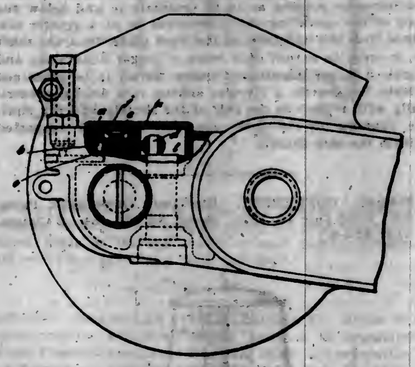
1. In a car loading system for use in shipping motor vehicles in freight cars, inclined supporting or strut members extending upward from the door and inward from the sides of the car; metallic base members secured one to the lower end of each of said strut members and provided each with a flange whereby said base members may be fastened to the floor of the car; metallic cap members secured one to the upper end of each of said strut members and provided each with a seat adapted to receive and support the outer end of the hub of a motor vehicle; brace members extending from the sides of the car inward and the inner ends of which are secured to the cap members at the upper ends of said strut members, and which brace members lie substantially in vertical planes extending through said strut members and through the axles of a motor vehicle supported by said strut members; and flexible tension members, one associated with each of said strut members, the middle portions of said tension members extending over the hubs of a motor vehicle supported by said strut members to thereby hold said hubs in the seats aforesaid, and the ends of said members being secured to the floor of the car at two points spaced apart from one another and located one in front and the other to the rear of the lower ends of said strut members.

1,394,039. SEWING-MACHINE. JAMES MARSDEN, Wigan, England. Filed Feb. 1, 1921. Serial No. 441,669. 9 Claims. (Cl. 112—189.)

1. A sewing machine having in combination a shuttle driver so pivotally supported at the point upon which it oscillates or rotates, as to be eccentric to and below the axis of the operating shaft and thus be at a greater distance from the underside of the work plate, than the shaft is, in order to permit of it being of larger dimensions and enable a larger quantity of under thread to be contained within the shuttle, a circular shuttle race fixed concentrically with respect to the axis of the shuttle driver, a shuttle running on the said race, and a bobbin supported within the said shuttle.

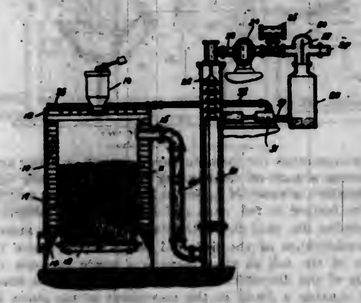
1,394,040. COFFEEPOT. BENJAMIN OLSHASKIE, Pana, Ill. Filed July 12, 1920. Serial No. 395,484. 2 Claims. (Cl. 53—8.)

1. A receptacle of the class described comprising a body, a discharge spout connected thereto, said body being pro-



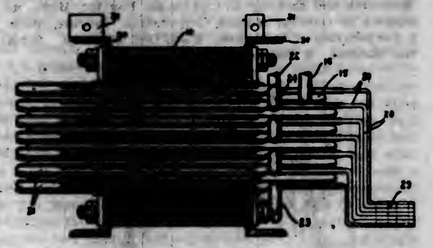
vided with perforations in one side wall thereof thereby communication is established between said spout and body, a perforated strainer secured to said body and being V-shaped in cross section, and a perforated baffle secured flatly in contact with the entire lower end of the strainer and extending beyond the sides of the same, the enlarged upper end of the strainer being open to permit cleaning.

1,394,041. IRRIGATING DEVICE. EVELYN ROBBINS, Richmond, Calif. Filed Feb. 10, 1920. Serial No. 357,526. 3 Claims. (Cl. 61—13.)



1. An irrigating device comprising a tubular receptacle closed at one end, a longitudinally extending opening adjacent its closed end, a circumferentially extending opening adjacent its opposite end, and a removable cap associated with said opposite end.

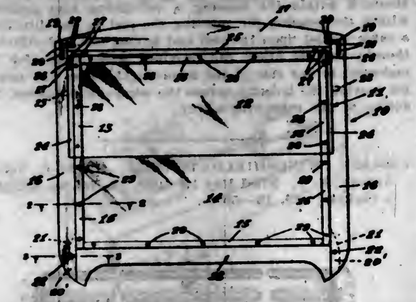
1,394,042. OIL-PUMP FOR INTERNAL-COMBUSTION ENGINES. FRANK WALKER SMITH, Redditch, England, assignor of one-half to The Enfield Cycle Company, Limited, Redditch, England. Filed June 5, 1920. Serial No. 386,792. 1 Claim. (Cl. 184—34.)



An engine frame having a recess including a bearing seat the bottom of which presents a flat surface and is provided with inlet and outlet ports, a drum mounted for oscillation in said seat and on said flat surface and having a bore and a port leading from said bore and arranged to register successively with said port of the frame, a rotary shaft having a crank pin projecting into said recess, a plunger operated by said crank pin and arranged to reciprocate in said bore, a cover for said recess, and a spring bearing between said cover and the top of said drum and serving to press the latter firmly against said flat surface.

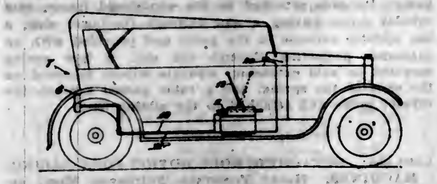
1,394,043. GAS GENERATION. HARRY F. SMITH, Dayton, Ohio, assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Nov. 20, 1918. Serial No. 263,407. 11 Claims. (Cl. 48—201.)

5. The method, in the generation of producer gas, which consists in withdrawing gas from the generating chamber; removing the heavy hydrocarbons therefrom and returning them to the generating chamber above the combustion zone of the fuel bed therein.



1,394,044. WATER-COOLED TRANSFORMER. HOWARD O. STEPHENS, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 25, 1919. Serial No. 285,043. 8 Claims. (Cl. 175—356.)

1. In an electric apparatus, the combination with a core, of a winding supported thereon, and means for circulating a cooling medium through a portion of said winding to cool it by convection, the remaining portion being cooled by conduction.

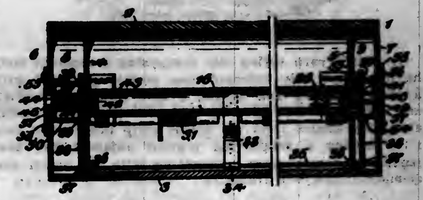


1,394,045. WINDSHIELD. ARTHUR J. STRETCH, Seattle, Wash. Filed Apr. 26, 1920. Serial No. 376,843. 4 Claims. (Cl. 296—84.)

1. In a wind shield comprising a frame having a portion of its inner edges cut away to form a seat, a plate of glass disposed in one portion of said seat, a strip having its outer edge undercut to form a shoulder that is adapted to bear against the side surface of said frame adjacent its inner edge for pivotal movement thereon,

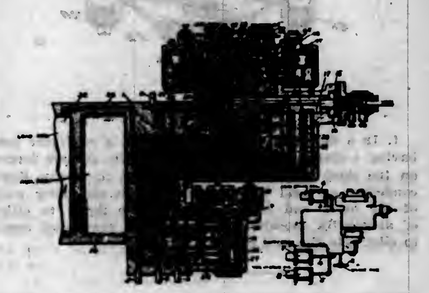
said strip also having its inner edge undercut and adapted to engage said glass, and adjustable securing means for said strip.

1,394,046. REAR LIGHT FOR AUTOMOBILES AND THE LIKE. CLARENCE S. SWANEY, Los Angeles, Calif. Filed Feb. 6, 1920. Serial No. 356,789. 2 Claims. (Cl. 240—7.)



1. In combination with a reverse mechanism of an auto vehicle, a lamp casing, a reflector disposed within said casing and formed with an opening to allow rays of light to enter said casing, an electric lamp disposed in said reflector to project light rearwardly of the vehicle, a translucent indicia bearing plate disposed in said casing so that part of the light emanating from said lamp will pass through said opening and through said translucent indicia bearing plate to render it apparent at night, and circuit closing means disposed to be actuated upon movement of said reversing mechanism to cause a current to pass through said lamp; whereby the road rearwardly of said vehicle is illumined.

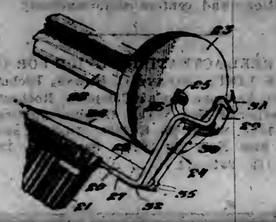
1,394,047. CAMERA. SYDNEY C. SWANN, Richmond, Va., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 15, 1916. Serial No. 84,320. 21 Claims. (Cl. 242—71.)



10. In a device of the character stated, a reel of polygonal shape in cross-section, and having longitudinally extending, juxtaposed, spaced apart lips adapted to receive the end of a strip of material, centers of polygonal shape in cross-section and engaging the ends of said reel, a rod extending in a plane parallel to said reel, connections from said rod to said centers, and means for actuating said rod, connections and centers simultaneously.

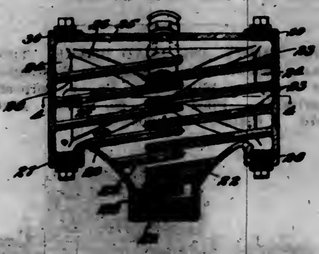
1,394,048. REEL-ACTUATING DEVICE FOR CAMERAS AND THE LIKE. SYDNEY C. SWANN, Richmond, Va., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed Mar. 15, 1916, Serial No. 84,320. Divided and this application filed Nov. 29, 1916. Serial No. 134,100. 9 Claims. (Cl. 242—71.)

1. In a reeling device, a center adapted to engage the end of a reel, a pinion carried by said center and rotatable in unison therewith, means for rotating said pinion and center, a cam sleeve surrounding a portion of said center, and means coacting with said cam sleeve to actuate said center in a longitudinal direction.



1,394,049. EMPTY AND LOAD BRAKE. THOMAS H. THOMAS, Edgewood, Pa., assignor to Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1920. Serial No. 426,976. 9 Claims. (Cl. 303—23.)

1. In a fluid pressure brake, the combination with a valve, of means having a seated position and subject to opposing fluid pressures for operating said valve, said means having one area which is subject to the opposing fluid pressures in the seated position and a reduced area which is subject to said pressures when unseated.

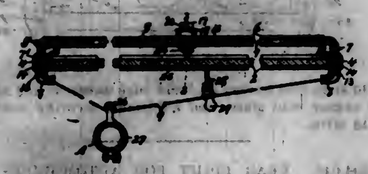


9. In a fluid pressure brake, the combination with a brake pipe and brake cylinder, of an additional brake cylinder, a valve for controlling a fluid pressure connection to the additional brake cylinder, and means for operating said valve comprising a seat member and a piston, the seat member being subject over a predetermined area in the seated position to the opposing pressures of the first brake cylinder and the brake pipe, and said piston being subject, upon movement from the seated position, to said opposing fluid pressures.

1,394,050. TUFT-YARN SPRING-CLIP. ARTHUR TORREN THORPRAW, Hightstown, N. J. Filed June 15, 1920. Serial No. 387,912. 5 Claims. (Cl. 139—98.)

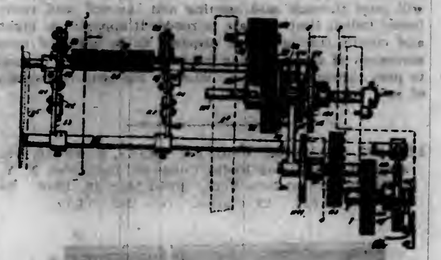
1. A tuft yarn spring clip comprising a resilient strip having a laterally enlarged base portion provided with a screw opening and having a slot extending through one edge from said opening, said base portion extending at obtuse angles from the spring strip proper and said strip having a reinforcing portion adjacent the base portion and means for cooperating with the usual end member of the yarn frame.

1,394,051. DISTRIBUTER-HEAD. JAMES M. TOWLE, West Somerville, Mass., assignor of one-half to Louis I. Beckwith, Boston, Mass. Filed Mar. 17, 1920. Serial No. 366,598. 13 Claims. (Cl. 183—83.)



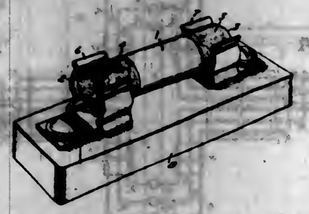
1. In a device of the class described, a separator head having a plurality of baffle plates therein, grooves formed on the inner face of the head adapted to receive liquid condensed on said baffle plates and on the inner walls of the head, and adapted to lead the liquid to either of diagonally opposite portions of the head, and means to eliminate the said condensed liquid.

1,394,052. WINDSHIELD-CLEANER. HENRY C. TRIPP, Auburn, N. Y. Filed Mar. 5, 1919. Serial No. 280,765. 1 Claim. (Cl. 15—59.)



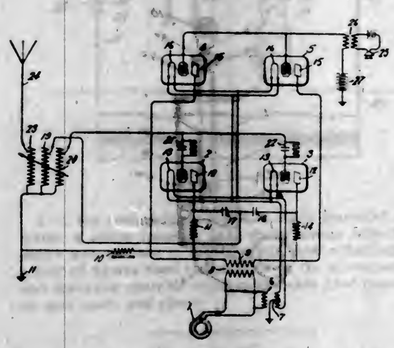
A wind-shield-cleaner comprising a guide to extend across the wind-shield, a relatively small circular casing or housing movable along said guide, arms mounted to and extending radially from said housing in opposite directions, wipers mounted on said arms, a reel rotatably mounted within the housing, a coil-spring also mounted within the housing for rotating the reel in one direction, a cable wound upon the reel and having one end attached thereto and its other end provided with means for attachment to one side of the wind-shield-frame, and means for moving the housing across the wind-shield against the action of the retracting-spring.

1,394,053. WINDSHIELD-CLEANER. HENRY C. TRIPP, Auburn, N. Y. Filed May 19, 1920. Serial No. 382,486. 3 Claims. (Cl. 15—59.)



1. A cleaning device for windshields comprising, a tubular guide extending lengthwise of the windshield and having its ends attached to the windshield frame, said tubular guide having a slot through its lower side, a bar slidable endwise in the guide and provided with an extension projecting through the slot, a bow spring mounted on said extension, separate wipers mounted on the ends of the spring, and a cable passed through the tubular guide and attached to the sliding bar.

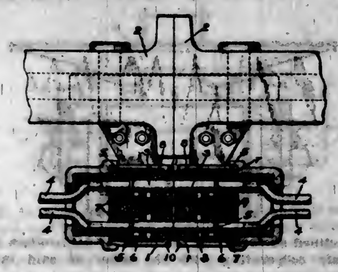
1,394,054. DETACHING ROLL-MOTION FOR COMBING-MACHINES. HARRY TUNSTALL, Fairhaven, Mass., assignor to Alsatian Machine Company, Boston, Mass., a Corporation of Massachusetts. Original application filed Oct. 7, 1918, Serial No. 257,089. Divided and this application filed Oct. 22, 1919. Serial No. 334,227. 6 Claims. (Cl. 19—6.)



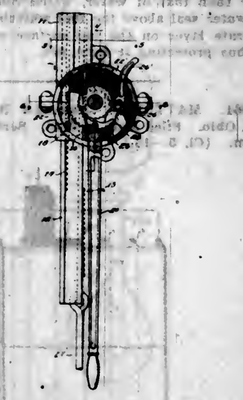
3. As a means for oscillating and progressively rotating a roll, a reciprocating rod, means for reciprocating it, a clutch one member of which is connected to said rod to be oscillated by it, the other member of said clutch being connected to said roll, and means comprising two oppositely-disposed ratchets and two pawls each adapted to engage one of said ratchets, for connecting said clutch members, and means adapted to hold one of said pawls out of engagement with its ratchet during a portion of its engaging movement whereby the rotary movement of one member will be longer in one direction than in the other.

1,394,055. RESISTANCE-UNIT TERMINAL. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1920. Serial No. 365,830. 4 Claims. (Cl. 219—76.)

1. An electrical conductor comprising a vitreous material, a conductor distributed therethrough and containing at the surface portions thereof conductive material of colloidal fineness of subdivision constituting current conveying terminals.



1,394,056. SIGNALING SYSTEM. WILLIAM C. WHITE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 8, 1920. Serial No. 393,812. 10 Claims. (Cl. 250—17.)

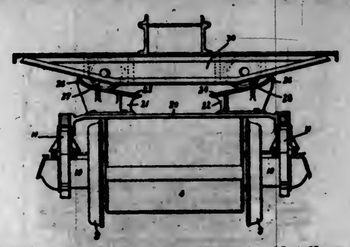


9. The combination in a high frequency signaling system of a pair of electron discharge devices having coupled grid and plate circuits, a source of low frequency alternating current oppositely connected to the plate circuits of the two devices and means for varying in accordance with a signaling current the potentials applied from said source to the electrodes of said devices.

1,394,057. ELECTRIC COUPLING DEVICE. HARRY F. WOMANLEY, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed May 4, 1918. Serial No. 232,466. 1 Claim. (Cl. 173—332.)

The combination with a car coupler, of an electric coupler head secured to said car coupler and comprising a casing, longitudinally movable yielding contacts therein for engaging in a vertical plane corresponding contacts of a counterpart coupler head, a longitudinally movable plunger member having apertures through which said contacts extend, and means for maintaining the contact faces of the contacts flush with the face of said member when the coupler head is in the uncoupled position.

1,394,058. HAND-BRAKE FOR RAILWAY-CARS. GEORGE A. WOODMAN, Chicago, Ill. Filed July 29, 1920. Serial No. 399,827. 9 Claims. (Cl. 74—110.)

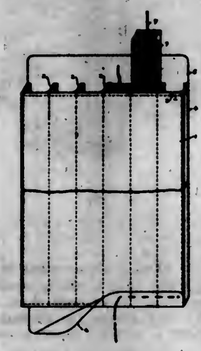


1. A railway car hand brake comprising a lengthwise movable multiple rack bar, a shaft, multiple gears of different diameters mounted on said shaft to engage the racks on said bar, and means for operating said shaft and gears to impart a variable speed movement to said rack bar.

1,394,059. LOCOMOTIVE OR CAR. ASA F. BATCHELDER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Original application filed Mar. 21, 1918, Serial No. 223,724, now Patent No. 1,350,861, dated Nov. 23, 1920. Divided and this application filed Apr. 21, 1919. Serial No. 291,601. 22 Claims. (Cl. 105—174.)

18. In a locomotive or car, a car frame, a truck comprising axles, journal boxes for said axles, and a truck frame supported on said journal boxes, said truck frame being rigidly connected to said car frame, a second truck comprising axles, journal boxes for said axles, and a truck frame supported on said journal boxes, a guiding joint between said trucks, and a centering device for supporting said car frame on said second truck frame comprising means rigidly mounted on said truck frame and provided with two oppositely inclined surfaces and a

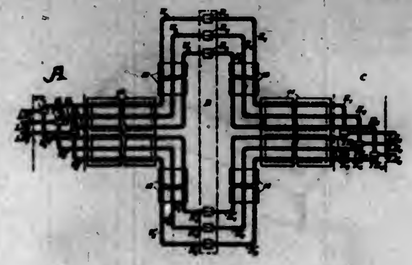
coöperating member carried by said car frame comprising two rollers, one of said rollers coöperating with one of



said inclined surfaces and the other of said rollers simultaneously coöperating with the other of said inclined surfaces.

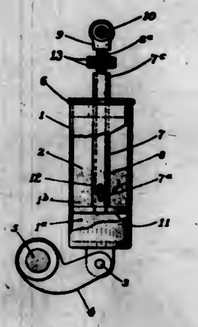
1,394,060. METHOD OF FIREPROOF-STORING MOBILE FUEL. LINDON WALLACE BATES, Mount Lebanon, N. Y. Filed Aug. 5, 1919. Serial No. 315,563. 4 Claims. (Cl. 23—11.)

1. That method of storing a stable mobile fuel comprising liquid hydrocarbon and pulverised carbonaceous substances where the specific gravity of the composite is greater than that of water, which consists in maintaining a water seal above the fuel whereby the water forms a separate layer on the top surface only of the mobile fuel, thus protecting it from fire.



1,394,061. MATTRESS. ABRAHAM BERNSTEIN, Cincinnati, Ohio. Filed Mar. 4, 1918. Serial No. 220,221. 1 Claim. (Cl. 5—13.)

In a mattress in combination with a casing having a series of partitions dividing said casing into compartments, of a series of resilient filling strips arranged to fit into said compartments, and a longitudinal line of stitching in each of said strips, independent of said casing, the ends of said stitching extending beyond the ends of the strips to provide grips whereby said strips may be inserted into and removed from said compartments.

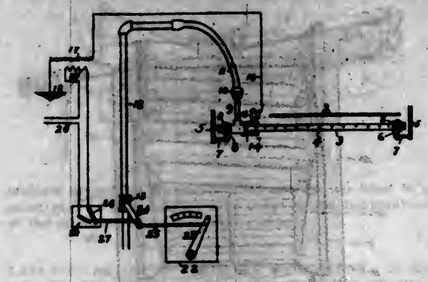


1,394,062. MEANS FOR AND METHOD OF REDUCING CROSS-TALK IN FOUR-WIRE CIRCUITS. OTTO B. BLACKWELL, Garden City, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 20, 1918. Serial No. 235,680. 36 Claims. (Cl. 179—78.)

26. In a transmission system comprising a cable having a plurality of conductors employed for the transmission of signaling currents, the currents transmitted by certain of said conductors being large as compared with the currents transmitted by other of the conductors in a region near the terminals, the method of reducing cross-

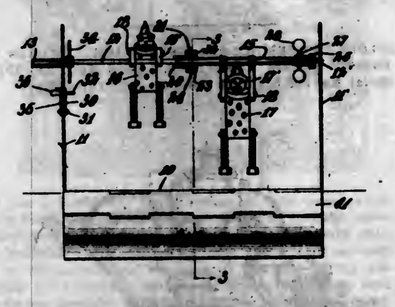
talk which consists in electrically separating the two sets of conductors so that conductors in which large currents flow will be separated from conductors in which small currents flow.

1,394,063. DASH-POT. EDGAR MAYNARD CAMP, Newark, N. J., assignor, by mesne assignments, to William D. Bleick, Newark, N. J. Filed Nov. 17, 1919. Serial No. 338,599. 8 Claims. (Cl. 188—96.)



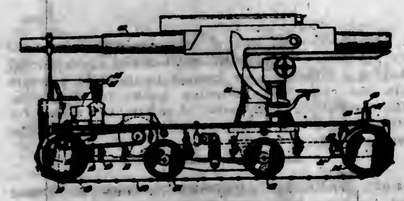
1. The combination of a casing having fluid therein, and means including a piston mounted therein to permit relative reciprocable movement between the casing and piston, said means having a port permitting the flow of fluid from one side of the piston to the other, and means controlling the size of said port and opening the port to a greater extent on one stroke than on the opposite stroke whereby the retarding action of the fluid against such relative movement is greater for one stroke than the opposite stroke, said port controlling means being adjustable to vary the size of the port for one of said strokes.

1,394,064. PRINTING-PRESS ATTACHMENT. WILLIAM HENRY CHAPMAN, Portland, Me. Filed July 27, 1921. Serial No. 487,901. 4 Claims. (Cl. 175—264.)



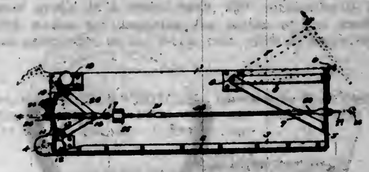
1. A printing press attachment for neutralizing static electricity and drying ink, consisting of a gas burner within the heating zone of which the printed paper passes, a shut-off valve for controlling the gas supply to said burner, a starting device for starting and stopping the

press, mechanism connecting said shut-off valve and said starting device, mechanism for delivering a charge of



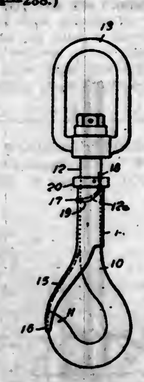
alternating electricity to the gas flame, control mechanism for the same and said control mechanism being connected to and operated simultaneously with said gas shut-off.

1,394,065. GYMNASTIC TOY. JOSEPH CHOJNIK, Whiting, Ind. Filed Jan. 13, 1921. Serial No. 436,876. 2 Claims. (Cl. 46—40.)



1. A toy comprising a frame, a shaft journaled in said frame, a sleeve loose on said shaft, means whereby said sleeve may be fixed to said shaft to rotate therewith, and a pair of figures fixed respectively on the sleeve and shaft and manually operable rotation elements fixed respectively on said shaft and sleeve.

1,394,066. AERIAL-GUN TRACTOR. WALTER CHRISTIE, Weehawken, N. J. Filed Mar. 2, 1920. Serial No. 362,804. 6 Claims. (Cl. 180—9.1.)

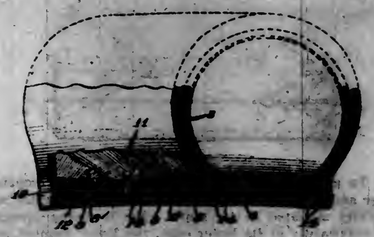


1. In a tractor, the combination with the frame thereof and a wheel support comprising an arm movably mounted on the frame on a transversely extending axis, of a spring between the frame and arm, and an adjustable abutment for rendering the spring ineffective.

1,394,067. REAR-LOADING SCOOP. HARRY MCKEAN CONNER, deceased, Scranton, Pa., by Eli T. Conner, administrator, Scranton, Pa. Filed Feb. 13, 1920. Serial No. 358,076. 5 Claims. (Cl. 37—54.)

5. In a rear end loading scoop, a rear gate comprising upper and lower closing members, the upper member being pivotally mounted at its upper edge to swing upwardly and rearwardly at its lower edge, the lower member being pivoted at its lower edge to swing rearwardly and downwardly at its upper edge, the lower member being relatively narrow so as to close against the load with a minimum resistance and the upper member being rearwardly curved between its upper and lower edges, and means for operating the closing members in unison with each other.

1,394,068. HOISTING-HOOK. BENJAMIN COUSINS, Tulsa, Okla. Filed Sept. 9, 1920. Serial No. 409,080. 6 Claims. (Cl. 24—238.)



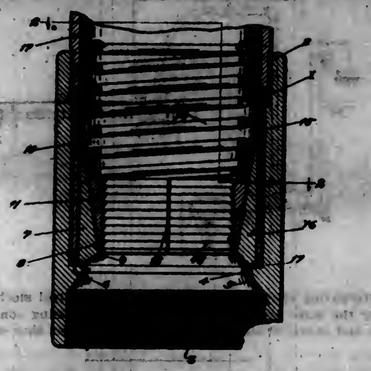
2. The combination with a hook embodying the usual shank and point of a sleeve slidably and rotatably mounted upon said shank and embodying an extension adapted to engage the point of the hook with its lower end and means connecting said shank and sleeve whereby said sleeve is shifted vertically on said shank when rotated, comprising a spiral groove formed in said shank and a dog secured to said sleeve and engaging in said groove, said groove having its upper end disposed upon the side of said shank remote from said point.

1,394,069. METHOD OF CONSTRUCTING PNEUMATIC TIRES. FREDRICK S. DICKINSON, New York, N. Y., and JOHN SPRINGER, Bradley Beach, N. J., assignors to said Dickinson. Filed Aug. 16, 1916, Serial No. 115,138. Renewed Mar. 18, 1921. Serial No. 453,476. 18 Claims. (Cl. 154—14.)

1. The method of constructing the internal body fabric for the shoe or casing of pneumatic tires, which comprises laying a continuous length of cord or thread back and forth over a core or mandril to produce loops at the side edges of the cord fabric at the bead-edge portion, the continuous length of cord being turned upon itself to form

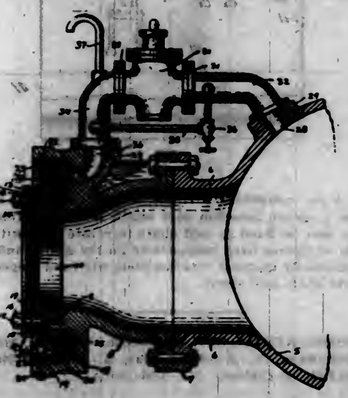
said side-edge looped, and locating a friction-fabric strip in retained position at a point under the length of cord and immediately beyond the looped-edge portion, the cord

being placed in its successive lay in contact with said friction-fabric strip and retained thereby in said position with the looped side edges of the cord fabric initially extending in free position beyond said strip.



1,394,070. SHAVING MIRROR AND STAND. HENRY DIFFANY, Newark, N. J. Filed Apr. 7, 1919. Serial No. 287,990. 1 Claim. (Cl. 45—100.)

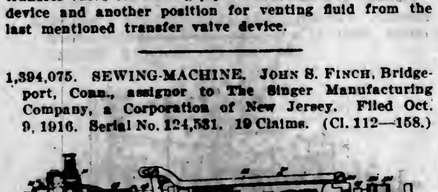
In a device of character described, the combination with an apertured base, provided with a downwardly extending bearing, a one piece split ferrule secured within said bearing, said ferrule being provided with an outwardly extending bead to engage with the under side of the bearing, and an outwardly extending flange, adapted to engage with the upper side of the base and a mirror supporting upright, one end of which is frictionally secured within said ferrule.



1,394,071. FISHING-TOOL FOR USE IN DRILLING OPERATIONS. DENNIS L. DARCOLL, Coalinga, Calif., assignor of one-half to Bunting Iron Works, San Francisco, Calif., a Corporation of California. Filed May 22, 1920. Serial No. 383,401. 4 Claims. (Cl. 294—102.)

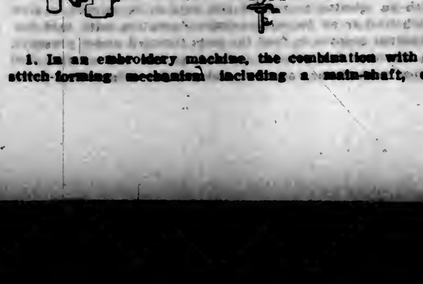
1. A fishing tool of the class described, comprising a socket ring formed with an inclined surface, an engaging member pivotedly therein and consisting of a plurality of engaging dogs movable over the inclined surface to open and closed position, a spring for normally maintaining said engaging member in closed position within the ring and means engaging the spring and the socket ring

for maintaining said spring under tension at all times, and for retaining the socket ring dogs and spring together to form a unit structure.



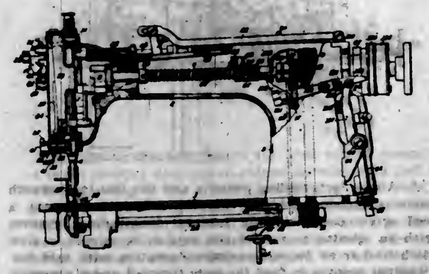
1,394,072. PRESSURE-RELIEF DEVICE. CHARLES C. EGBERT, Niagara Falls, N. Y. Filed July 23, 1920. Serial No. 398,524. 14 Claims. (Cl. 137—53.)

1. The combination with a receptacle containing fluid under pressure, of a pressure relief device characterized by having a bursting plug exposed to the fluid pressure within the receptacle, fastening means for the plug, having a relatively high factor of safety, and means for exerting an auxiliary pressure against the plug and the fastening means.



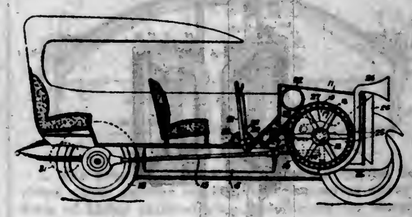
1,394,073. KEROSENE-BURNER. FLOYD W. EVANS and AMANDUS A. MILLER, Buffalo, N. Y. Filed Sept. 29, 1920. Serial No. 413,501. 8 Claims. (Cl. 158—65.)

1. In a kerosene burner, in combination, a hollow burner head having burner ducts, a mixing pipe arranged over and communicating with said head, a pipe for air under pressure having a nozzle communicating with said mixing pipe, an oil pipe communicating with said mixing pipe below said nozzle, and a pipe for conducting a fluid



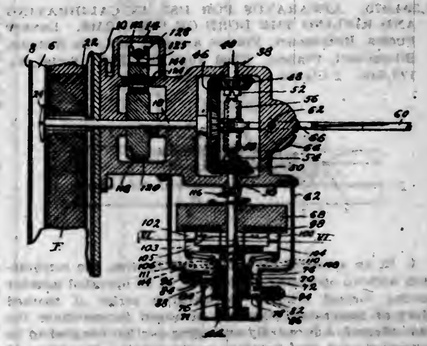
medium heated by the flames from said burner head to a point back of said nozzle where it raises the temperature of the oil as it enters said mixing pipe.

1,394,074. LOCOMOTIVE BRAKE EQUIPMENT. CLYDE C. FARMER, Edgewood, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a Corporation of Pennsylvania. Filed July 23, 1920. Serial No. 398,470. 16 Claims. (Cl. 303—14.)



16. In a locomotive brake equipment, the combination with a brake controlling pipe and a pair of transfer valve devices for controlling communication through said pipe, of a transfer valve controlling pipe and a cock at each end of the locomotive, the cock at one end having one position for supplying fluid under pressure through said pipe to one transfer valve and another position for venting fluid under pressure from said pipe, and the cock at the other end having one position for connecting said transfer valve controlling pipe to the other transfer valve device and another position for venting fluid from the last mentioned transfer valve device.

1,394,075. SEWING-MACHINE. JOHN S. FINCH, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 9, 1916. Serial No. 124,531. 19 Claims. (Cl. 112—158.)



1. In an embroidery machine, the combination with a stitch-forming mechanism including a main-shaft, of means under the control of the operator during the operation of the machine for effecting stitch-forming movements of the needle in separate paths for an indeterminate period and for continuing the stitch-forming movements of said needle in a single path, and automatically controlled means for arresting the action of the machine at the completion of the single path cycle of operation.

1,394,076. MOTOR-VEHICLE. EDWARD L. FITZ GIBBON, Brooklyn, N. Y. Filed Nov. 29, 1919. Serial No. 341,530. 3 Claims. (Cl. 180—66.)

2. In a motor vehicle, the combination of a vehicle frame and wheels, an air driven turbine mounted in the frame and adapted to rotate the wheels, a circular casing inclosing the turbine, cups around the latter, compressed air driving means for the cups, a throttle valve operated from the seat of the vehicle, an air intake at the front of the vehicle, and a pipe from the intake to deliver air around the motor casing as an auxiliary to the compressed air driving means.

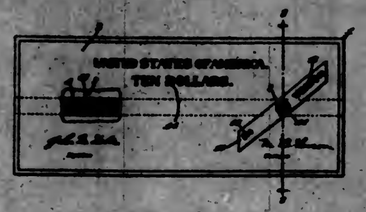
1,394,077. FILM-WINDING APPARATUS. EARL H. FRANCIS, Mount Washington, Mo. Filed Dec. 27, 1919. Serial No. 347,685. 8 Claims. (Cl. 242—57.)

4. In an apparatus of the character described, the combination of an electric motor, a driving shaft actuated by said motor and adapted to carry a film receiving reel, a driven shaft adapted to carry a reel with a film and be driven by said film from said diving shaft, a circuit for the motor, manually controlled means to initially close said circuit, a switch to maintain said circuit in closed position, a governor carrying certain of the switch points, a nut driven by said governor and carrying the opposing switch points, a threaded element actuated by the driven shaft to drive the governor and move the nut toward and away from said governor to close and open the switch points, and yieldable means to permit the

1. In a focusing device for cameras, the combination with a barrel holding three lenses of a four lens system, of a movable mount, a fourth lens, carried by the movable mount adjustable to and from the three fixed lenses along the axis thereof, a pointer and a focusing scale, one located on the barrel and the other on the movable mount, and means including a stop for limiting the movement of the movable mount relative to the fixed barrel, the range of focus of the camera being included in the movement of the mount.

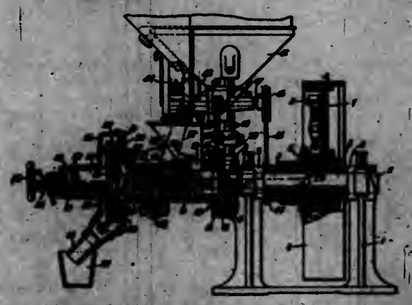
1,394,079. APPARATUS FOR USE IN CALIBRATING AND RIFLING THE BORE OF FIREARMS. Rainer Fuchs, Billancourt, France, assignor to Louis Renault, Billancourt, France. Filed June 23, 1917. Serial No. 177,548. 2 Claims. (Cl. 89—28.1.)

1. In an apparatus for riding gun barrels, the combination with an operating mechanism, of an operated member having formed integral therewith a series of toothed disks of increasing diameter, arranged intermediate the ends thereof, a forwardly extending portion adapted to be connected with the operating mechanism for drawing said member longitudinally through the gun barrel, and a helicoidally grooved cylinder formed on the rear of said operated member, the helicoidal grooves of said cylinder adapted to be engaged by a stationary element extending into said grooves, whereby said cylinder and its associated cutters will be rotated during the longitudinal movement.



1,394,080. GEARING. Rufus A. Gardner, Ballston Spa, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1920. Serial No. 397,583. 3 Claims. (Cl. 74—7.)

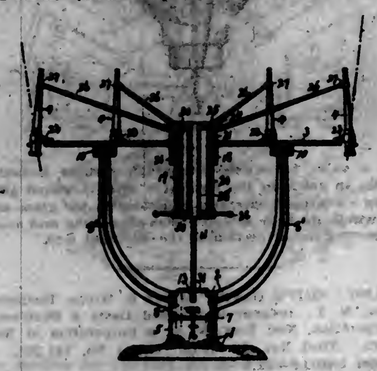
1. In a gearing, the combination of a pinion, and a plurality of gear wheels, meshing therewith, each of said gear



their peripheries, the spaces between the disks of the respective gear wheels being staggered relatively to each other.

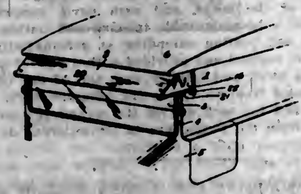
1,394,081. CURRENCY. William Henry Griffiths, Farmington, Iowa. Filed May 26, 1921. Serial No. 472,894. 4 Claims. (Cl. 283—66.)

1. A piece of currency comprising a body and a seal, the seal including mechanically connected, freely separable parts, one of which is mounted permanently on the body.



1,394,082. NUT-MILL. Richard A. Gardner, Brooklyn, N. Y., assignor to Jabez Burns & Sons, a Corporation of New York. Filed Sept. 4, 1920. Serial No. 408,124. 15 Claims. (Cl. 83—8.)

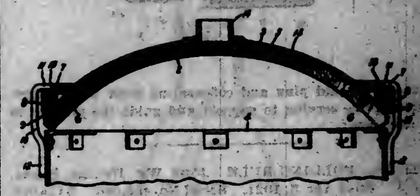
1. A mill for grinding peanuts and the like into smooth paste comprising a frame carrying a hopper for nuts, a feed screw casing having internal longitudinal grooves with an opening to receive the nuts to be ground, a slow pitch feed screw in said casing codperating with said longitudinal grooves to feed the nuts forward under pressure, an annular flat grinder carried at the end of the feed screw, a stationary annular disk grinder codperating there-



with, means for rotating said thrust of the grinders, the end of the feed casing, the feed screw and the grinders being formed to provide a progressively narrowing passage to the flat faces of the grinders to maintain the nuts under increasing pressure between the feed screw and the periphery of the grinders, and the flat faces of the grinders having non-radial grooves therein, whereby pressure is maintained on the nuts by the feed to and through the grinders without overheating and without excessive thrust.

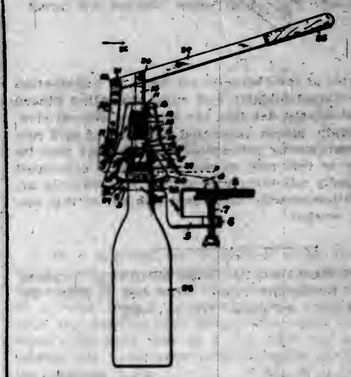
1,394,083. GUN-MOUNTING. Ira Herman Griffiths, Syracuse, N. Y. Filed Aug. 2, 1918. Serial No. 247,914. 1 Claim. (Cl. 89—37.)

In a gun mounting, the combination of a base, a frame journaled on the base to rotate about a vertical axis and provided with means for supporting an attendant near said axis, a gun carrier hinged to the frame to swing about a horizontal axis, means for locking said carrier in different positions of adjustment about said horizontal axis, a sighting tube mounted on the carrier to swing therewith to and from a position coaxial with said vertical axis a plurality of guns pivotally mounted on the carrier in uniformly spaced relation circumferentially around the sighting tube to swing toward and from the axis of said sighting tube, and means for adjusting said guns about the axis of their respective pivots.



1,394,084. WINDSHIELD ATTACHMENT. George G. Gross, Columbus, Ohio. Filed Oct. 11, 1920. Serial No. 415,979. 2 Claims. (Cl. 296—95.)

1. A protecting attachment for wind shields comprising a panel member disposed to extend parallel with and on a vertical angle to the upper portion of a wind shield, a bracket structure operable to adjustably connect the attachment with the frame of the wind shield, a gutter disposed to extend longitudinally with the lower edge of the panel member, side members provided at the ends of the panel, gutters provided upon the lower edges of said side members and arranged in communication with the gutter of said panel, and a pivotal connection between said side



members and bracket structure, said connection serving to permit of lateral adjustment on the part of said side members to regulate the discharge of water from the gutters thereof.

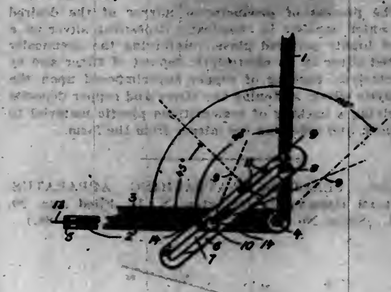
1,394,085. METAL MIRROR. Cromwell A. B. Halvorson, Jr., Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,537. 14 Claims. (Cl. 204—8.)

1. The process of producing a mirror of the desired shape which consists in chemically depositing silver on a form of highly polished glass, reinforcing the chemically deposited silver by an electrolytic deposit of silver and by an electrolytic backing of copper superimposed upon the electrolytic silver, stiffening the silver and copper deposits by applying a backing of cementitious plastic material to the copper, and removing the mirror from the form.

1,394,086. SEALING-CAP-ATTACHING APPARATUS. William Heckmann, Irvington, N. J. Filed Apr. 20, 1921. Serial No. 462,792. 8 Claims. (Cl. 226—84.)

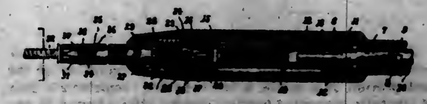
1. A sealing cap attaching apparatus comprising a base formed with a receiving opening for the reception of the neck-portion of a bottle, a bottle-holder comprising a pair of pivotally connected bottle-clamping jaws adapted to embrace the neck-portion of the bottle, means for pivotally attaching one of said jaws to said base, a plunger movably disposed above said base for attachment of a sealing-cap to the bottle, and means for actuating said plunger.

1,394,087. CUT-OUT SWITCH. Walter A. Heinrich, St. Louis, Mo., assignor to W. N. Matthews and Brother, Inc., St. Louis, Mo., a Corporation of New Mexico. Filed May 17, 1918. Serial No. 235,172. 6 Claims. (Cl. 200—111.)



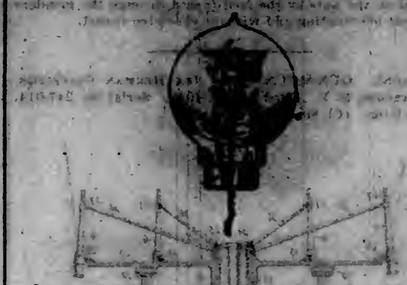
6. The combination of an electromagnet, of a plunger frictionally arranged therein and carrying a resistance

block at its end, means for normally supporting said plunger, a metallic plug mounted in said support, said contacts



mounted on said plug and cooperating with the plunger, said contacts serving to support and guide the plunger in its movement.

1,394,088. FOLDING RULE. JOHN WM. HULLER, Buena, N. J. Filed Apr. 6, 1921. Serial No. 459,044. 2 Claims. (Cl. 33—75.)



1. In a device of the character set forth, in combination with a conventional foldable foot rule, presenting hinged sections, an elongated flat link bar having a central elongated slot therein, means associated with one of said rule sections for stationarily fulcruming said link bar near its one extremity to this rule section, and means associated with the hingedly adjoining rule section for shiftably articulating and temporarily fixing said link bar to this second said rule section.

1,394,089. POWER-DRIVEN SCREWDRIVER. CLAUDE A. HEAMAN, Bridgeport, Conn. Filed Oct. 1, 1919. Serial No. 327,782. 4 Claims. (Cl. 144—32.)

1. A power driven screw driver comprising a cylindrical hand piece, a spindle mounted in the hand piece and having a pocket in one end, a split bushing mounted in the pocket and having a tapered hole therein, a driven spindle journaled in the hand piece and having a tapered end to engage the inner wall of the bushing and provided with a key to engage between the two bushing members, a spring positioned upon the driven spindle to normally hold the driven spindle out of engagement with the bushing and driving spindle, and means for operatively connecting the driven spindle with the handle when disconnected from the driving spindle.

1,394,090. [illegible]. Filed May 10, 1920. Serial No. [illegible]. 1 Claim. (Cl. 200—67.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a valve for wireless telegraph systems including a bulb, an anode in the form of a spirally wound plate having an integral extension embedded in the glass support within the bulb, said extension supporting said anode and serving for connection to the electrical lead.

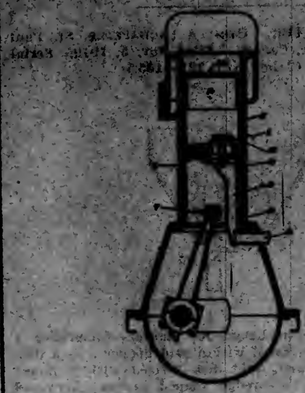
1,394,091. SHIP'S DAVIT. HARRY B. HILLS, Tompkinsville, N. Y., assignor to Steward Davit & Equipment Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 28, 1919. Serial No. 341,261. 1 Claim. (Cl. 9—22.)

In combination, pair of life boats; a ship's davit at each end of the boats, and each davit comprising a support and a boom movable inboard and outboard and having its end portion extending at substantially right angles to its support and provided with a pair of supporting eyes; a block and fall for each end of one life boat and suspended from an eye in the adjacent davit, and a block and fall for each end of the second life boat and suspended from the second eye in the adjacent davit.

1,394,092. MACHINE FOR MAKING HOLLOW GLASSWARE. EDWARD S. HUTTON, Lapel, Ind. Filed Aug. 2, 1919. Serial No. 314,853. 21 Claims. (Cl. 49—9.)

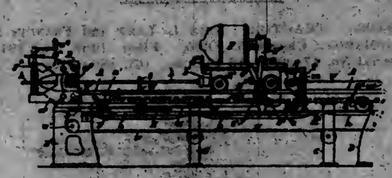
9. A machine for making hollow glass ware, including a rotary table, a mold holding frame mounted in said table with guideways in the sides thereof, a blank mold, a blow mold, each of said molds being formed of two vertical halves, stationary means on the outer end of said frame for securing the two outer halves of said molds, a block movable in said frame for holding the two inner halves of said molds, a rod connected with said inner block for moving the inner halves of the molds

the machine for engaging the inner end of said rod and forcing it inwardly and outwardly.



1,394,093. KNITTED CAP AND METHOD OF MAKING THE SAME. MARIE K. JUHL, Milwaukee, Wis., assignor to Wisconsin Knitting Works, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 8, 1921. Serial No. 459,606. 8 Claims. (Cl. 2—167.)

1. A knitted cap comprising a body portion, a head encircling band secured to the lower edge of the body portion and having portions each knitted in opposite directions and folded upon themselves adjacent the front of said cap to form a peaked portion.



1,394,094. INTERNAL-COMBUSTION ENGINE. EDWIN T. EARNSHAW, Denver, Colo. Filed May 20, 1919. Serial No. 298,022. 2 Claims. (Cl. 123—74.)

In an internal combustion engine having a sliding piston with an inherent compression chamber, the combination of a head for said compression chamber having an orifice therethrough, valve means mounted in said orifice

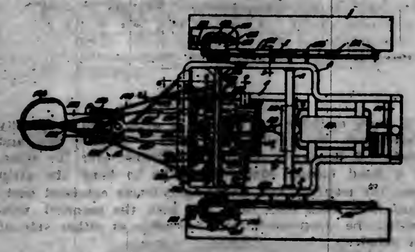
to support the head, said pillow bracket constituting a conduit to supply fuel to the said compression chamber.

1,394,095. ROLL-WINDING MACHINE. CONRAD KNOTH, Hillside, N. J., assignor to Hyatt Bearings Division, General Motors Corporation, Harrison, N. J., a Corporation of New York. Filed Aug. 20, 1920. Serial No. 402,881. 12 Claims. (Cl. 153—67.)

1. In a machine for winding a strip, into a spirally wound roll, the combination, with a suitable bed and means for moving a mandrel lengthwise over the same, of a head having compression-rolls to bend the strip upon the mandrel, and compression-levers extended backward from such rolls in a line with the mandrel, thus leaving the compression-rolls accessible at either side of the mandrel.

1,394,096. TOY. EDITH LACEY, New York, N. Y. Filed May 20, 1920. Serial No. 382,719. 1 Claim. (Cl. 46—40.)

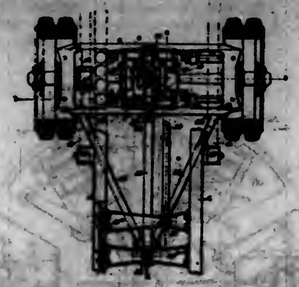
In a toy, the combination with a supporting string extending parallel to the floor, of a figure resting upon the floor and supported at its upper end by the string, said figure being maintained in an inclined position,



whereby the figure will be caused to progress longitudinally of the string by vibrating the same horizontally, substantially as and for the purposes set forth.

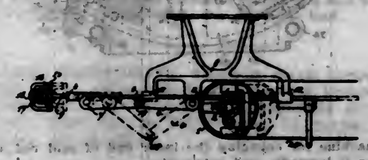
1,394,097. PLANTER. CYRILLE LACHAPELLE, St. Paul l'Ermite, Quebec, Canada. Filed Nov. 6, 1919. Serial No. 335,911. 1 Claim. (Cl. 221—135.)

A seed feeding attachment for planters comprising a hopper, a shaft journaled within said hopper a feed disk carried by said shaft, said disk formed with a flange having a plurality of wedge shaped recesses arranged therein, pockets formed in said flange and communicating with said recesses, a tube arranged within said hopper and provided with a funnel shaped mouth at its upper end adapted to receive seeds discharged from the pockets of said feed disk, an auxiliary tube also arranged within said hopper adjacent said first tube said auxiliary tube having its upper end formed with a funnel shaped mouth, and its lower end opening within and adjacent the bottom of the hopper, said auxiliary tube being adapted to receive over accumulation of grain carried upwardly by said disk and discharge it at the bottom of said hopper.



1,394,098. TRACTOR. JOHN L. LAKE and FRANCIS D. MCMAHON, Cleveland, Ohio. Filed June 14, 1917. Serial No. 174,686. 15 Claims. (Cl. 180—17.)

1. In apparatus of the character set forth, the combination of a motor, a traction wheel, an internal and an external gear through which said wheel may be driven, a shaft, driving connections between the shaft and motor, a pinion loose on the shaft and in mesh with one of said gears, a second pinion non-rotatable but slidable upon the shaft into and out of mesh with the other gear, said pinions having clutch faces arranged for engagement with each other, and mechanism for shifting the second pinion.

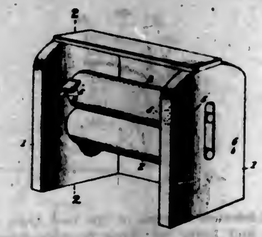


1,394,099. MOTOR-VEHICLE AND AXLE THEREFOR. JOHN M. LANEMAN, New York, N. Y. Filed Dec. 2, 1918. Serial No. 264,890. 6 Claims. (Cl. 180—73.)

2. A power axle for motor vehicles comprising a rectangular frame having two oppositely disposed side members and two end members only, an element carried by the frame at its center, a plurality of chined axle

shafts carried in the center and end members of the frame and a wheel carried by each axle shaft.

1,394,100. INTERMEDIATE BELT-GEARING. OSKAR LEINBOCK, Gottleuba, Germany. Filed June 12, 1920. Serial No. 388,694. 2 Claims. (Cl. 64—32.)

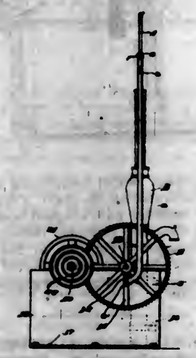


1. In an intermediate belt gearing having its intermediate shaft mounted in displaceable bearings for tightening and loosening the driving belt, a fast and loose pulley, a driving belt, bearings, an intermediate shaft, adapted to slide in said bearings, a toggle joint lever, means for connecting the same to said bearings, means for interconnecting said bearings, said intermediate shaft and said pulley in such a manner that the movement of the toggle-joint-lever in downward direction results in a respective movement of the said bearing, said shaft and said pulley, and thereby in a loosening of the driving belt, whereas a movement of the toggle-joint-lever in opposite direction which will be as well transmitted to the said bearing, said intermediate shaft and said pulley results in a retightening of the belt.

1,394,101. ELECTRIC HANDLAMP. BERT AUSTIN LITTLE, Tulsa, Okla., assignor of one-half to J. W. Dodge, Tulsa, Okla. Filed Sept. 8, 1919. Serial No. 322,353. 2 Claims. (Cl. 240—8.5.)

2. In a device of the kind described, the combination of a tubular casing adapted for the reception of a battery, a stop therein adjacent to one end, a conical coil spring hinged thereto at the other end, a lamp secured to said tubular casing at said other end, a battery within said casing between said stop and said coil spring, and suitable electrical connectors and a switch between said battery and said lamp; said conical coil spring forming part of said line of connectors for forming contact with the lamp and being adapted to be swung on its hinge out of the way to permit the insertion and withdrawal of said battery.

1,394,102. ROLL-SCRAPER. TERENCE MCCAULEY, Warren, Ohio. Filed Jan. 27, 1921. Serial No. 440,475. 1 Claim. (Cl. 80—1.)

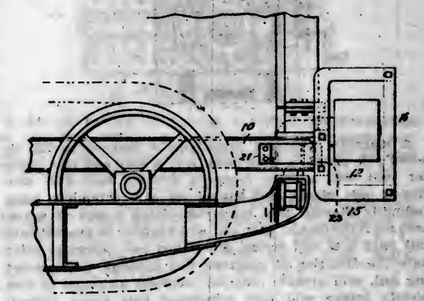


In a device of the class described, a frame, pairs of rolls mounted therein, and arranged for coöperation with one another, pairs of scrapers pivotally mounted in said frame and directed inwardly for contact with the ends only of said rolls, one pair of said scrapers being positioned for coöperation with each roll, and means for adjustably retaining said scrapers in position.

1,394,103. METHOD OF PREPARING STEEL FOR CASTING. JOSEPH B. MCGLYNN, Cleveland, Ohio, assignor to The West Steel Casting Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 17, 1919. Serial No. 290,761. 1 Claim. (Cl. 75—44.)

The method of preparing molten steel for casting, which comprises melting a charge of steel containing scrap steel, in a suitable furnace, refining the same until the carbon and silicon are present in desired proportions and then introducing the molten metal from the furnace into a converter, and blowing the same until the carbon and silicon content and manganese content have been reduced to the amount desired.

1,394,104. WINDMILL-POWER ENGINE. STANLEY E. MARTIN, Bloom, Kans. Filed June 21, 1918. Serial No. 241,185. 3 Claims. (Cl. 74—14.)



1. In a device for operating machines by windmill power, the combination with an ordinary vertically reciprocable operating rod of a windmill, an ordinary windmill pump, of power transmitting structure including a relatively large gear, a connecting rod adjustably connected to said gear, a coupling upon the lower end of said vertically reciprocable rod and provided with a transverse extension adapted for detachable connection with said connecting rod to rotate the gear upon reciprocation of the vertically reciprocable rod and a power take off member carried by said structure.

1,394,105. JAR-HOLDER. NATHAN T. MERCALF, Kingston, N. Y. Filed May 21, 1920. Serial No. 383,234. 2 Claims. (Cl. 81—3.3.)

1. A jar holder comprising in combination, a suitable base, an ear fixed to one end of said base, a bolt passing through said ear, a holder ending in two parallel outstanding arms held to said bolt, a U-shaped sheet metal member having its ends fixed to said arms the intermediate portion of said member being narrowed at opposite points, a wing nut on said bolt, a second holder fixed to said base having two outstanding arms extending in parallel spaced relation, a clamp fixed to said last mentioned arms, and a U-shaped band held to said first mentioned parallel arms, having oppositely positioned slots intermediate of its ends containing said narrowed portions, all arranged as and for the purpose set forth.

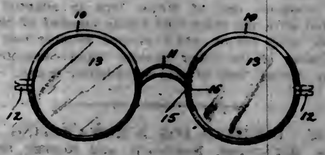
1,394,106. BELT-GUIDE FOR TRACTORS. MATHEW B. MORGAN, Cleveland Heights, Ohio, assignor to The Cleveland Tractor Company, Euclid, Ohio, a Corporation of Ohio. Filed Sept. 15, 1919. Serial No. 323,695. 1 Claim. (Cl. 74—51.)

A belt guide, comprising a rectangular frame and two members for connecting said frame to the tractor frame in operative position with respect to said belt pulley, one of said members having a T-shaped front end, a laterally bent body and a foot at the rear end adapted to be connected with a frame member of the tractor, and a U-shaped member, one of whose legs is adapted to be connected with the same side frame member of the tractor,—the other leg of said U-shaped member and the T-shaped head of the other member being connected with the rear vertical side of said rectangular frame.

1,394,107. DIE-HEAD FOR SCREW-CUTTING. FREDERICK MOUNTFORD, Northfield, and ROBERT STANDEN, Small Heath, Birmingham, England. Filed July 7, 1919. Serial No. 309,118. 2 Claims. (Cl. 10—96.)

1. An improved die head for screw-cutting machines having a chamber at the front to accommodate a spigot or stem of the die holder, a spring in said chamber for arrangement around the spigot or stem for moving the holder axially and also having a circumferential groove in the periphery, a circumferential spring arranged in said

groove and adapted to rotate and upon the clockwise movement takes place between the die head and the

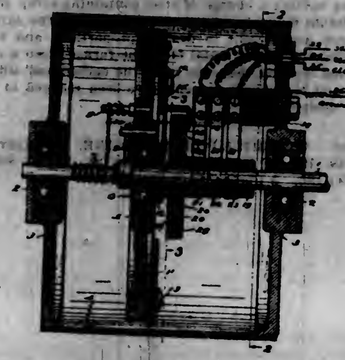


die holder, and a cylindrical cover inclosing the parts of the said die holder and the said groove and circumferential spring.

1,394,108. FOUR-POLE MAGNETO-GENERATOR. HERMAN C. MUELLER, Milwaukee, Wis. Filed Dec. 24, 1917. Serial No. 208,704. 1 Claim. (Cl. 171—209.)

A magneto generator comprising a magnet having opposed pole pieces, a generating coil, a core and pole pieces for said coil, a rotor mounted between said first mentioned pole pieces and having its axis extending longitudinally thereof, said rotor comprising a pair of spaced arcuate inductors at each end and adapted to magnetically link said first and second mentioned pole pieces to alternate the direction of magnetic flux through said generating coil, said arcuate inductor members arranged to completely bridge said first mentioned pole pieces immediately following each change of flux through said generating coil.

1,394,109. EYEGLASSES. OTTO NARUM, Staunton, Va. Filed Feb. 1, 1919. Serial No. 274,545. 1 Claim. (Cl. 88—47.)

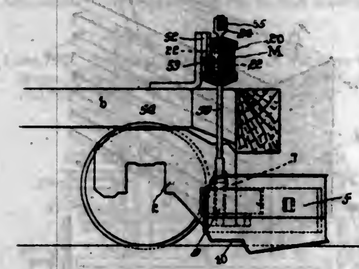


A framed eyeglass having a circular rim and lens, and coacting formations of rim and lens that positively hold the lens from turning in the rim, the rim having a channel that receives the circumference of the lens, and having in said channel a rib, the lens having in its periphery a notch that fits said rib, the rib being split on the side opposite said notch and rib.

1,394,110. ANTIFRICTION-BEARING. JOHN G. HENNING, Rockford, Ill. Filed July 28, 1919. Serial No. 313,591. 4 Claims. (Cl. 64—36.)

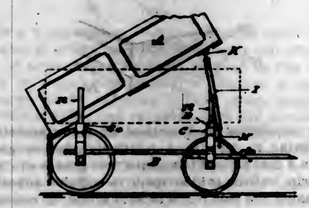
1. An anti-friction bearing of the ball type, consisting of an outer and inner retaining member concentrically spaced apart and having coinciding race-ways on their adjacent surfaces, the outer retaining member having a tangentially disposed opening extended therethrough and located between its race-ways, a series of balls located within said race-ways of the retaining members and a broken resilient member located against the inner periphery of said outer member between the race-ways thereof after said balls have been inserted in place.

1,394,111. ELECTRIC SWITCH FOR OPERATING AUTOMOBILE SPEED-SIGNALS. ALFRED W. OLDS, Windsor, Conn. Filed Oct. 9, 1920. Serial No. 415,843. 7 Claims. (Cl. 200—88.)



1. An electric signal switch comprising a rotary shaft, a member loosely mounted on the shaft, a conductor loosely mounted on said member and adapted under centrifugal action to assume different positions radially of the shaft according to the speed of rotation of the member, contacts rotatable with the shaft and adapted to be engaged by said conductor, and brushes in engagement with said contacts.

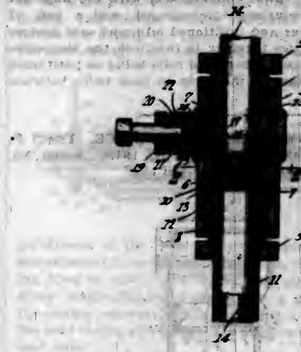
1,394,112. RAILWAY SNOW-FLANGER. EBEN RAY PACKER, New Rochelle, N. Y. Original application filed June 10, 1920, Serial No. 388,143. Divided and this application filed Jan. 12, 1920. Serial No. 350,843. 4 Claims. (Cl. 37—37.)



1. In a device of the character described, the combination of a railway vehicle, supporting members attached thereto at the opposite sides thereof and provided with guide ways, a carrier bar transversely arranged and fitted to the guide ways and capable of elevating and depressing movement therein, deflecting means supported upon the carrier bar to be movable therewith and operating means therefor comprising a motor positioned thereabove and

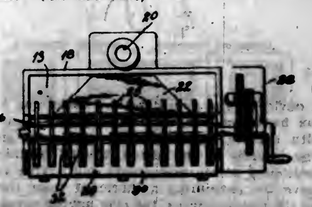
having a cylinder and piston member, one of said members being rigidly supported and the other of said motor members being movable with relation thereto in a vertical direction, a transversely arranged lifting rod posi-

tioned above the motor and carried by the movable member thereof and connections from said rod to the elevating bar whereby the latter is operated, substantially as described.



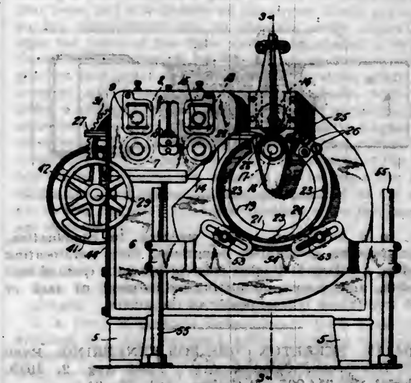
1,394,113. DUMPING-WAGON. HARRY PAGE, Newark, Ill. Filed Aug. 30, 1919. Serial No. 320,768. 3 Claims. (Cl. 298—19.)

1. In a device of the nature described, the combination, with the running gear of a vehicle, of a tiltable wagon box mounted on said running gear, and mechanism for tilting said wagon box, said mechanism including a base, end brackets extending from one side of said base, said end brackets having each a journal bearing, a further bearing bracket medially of said base, said latter bracket having a journal bearing in axial alinement with said end bearings, a screw-spindle rotatably mounted in said bearings, said screw-spindle having a right and a left thread, a nut on each of said threads and in screw-threaded connection therewith, a pair of links pivotally connected at one of their ends to said nuts, a track rail secured transversely to said wagon box and adapted to cooperated with the extremities of said links, said links having curved portions constructed to slide upon the medial bearing bracket, to cause the ends of the links that coöperate with said track rail to move upwardly to tilt said wagon box, as described.



1,394,114. BRASS LINER STUFFING-BOX HEAD. ALBERT D. PURTLE, Marietta, Ohio. Filed Jan. 22, 1920. Serial No. 353,352. 4 Claims. (Cl. 286—31.)

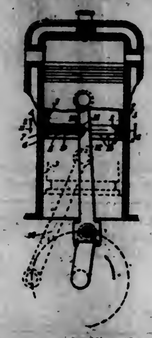
2. A stuffing box head having a central opening, a liner having one of its ends secured within the central opening, said central opening merging into enlarged openings, a polished rod operating through the stuffing box head and through the liner, means positioned within the enlarged openings for providing fluid tight connections between



the liner and polished rod, and means for securing the polished rod to the stuffing box head.

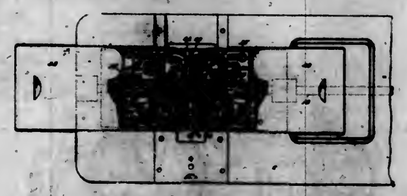
1,394,115. OIL-BURNER. FRANCISCO A. QUIROZ, Mexico, Mexico. Filed Feb. 10, 1920. Serial No. 357,668. 5 Claims. (Cl. 158—28.)

1. An oil burner comprising a trough for containing fuel oil, disks rotatably mounted upon the trough, portions of their peripheries immersed in the fuel oil and means for rotating the disks.



1,394,116. MACHINE FOR FORMING TUBULAR BODIES. EMIL RENDANO, Brooklyn, N. Y., assignor to Forbes Tubular Products Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Apr. 9, 1920. Serial No. 372,423. 8 Claims. (Cl. 113—35.)

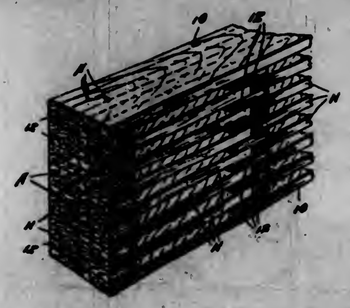
1. In a machine of the character described, means for bending the edges of a strip at an angle to the strip,



a device including a ring having an inclined edge and a rigid rib spaced from said ring for forming the strip longitudinally into spiral convolutions with the adjacent edges of the convolutions interengaged, and a pair of rolls geared together and positioned adjacent said devices for pressing the edges together to interlock the respective convolutions with each other, said rolls being so positioned as to cause the edges of the strip to pass twice between them.

1,394,117. ENGINE-LUBRICATING DEVICE. PERCY F. RICE, Tustin, Calif. Filed Oct. 21, 1919. Serial No. 332,145. 6 Claims. (Cl. 74—100.)

6. A device of the class described combining a cylinder, a piston having a peripheral ring groove near its outer end with orifices communicating with said groove and with the interior of the piston, a split contractile wipe ring positioned within said groove and having an annular oil groove for entraining a lubricant from the cylinder walls to the piston orifices, the ring having opposed angled ends forming a wedge throat, a wedge element adapted to be translated in said throat to expand the ring, and yielding means connecting the wedge element and the connecting rod.

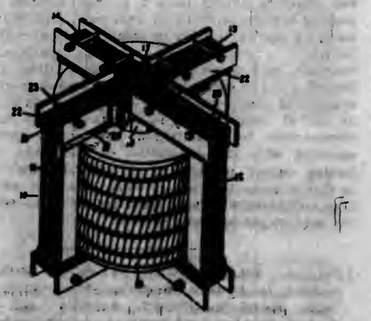


1,394,118. MULTIPLE-NEEDLE SEWING-MACHINE. JOHN C. RINGE, Stratford, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Oct. 8, 1918. Serial No. 257,378. 7 Claims. (Cl. 112—167.)

1. In a lock-stitch sewing machine, in combination, stitch-forming mechanism comprising four reciprocating needles, a rotary loop-taker cooperating with each of said needles, and means permitting adjustment of each of said loop-takers independently of the others.

1,394,119. SKELETON CORE FOR VENEERING. BYRD C. ROCKWELL, Camden, Ark. Filed Aug. 2, 1919. Serial No. 314,907. 2 Claims. (Cl. 20—91.)

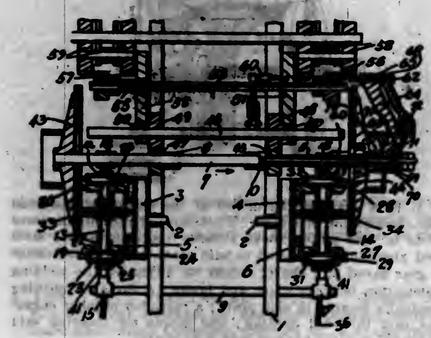
1. A core for veneering comprising a pair of facing stripe, parallel series of relatively short intermediate stripe arranged between said facing stripe, the intermediate stripe in alinement having their ends abutting, and combined splicing and spacing members arranged be-



tween and overlying the abutting end portions of said intermediate stipe, all of said pieces being secured together by an adhesive, and said core being susceptible of longitudinal division to form skeleton slabs.

1,394,120. VENEERED FLOORING-LUMBER AND METHOD OF MANUFACTURING SAME. BYRD C. ROCKWELL, Camden, Ark. Filed Dec. 20, 1919. Serial No. 346,404. 6 Claims. (Cl. 144—309.)

1. The hereindescribed method of manufacturing lumber consisting in forming a relatively shallow groove or channel in a core strip, fitting into said groove or channel a veneer strip, uniting said stripe by a suitable adhesive, and then finishing the side edges of said stripe by removing the ledges of the core on each side of the veneer strip.



1,394,121. ELECTRICAL APPARATUS. IVANHOE H. SCLATER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 12, 1919. Serial No. 303,617. 6 Claims. (Cl. 175—356.)

1. The method of constructing distributed cores with four outer legs for a line of electrical apparatus rated for varying duties and having interlocking groups of lamina-

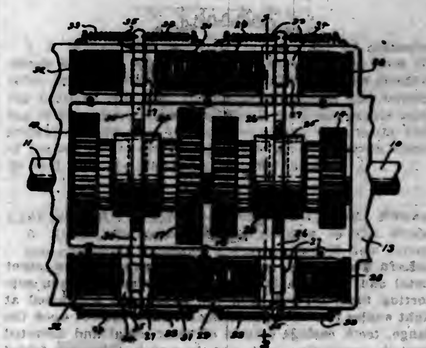
tions arranged to have their coil supporting edges lying on a circle, which consists in making a few standard sizes of punchings, assembling said different sized punchings in groups adapted to be dovetailed at right angles with other groups, and building each group out of some of each sized punching, one portion of each group being varied in dimensions to correspond with the ratings desired.

1,394,122. TRANSMISSION. HENRY FAUCETT SHANNON, Megee, Saskatchewan, Canada. Filed May 3, 1920. Serial No. 378,535. 6 Claims. (Cl. 74—26.)

1. In a transmission, the combination with the engine shaft and fly wheel mounted upon each end of the engine shaft, of beveled friction gears secured to the outer face of each fly wheel, counter shafts mounted at each end of the engine shaft, opposing beveled gears mounted upon each counter shaft and engaging with the beveled gears of the fly wheels at diametrically opposite points, clutch mechanisms for engaging the counter shaft, beveled gears engaging alternately with the counter shafts, a peripheral friction gear feathered upon each counter shaft and face friction gears rotatably mounted upon a suitable supporting shaft in engagement with the peripheral friction gears and means for transmitting motion from the face gears to the point desired.

1,394,123. FASTENER FOR PAPERS AND OTHER MATERIALS. CEDRIC PUTNAM SIBLEY, Detroit, Mich. Filed Aug. 7, 1920. Serial No. 401,934. 5 Claims. (Cl. 85—40.)

1. A fastener for papers and other objects, having one end closed and the remainder divided longitudinally into stripe of even number and forming a substantially cylindrical collapsible barrel and a laterally spread flange or base, there being excisions in the barrel adjacent to the closed end to facilitate the collapsing of the barrel.

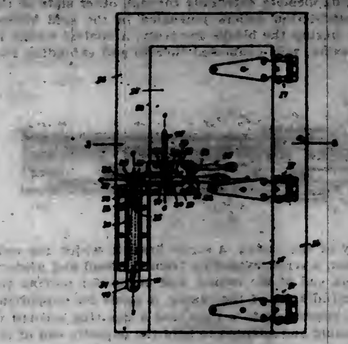


1,394,124. TUBE-CUTTING DEVICE. GEORGE W. SIMPSON, Bristow, Okla. Filed June 27, 1921. Serial No. 480,773. 3 Claims. (Cl. 81—105.)

1. In a tube cutting device, a casing having longitudinally disposed slots between its ends, a sliding member projecting through one of the slots, a cutter wheel rotatably mounted on the sliding member, means for urging the sliding member inwardly, blocks disposed at acturate angles to the sliding member extending through other slots of the casing, anti-friction rollers journaled in the said blocks, means for urging the blocks inwardly, a conical wedge in the said casing, rods connected thereto and extending lon-

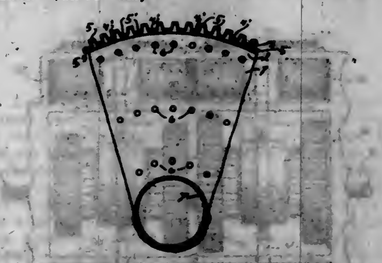
gitudinally of the casing, a screw head to which the rods are attached, a screw extending from the head and projecting from an end of the casing, and means for moving the screw longitudinally of the casing, a guide for supporting the casing concentric to a tube, and a gas ring secured to the said casing and adapted to hold the opposite end of the said tube.

1,394,125. TRANSMISSION MECHANISM. CHARLES E. STAILEY, EMMER H. BLAZER, and HERMER W. MONSON, Portsmouth, Ohio. Filed June 29, 1920. Serial No. 392,699. 6 Claims. (Cl. 74—59.)



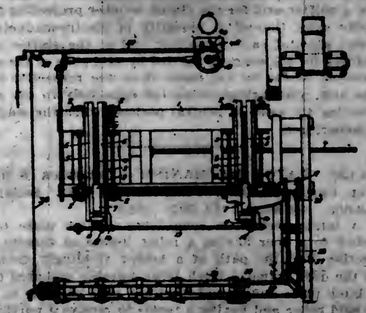
2. The combination of axially alined drive and driven shafts, a countershaft, a gear fast on the drive shaft, a gear loose and non-slidable on the driven shaft, gears fast on the countershaft and in constant mesh respectively with the gears of the drive and driven shafts, a driving clutch member slidable on the driven shaft between the gear on said shaft and the gear on the drive shaft, and movable selectively into locking engagement with said gears, a shifter arm for the clutch member projecting from opposite sides thereof, a plurality of electro-magnets on opposite sides of each projecting end of the shifter arm, armatures for the magnets carried by said ends of the arm, controlling means for the magnets on the respective sides of the arm, and springs connected oppositely to the arms for moving the same to neutral position when the magnets are deenergized.

1,394,126. LATCH MECHANISM. FREDERICK SCHMIDGALL, Cincinnati, Ohio. Filed Mar. 29, 1921. Serial No. 456,609. 4 Claims. (Cl. 292—254.)



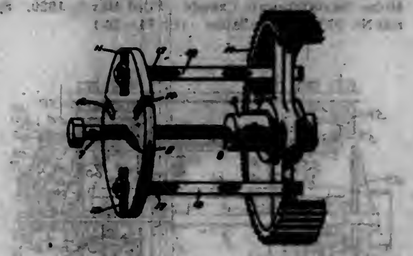
1. A latch mechanism comprising a latch plate to be attached to a door having a roller journaled thereto and projecting into the path of a keeper yieldingly mounted upon the door frame, a latch lever movably mounted upon said latch plate and provided with a nose movable to and from said roller and having a recess to receive a portion of the face of said roller and a resiliently supported latch

longer having an upwardly directed nose with outwardly directed inclined faces at opposite sides thereof, the nose



of said latch keeper being interposed between said roller and latch member to hold the door in closed position.

1,394,127. GEAR-WHEEL. CHARLES STOWN, Detroit, Mich. Filed July 27, 1920. Serial No. 399,263. 2 Claims. (Cl. 74—41.)



1. In gear wheel construction, a web made of sheet metal and having a hub and flange formed thereon, supporting teeth formed upon the flange and positioned at right angles thereto, mounting elements formed upon the flange, teeth casings formed of sheet metal and mounted upon the supporting teeth, and the securing elements folded over the edges of the casing and pressed firmly into the valleys between the teeth.

1,394,128. DOGGING MECHANISM FOR SAWMILLS. JOHN BROOMFIELD WEIR, Vancouver, British Columbia, Canada. Original application filed Aug. 16, 1916, Serial No. 250,144. Divided and this application filed Oct. 11, 1916. Serial No. 257,607. 5 Claims. (Cl. 143—125.)

1. A mechanism of the character described, including in combination, a saw mill carriage, dogging mechanism thereon, including a shaft and fluid pressure means for moving said shaft, an additional shaft operatively connected to said first shaft to move in opposition thereto, and a dog connected to one end of one shaft and a dog connected to the other end of the other shaft between which to secure a log.

1,394,129. GEAR-PULLER. ALFRED R. WICKERSHAM, Oakland, Calif. Filed June 2, 1919. Serial No. 301,564. 11 Claims. (Cl. 29—85.)

1. In a gear pulling device of the character described the combination of a plate; a plurality of radially disposed slots in said plate; hooks slidably retained in said slots and yieldingly connected to said plate, adapted to engage a gear keyed to a shaft; means for adjusting the yielding connection between plate and hooks; a threaded opening centrally located in said plate; a threaded member engaging said threaded opening; and means for rotating said threaded member against said gear shaft.

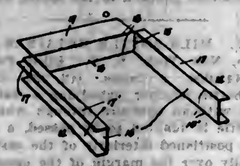
1,394,130. SODA-FOUNTAIN. FRANK T. WIECHERT, Lakewood, Ohio, assignor of one-half to George W. Wise, Cleveland, Ohio. Filed Sept. 22, 1920. Serial No. 411,894. 2 Claims. (Cl. 211—11.)

1. In a soda fountain, a vertical sheet-metal supporting structure including front, bottom, and end walls, means for supporting the bottom of said structure, a rectangular cooling compartment structure set into said supporting structure and attached to the walls thereof in a vertically inclined position, the lower inner longitudinal corner of said cooling compartment being attached to the front wall of said supporting structure at a distance above the bottom of said supporting structure, and the lower outer longitudinal corner being attached to the bottom wall of the supporting structure, said cooling compartment provided with a top member the front portion of which is in a horizontal plane and the rear portion inclining therefrom, openings in the horizontal plane portion and openings in the inclined portion of the top, and closure members for said openings.

1,394,131. REVERSING-GEAR. JACOB F. WOLLEMEN, Lockwood, Calif. Filed Dec. 6, 1919. Serial No. 343,420. 8 Claims. (Cl. 74—7.)

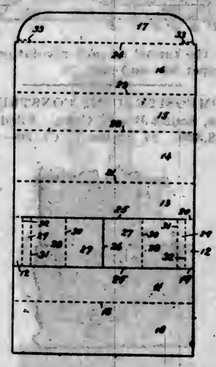
1. A reversing mechanism comprising a driven element; oppositely faced gears connected to the driven element;

a second set of gears in mesh with the first mentioned set, each meshing set being of the same ratio; a driving element; a pair of nested connecting elements connected to the second set of gears and aligned with the driving



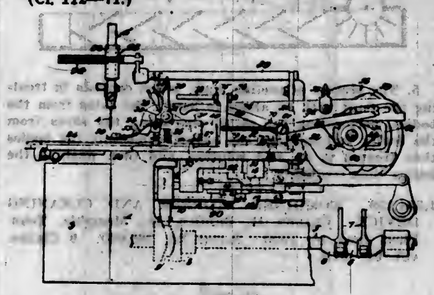
element; and means for operatively connecting either connecting element with the driving element whereby the driven element may be driven in either direction at the same speed.

1,394,132. ELECTRICAL SWITCH. GEORGE A. YANOCHOWSKI, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 16, 1917. Serial No. 162,368. 12 Claims. (Cl. 200—159.)



11. A device of the character described including a cylindrical supporting member having an orifice in one end thereof, an actuating member provided with a cylindrical portion adapted to fit into said orifice, a flange for said actuating member resting against said supporting member, a button connected to one end of said actuating member, a helical spring resting against said supporting member and against said button for maintaining said actuating member in position, a hollow stationary contact, and an enlarged end portion for said actuating member extending into said hollow stationary contact.

1,394,133. SHELF-ADAPTER. JOHN ZIMMERMAN, Jamaica, N. Y. Filed Feb. 17, 1921. Serial No. 445,744. 2 Claims. (Cl. 211—16.)

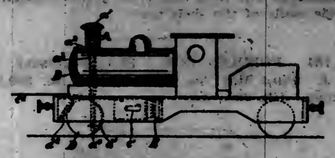


1. A shelf adapter comprising a plurality of panels arranged at right angles to one another and of a height substantially equal to the vertical height of the shelf space, and means cooperating with the otherwise free edges of said panels to hold them at a predetermined distance from the side walls of the shelf space.

1,394,134. FOLDING BOX. EDWARD ABELLS, Nutley, N. J. Filed Mar. 30, 1920. Serial No. 369,236. 3 Claims. (Cl. 229—16.)

1. A folding box comprising a plurality of connected panels arranged to be folded upon themselves to form the sides, top and bottom of the box and end panels comprising portions cut from the connected panels and remaining in hinged connection therewith, said end panels being foldable transversely to the other panels to form the ends of the box and to extend between two folded panels whereby said ends are removably fastened in place.

1,394,135. BUTTONHOLE-SEWING MACHINE. EDWARD B. ALLEN, Bridgeport, Conn., assignor to The Singer Manufacturing Company, a Corporation of New Jersey. Filed Nov. 16, 1914. Serial No. 872,333. 9 Claims. (Cl. 112—71.)



1. In a buttonhole sewing machine, the combination with stitch-forming mechanism, of a work-clamp, a buttonhole cutting device comprising cutter-carrying levers, a shaft, actuating elements thereon in permanent operative relation with said levers, a clamp-closing element upon said shaft, and a connection between the latter and the work-clamp.

1,394,136. TOY ENGINE. JOHN ALEXANDER BALLANTYNE, London, England. Filed Jan. 11, 1921. Serial No. 436,472. 3 Claims. (Cl. 46—47.)

1. The combination, with a toy locomotive engine provided with a tubular funnel and front wheels, of a tappet bar secured between the said front wheels, a vertical rod

arranged in the funnel in the upward path of the said tappet bar, and loose wool secured to the said rod and

projected from the funnel at each revolution of the wheels by the said tappet bar and rod.

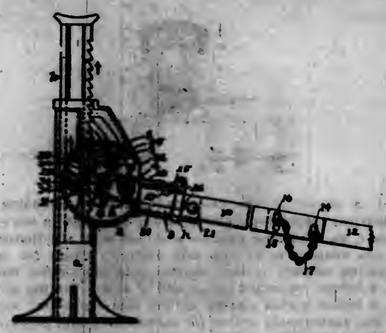
1,394,137. COMPOSITE-JOINT CONSTRUCTION. ROBERT S. BLAIR, Sound Beach, Conn. Filed Dec. 23, 1915. Serial No. 68,329. 17 Claims. (Cl. 20—92.)

1. In joint construction, in combination a member provided with a tenon, a member provided with a mortise, in which said tenon lies, one of said members being wooden, and a member interlocking with said tenon and the walls of said mortise and formed of a metallic alloy fusible at a temperature below the scorching point of the wood.

1,394,138. PROCESS OF PEELING FRUITS AND VEGETABLES. WILLIAM DALE BOST and HARRY M. MILLER, Los Angeles, Calif.; said Bost assignor to said Miller. Filed Nov. 16, 1918. Serial No. 262,866. 7 Claims. (Cl. 146—14.)

5. The process of peeling fruit, which consists in treating the fruit with an alkali to loosen the skins from the bodies, perforating the skins, separating the skins from the bodies and washing the bodies, subjecting the bodies thus treated to an acid solution, and then washing the bodies thus treated.

1,394,139. COMBINED STOPPER AND CLEANING DEVICE. CLAUDE H. BARNET, Jr., Memphis, Tenn. Filed June 10, 1920. Serial No. 388,060. 9 Claims. (Cl. 91—67.1.)



1. The combination with a container of a hollow cap or stopper having a closed top and a spring seated valve adapted to control communication between the interior of the container and the interior of the hollow cap or stopper.

1,394,140. FRAME FOR GAMES AND OTHER PURPOSES. STEWART BROWN, Chicago, Ill. Filed Feb. 28, 1921. Serial No. 448,738. 2 Claims. (Cl. 40—155.)

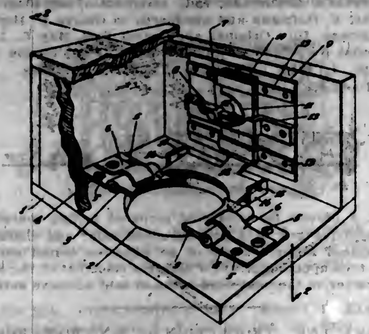
1. In a new article of manufacture, a frame comprising a glass front and a back, a ribbon provided with an aperture adjacent to one end and a tongue at the other end, and said ribbon bent adjacent to the sides thereof to obtain flanges, in combination with an additional ribbon of flexible material, said ribbon being formed up with said additional ribbon inclosed by said first named ribbon and said tongue engaged in said aperture to retain said ribbons in said formed up position, and means to hold said additional ribbon in spaced relation to said first ribbon, and between said front and back to retain said front and back in spaced relation.

1,394,141. JACK. JOHN H. BURKHOLDER, Ashland, Ohio, assignor to Hite Manufacturing Company, a Partnership composed of John H. Burkholder, Preston R. Countryman, and E. L. Kilheffner, Ashland, Ohio. Filed Aug. 29, 1919. Serial No. 320,570. 5 Claims. (Cl. 254—111.)

1. A lift jack as described, comprising a lift-bar and a pair of pawls adapted to engage the same having each a lateral finger on corresponding sides, a tripping device at the side of said pawls adapted to engage said fingers, a pivoted handle socket member carrying a spring in working relation with said device, and a handle having means adapted to flex said spring when the handle occupies a predetermined position in the socket member.

1,394,142. MILK-BOTTLE RETAINER. JAMES V. CANNIZZARO, New York, N. Y. Filed Feb. 7, 1921. Serial No. 443,004. 2 Claims. (Cl. 222—41.)

1. A milk bottle retainer embodying a casing provided in its bottom with an aperture through which the neck of a milk bottle is adapted to be passed, a plurality of pivoted flaps, positioned interiorly of the casing, and extending radially over the margin of the opening, for the purpose of gripping the neck of a milk bottle and precluding its surreptitious removal, a pivoted plate, one end of which extends beneath the pivoted flaps and a key operated bolt cooperating with the other end of the



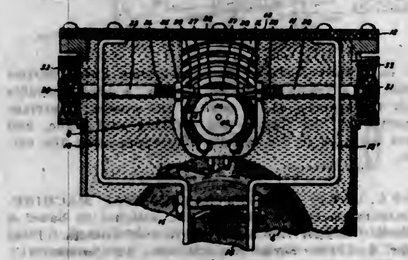


plate and adapted to operate upon the plate to tilt the flaps in a position to release the bottle.

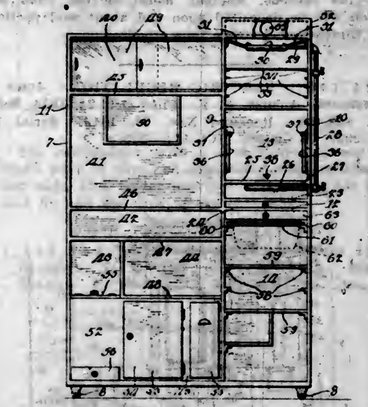
1,394,143. X-RAY APPARATUS. WILLIAM D. COOLIDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 24, 1919. Serial No. 333,065. 3 Claims. (Cl. 250—84.)

2. An apparatus comprising the combination of an inclosed tank, a device therein evolving heat during operation, a body of oil substantially filling said tank, a receptacle in said tank containing both oil and a gas and a tube, connecting the body of oil within said receptacle with the main body of oil in said tank, said tube ending substantially at the center of said receptacle, the oil in said receptacle more than half filling the same thereby preventing access of gas to the end of said tube in any position of the device.

1,394,144. INCANDESCENT-CATHODE APPARATUS. WILLIAM D. COOLIDGE, Schenectady, N. Y., and EDWARD A. WAGNER, Fort Wayne, Ind., assignors to General Electric Company, a Corporation of New York. Filed Oct. 24, 1919. Serial No. 333,092. 6 Claims. (Cl. 250—84.)



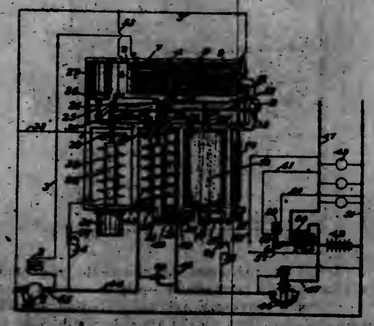
1. An electric apparatus comprising a high voltage transformer, an incandescent cathode tube connected to the high voltage terminals thereof, a sealed housing for said transformer and tube, a regulator within said housing for varying the current carrying capacity of said tube and means for changing the setting of said regulator from the exterior of said housing.

1,394,145. THERMIONIC DISCHARGE APPARATUS. WILLIAM D. COOLIDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 15, 1919. Serial No. 338,279. 8 Claims. (Cl. 250—34.)

1. An electron discharge apparatus comprising a metal tank, a high potential current source therein, an electron discharge device connected to said source and having one terminal connected to and projecting outside of said tank.

1,394,146. KITCHENETTE-CABINET. CLAUDE H. COOPER, Yonkers, N. Y. Filed Aug. 30, 1920. Serial No. 406,891. 1 Claim. (Cl. 45—16.)

In a device of the class described, the combination with a substantially rectangular upright wheeled unitary cabinet or casing having a vertical partition spaced at a greater distance from one of its side walls than from its other side wall, said cabinet having at least a pair of compartments located one above the other in the narrow compartment formed by the said partition and the walls of the cabinet, a door hinged at its upper edge to the upper front portion of the narrow upper compart-



that on one side of the partition the products of combustion, said heating as caused to flow in such manner as to contact with the walls of said narrow compartments for the greatest amount of surface and thereby transmit the greatest amount of heat to said walls, a flue connected at its lower edge to the front lower portion of the last named compartment for vertical upward movement, and having at each of its side edges a flange to contact with the walls of said narrow compartments to prevent lateral displacement of articles supported by the last named flue when in its lowered position, a pair of burners located in the upper and lower portions of the last named compartment, means communicating with said burners to supply fuel thereto, means supported within the last named compartment above the lower burner thereof for the support of cooling utensils, and means mounted within the last named compartment below the upper burner for supporting articles to be cooked, the last named compartment having at its upper end a fume collecting receptacle provided with an outlet, a flexible pipe connected at one of its ends to said outlet, and leading at its other end to a point of discharge.

1,394,147. ELECTROLYTIC DEPOSITING OF METALS. FREDERICK D. CRABB, Montclair, N. J. Filed Dec. 18, 1920. Serial No. 431,691. 13 Claims. (Cl. 204—57.)

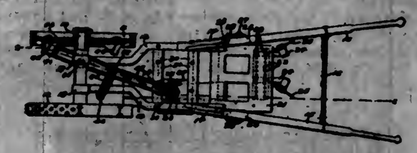
1. The process of forming an electrode which consists in providing a solution from which a metal may be deposited electrolytically, supplying a finely divided conducting material to said solution and causing the same to assume the form of a thin layer made up of the particles thereof, and causing a current of electricity to flow through said solution and said finely divided material; the direction of flow being such that said layer forms the cathode, whereby metal derived from said solution will be deposited upon and about said particles and a continuous electrode thus produced.

1,394,148. ELECTRIC REGULATION. JOHN L. CREVELING, Auburn, N. Y. Filed Oct. 24, 1914, Serial No. 868,403. Renewed Nov. 26, 1919. Serial No. 341,292. 96 Claims. (Cl. 171—229.)

1. In an electric system, a generator and means for regulating the same comprehending regulating means, means tending to operate the same, and means responsive to current fluctuations for controlling and also assisting said means.

1,394,149. PRODUCTION OF MINERAL-SURFACED ROOFING. ERNEST A. ANDERSON, Chicago, Ill., and OLIVER R. MAHAFFEY, Minneapolis, Minn., assignors of one-fourth to Carl F. Mathesius and one-fourth to George F. Hagens, Chicago, Ill. Original application filed May 5, 1913, Serial No. 766,092. Divided and this application filed Apr. 1, 1916. Serial No. 238,939. 2 Claims. (Cl. 91—68.)

2. A process for producing prepared roofing, consisting in applying grit of a predetermined color and character to spaced unlaced areas of an adhesive coated surface and then applying grit of a different color but of the same character to the uncovered areas of said adhesive surface.



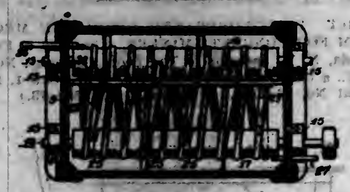
1,394,150. PRODUCTION OF M-NITRO-P-CRESOL. CLARENCE G. DERICK, WALTER M. RALPH, and LAWRENCE H. FLETT, Buffalo, N. Y., assignors to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 9, 1920. Serial No. 364,427. 12 Claims. (Cl. 23—24.)

1. The method of dinitrating p-toluidin, which comprises dissolving about 107 parts of p-toluidin in about 205 to 220 parts of sulfuric acid (66° Bé.), diluted with about 400 parts of water, whereby the heat of dilution of the sulfuric acid is utilized in dissolving the p-toluidin, adding about 1100 parts of water thereto, cooling the resulting solution, and adding sodium nitrite.

1,394,151. PROCESS OF TREATING WASTE SULFITE LIQUOR AND COMPOUND OBTAINED THEREFROM. WALTER H. DICKERSON, Muskegon, Mich., assignor, by mesne assignments, to Edward J. Koehler. Original application filed Mar. 28, 1914, Serial No. 827,948. Divided and this application filed Apr. 7, 1915. Serial No. 19,779. 6 Claims. (Cl. 149—4.)

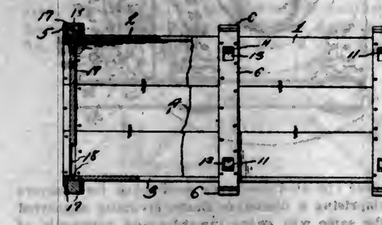
4. As a new composition of matter, a solution of the organic constituents of waste sulfite liquor which is capable of increasing the insolubles of quebracho tanning extracts.

1,394,152. BEET-BLOCKER. STEPHEN DONNER, Toledo, Ohio, assignor of one-fourth to Charles W. Feigner, and three-fourths to Fred C. Balk, Toledo, Ohio. Filed Apr. 27, 1920. Serial No. 376,939. 8 Claims. (Cl. 97—45.)



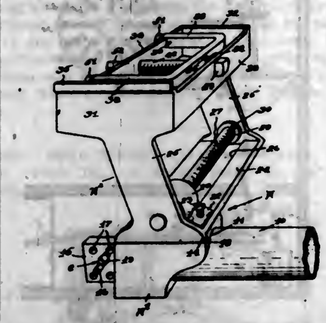
3. In a beet blocker, the combination, with carrier wheels, of a frame supported thereby, a blade movable bodily transversely of the path of the wheels, a carriage supported by the frame, and carrying said blade, and means actuated by the wheels for reciprocating the carriage.

1,394,153. WASHER-SATURATING MACHINE. CHARLES A. DORAN, Chicago, Ill., assignor to Bauer & Black, Chicago, Ill., a Corporation of Illinois. Filed Apr. 1, 1918. Serial No. 225,909. 12 Claims. (Cl. 8—19.)



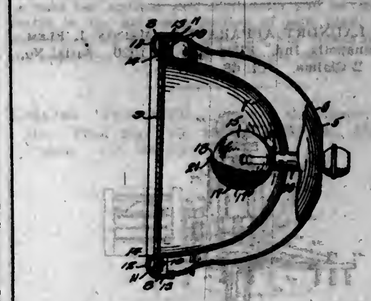
1. In a washer-saturating machine, the combination of a liquid receptacle, means for maintaining a constant flow

of liquid with a substantially uniform level through the receptacle, means to cause said liquid to follow a tortuous path through transverse channels extending across said



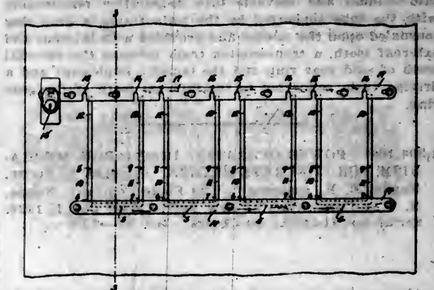
receptacle, and means to support the material to be treated below the surface of the liquid in said receptacle and to advance said material through the liquid.

1,394,154. COLLAPSIBLE BOX. HENRY P. EASTMAN, Livingston Manor, N. Y. Filed Oct. 20, 1920. Serial No. 418,154. 3 Claims. (Cl. 217—12.)



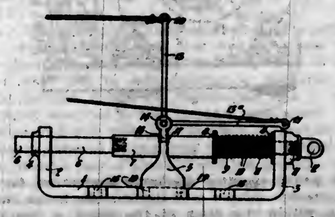
1. A collapsible box comprising side, bottom and top sections, said sections being provided with transversely disposed cleats adjacent their ends and centrally thereof, said cleats extending beyond the edges of the members to which they are secured and having their ends beveled substantially at 45 degrees, right angled apertures in the ends of the cleats, said apertures being so positioned that they will register with each other when the ends of the cleats are brought together, and bolts passing through said apertures and forming means for holding the sides, top and bottom of the box together.

1,394,155. BED-SPRING FRAME. HAROLD O. ERBIN, Anoka, Minn. Filed Jan. 18, 1921. Serial No. 438,138. 9 Claims. (Cl. 5—63.)



9. In a device of the class described, a pair of rails, means on said rails for applying the same to a bed structure and riser members on each rail to carry a spring fabric, said rails being severally adjustable laterally with respect to said members.

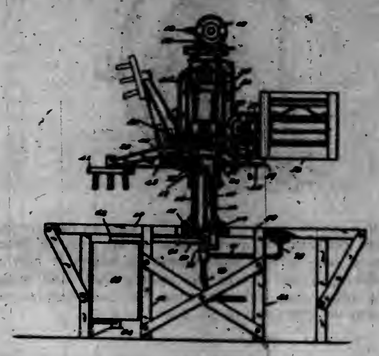
1,394,156. SHADE FOR HEADLIGHTS. GEORGE P. EDWARDS, Washington, D. C. Filed Nov. 29, 1920. Serial No. 427,104. 4 Claims. (Cl. 240—49.6.)



1. In a headlight, the combination with an electric bulb and its reflector, of a removable elastic textile fabric screen, a loop at one end thereof by which it may be mounted upon one end of the electric bulb, and means at the other end, for attaching the rear end of the screen to the other end of the bulb.

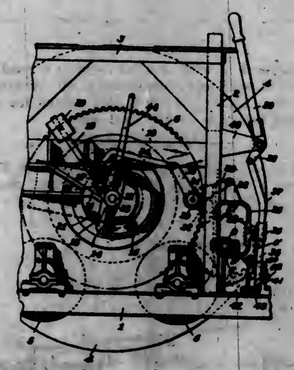
1,394,157. CARD-HOLDER. HUBERT J. FARNHAM, West Haven, Conn., assignor to The Price & Lee Company, New Haven, Conn., a Corporation. Filed Jan. 11, 1921. Serial No. 436,429. 1 Claim. (Cl. 129—1.)

The combination with a card holder formed from a single piece of wire and comprising a lip, parallel arches and ends, of a holder provided with means for engaging said lip and the ends of the said wire.



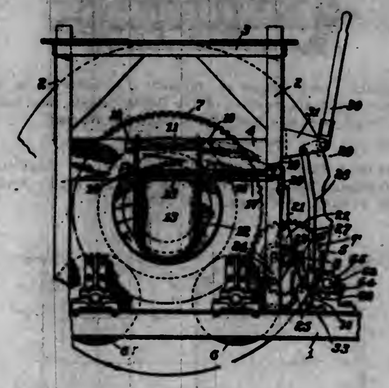
1,394,158. CONTROL DEVICE. HENRY FERESTER, Brooklyn, N. Y. Filed Sept. 18, 1919. Serial No. 324,649. 4 Claims. (Cl. 74—14.)

1. In a device of the class described, a supporting member, a bar resiliently slidable longitudinally therein,



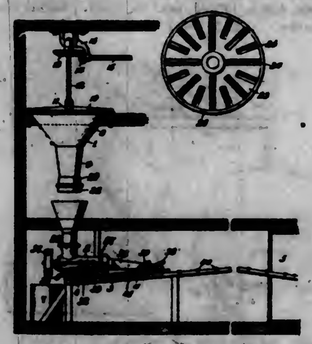
means for actuating said bar comprising a pair of complementary arms fulcrumed at or near their point of intersection, and a member projecting from said point and engaging said bar.

1,394,159. LAUNDRY APPARATUS. MELVIN J. FLEMING, Indianapolis, Ind. Filed May 17, 1920. Serial No. 381,972. 2 Claims. (Cl. 68—18.)



1. A laundry apparatus comprising a main frame adapted to support a plurality of tubs, a central column supported by said frame, a laundry implement swiveled upon said column and movable into coöperative relationship with the tubs supported by the main frame, a gear ring journaled upon the column and provided with internal and external teeth, a transmission train between the external teeth of said gear ring and the laundry implement and a driving train connected to the internal teeth of the gear ring.

1,394,160. POWER-OPERATED DISCHARGE MECHANISM FOR CONCRETE-MIXERS. CHARLES E. FOOTE, Nunda, N. Y., assignor to The Foote Company, Nunda, N. Y., a Corporation of New York. Filed Oct. 1, 1920. Serial No. 414,065. 10 Claims. (Cl. 83—73.)

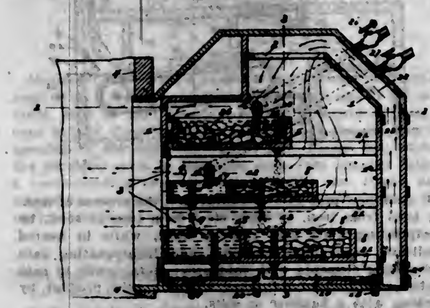


1. A power operated discharge mechanism for rotary drum concrete mixers comprising a discharge chute extending within the drum of the mixer, a continuously revolving gear for said drum, means connected to said chute and having on its opposite sides means adapted to be brought into and out of coöperation with said gear to thereby move said chute to its operative and inoperative positions.

1,394,161. POWER-OPERATED DISCHARGE MECHANISM FOR CONCRETE-MIXERS. CHARLES E. FOOTE, Nunda, N. Y., assignor to The Foote Company, Nunda, N. Y., a Corporation of New York. Filed Oct. 1, 1920. Serial No. 414,066. 5 Claims. (Cl. 83—73.)

1. A power operated discharge mechanism for concrete mixers comprising a discharge chute, pivotally supported so that the same will swing inwardly and outwardly of the drum of the mixer, a rotating gear, a rack coöperating with said either gear and means for forcing one side of the rack in mesh with the gear to thereby swing the chute inwardly of the mixer to its operative or discharge position, and to the other side of the rack for swinging the chute outwardly of the drum of the mixer to its inoperative position.

1,394,162. PROCESS OF MAKING STOCK FOOD FROM CACTUS. WILLIAM GERHARDT, San Antonio, Tex. Filed May 20, 1918. Serial No. 235,545. 7 Claims. (Cl. 99—11.)



1. The process of preparing spiny cactus for stock food, which consists in reducing the green plant, including the spines, to a finely divided pulpy mass, with excess liquid, if present, removed, and then drying the pulp.

1,394,163. DRAFT-YOKE. ENOCH GEORGE, Jr., Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 5, 1921. Serial No. 459,813. 15 Claims. (Cl. 213—42.)

8. A draft yoke having spaced arms adapted to receive a cushioning unit between them, and provided with a wear plate engagingly overlapping the inner face of one of said arms.

1,394,164. OIL-BURNING FURNACE. THOMAS GERARD, Cortland, N. Y., assignor of one-half to Daniel Kernan, Cortland, N. Y. Filed June 9, 1919. Serial No. 302,713. 2 Claims. (Cl. 158—4.)

1. In an oil-burning apparatus and in combination, an inclosure provided with an air-inlet, and with a gas-outlet; a plurality of oil-burning hearths mounted one above another within the inclosure all below the level of said air-inlet; a lower hearth having separate compartments for oil and for water; means for supplying oil directly to only the top hearth; overflow means for delivering an excess of oil from the top hearth to the oil-compartment of said lower hearth; means for supplying water to the water-compartment of said lower hearth; and overflow means for separately conveying an excess of oil from said oil-compartment and an excess of water from said water-compartment to points outside the inclosure.

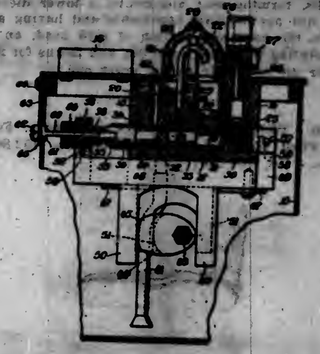
1,394,165. SEAL-PRESS. CALDER C. GIBSON, Buffalo, N. Y. Filed Jan. 24, 1920. Serial No. 353,804. 5 Claims. (Cl. 81—9.1.)

1. In a seal press, the combination of a head comprising spaced side walls formed with a die-bed, the portion of the head carrying said die-bed being narrower than the remainder thereof transversely of the plane of the head and depressed below the adjacent portions of said side walls, forming rear abutments, a lower die seated on said bed against said abutments and having a stem seated in the narrowed portion of said head, an upper die coöperating with said lower die, and means for moving the upper die relatively to the lower one.

1,394,166. PENKNIFE. THOMAS C. GIBSON, Forsyth, Ga. Filed Mar. 16, 1921. Serial No. 452,865. 4 Claims. (Cl. 30—10.)

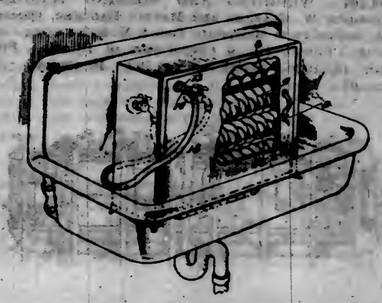
4. The combination with a penknife handle, of blades pivotally connected to the opposite ends of the handle, and means carried by the butt end of one blade coöperating with the point of the other blade when in closed position, preventing the first blade when being closed from closing on the wrong side of the closed blade.

1,394,167. WEIGHING AND SORTING MACHINE. RUDOLPH W. GLAESNER and MARTIN BALCKER, Chicago, Ill., assignors to Marquette Tool & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 18, 1920. Serial No. 366,792. 19 Claims. (Cl. 83—92.)



1. The combination of article sorting means, weighing mechanism for weighing the articles and means automatically movable into and out of operative position by the weight of the articles and operating to automatically deliver the articles from the weighing mechanism as they are weighed.

1,394,168. FORCE-FEED OILER. LOUIS E. GODFRIAUX, Madison, Wis., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Feb. 12, 1921. Serial No. 444,346. 11 Claims. (Cl. 184—27.)

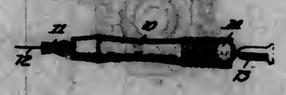


11. In a force feed oiler, the combination of a cylinder having a suction port, a sight feed well, a by-pass duct, a supply duct from said cylinder to said well, a delivery duct from said well to said cylinder, a discharge duct from said cylinder to the oil distribution line, a sleeve valve slidably mounted in said cylinder, said sleeve valve having high and low pressure chambers, a port in said high pressure chamber coöperating with said delivery and discharge ducts, a pair of ports in said low pressure chamber coöperating with said by-pass and supply ducts, respectively, and a port in said low pressure chamber coöperating with said suction port, tandem plungers slidably mounted in said high and low pressure chambers, and means for reciprocating said sleeve valve and plungers,

and reciprocating means effecting simultaneous equal movements, in such direction, of said sleeve valve and

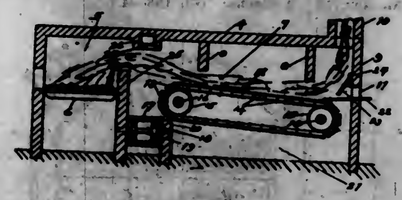
plungers to first effect registration of said ports and ducts, and then a further movement of said plungers to effect the suction and forcing of the oil.

1,394,169. DISH-WASHER. G. Marvin Green, Kissimmee, Fla. Filed Jan. 7, 1920. Serial No. 349,902. 1 Claim. (Cl. 141—9.)



A dish washer comprising a portable casing adapted to be placed in a sink and equipped with a drain outlet and a series of shelves, said casing having one of its sides hinged to constitute a door, a header and a series of perforated spray pipes on the inner face of said door, the remaining walls of said casing being imperforate, and a tube adapted to be connected with said header and a faucet of the sink.

1,394,170. BUMPER. Rafael E. Griewe and Raymond Johnson, Los Angeles, Calif. Filed May 24, 1921. Serial No. 472,228. 7 Claims. (Cl. 293—55.)



4. In a bumper for vehicles, a bumper bar, and means adapted for attachment to the vehicle to support the bar, said means comprising a split head having a transverse opening to receive the bar, one end of the head having a pocket formed in its inner wall beyond the bar, a supporting member having a hooked free end engaging into said pocket and contacting with the bar, and means engaging the opposite end of the head and the supporting member to draw them together to clamp the bar.

1,394,171. ELECTRIC NEEDLE. Mary E. Hall, Chicago, Ill. Filed May 2, 1921. Serial No. 465,978. 1 Claim. (Cl. 174—177.)

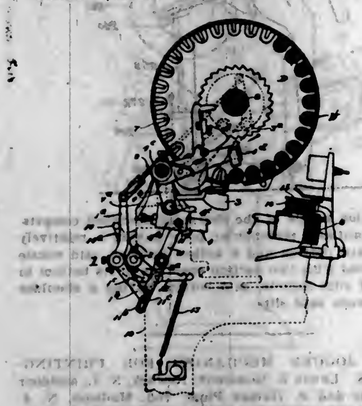
An electric needle for removing hairs, said needle having a relatively stiff shank and a flexible tapering end, whereby the needle may bend to follow the curvature of a hair follicle into which it is inserted.

1,394,172. PROCESS FOR MAKING STEEL. James Hundley, Columbus, Ohio. Filed July 22, 1919. Serial No. 312,748. 5 Claims. (Cl. 148—16.)

1. As a new process of manufacture, the process of making steel from iron, or alloy steel from iron or steel, by precipitating upon said iron or steel, while in heated condition, carbonizing elements and incorporating said carbonizing elements with said other metal while in said heated condition and further unifying said product by working with a hammer or rolls.

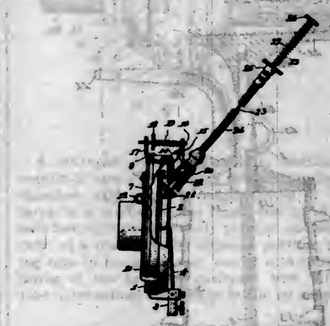
1,394,173. AUTOMATIC STARTING AND STOPPING DEVICE FOR TALKING-MACHINES. Albert A. Houser, Chicago, Ill. Filed July 31, 1920. Serial No. 400,261. 2 Claims. (Cl. 192—116.)

1. In an automatic stopping mechanism for talking machines, the combination of a supporting plate, a turn-table



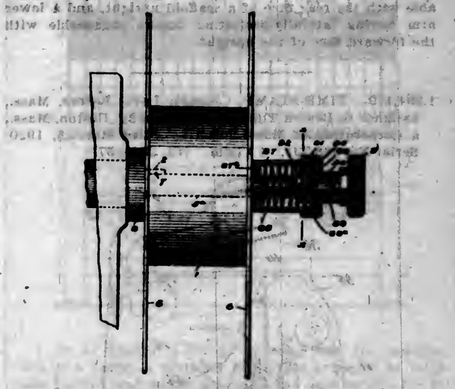
above said plate, an arm mounted to swing horizontally above said plate, a brake-shoe carrier pivotally mounted on said plate, a brake-shoe on said carrier movable into and out of engagement with said turn-table, a spring normally urging said brake-shoe into engagement with said turn-table, a lever pivoted on said plate and having its arms connected to each other by a friction joint, one of said arms carrying at its outer end a catch engageable with said brake-shoe carrier, and the other arm carrying at its outer end an upstanding member located in the path of travel of said first-named arm, a spring acting on said lever to force said catch into engagement with said carrier, an arm pivoted concentric with said lever and having a transversely slotted free end through which said upstanding member projects, and manually operable means for swinging said last-named arm whereby to set said upstanding member at any predetermined point in the path of travel of said first-named arm.

1,394,174. HACKSAW. Edwin G. Ireland and John D. Clark, Clayburn, British Columbia, Canada. Filed Nov. 1, 1920. Serial No. 421,034. 1 Claim. (Cl. 145—33.)



Means for connecting a hack-saw to its frame, said means comprising a member pin-connected to each end of the saw blade, each of said members having a threaded stem, a cone axially threaded on each stem with the smaller dimension of the cone toward the saw, means for locking the threaded stem in the cone, each cone member fitting a corresponding conical bearing in the saw frame, and means for applying tension to the saw blade through the cone bearings of the saw connection.

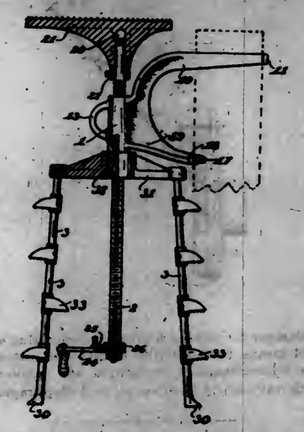
1,394,175. WEFT-REPLENISHING LOOM. Simeon S. Jackson, Boston, Mass., assignor to The Stafford Company, Readville, Boston, Mass., a Corporation of New Jersey. Filed Dec. 22, 1920. Serial No. 432,443. 6 Claims. (Cl. 139—85.)



1. In a weft-replenishing loom, the combination with a controlling rockshaft having a pad-finger, a give-away lever pivoted upon an arm of the said rockshaft, a shuttle-feeler, and a transferrer-dog, of a transmitter-rocker having an arm engaged by said lever, a link intermediate the rocker and the shuttle-feeler, a link intermediate the rocker and the dog, and a spring acting through the said lever to keep the rocker engaged with the pad-finger, and also acting through the lever and rocker to keep the rockshaft in normal position, with the pad-finger against its abutment, and the shuttle-feeler and transferrer-dog in their normal inoperative positions.

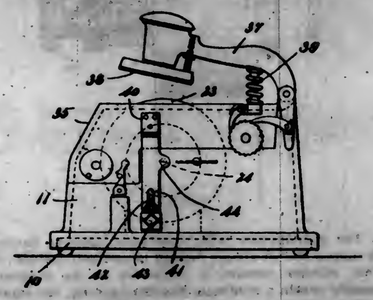
1,394,176. DAMPER FOR TALKING-MACHINES. Robert E. L. Janney, Chicago, Ill. Filed June 25, 1918. Serial No. 241,732. 8 Claims. (Cl. 274—27.)

1. A damper for talking machines, comprising a damping pad, and means for adjusting it into and out of contact with the talking machine diaphragm, and, while in contact therewith varying its position on said diaphragm.



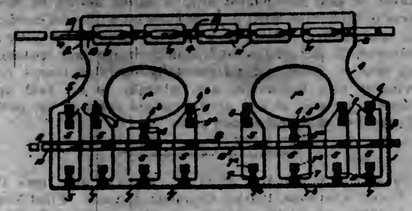
1,394,177. RETAINING MEANS. Robert W. Jones, Wilkes-Barre, Pa. Original application filed Dec. 16, 1917, Serial No. 207,807. Divided and this application filed Aug. 5, 1918. Serial No. 248,284. 8 Claims. (Cl. 287—53.)

1. The combination with a suitable support having a hook-shaped slot or groove formed in one end thereof; of a unitary retainer removably applicable to the support to releasably retain a rotatable member thereon, the retainer including a locking member having a bore adapted to fit over the outer slotted end of the shaft; a bit carried by the locking member and projecting into the bore, the bit adapted to be entered in and removed from the hook-shaped slot; an apertured arresting member adapted to removably surround the outer end of the support, the inner



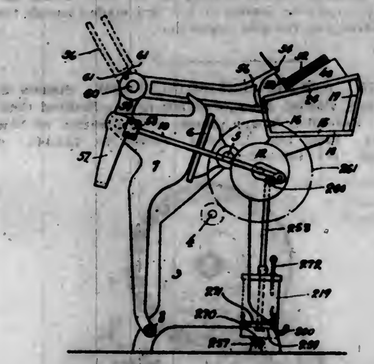
end of the arresting member normally in contact with the rotatable member to hold the latter in place; the arresting member being chambered to inclose the inner end of the locking member; means to connect the arresting and locking members against disengagement, and to permit relative rotary and telescopic movement thereof; and a spring inclosed within the arresting member and bearing against the locking member to retain the latter where adjusted.

1,394,178. SCAFFOLD-JACK. CARL HJALMAR LARSSON, Seattle, Wash. Filed Jan. 2, 1920. Serial No. 348,819. 6 Claims. (Cl. 304—29.)



1. Means for raising or lowering scaffolding platforms comprising an attachment member and an elevator member engaged therewith and vertically movable therein, and supporting means for said attachment member comprising an upper arm having laterally-projecting fingers engageable with the rear face of a scaffold upright, and a lower arm having laterally-projecting fingers engageable with the forward face of the upright.

1,394,179. TIME-STAMP. JOSEPH LEVY, Boston, Mass., assignor to Boston Time Stamp Company, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 25, 1920. Serial No. 368,731. 1 Claim. (Cl. 234—57.)

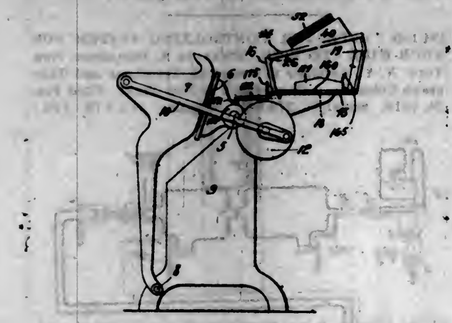


In an apparatus of the kind described, the combination of a base and standard, a timing mechanism located on the base and in operative relation to the standard, a date and time indicating unit, cooperating means on said unit and standard for positioning the said unit in the standard and in operative relation to the timing mechanism, a cover on said standard inclosing said date and time indicating unit, means for adjusting the timing mechanism, and means cooperating with the standard and cover for locking said adjusting means against movement.

1,394,180. LIFE-PRESERVER. ANDREAS P. LUNDIN, Bayside, N. Y., assignor to American Balsa Company, Inc., a Corporation of New York. Filed Jan. 12, 1920. Serial No. 351,122. 4 Claims. (Cl. 9—20.)

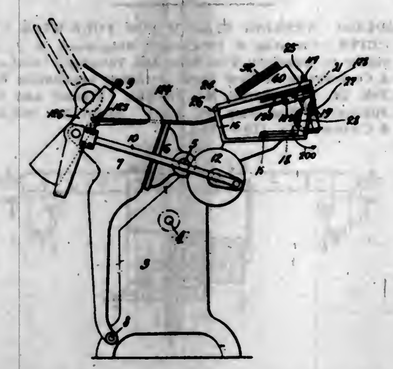
1. A life preserver embodying a base composed of a single sheet of fabric; a series of buoyant units, each comprising a block of balsa wood having bores at its opposite end, mounted on one side of said base; and a series of relatively narrow straps each connected to said base fabric and threaded through said bores to secure the blocks to the face of the fabric.

1,394,181. PAPER SEPARATING AND FEEDING MECHANISM. LEWIS E. MORRISON, Newark, N. J., assignor to himself and S. Haines Plum, 2nd, Madison, N. J. Original application filed May 29, 1919, Serial No. 300,702. Divided and this application filed Jan. 20, 1920. Serial No. 352,749. 11 Claims. (Cl. 101—287.)



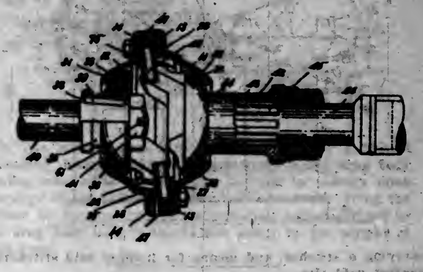
4. A suction nozzle of the character described comprising a substantially rectangular body having a relatively heavy forward portion and a hollow interior, said nozzle being provided with two suction openings in its bottom in the form of slits therein, said bottom having a shoulder formed between said slits.

1,394,182. JOGGER MECHANISM FOR PRINTING-PRESSES. LEWIS E. MORRISON, Newark, N. J., assignor to himself and S. Haines Plum, 2nd, Madison, N. J. Original application filed May 29, 1919, Serial No. 300,702. Divided and this application filed Feb. 21, 1920. Serial No. 360,331. 1 Claim. (Cl. 271—33.)



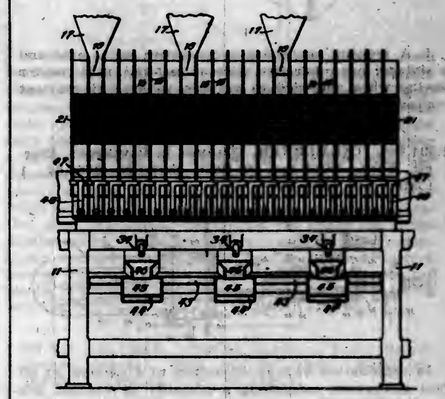
In a printing press the combination of a movable platen, a table for receiving the printed matter therefrom, a paper stacking means on said table comprising fixed rear

members over which the printed matter is adapted to slide, said members being disposed parallel to the direction of movement of the paper, yieldable front stops for positioning the printed matter on the table, a sliding member for adjusting said stops simultaneously, a rear jogger disposed transversely of the said fixed rear members and provided with slots for moving past said fixed members to move the



printed matter against the said front stops, side joggers, guide means for the latter secured beneath said table, means for adjusting said side joggers and guiding means, cam rollers carried by said side joggers, a cam secured to said rear jogger and adapted to cooperate with the said cam rollers for operating said side joggers and means for operating said rear jogger from the said platen.

1,394,183. GRIPPING MECHANISM FOR PRINTING-MACHINES. LEWIS E. MORRISON, Newark, N. J., assignor to himself and S. Haines Plum, 2nd, Madison, N. J. Original application filed May 29, 1919, Serial No. 300,702. Divided and this application filed Jan. 20, 1920, Serial No. 352,751. Renewed Mar. 14, 1921. Serial No. 452,228. 9 Claims. (Cl. 101—287.)

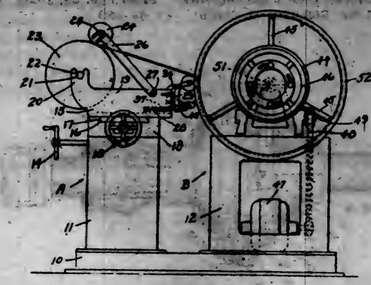


2. A gripping mechanism comprising supporting means, a gripper carriage, guiding means therefor, a gripper adjustably mounted on said carriage, a latch mechanism on the latter and gripper operating means adapted to automatically engage and disengage with the said latch mechanism.

1,394,184. UNIVERSAL JOINT. ALFRED B. MORSE, South Easton, Mass., assignor, by mesne assignments, to Julia A. Morse, South Easton, Mass. Filed Feb. 24, 1920. Serial No. 360,930. 1 Claim. (Cl. 64—89.)

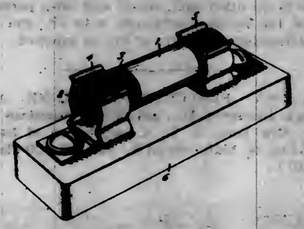
A universal joint construction, having a pair of substantially concave members cooperating to define a hollow chamber, said members being united at their contacting faces, in a semi-spherical form, each of said concave members having formed entirely through one part, an extending tube, at a diametrically opposite position from the extending tube in the other part, one of said tubes permitting the filling of the inclosed structure with oil, and the other tube determining the height of the oil supplied.

1,394,185. FISH-CUTTING MACHINE. ARTHUR R. BOOMER, Jonesport, Me., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1920. Serial No. 353,883. 29 Claims. (Cl. 17—10.)



1. In an apparatus for decapitating fish, the combination of a frame, a plurality of cutters arranged at intervals therein, and means common to all said cutters for delivering fish to said cutters for decapitation.

1,394,186. APPARATUS FOR ATTACHING TIRE-BASES TO RIMS. AMBROSE WEATHERILL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 28, 1919. Serial No. 293,187. 14 Claims. (Cl. 154—0.)

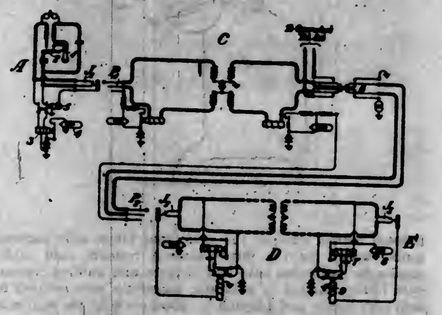


1. An apparatus of the kind described, comprising means for supporting and rotating a base rim, means for

applying a strip of material to said rim, including a plurality of members mounted thereon, each of said members

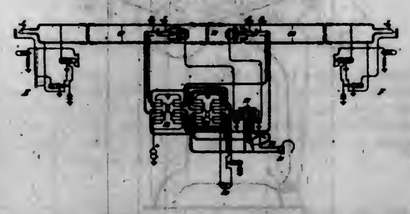
carrying a stitcher, and means for holding said stitchers against said rim.

1,394,187. RESISTOR. ELMER E. F. CREIGHTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 15, 1920. Serial No. 365,738. 5 Claims. (Cl. 219—76.)



1. A resistor comprising a conductive metal oxid and a sintered non-conductive vitreous material, said resistor having when subjected to variable voltages at constant temperature a substantially stable resistance.

1,394,188. OIL-BURNER. THOMAS L. DAVENPORT, Everett, Wash. Filed Apr. 19, 1920. Serial No. 375,164. 1 Claim. (Cl. 158—75.)



In combination with an oil burner, of a vacuum jet oil feed mechanism comprising a plurality of vacuum jets adapted to be secured together in end to end relation, each of said jets comprising an outer casing provided with a cylindrical passageway that is counterbored at each end to form a seat, a tubular member having a perforated flange on one end disposed concentrically within said passageway and adapted to fit within said seat, said tubular member being of less diameter than said cylindrical passageway whereby an annular passageway is formed therebetween and having one of its ends internally flared in a rearward direction, another tubular member having a perforated flange on one end adapted to fit within the said seat on the opposite end of said casing, said tubular member being of substantially similar diameter of the first named tubular member and having one of its ends externally tapered and fluted and adapted to be projected within the flaring end of the first named tubular member in concentric relation thereto to form a plurality of apertures of relatively small area therebetween, an intake conduit for fluid fuel connected with the inlet end of said tubular members, controlling means interposed in said intake conduit, a supply pipe adapted to conduct fluid under pressure into the said annular passageway, controlling means interposed in said supply pipe, and a delivery conduit connecting the outlet end of said tubular members with said burner.

1,394,189. REPEATER-CONTROLLING SYSTEM FOR FOUR-WIRE CIRCUITS. CHARLES S. DEMAREST, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 24, 1919. Serial No. 278,945. 8 Claims. (Cl. 179—170.)

1. In a telephone system the combination of two subscribers' circuits, trunk circuits adapted to connect each subscriber's circuit to a toll office,—a four-wire repeater trunk circuit extending between said toll offices, telephonic repeaters adapted to be connected with said four-wire circuit, link circuits adapted to connect said subscriber's circuits with said trunk circuits and said trunk circuits with said repeater trunk circuit, and means associated with said repeater trunk circuit whereby the said telephonic repeaters may be effectively connected into said repeater trunk circuit when a talking connection is established between the two subscribers' circuits.

1,394,190. TESTING SYSTEM FOR FOUR-WIRE CIRCUITS. CHARLES S. DEMAREST, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Feb. 24, 1919, Serial No. 278,945. Divided and this application filed July 24, 1920. Serial No. 398,657. 6 Claims. (Cl. 179—175.)

4. In a telephone system, the combination with a four-wire repeater circuit having a plurality of repeaters associated therewith but normally disconnected therefrom, of a gain testing circuit and a plurality of link circuits for connecting the said repeater circuit with the said testing circuit, the link circuits having means associated therewith for controlling the connection of the said repeaters with the said four-wire circuit.

1,394,191. DISPENSING-PUMP. BERNARD P. FALTIN, Bareville, Pa. Filed Oct. 27, 1919. Serial No. 333,449. 1 Claim. (Cl. 221—61.)

In a housing for a dispensing device, a pedestal having a circular guide rim formed with a rabbet on its outer and upper edge, a cylindrical casing having a fixed part and a rotatable part, the lower edge of the fixed part being secured to the outer face of the guide rim, the rotatable part being pivotally secured from above and its lower edge slidably seated in the rabbet on the circular guide, and a plurality of grooved rollers secured to the inner face of the rotatable part adjacent its lower edge, the grooves of the rollers seating over the upper edge of this circular guide to secure the rotatable part thereon.

1,394,192. PROCESS OF DRILLING WELLS. JOHN A. FITZPATRICK and GEORGE A. FITZPATRICK, Santa Ana, Calif. Filed Nov. 22, 1919. Serial No. 339,937. 2 Claims. (Cl. 166—21.)

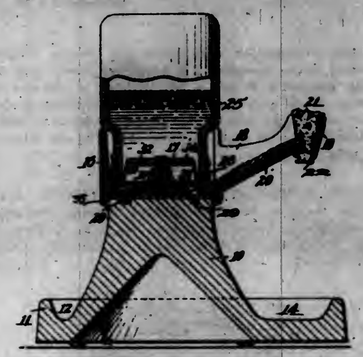
1. That method, of constructing a well wherein a casing is lowered into a hole of greater diameter, from top to bottom than the casing, forcing water down the casing to the bottom of the well so it flows upward in the outer chamber and washes it out, and filling the washed well hole with assorted bodies to form a filtering jacket about the casing, thereafter perforating the casing to form suction holes.

1,394,193. TRACK-WEEDER. JOHN B. FRANKLIN, Brockville, Ontario, Canada. Filed Apr. 30, 1920. Serial No. 375,377. 3 Claims. (Cl. 37—56.)

1. The combination with a railway car of a ballast spreading device comprising a relatively heavy drag body flexibly suspended from the car to hang by gravity upon the slope of the ballast and adapted to be drawn along the ballast by the car, and ballast dressing means carried by the drag body held to the ballast solely by the weight of said body.

1,394,194. COMBINATION KITCHEN UTENSIL. JOSEPH HENRI GAGNON, Montreal, Quebec, Canada, assignor of two-thirds to Victor Geoffrion, Montreal, Quebec, Canada. Filed May 10, 1920. Serial No. 380,277. 1 Claim. (Cl. 65—46.)

A device of the character described comprising a main body portion having its lower edge located in one common plane, a bottle cap piercer provided at one end of said member in the form of a barb having sharpened cutting edges and a flat edge parallel with the lower edge of the main body, the opposite end of the member constituting a handle whereby the pierced cap is raised upon the downward movement thereof, a portion intermediate the piercer and the handle adapted to engage the rim of the bottle neck to serve as a fulcrum in the cap raising operation, a portion opposite the fulcrum and at the end of the member which carries the piercer overlapping and constituting a guard for the piercer, and an upwardly curved portion on said member substantially directly over the piercer to serve as a thumb piece when the piercer is forced into the cap.



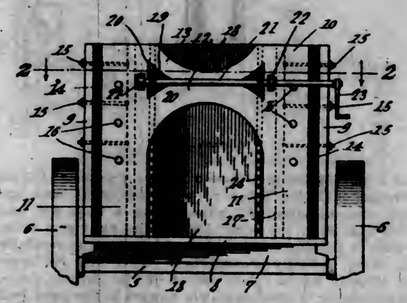
1,394,195. BUCKLE. THEODE GARCEAU, Three Rivers, Quebec, Canada. Filed May 10, 1921. Serial No. 469,952. 2 Claims. (Cl. 24—198.)

1. A buckle comprising a plate provided with an inner recess; inwardly projecting lugs provided intermediate of said recess, said lugs being adapted to form a strap receiving slot; a lug inwardly projecting from the lower edge of aforesaid recess, and suitably distanced from said other lugs, a part of said plate between said last named lug and said other lugs being cut out, whereby a passage

is formed intermediate of the lower edge of said plate, said inwardly projecting lug forming a locking element for the loop provided on the other end of the strap, substantially as described.

1,394,196. MOISTENING DEVICE. CARL CHESTER HARRIS, Orange, Mass., assignor to Rivet-O Manufacturing Company, a Corporation of Massachusetts. Filed June 18, 1919, Serial No. 303,832. Renewed Mar. 26, 1920. Serial No. 369,080. 7 Claims. (Cl. 91—54.4.)

1. A moistening device comprising a stand or base, a water reservoir removably mounted at an elevation thereon, and a moisture holding and applying element in uninterrupted communication with said removable reservoir having a downwardly projecting substantially flat surface for applying the moisture to the top of the article to be moistened.



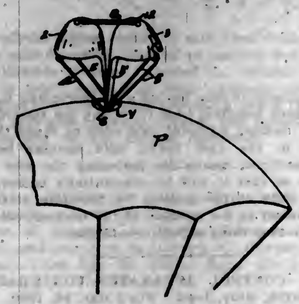
6. A moistening device comprising a receptacle, means for keeping the liquid at a constant level therein provided with a valve arranged to close automatically when said means is removed, means for holding absorbent material with its lower surface at a slight elevation above the level of liquid in said receptacle, and means for supplying moisture from said receptacle to said absorbent material.

1,394,197. FRUIT-PICKER'S BAG. WILLIAM F. KEELINE, deceased, El Centro, Calif., by Mrs. W. F. Keeline, administratrix, El Centro, Calif. Filed Dec. 1, 1919. Serial No. 341,673. 1 Claim. (Cl. 150—2.)

A fruit picker's bag comprising a flexible body having an upper open mouth, a substantially rigid U-shaped frame at the forward portion of the open mouth around which the forward portion of the upper edge of the body is secured, a flexible connecting strip secured at its opposite ends to the opposite ends of said U-frame and around which the rear portion of the upper edge of the body is secured, reinforcing strips externally of the bag mouth, secured to said connecting strip at their inner ends and to the U-frame at their outer ends, and a wear strip extending along the rear portion of the bag mouth and secured at its opposite ends to the inner ends of said reinforcing strips and also secured intermediate its ends to the said connecting strip.

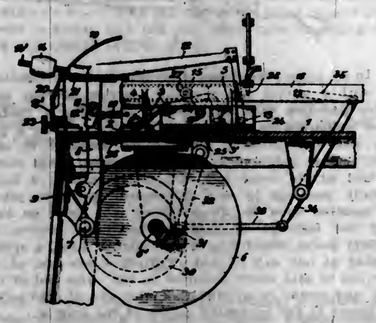
1,394,198. END-GATE. WILLIAM LAWRENCE, Harcourt, Iowa. Filed May 13, 1920. Serial No. 381,122. 1 Claim. (Cl. 296—52.)

In combination with the side boards of a wagon body, an end gate frame including leg members, a bar connecting the leg members secured to the upper ends thereof, said bar having gear openings, an end gate movable at the rear of the end gate frame and carrying rack bars, a shaft supported on the end gate frame and having gears positioned in the gear opening, the gears adapted to move over the rack bars, and a handle formed on one end of the shaft for operating the gears to raise and lower the end gate.



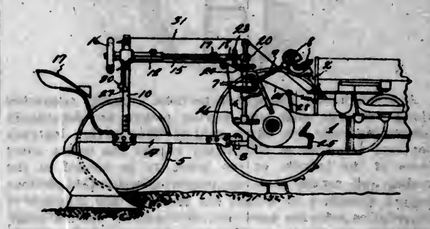
1,394,199. CLASP FOR HOSE-SUPPORTERS. JOHN S. LEARY, North Cambridge, Mass. Filed Jan. 15, 1919. Serial No. 271,211. 1 Claim. (Cl. 24—260.)

A clasp for a hose supporter comprising two jaws, one of said jaws terminating at one end thereof in a cylindrical portion extending transversely thereacross, the other of said jaws terminating at its free end in a curved portion adjacent to said cylindrical portion, said curved portion conforming to the curvature of said cylindrical portion, and a band encircling said jaws and slidable thereon whereby said jaws may be clamped together and material inserted therebetween firmly secured thereto, each of the jaws being so related to the other as to be at all times yieldable toward each other within said band to entirely relieve the pressure against said band during its movements upon said jaws, the curved ends of said jaws also being so related to each other as to separate automatically when the pressure thereon is relieved by said band.



1,394,200. [WITHDRAWN.]

1,394,201. AUTOMATIC OPENER FOR PARACHUTES. FREDERICK M. LEMON, Oklahoma, Okla. Filed July 13, 1920. Serial No. 395,912. 6 Claims. (Cl. 244—21.)



1. The combination of a harness attachable to the body of the person; a parachute connected to the harness; and means connected to the parachute to bring it to an upright position and facilitate the opening of the parachute; the last named means including a pair of opposed automatically opening bag-like devices.

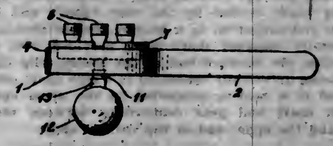
1,394,202. AUTOMATIC SHEET-FEEDING DEVICE. RICHARD LEUMANN, Chailly-sur-Lausanne, Switzerland. Filed Mar. 1, 1921. Serial No. 448,840. 6 Claims. (Cl. 271—26.)

1. In a device for removing from a pile of sheets used in wrapping machines separating sheets inserted between every two wrapping sheets, the combination of a first member adapted to engage every uppermost separating sheet, the wrapping sheets being removed by members of the wrapping machine, a second member adapted to engage with said sheet at a point at some distance from the point of engagement of the first member, means to move said members relatively to and toward each other so that no relative displacement between said members and the sheet at the points of engagement but a looping of the sheet is caused, and means provided on one of said members to spit the sheet through said loop.

1,394,203. STEERING DEVICE FOR TRACTORS. HENRY LUTTERBACH, Armstrong, Ind. Filed Dec. 21, 1920. Serial No. 432,283. 1 Claim. (Cl. 180—77.)

The combination with a pair of alined vehicles, the forward vehicle being provided with a steering post, of steering mechanism whereby the forward vehicle may be steered from the rear vehicle, said mechanism comprising a vertically disposed shaft carried by the forward vehicle, shafting and gear connections between said vertical shaft and the steering post, a horisontally disposed steering shaft carried by the rear vehicle and having its rear end supported in a bearing carried thereby, said horisontally disposed shaft being provided with a slip connection, the forward end of the horisontally disposed shaft being universally connected to a stub shaft rotatably mounted in a bearing supported on the upper end of a vertical shaft and gear connections between the stub shaft and the upper end of the vertical shaft.

1,394,204. PISTON. JOHN O. MCARTHUR, Milwaukee, Wis. Filed July 20, 1920. Serial No. 397,698. Renewed Sept. 8, 1921. Serial No. 499,316. 2 Claims. (Cl. 74—109.)

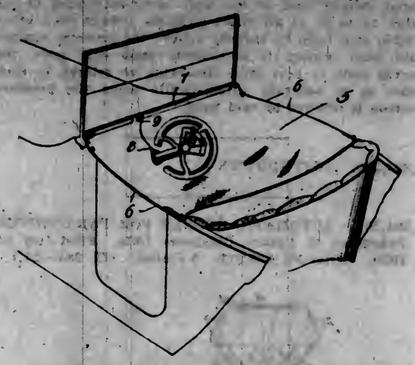


1. The combination with a piston having an annular channel in the periphery thereof, of a packing ring disposed in said channel, coiled springs disposed in pockets in the bottom of the channel, said coiled springs having their outer ends in engagement with the packing ring, the spiral springs to one side of the piston being of greater expansive force than the coiled springs at the other side of the piston thereby forming means for taking up the wear on the packing rings at its point of greatest wear and also forming means for supporting the weight of the piston.

1,394,205. BRUSH-HOLDER. OSMOND C. MALCOLM, Auburn, N. Y. Filed Aug. 6, 1920. Serial No. 401,841. 1 Claim. (Cl. 248—68.)

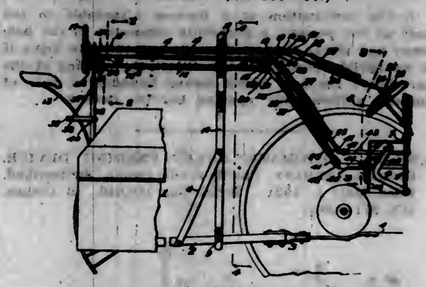
A brush holder comprising sections hingedly connected along one side edge and having means for detachably connecting their free edges, said sections having instruck portions arranged to clampingly engage the entire outer faces of the bristles of the brush to be housed in the casing and retain them in proper shape, said portions having shoulders to engage the brush at the junction of the bristles with the head to hold the brush against longitudinal movement in one direction and prevent the weight of the brush from resting on the bristles.

1,394,206. MASSAGE-BRUSH. FRED L. MATHEU, South Bend, Ind. Filed Aug. 9, 1920. Serial No. 402,457. 8 Claims. (Cl. 128—297.)



1. A massage brush comprising a hollowed head portion, a plate, a plurality of vacuum cups formed integral with said plate, a divided channel frame detachably secured to said head member, said frame being adapted to receive and house said plate, substantially as described.

1,394,207. CUT-OUT. FRANK J. MEDINE, Los Angeles, Calif., assignor of one-half to Harry S. Longfellow, Los Angeles, Calif. Filed Mar. 30, 1920. Serial No. 369,852. 5 Claims. (Cl. 251—125.)

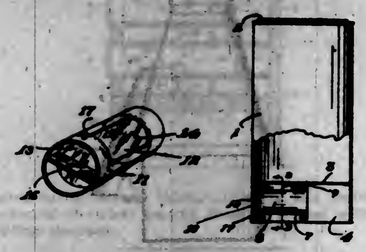


1. A cut-out comprising a supporting bracket, a movable arm swingably mounted on said bracket and having a closure head at its free end, an operating rod having a connection with said movable arm for swinging the latter to move its closure head to open position, means for engaging said operating rod on said bracket for retaining the closure head in open position, and means for pivotably swinging said movable arm so that its closure head is in closed position.

1,394,208. AUTOMOBILE-ROBE. RESTORE RYAN MERRIMAN, Cupertino, Calif. Filed June 16, 1917. Serial No. 175,189. 2 Claims. (Cl. 296—62.)

1. An automobile robe having a slit extending inwardly from the front marginal edge to receive the steering post, a resilient member adjacent said edge to cause the robe to snugly fit the dash board, said member being in separable sections, means for fastening the robe to the automobile so that it will be substantially immovable at the outer ends of the member to facilitate attachment and detachment of the sections of the member, said separable connection being adjacent said slit.

1,394,209. CONTROL APPARATUS FOR TRACTORS. JOHN MEYER, Gray, Iowa. Filed Mar. 16, 1920. Serial No. 366,205. 3 Claims. (Cl. 180—77.)



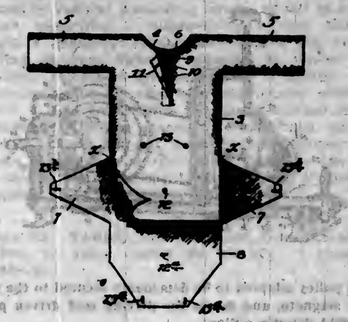
1. In an apparatus of the class described, the combination with a tractor and a trailer attached thereto, said tractor provided with a governing device, of a control device supported upon the trailer and comprising a primary sleeve, a primary rod slidably mounted in said sleeve against independent rotary movement, said sleeve provided at its outer end with a bifurcation, a block pivotally mounted in said bifurcation, a sleeve pivotally mounted upon the outer end of said block, an auxiliary rod fastened in said last-mentioned sleeve, an auxiliary sleeve mounted upon said auxiliary rod, a spring attached at one end to said auxiliary sleeve and at its other end to said sleeve mounted on the outer end of the block, and means connecting the outer end of said auxiliary sleeve to the governing device of the tractor.

1,394,210. COFFEE-CAN AND ATTACHMENT. WILLIAM SCHUYLER MILLER, San Diego, Calif. Filed Dec. 9, 1920. Serial No. 429,467. 1 Claim. (Cl. 221—166.)

A coffee can comprising in combination a receptacle, an air tight removable cover for said receptacle, a raised

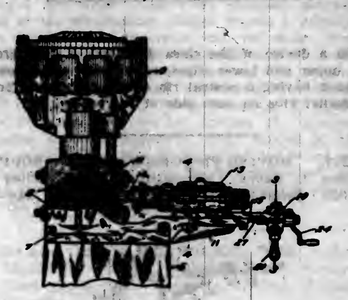
horizontal bottom in said receptacle, an opening in said bottom having a downwardly depending housing, a horizontal cylinder fixed to said housing, an upper and a lower opening in the walls of said cylinder, the upper opening thereof being held in alinement with the opening in the bottom of said receptacle by said housing, a rotatable cylinder fitting inside of said fixed cylinder, closed ends in said rotatable cylinder, an opening in the wall of said rotatable cylinder adapted to register with the upper or lower opening in said horizontal cylinder, an opening in the side of said receptacle and a thumb piece on said rotatable cylinder adjacent said opening substantially as and for the purpose described.

1,394,211. APPARATUS FOR DISCHARGING STATIC CHARGES. JOHN H. MORGAN, Holyoke, Mass., assignor of one-third to Bertha Webster, Springfield, Mass., and one-third to Charles W. Huntley, Holyoke, Mass. Filed Apr. 21, 1917. Serial No. 163,594. 4 Claims. (Cl. 175—364.)



1. In an apparatus for discharging static charges from material, an outer and inner tube one of which is of insulating material and the other of conducting material, a rotatable conducting rod within the inner of said tubes, means to rotate said rod, and conductors extending from said rod toward said material.

1,394,212. WATER-MOTOR. SAMUEL NEUMANN, New York, N. Y. Filed June 28, 1920. Serial No. 392,263. 2 Claims. (Cl. 253—136.)

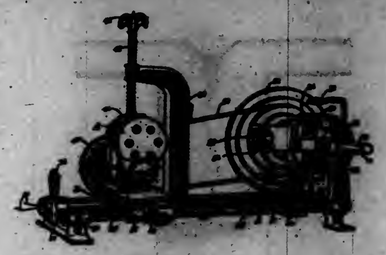


1. A water motor comprising a casing, a hollow shaft journaled therein, a plurality of bucket wheels revoluble on said shaft, said wheels having recessed hubs, a rod slidable in said shaft, a plurality of spring impelled dogs pivoted in said rod, said dogs being normally engageable in the recesses of said wheels, and means formed internally in said shaft adapted to release said dogs upon moving said rod outwardly.

1,394,213. INFANT'S GARMENT. VALERIE D. OSMUNSEN, Elmhurst, Ill. Filed Apr. 30, 1921. Serial No. 465,739. 2 Claims. (Cl. 2—41.)

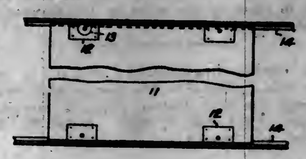
1. A garment of the character described comprising a rear and a front section, the rear section having a lower flap-extension folding over the lower portion of the front section, flaps extending from the opposite sides of the garment and folding toward each other over said folded flap-extension, and means adjacent the lower end of said front section for securing said flap-extension and said side flaps in place at one point on the garment and in superposed relation.

1,394,214. DRILL-SHARPENER. EDWARD L. OLDHAM, Denver, Colo., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed Jan. 7, 1919. Serial No. 270,050. 6 Claims. (Cl. 76—5.)



1. In apparatus of the character set forth, the combination with a base, of work clamping means mounted thereon, a device for operating on the work, mounted on the base and adjustable thereon toward and from the clamping means, a fixed support extending outwardly from the base beyond the outer end of said device, an actuating element rotatably mounted on the outer end of the support and held against longitudinal movement along the support, and an actuated element fixed to and movable with the said work operating device, said actuated element being engaged with and moved by the actuating element.

1,394,215. MAGNETO-TESTING MACHINE. DAVID W. OMAN, Minneapolis, Minn. Filed May 12, 1919. Serial No. 296,516. 2 Claims. (Cl. 175—183.)

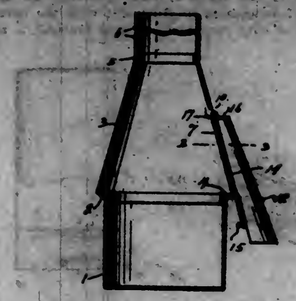


1. A magneto testing machine comprising two end supporting members, longitudinal tubular members connecting said end members, bearings on one of said end members for supporting a driving shaft, a driving pulley

attached to said shaft, a bed mounted on the said longitudinal members for holding a magneto to be tested, a

driven pulley adapted to be detachably secured to the shaft of the magneto, and means for driving said driven pulley from said driving pulley.

1,394,216. SLIDING DOOR. WILLIAM H. PARKER and GEORGE L. SMYTH, Montreal, Quebec, Canada. Filed Apr. 28, 1919. Serial No. 293,164. 6 Claims. (Cl. 20—19.)



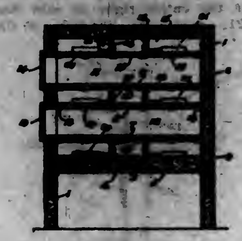
1. In a device of the class described, a door grooved at its upper and lower edges, rails above and below the door each having a central rib entering the door groove, and smaller ribs on each side of the central rib.

1,394,217. MOVING-PICTURE-MACHINE SUPPORT. MILTON L. PARRET, Marshalltown, Iowa. Filed July 6, 1920. Serial No. 394,320. 4 Claims. (Cl. 248—47.)

1. In a device of the class described, a support, an upright member rotatably mounted therein for vertical adjustment, means for effecting such vertical adjustment, a frame on said upright, a table pivoted to said frame and projecting therefrom, an adjustable device pivoted to said frame and said table and capable of longitudinal adjustment, a plate slidably adjustable on said table, means for locking said plate in different positions of its slidable adjustment, and guides on said plate for permitting the sliding mounting of a camera on the plate, said plate being arranged to be adjusted toward and from said frame, said guides being arranged transversely of the table.

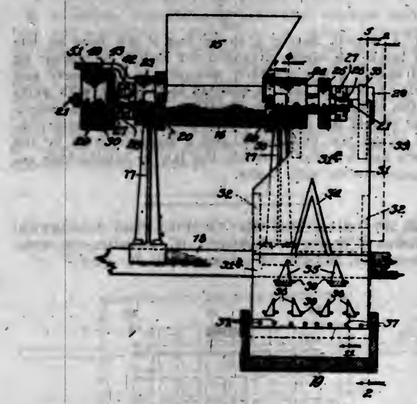
1,394,218. ORCHARD-HEATER OR SMUDGE-POT. ARTHUR C. FERGUS, Mission, Tex. Filed Dec. 31, 1920. Serial No. 433,947. 3 Claims. (Cl. 169—91.)

1. In an orchard heater, a cap adapted to be operatively supported upon an orchard heater or smudge pot, and provided with an opening, a flue connected to the upper end of the cap, a flue disposed adjacent the side of the cap, said side flue having a communicating opening with the interior of the cap, a damper mounted in guides and adapted to control the draft through said opening, and means for fastening the flue and the damper detachably and movably in position.



1,394,219. WHEEL-LOCK. DAVID J. RADDICK, San Francisco, Calif., assignor of one-half to Siegfried Graf, San Francisco, Calif. Filed May 13, 1920. Serial No. 381,023. 3 Claims. (Cl. 70—90.)

1. A wheel lock, comprising a chock, an arm integrally extending from one end of said chock, another arm pivoted to the other end of said chock, said integral arm having a perforated head, a U-shaped frame carried by the aforesaid pivoted arm, the side bars of said frame adapted to extend through said perforated head, and a lock carried by said perforated head.



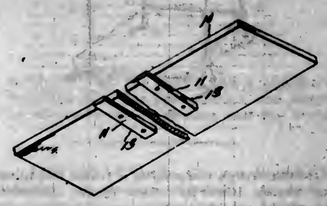
1,394,220. BAKING-OVEN. WILLIAM ROBERTS, Winnipeg, Manitoba, Canada. Filed Jan. 4, 1919. Serial No. 269,602. 1 Claim. (Cl. 219—38.)

In a baking oven, the combination with an inclosing insulated casing, of spaced fire brick decks supported from the inner walls of the casing and dividing the interior of the casing into distinct baking chambers and air tight heating chambers and one such heating chamber located above and one below each baking chamber, individual inlet doors allowing of entrance through the

casing to the several baking chambers and individually controlled electrical heating elements located within the heating chambers.

1,394,221. SALTING DEVICE. RALPH J. SAFFER, Los Angeles, Calif., assignor to Wilson & Company, Chicago, Ill., a Corporation of New York. Filed Feb. 17, 1921. Serial No. 445,676. 8 Claims. (Cl. 31—25.)

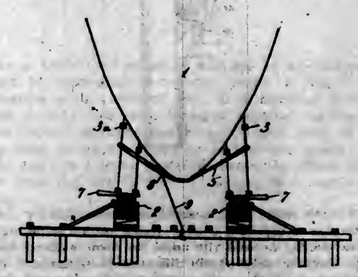
1. In a salt distributing device, in combination, means for delivering a substantially vertical stream of salt, a distributing board, and upwardly tapering distributing members mounted on said board, each being adapted to receive a stream of salt upon its apex and deliver divided streams of salt.



3. In a salt distributing device, in combination, a screw conveyer for delivering the salt, a disk spaced from the discharge end thereof to direct the issuing stream of salt substantially vertical, and means for distributing the discharged salt substantially evenly in a vertical plane.

5. A device for substantially evenly distributing a substantially vertical descending stream of salt in a vertical plane, comprising a substantially vertical distributing board, triangular distributing members mounted upon said board, their apices being directed upwardly and each of said triangular members being arranged to receive a stream of salt upon its apex and deliver dividing streams of salt to the distributing members below it.

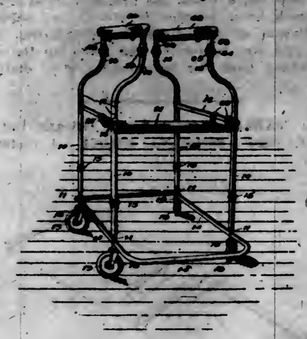
7. A device for substantially evenly distributing a substantially vertical descending stream of salt in a vertical plane, comprising a substantially vertical distributing board, a triangular member mounted on said board and having its apex directed upwardly to receive the descending stream of salt and divide it equally, and rows of laterally adjustable triangular distributing members secured to said board below the first-mentioned triangular member, each being adapted to receive and subdivide a divided stream of salt from the distributing member above it.



8. A device for substantially evenly distributing a substantially vertical descending stream of salt in a vertical plane, comprising a substantially vertical distributing board, a triangular member mounted on said board and having its apex directed upwardly to receive the descending stream of salt and divide it equally, rows of laterally adjustable triangular distributing members secured to said board below the first-mentioned triangular member, each being adapted to receive and subdivide a divided stream of salt from the distributing member above it, and pins to receive and break up the streams of salt falling from the lowermost row of distributing members.

1,394,222. TABLE. GEORGE SAUER, Orleans, Ind. Filed Dec. 21, 1920. Serial No. 432,271. 1 Claim. (Cl. 45—9.)

A table comprising a rectangular shaped frame, a pivoted cover pivoted to said frame substantially centrally thereof, a hinged leaf hingedly connected to one of the edges of the pivoted cover, said pivoted cover and hinged leaf when transversely disposed uncovering one end of the rectangular shaped frame, a detachable leaf for covering said uncovered end, the under face of said detachable leaf being provided with spaced cleats having their outer ends extending beyond the inner edge of the detachable leaf and underlying the pivoted cover, the rear ends of said cleats engaging the inner side of the rectangular frame for holding the detachable leaf against outward movement, stops carried by the frame and engaging the sides of the spaced cleats and preventing longitudinal movement of the detachable leaf, said cleats and stops providing means for preventing pivotal action of the table top as a whole.



1,394,223. RELEASING DEVICE FOR LAUNCHING-CRADLES. JOHN JOSEPH SCOLLAN, Newark, N. J. Filed May 3, 1920. Serial No. 378,583. 5 Claims. (Cl. 61—66.)

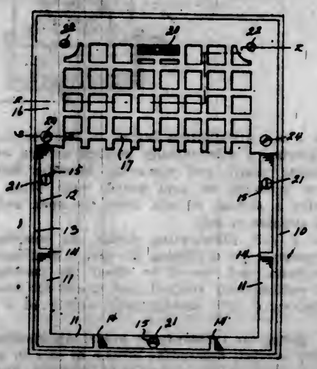
1. A launching cradle for ships comprising an after-poppet for each side of the ship, means for securing said

poppets together while the ship is on the ways, and means cooperable with the ways for automatically releasing said poppets from each other during the launching operation whereby the poppets float off to the sides of the launched ship.

1,394,224. ROLLING CRUTCH. MILTON DARNELL SCOTT, Kewanee, Ill. Filed Jan. 10, 1921. Serial No. 436,220. 2 Claims. (Cl. 155—22.)

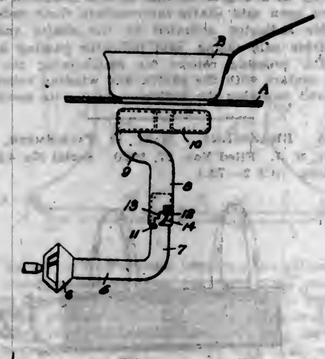
1. A rolling crutch comprising a frame including corner uprights having inwardly offset upper extensions, arm rests connected to the upper ends of said extensions in laterally adjustable relation, side hand rails adjustably connected to and extending between the uprights below their said extensions, and a seat bar adjustably engaged at opposite ends with the said hand rails and movable along the full length of the latter, said extensions of said uprights projecting freely above the hand rails whereby to leave unobstructed arm spaces below the arm rests.

1,394,225. WRENCH. ADOLPHUS M. SHANK, ANDREW SALTZER, and LOUIS SALTZER, Calexico, Calif.; said Andrew Saltzer and said Louis Saltzer assignors of one-sixth of the entire right to said Shank. Filed Jan. 3, 1921. Serial No. 434,690. 1 Claim. (Cl. 81—148.)



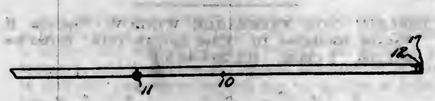
A wrench comprising a shank, a sleeve slidably thereon and having a tapering pocket and a shank engaging portion extending beyond the same to form a hand hold, a wedge block in said pocket adapted to adjustably clamp said sleeve to said shank, said sleeve being slotted, and an operating member projecting from said block through said slot and conveniently positioned with relation to said hand hold.

1,394,226. WRENCH. ADOLPHUS M. SHANK, ANDREW SALTZER, and LOUIS SALTZER, Calexico, Calif.; said Andrew Saltzer and said Louis Saltzer assignors of one-sixth of the entire right to said Shank. Filed Jan. 3, 1921. Serial No. 434,700. 3 Claims. (Cl. 81—130.)



1. A wrench having a shank and a jaw fixed on one end thereof, a sleeve arranged for sliding movement on said shank, a jaw pivotally mounted on said sleeve and having a portion that is adapted to interlock with parts of the shank, means for yieldably urging pivotal movement of said jaw relative to said sleeve, to cause interlocking of the jaw and shank, and a keeper carried by the sleeve and adapted to retain the jaw in interlocking engagement with said shank.

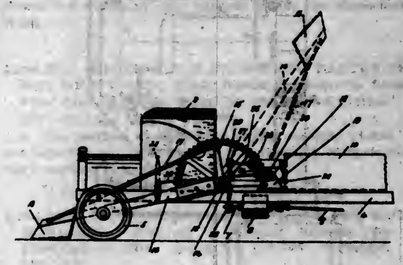
1,394,227. HEATING OR VENTILATING REGISTER. JAMES H. SHENTON, Nashua, N. H. Filed May 22, 1920. Serial No. 383,474. 5 Claims. (Cl. 98—52.)



3. An outer border frame for registers right angular in cross section to provide a border wall, and an inwardly projecting attaching flange, the outer face of the border wall being flat throughout the depth of the wall, the inner edge of the border wall being rabbeted along its entire length, and the attaching flange having screw openings whereby it may be attached to a supporting structure, a register plate fitting within the border wall and resting upon the shoulder formed by the rabbet on the border wall, the register plate having a thickness equal to the depth of the rabbet, and a rectangular frame carried by said register plate and extending into the space defined by the border frame and having dampers.

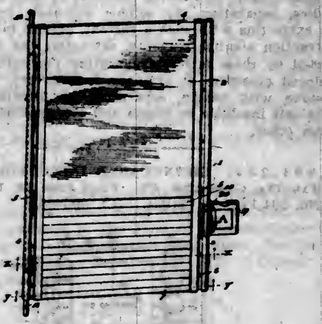
1,394,228. BURNER. JAMES B. SHERIDAN, Pittsburgh, Pa. Filed Sept. 28, 1920. Serial No. 413,357. 6 Claims. (Cl. 158—99.)

6. A burner comprising a vertically movable burner tube and a stationary mixer tube, a sliding telescoping connection between the burner tube and the mixer tube, the telescoping end of the burner tube being provided with a helically arranged slot, a pin on the mixer tube adapted to engage the edges of the slot, and a series of steps arranged on the upper edge of said helical slot, said steps being adapted for selective engagement with the pin to support the burner tube in any one of a plurality of different vertical positions.



1,394,229. MEASURING INSTRUMENT. ROY C. SHOWALTER, Altoona, Pa. Filed Sept. 26, 1919. Serial No. 326,447. 1 Claim. (Cl. 33—107.)

A folder rule having one end provided with a marking tip consisting of a body having spaced apart wings for receiving between them said end of the rule, said body also having a tapering knife blade portion offset from one side only thereof, said knife blade portion extending transversely of the entire end of the rule and located in the outside face of the rule when the latter is in its folded position.

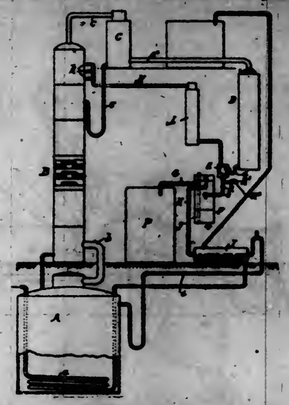


1,394,230. POWER-SHOVEL. FREDERICK E. SILLS, Statesville, N. C., assignor of one-half to Carolina Motor Company, Statesville, N. C. Filed June 2, 1920. Serial No. 386,122. 2 Claims. (Cl. 214—78.)

1. In a power shovel, a motor car provided with a frame, a rock-shaft mounted in bearings on the frame, a receptacle for dirt arranged on the frame to the rear of the rock-shaft, toothed segments secured on the end portions of the rock-shaft, arms secured to the toothed segments, a shovel secured between the free end portions of the said arms and adapted to scrape up road material in front of the motor car, a driving shaft journaled in the frame to the rear of the rock-shaft, toothed pinions secured on the end portions of the said driving shaft and gearing into the said toothed segments, a worm wheel secured on the said driving shaft, a countershaft supported by the frame, a worm mounted loosely on the countershaft and gearing into the worm wheel, means for revolving the countershaft in each direction, a clutch

member revolving with the worm, and a slidable clutch member revolving with the countershaft and adapted to revolve the aforesaid clutch member and the worm.

1,394,231. LISTING DEVICE. CYRIL A. SOANS, Chicago, Ill., assignor, by mesne assignments, to Acme Card System Company, a Corporation of South Dakota. Filed May 28, 1914, Serial No. 841,450. Renewed Aug. 2, 1918. Serial No. 248,074. 5 Claims. (Cl. 40—102.)

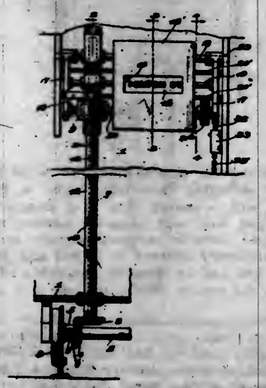


1. In a holder for members adapted to be removably retained by springing their edge under a flange, the combination with a central web, of a marginal member secured to said web, said marginal member having depressed central portions engaging opposite faces of the web, a bead member adapted to inclose and protect the edge of the web and an inwardly extending offset flange spaced from the web to receive the end of a member to be held.

1,394,232. PROCESS OF SEPARATING PARTLY MISCIBLE COMPOUNDS. ARTHUR STEVENS, Buffalo, N. Y. Filed Mar. 10, 1920. Serial No. 364,697. 6 Claims. (Cl. 23—24.)

1. The hereindescribed process of separating partly miscible constant boiling point compounds, consisting of

distilling a mixture of the compounds thereby producing a distillate containing a mixture of said compounds and an



excess of one of said compounds, separating said compound from said mixture, and returning said separated mixture to the mixture which is being distilled.

1,394,233. HIGHLY-ACTIVE PREPARATION OF ERGOT AND PROCESS OF MAKING SAME. ARTHUR STOLL, Basel, Switzerland, assignor to Chemical Works formerly Sandoz, Basel, Switzerland. Filed Apr. 11, 1919. Serial No. 289,422. 4 Claims. (Cl. 167—9.)

1. The herein described process for the manufacture of a highly active preparation of ergot, consisting in adding to the drug acid reagents in order to make the valuable basic substances insoluble in solvents for fatty bodies, separating the soluble non-basic substances by an extraction with such a solvent, adding to the mass of extraction alkaline reagents, extracting the alkaloids liberated by these latter, evaporating the extract under a reduced pressure at ordinary temperature, treating the residue with benzin, separating by filtration the raw alkaloids insoluble in benzin and recrystallising the same from ether.

1,394,234. CHANGEABLE INDICATOR. CARMINE TALOTTA, Clementon, Pa. Filed June 23, 1920. Serial No. 391,141. 7 Claims. (Cl. 40—95.)

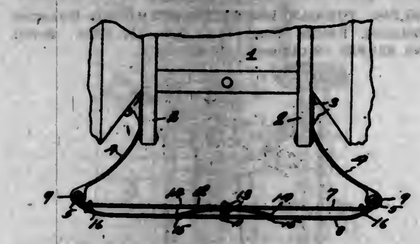
1. An indicator for railway cars comprising separated swinging frame members, said frame members receiving a plurality of shafts, one shaft passing entirely through openings in the frame members and adapted to enter sockets in the car to support said frame members for a swinging movement, gears carried by the shafts, a driven shaft actuated by the movement of the car having a gear cooperating with a gear on one of said shafts, a casing suspended upon said shafts intermediate their ends, and a movable indicator actuated by the shafts and disposed within said casing, said indicator passing around the shafts, pressing rollers for maintaining the indicator in contact with the shafts, and winding rollers for feeding and receiving the indicator during its movement.

1,394,235. BRASSIÈRE. MARY D. TATE-SMITH, West Orange, N. J. Filed Nov. 27, 1920. Serial No. 426,696. 4 Claims. (Cl. 2—73.)

1. In a brassière, the combination of an elastic body supporting band, a cover enveloping the body band and flexible securing bands attached to the body supporting band and cover.

1,394,236. QUICK METHOD FOR BREWING SOY. MEIJIRO TOGANO, Tokyo, Japan. Filed Feb. 19, 1920. Serial No. 359,856. 5 Claims. (Cl. 195—20.)

1. A rapid method of soy brewing consisting in salting soy-bean-koji with salt-water of about 20 degrees Baumé, maintaining this mixture at a temperature of approximately 40 degrees C. in order to decompose the albumin, and extracting the soy from said mixture.

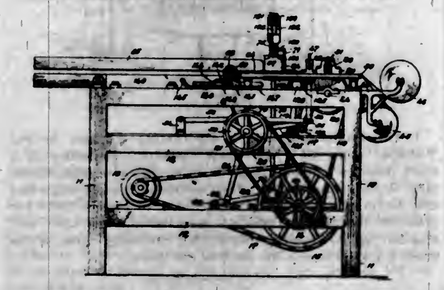


1,394,237. NON-FREEZABLE WINDOW. HECTOR B. VALADE, Kankakee, Ill. Filed Apr. 18, 1919. Serial No. 291,106. 1 Claim. (Cl. 20—40.5.)

The combination of a window sash having a glass therein, of an auxiliary window sash smaller than the window sash of the main window and having a glass therein, said auxiliary window sash having its sides equally spaced from the inner edges of the sides of the main window sash but adjacent thereto, a gasket carried by the inner face of the auxiliary sash and so disposed that it will engage the glass of the main sash adjacent the edge thereof, said gasket being so constructed that upon adjusting the auxiliary sash inwardly the gasket will spread outwardly into engagement with the inner edge of the main sash thereby protecting the glass of the main sash from the outside atmosphere and means carried by the main sash and auxiliary sash for adjustably securing said sashes together and causing the gasket to be forced outwardly into engagement with the inner edge of the main sash.

1,394,238. AUTOMOBILE-BUMPER. EDMOND VERLOOVE, Bad Axe, Mich. Filed July 26, 1921. Serial No. 487,595. 1 Claim. (Cl. 293—55.)

The combination with an automobile frame, of a spring bumper therefor, said bumper comprising forwardly and outwardly extending horizontally disposed spring arms, the outer ends of said arms terminating in inwardly extending horizontally disposed spaced ears, spring bars having their ends interengaged and pivoted between the spaced ears of the spring arms, said spring bars being spaced apart, a bowed spring secured to one of said spring bars

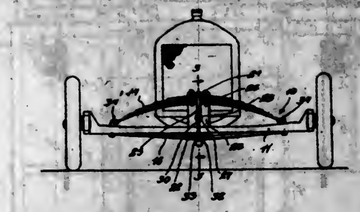


and having its ends slidably engaging the adjacent face of the other spring bar, ears carried by the ends of said bowed spring and overlying the edges of one of the spring bars, and slidable collars carried by the spring bars adjacent their ends and forming means whereby the tension of the bowed spring may be varied by holding the spring bars in various spaced positions in relation to each other.

1,394,239. CLOTHESLINE-BRACKET. PHILIP J. G. VETTER, Brooklyn, N. Y. Filed Dec. 1, 1919. Serial No. 341,740. 5 Claims. (Cl. 68—3.)

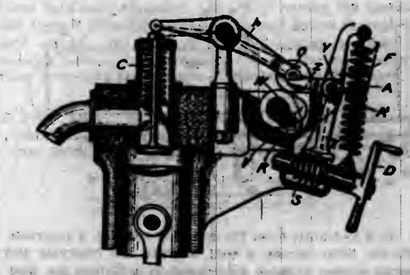
1. A clothes line support comprising a bracket adapted to be secured to a window frame and having a slot therein, a clothes line supporting bar pivotally and slidably attached to said bracket, a pin on said bar adapted to work in said slot, and means on said bar for guiding a clothes line.

1,394,240. MACHINE FOR WRAPPING ARTICLES. CARL O. WACHTER, Wheeling, W. Va. Filed Oct. 14, 1919. Serial No. 330,627. 7 Claims. (Cl. 93—2.)



1. In an automatic machine for wrapping articles, wrapping material feed mechanism, article feed mechanism, a reciprocating box for transferring the articles from the article feed mechanism and depositing them in a position to be wrapped, angle plates hinged to the box, a portion of each of said plates underlying said box for supporting an article therein, plates carried by the angle plates and adapted to engage a portion of the machine for swinging the angle plates to a releasing position from under the box when the box reaches its limit of movement in one direction, means for engagement with said last named plates to return the angle plates to normal position when the box reaches its limit of movement in the other direction, and means for wrapping the material about the deposited articles.

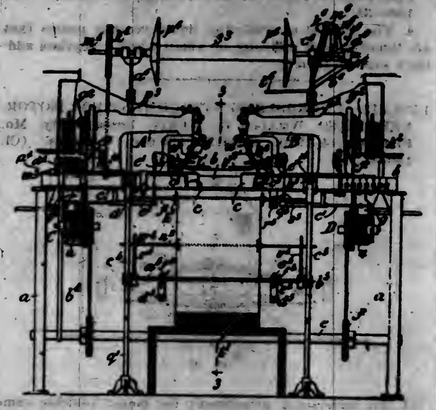
1,394,241. METHOD FOR PRODUCING PASTES THAT MAY BE POURED. EMIL WEBER, Schweppnitz, Saxonia. Filed June 15, 1920. Serial No. 389,253. 4 Claims. (Cl. 106—38.)



4. The method of rendering liquid ceramic pastes that are liquefied with difficulty by alkali which comprises adding a saponin thereto.

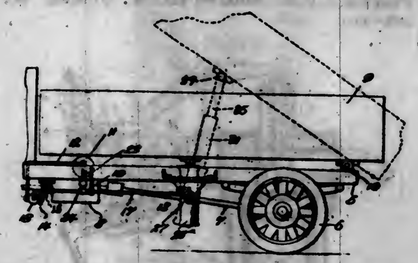
1,394,242. UNDERSLUNG ATTACHMENT FOR MOTOR-VEHICLES. WILLIAM G. WEBAT, Kansas City, Mo. Filed Oct. 14, 1919. Serial No. 330,646. 3 Claims. (Cl. 180—1.)

1. An underslung attachment for motor vehicles comprising means for supporting the rear spring of the machine whereby the terminals thereof are secured at points rearwardly of the adjacent axle, a substantially Z-shaped bracket having one end secured to the machine and its opposite end arranged in advance of the latter, means for securing the front spring of the machine to the latter mentioned end of the bracket with the body of the bracket arranged between the spring and radiator, a radius rod terminally connected with the adjacent extremities of the front spring, and the body portion of the bracket having an opening beneath the spring for the purpose specified.



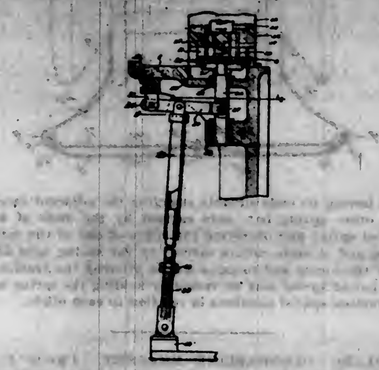
1,394,243. REVERSING-GEAR FOR INTERNAL-COMBUSTION ENGINES. HANS WIEDERKEHR, Zurich, Switzerland, assignor to The Firm of Schweizerische Lokomotiv & Maschinenfabrik, Winterthur, Switzerland. Filed Nov. 3, 1920. Serial No. 421,575. 2 Claims. (Cl. 123—41.)

1. A reversing gear for internal combustion engines, comprising a cam shaft adapted to be axially displaced and provided with ahead and astern cams, a roller coacting with either of said cams, a rocking lever for transmit-



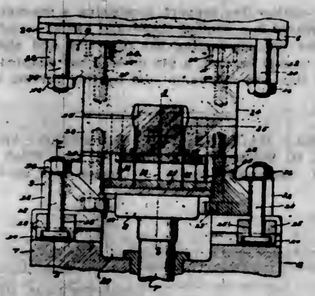
ting the cam action to a spring-loaded valve, lifting means operatively connected to said roller, and an auxiliary spring combined with said lifting means to compensate the antagonistic action of the valve spring.

1,394,244. MACHINE FOR HEMSTITCHING FABRICS. Montague Adair, Brooklyn, and William Prescott Snyder, New York, N. Y., assignors to Adair Machine Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 29, 1911, Serial No. 617,804. Renewed Mar. 18, 1921. Serial No. 453,475. 7 Claims. (Cl. 112—2.)



1. In an automatic sewing machine or the like, the combination of a pair of non-rotative bars over which the fabric is led, an adjustable edge turning device for turning up the side of the fabric, said edge turning device comprising a pair of rods mounted to turn the edge of the fabric, one of said rods having an angular portion overlying the body of the fabric, a hem folder comprising a scroll member having a tapering portion from the entrance toward the exit, and said hem folder having a wide upper plate adapted to lie across the top of the fabric, and a take-up mechanism comprising a freely movable rod beneath which the cloth passes, and means for removing the surplus cloth beyond said rod.

1,394,245. HYDRAULIC HOIST FOR DUMPING-VEHICLES. George W. Berry, Kane, Pa. Filed June 9, 1919. Serial No. 302,880. 2 Claims. (Cl. 298—22.)

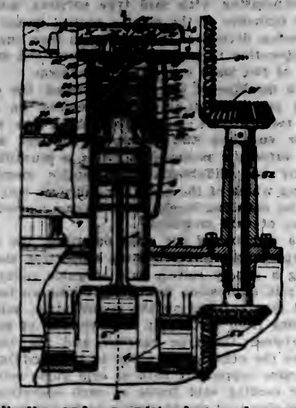


1. In a hydraulic hoist for dumping vehicles, a reservoir, hydraulic hoist means, a lead between the reservoir and hoisting means, a pump interposed in said lead for feeding liquid to the hoisting means under pressure from the reservoir, a pipe connecting the portion of the lead between the pump and hoisting means with the reservoir, an automatic relief valve within the pipe and adapted to be automatically actuated when the pressure between the pump and hoisting means exceeds a predetermined value to permit the liquid to return to the reservoir and a return pipe connecting the reservoir with the lead between said pump and hoisting means and having a restricted passage.

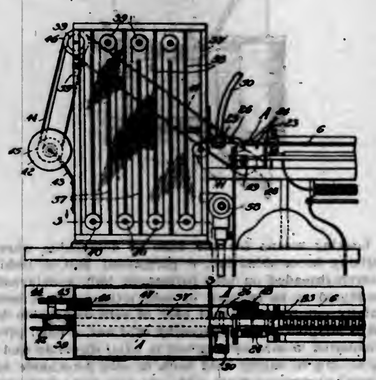
1,394,246. DIE-CASTING EJECTOR. Balthar Emanuel Bolling, Racine, Wis. Filed Jan. 15, 1920. Serial No. 351,639. 8 Claims. (Cl. 22—94.)

1. The combination with a die casting machine having a reciprocal head carrying a die part provided with ejector openings, of means for positively ejecting castings from said die part, comprising means extending into said openings and movable therethrough after said reciprocal head has reciprocated a predetermined distance.

1,394,247. DIE-BLOCK. Balthar Emanuel Bolling, Racine, Wis. Filed Jan. 15, 1920. Serial No. 351,640. 7 Claims. (Cl. 22—57.)



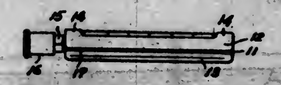
1. In combination with a die casting machine having T-shaped slots, of a die block therefor, consisting of a block member of rectangular form having a comparatively large ejector opening extending vertically therethrough and also having projecting apertured ears to receive bolts for attachment to the T-shaped slots of the machine and also having bolt openings extending vertically through the block for attaching a die part to the block.



1,394,248. VALVE FOR INTERNAL-COMBUSTION ENGINES. Everett R. Burtnett, Los Angeles, Calif., assignor of one-half to Homer A. Brunell, Los Angeles, Calif. Filed Feb. 25, 1920. Serial No. 361,272. 7 Claims. (Cl. 123—75.)

1. In an internal combustion engine, a piston cylinder with a water jacket immediately surrounding its body and

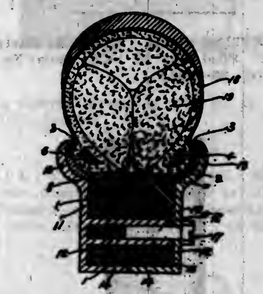
said chamber extending in a compression pocket part having inlet and outlet ports and having a chambered diametrical head; the said ports being arranged substantially helically; and concentric sleeve valves surrounding the head and controlling the inlet and exhaust of fuel and gases into and from the compression pocket.



1,394,249. DRIER FOR MOTION-PICTURE FILMS. John G. Capstaff, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Original application filed Mar. 29, 1918, Serial No. 225,388. Divided and this application filed Apr. 2, 1920. Serial No. 370,847. 1 Claim. (Cl. 34—48.)

In a machine for treating continuous lengths of motion picture film, a drier comprising a casing and upper and lower guides therein over which the film may be passed in successive loops, partitions connecting one set of guides with the opposite wall of the casing and alternating partitions having their ends spaced from the other set of guides to form a sinuous passage for the film and means for moving a current of air through said passage on one side of the film.

1,394,250. CIGARETTE-MAKING MACHINE. Castellani Cesare, Montreal, Quebec, Canada. Filed Jan. 26, 1920. Serial No. 354,022. 1 Claim. (Cl. 131—5.)



In a cigarette making machine, a pair of hingedly connected members movable into position to form a tube having a longitudinal opening for the gummed edge of a cigarette paper, one of said members being provided at the hingedly connected portion thereof with stop lugs adapted to limit separation of the members, the other of

said members being provided opposite the hingedly connected portion thereof with a projecting lip lying outside of the longitudinal opening and forming a support for the gummed edge of the cigarette paper, and a forming plate movable within said members.

1,394,251. [WITHDRAWN.]

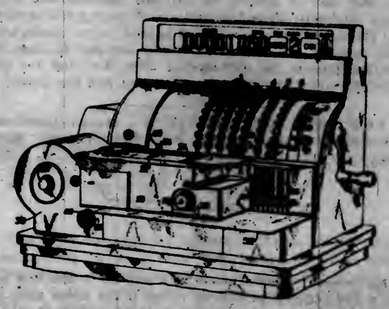
1,394,252. TIRE-RIM FOR USE ON AUTOMOBILES AND OTHER VEHICLES. Thomas William Costello, San Francisco, Calif. Filed July 24, 1919. Serial No. 313,047. 1 Claim. (Cl. 152—7.)

A pressure clamp for securing a circumferentially divided clencher rim to a wheel felly comprising a pair of complementary plates adapted to be engaged with opposite sides of the felly, each of said plates having its outer end extended beyond the felly and bent in a curvilinear manner to embrace one of the rim flanges, the inner ends of said plates being directed inwardly at right angles to extend across the inner side of the felly in engagement therewith and to a point located substantially midway the width of the felly, one of said plates having a right angularly directed hollow sleeve integral with the inner face thereof and adapted to extend transversely through the body of the felly in the direction of the opposite plate, said last-mentioned plate having an opening corresponding in diameter to the bore of the said sleeve and alined with the said bore to provide an entrance thereto, said sleeve being internally threaded, and a bolt having the threaded end thereof threadedly engaged in said sleeve through the said opening, the head of the bolt serving to close the opening against the entrance of dust, dirt and the like, thus protecting the threads of the bolt and the sleeve.

1,394,253. WINDOW-CATCH. Matts Dahlgren, Falköping-Ranten, Sweden. Filed July 21, 1920. Serial No. 397,856. 1 Claim. (Cl. 292—202.)

An element for attachment to a window frame and having a downwardly narrowing recess in its upper side, and a catch arranged to be placed between the window post and the window and provided on one of its broad sides with notches which enable said catch to be adjustably engaged in said recess of said element.

1,394,254. SUN AND RAIN SHIELD FOR AUTOMOBILES. WILLIAM H. DAMOW, Los Angeles, Calif. Filed Jan. 31, 1919. Serial No. 274,297. 1 Claim. (Cl. 296—95.)

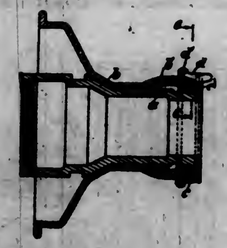


The combination with windshield supporting members, of inverted L-shaped brackets having the lower ends of their vertical legs pivotally and adjustably connected to the upper portions of said windshield supporting members, and a corrugated metal plate having its ends secured to the horizonal arms of said invered L-shaped brackes.

1,394,255. TESTING-MOLD. HELEN M. DAVIS, Washington, D. C. Filed Sept. 23, 1920. Serial No. 412,827. 7 Claims. (Cl. 25—122.)

1. A testing mold blank for cement and concrete mixes comprising a longitudinally slit paper or pasteboard tubular mold uniform and symmetrical throughout its length and coated with a waterproofing substance, whereby a plurality of such molds may be nested.

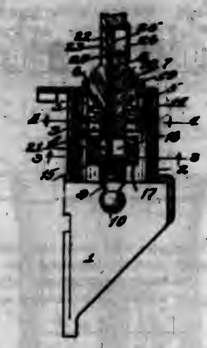
1,394,256. CASH-REGISTER. FREDERICK L. FULLER, Bridgeport, Conn., assignor to The National Cash Register Company, Dayton, Ohio. Filed Apr. 24, 1918. Serial No. 230,455. 94 Claims. (Cl. 235—3.)



13. In a machine of the class described, the combination of a plurality of type carriers, a main operating mechanism, means operated by the main operating mechanism for moving the type carriers, differentially manipulative means controlling the extent of movement of the differential means, printer control means, two impression devices coöperating with said type carriers, and means under the influence of the printer control means causing the impression devices to change at will from their single printing operation to a plurality of operations during an operation of the main operating mechanism.

75. In a machine of the class described, the combination of a plurality of accounting devices, an actuator therefor, manipulative means controlling the actuator, means for engaging the accounting devices with the actuator, automatic means comprising a plurality of independently and differentially adjustable members for determining which of the accounting devices will be operated by the engaging means, and means controlling the adjustment of said members.

90. In a machine of the class described, the combination of type carriers, record strip supporting mechanism comprising a supply roll, a pair of guide rollers and a receiving roll, impression means for taking an impression from said type carriers on the record strip, said record strip passing from the supply roll over one of said guide rollers between the type carriers and the impression means over the other guide roller to the receiving roll, a pivoted frame supporting both of said guide rollers, and means for rocking said frame at each operation of the machine to give said record strip a backward and forward movement relative to the type carriers.



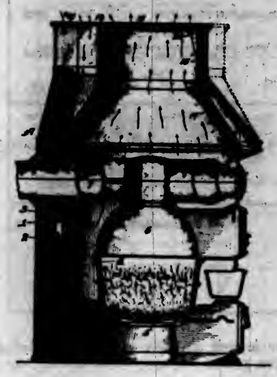
1,394,257. LOCKING DEVICE FOR DETACHABLE-WHEEL HUBS. MAX HEBING, Rosneberg, Germany. Filed Dec. 27, 1920. Serial No. 433,543. 3 Claims. (Cl. 301—9.)

1. Locking means for the hubs of detachable wheels, comprising in combination, a permanent hub, a locking nut screw-threaded on said permanent hub, a detachable hub adapted to be engaged by said locking nut, a series of axially cut teeth on that part of said detachable hub which is adapted to be engaged by said nut, a pawl pivotally mounted in said locking nut in axial direction and so as to be able to engage said teeth in said detachable hub, said pawl protruding from said nut so as to be taken hold of by hand for the purpose of being disengaged from said teeth by swinging said pawl axially upward, and resilient means mounted in said nut and adapted to act upon said pawl in the locking position only, whereby said pawl is enabled to remain stationary in the swung up position while the same is out of engagement with said teeth on said hub so that then said nut can be tightened up and adjusted.

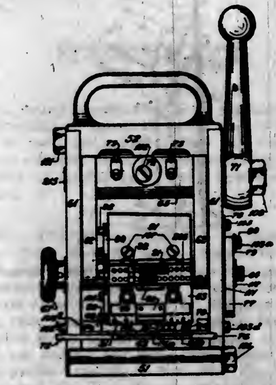
1,394,258. GEAR-SHIFT-LEVER LOCK. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 27, 1919. Serial No. 273,881. 9 Claims. (Cl. 70—128.)

3. In a gear shift lever lock the combination with a stationary plate having an opening therein, a gear shift lever projecting through the opening in said plate, and locking means on said lever below said plate adapted to be elevated

to engage in said opening to hold the lever in locked position.



1,394,259. AUTOMOBILE-TIRE-LOCK CABLE. COLVIN L. JOHNSON, Chicago, Ill., assignor to Johnson Automobile Lock Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 6, 1920. Serial No. 356,737. 5 Claims. (Cl. 28—5.)

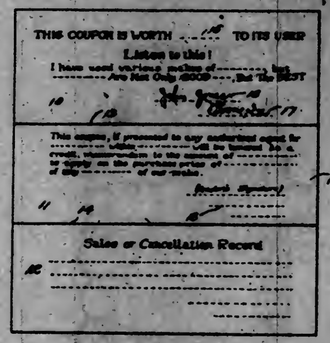


1. An armored cable comprising a core member, a plurality of passaged intermediate cable links engaged on said core member, a terminal head in engagement with one of the end intermediate links, a wedge plug engaged on one end of said core member and driven into said terminal head to hold the core member secured in said terminal head, a second terminal head interfitting the other intermediate end link, a plug member therein, and a wedge plug engaged on the other end of said core member and driven into said plug member to tension the core member for holding the intermediate cable links in coacting interfitting relation.

1,394,260. DUPLEX GRATING FOR PIPELESS FURNACES. WESLEY J. JOHNSON, Chicago, Ill. Filed Mar. 27, 1919. Serial No. 285,514. 5 Claims. (Cl. 98—49.)

2. A duplex grating for use with pipeless furnaces having a warm air jacket and a cold air jacket substantially surrounding the same at its emergent end, comprising a cold air section having a marginal portion, and a warm air section lying within said cold air section and substantially touching said marginal portion on one side of the grating, the warm air section being entirely surrounded by the cold air section except at said touching point, whereby to cause the cold air to pass downwardly outside of the hot air section on all sides except at the said touching side to prevent passage of cold air to non-heating portions of the furnace.

1,394,261. EMBOSSING-MACHINE. MATTHEW H. LOUGHRIDGE, Bogota, N. J., assignor to Atlas Railway Signal Company, a Corporation of New Jersey. Filed July 30, 1919. Serial No. 314,330. 15 Claims. (Cl. 101—3.)



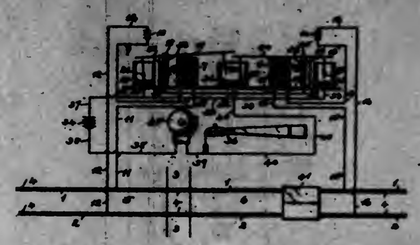
1. In an embossing machine of the class described, a type rotor arranged for vertical movement and having a plurality of legs, a shaft for said rotor having a plurality of flat sides corresponding with the legs of said rotor and a spring controlled member engaging the flat sides of said shaft to position the legs of said rotor.

1,394,262. COUPON SYSTEM. EUGENE STEBBINGS, Des Moines, Iowa. Filed June 22, 1921. Serial No. 479,618. 1 Claim. (Cl. 283—60.)

A coupon comprising three sections, each section being provided with data relating to the use thereof, the first section being provided with a testimonial statement referring to the goods for which the coupon is used, the

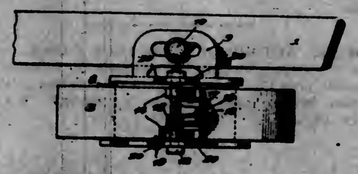
second section being provided with a statement of the vendor of the goods used with the coupons as to the

worth of the coupon and the third section being a sales or cancellation record for the coupon all for the purposes specified.



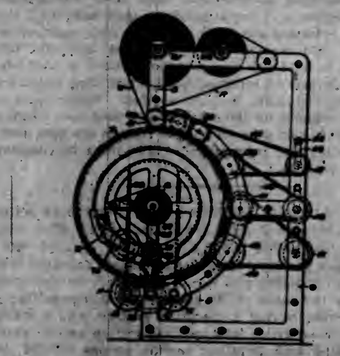
1,394,263. JACK FOR AUTOMOBILES AND THE LIKE. JOHN A. ADELL, Orange, Mass., assignor to The Adell Manufacturing Company, Inc., Orange, Mass., a Corporation of Massachusetts. Filed Apr. 11, 1921. Serial No. 460,204. 6 Claims. (Cl. 254—111.)

1. In a jack, the combination with a casing, a rack movable up and down in the casing, and a handle lever for operating the rack, of an operating pawl pivoted to the end of said operating lever, a second pawl pivoted at a stationary point, a single spring coiled around the pivot of the second pawl, each end forcing one of said pawls toward the rack, and a stronger spring pivoted on the pivot of the first named pawl and movable with the handle lever for pushing the operating pawl from the rack as it descends and allowing the first named spring to move it against the rack as it ascends.



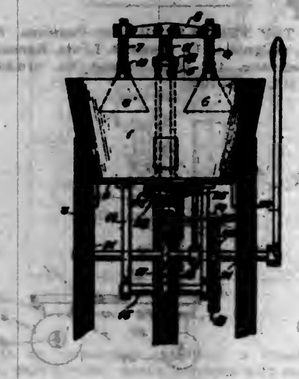
1,394,264. ROADWAY-CROSSING SIGNAL. CHARLES ADLER, Jr., Baltimore, Md. Filed Feb. 14, 1920. Serial No. 358,769. 2 Claims. (Cl. 246—128.)

1. In a signal device for railway crossings the combination with the track-rails formed into separated insulated sections at opposite sides of a crossing-point, a relay for one section said relay having a connection with a current-supply and another connection with one of the track-rails; another connection from said current-supply to the other track-rail of said section; a relay for the other insulated track-section and said latter relay having connection with a current supply and the two rails of said other track section; an armature for each relay and each armature having a front contact-point and a back contact-point said armatures being arranged so that when both



are down one will engage and hold the other; a signal device, and a signal circuit including the front point of one armature, the back point of the other armature and the signal device when the armatures are in reverse positions.

1,394,265. PICK-STICK CHECK. JAMES AUGUSTUS ANDREWS and JOHN WILLIAM HERBERT, Biddeford, Me. Filed Nov. 10, 1920. Serial No. 423,069. 5 Claims. (Cl. 139—22.)

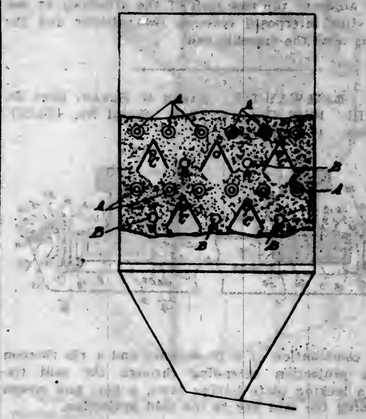


In a pick stick check, a check strap, a guide therefor, a reversible pivoted cam carried by the guide, an upper and a lower pair of spring anchors, a spring connected to the cam pivot for tensioning the latter, an eye on one end of the spring engaged with any one of the anchors of the pairs thereof, and a screw adjustably connected to the cam, the other end of the spring being formed to engage in the kerf of the screw and being removable therefrom to allow of adjustment of the screw to adjust the latter and thereby the tension of the spring.

1,394,266. WRAPPING OR PACKAGING MACHINE. EDWARD H. ARGIES, Framingham, Mass. Filed Dec. 31, 1917. Serial No. 209,642. 22 Claims. (Cl. 93—2.)

1. A machine for wrapping toric articles comprising means for gathering the fullness of a sheet of wrapping material to shape it about the sides of the article and a folding mechanism approximating the form of the article through which the article and said sheet are advanced to smooth the gatherings about the article.

1,394,267. WASHING-MACHINE. WILLIAM C. BASSEL, Providence, R. I. Filed May 5, 1921. Serial No. 466,955. 6 Claims. (Cl. 74—14.)

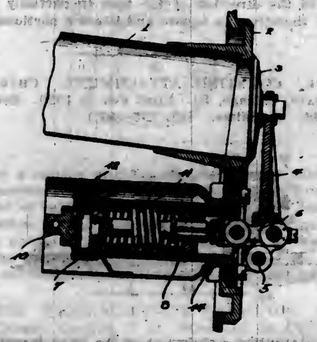


1. In combination with a driving shaft and a rotatable and vertically movable member having a ratchet thereon, a pawl carrying arm on the shaft, and having the pawl thereof engaged with the ratchet to operate the latter, a yoke swiveled on said member, a wheel, a flexible connection between the yoke and wheel for winding upon the latter, a driving connection between the shaft and wheel, and means to oscillate the driving shaft.

1,394,268. NON-SKID DEVICE. BAILEY OWEN BRADLE, Atlantic, Iowa. Filed Nov. 26, 1920. Serial No. 426,591. 9 Claims. (Cl. 301—46.)

3. In a device of the class described, non-skid members pivotally mounted on the wheels of an automobile, members for locking said non-skid members in operative position, yielding means for holding said non-skid members in inoperative position, and means for either moving said non-skid members from operative position to inoperative position, or inoperative to operative position, said last means including a pair of shafts slidably mounted, a pivoted lever pivoted to the ends of said shafts whereby movement of said lever will impart a sliding movement to said shafts in opposite directions, the free ends of said shafts being provided with members designed to engage the non-skid members, a spring for moving said lever in one direction and a second lever for moving said first lever in the opposite direction.

1,394,269. APPARATUS WITH SEVERAL TUBES FOR TREATING PULVERULENT MATERIALS. Armand PAUL EDOUARD BOURDET, Paris, France. Filed Jan. 10, 1920. Serial No. 350,715. 2 Claims. (Cl. 34—34.)



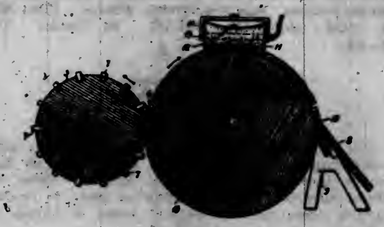
2. Apparatus for treating pulverulent materials, comprising thermic tubes, blowing tubes and sucking tubes in spaced relation, and screen between said blowing tubes and said sucking tubes.

1,394,270. ARTIFICIAL TEXTILE FABRIC AND THE PROCESS FOR ITS MANUFACTURE. JAQUES EDWIN BRANDENBERGER, Neuilly-sur-Seine, France. Filed May 18, 1920. Serial No. 382,375. 16 Claims. (Cl. 18—54.)

1. The herein-described process, comprising the steps of emulsifying a viscous solution and a gaseous fluid which is inert to said solution, and expressing the resultant emulsion through a drawing plate to produce an article containing an internal series of bubbles of said fluid.

1,394,271. TORPEDO. EDMUND S. R. BRANDT, Newport, R. I. Filed Mar. 26, 1921. Serial No. 456,000. 1 Claim. (Cl. 114—20.)

In a torpedo, in combination, an exhaust pipe, a valve normally closing said pipe, a spring actuated piston

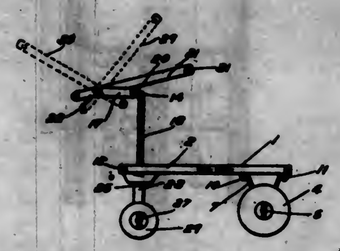


connected with said valve to normally maintain the same in closed position, a cylinder surrounding said spring and piston, means inclosing said cylinder for absorbing the heat radiated from the exhaust pipe, said means being supported adjacent the end wall of the afterbody at one end and clips interposed between the cylinder and the said means near the opposite end.

1,394,272. RAILWAY-TIE. AARON G. BRYAN, East St. Louis, Ill. Filed Dec. 13, 1920. Serial No. 430,221. 14 Claims. (Cl. 238—46.)

1. The combination of a tie-member and a rib thereon having a projection extending through the said tie-member, a locking plate having jaws, a key, and means for fastening the said key to the said projection.

1,394,273. METHOD OF PRODUCING LATHS. ALBERT H. CARRINS, Asheville, N. C., assignor of one-half to Edwin W. Grove, St. Louis, Mo. Filed Dec. 4, 1918, Serial No. 265,275. Renewed Aug. 8, 1921. Serial No. 490,726. 3 Claims. (Cl. 144—309.)

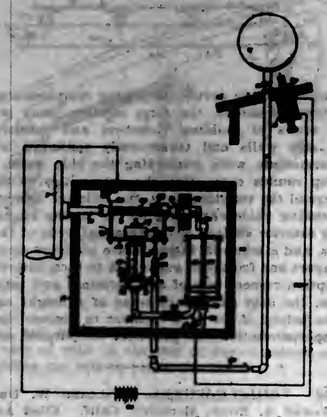


1. A method of producing a lath, consisting in cutting strips of predetermined width and length directly from a log of wood of fibrous and pithy nature, and forming key recesses in the surface of the lath by brushing said surface in the direction of the fiber to partially remove the pith therefrom to expose and liberate portions of the fiber.

1,394,274. COUNTING ATTACHMENT. CHARLES E. CASCRAIN, Chicago, Ill. Filed Feb. 2, 1920. Serial No. 355,544. 5 Claims. (Cl. 235—91.)

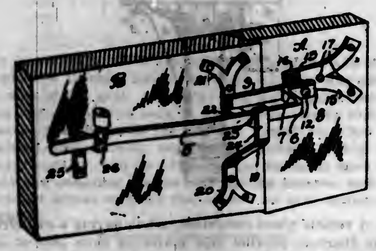
1. In a counting attachment of the class described, the combination of a housing having an opening in its bottom wall, counting wheels arranged within said housing, an actuating arm extending downwardly from said counting wheels to said opening, a bar closing said opening, said housing having guide walls for guiding said bar during relative movement between said bar and housing, a yielding pawl ridge on said bar for cooperating with said arm to cause operation of the counting wheels during relative movement between said bar and housing, and means for obstructing operative cooperation of said ridge with said arm during relative movement of said bar and housing, said pawl being yielding whereby it will glide past said arm when obstructed without causing operation thereof.

1,394,275. TOY VEHICLE. ROY C. CASNER, Kansas City, Mo., assignor to Le Grand B. Lewis, Kansas City, Mo. Filed Aug. 11, 1919. Serial No. 316,644. 2 Claims. (Cl. 308—165.)



1. In a device of the class described, a seat provided with rear wheels, a rod projecting through the forward part of the seat, an inverted axle-supporting bracket on the lower end of the rod, a latterally propecting portion at the upper end of the rod, a U-shaped member connected to the laterally projecting portion, and a pivoted handle carried by the U-shaped bracket.

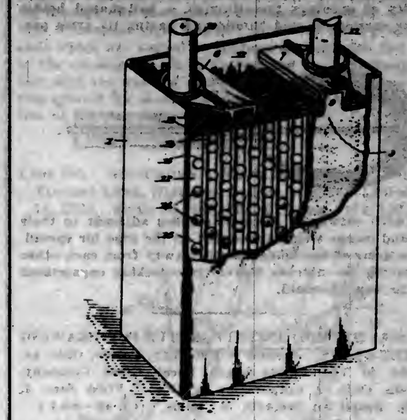
1,394,276. REEL. ROBERT CASSIDY, Mansfield, Ohio. Filed Apr. 15, 1921. Serial No. 461,782. 1 Claim. (Cl. 242—101.)



A reel of the character described, comprising a casing having an opening at one end of the maximum width and length of the casing, a ball having its ends secured to the ends of the casing, said ball having bearings in its end, said casing having openings in alinement with the bearings, a spool having disks at its ends, said spool removable through the open end of the casing, a shaft mounted in the bearings and connected to the spool, a crank arm on the shaft, a ratchet wheel on the shaft, a pawl engaging the ratchet wheel, and a line secured at one end to the spool and wound thereon and having its free end movable through the opening of the casing.

1,394,277. AMUSEMENT APPARATUS. FRANK R. CRESPINO, Asbury Park, N. J. Filed Jan. 10, 1921. Serial No. 436,297. 6 Claims. (Cl. 46—56.)

1. In an amusement apparatus, a fragile inflatable object, fluid pressure means connected with the said object to inflate the same, means to burst the inflated object, and actuating means controlling both the said fluid pressure means and the said bursting means.

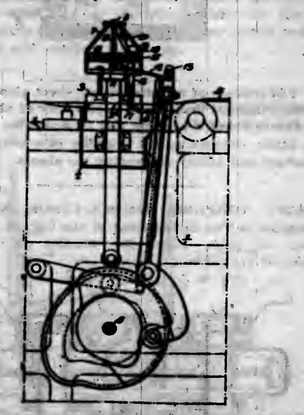


1,394,278. DOOR OPENING AND CLOSING DEVICE. GEORGE C. CIRAC, Fallon, Nev. Filed Nov. 4, 1920. Serial No. 421,705. 5 Claims. (Cl. 292—205.)

1. In a device of the character described, a lever adapted to be mounted adjacent a door to be opened and closed, a bracket adapted to be mounted to the door, said lever embodying in its construction a pair of spaced parallel sections adapted to assume a position within an upwardly presented end on the bracket, said lever adapted to be swung to and from the door with one of the said parallel sections bearing against the door for closing the same and adapted to impart a pull on the bracket to open the door.

1,394,279. SEPARATOR-PLATE FOR STORAGE BATTERIES. FRANK A. COLEMAN and JOSEPH J. HOFFMANN, Denver, Colo. Filed Mar. 12, 1921. Serial No. 451,923. 6 Claims. (Cl. 204—29.)

1. A spacing plate for battery plates, comprising a rubber plate provided with closely arranged recessed grooves in one of its surfaces, and provided with a multitudinous number of wooden disks extending through



it, and means for securing said wooden disks in said rubber plate.

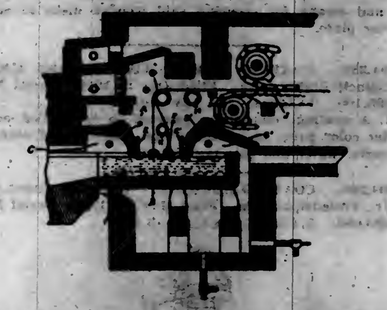
1,394,280. COATING COMPOSITION. FRANK COOK, Council Bluffs, Iowa. Filed July 9, 1920. Serial No. 395,160. 3 Claims. (Cl. 134—46.)

1. A coating composition adapted to be applied over water color paint or calcimine and consisting of starch, glycerin, water and coloring material.

1,394,281. COATING-MACHINE. WILLIAM COSTELLO, Jr., Philadelphia, Pa. Filed May 21, 1920. Serial No. 383,096. 5 Claims. (Cl. 91—3.)

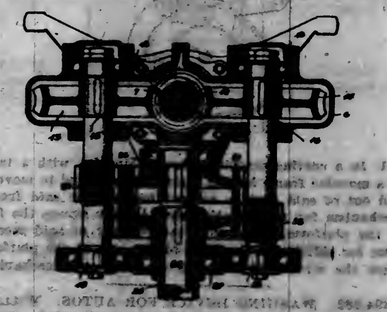
1. In a coating machine, the combination with a tank, of a movable frame having a platform adapted to move in and out of said tank, a scraper mounted on said frame, mechanism for reciprocating said scraper across the face of the platform, and means independent of said mechanism for shifting the scraper to one side of the platform when the scraper is disconnected from said mechanism.

1,394,282. WASHING DEVICE FOR AUTOS. WILLIAM H. CROSBY, Corning, N. Y. Filed Apr. 26, 1920. Serial No. 376,236. 2 Claims. (Cl. 15—51.)



1. A device of the class described comprising a water conducting pipe terminating in an apertured nozzle hav-

ing the other end flipped, a flexible connecting cord fixed to the pipe, a cap secured to the outer end and having a plurality of openings therethrough, a bell-shaped holder member carried by said handle and having its arms pro-

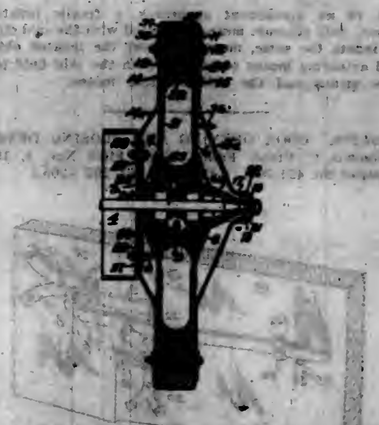


vided with outwardly disposed notches adjacent to their ends, and means slidably mounted on the pipe for spreading the arms of the holder member away from each other and forcing the notches thereof into locking engagement with the cap aforesaid.

1,394,283. METHOD AND APPARATUS FOR DRAWING SHEET-GLASS. JOSEPH P. CROWLEY, Toledo, Ohio, assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed June 4, 1920. Serial No. 386,440. 9 Claims. (Cl. 49—83.1.)

5. The process of manufacturing sheet glass, comprising the simultaneous drawing of a plurality of sheets, passing said sheets about a bending roll in separable contact with each other, continuing the drawing in a plane while still in contact and finally separating the sheets.

1,394,284. TORPEDO. JAMES S. CURRIER, Newport, R. I., assignor to The Government of the United States. Filed Aug. 10, 1920. Serial No. 402,686. 8 Claims. (Cl. 115—37.)

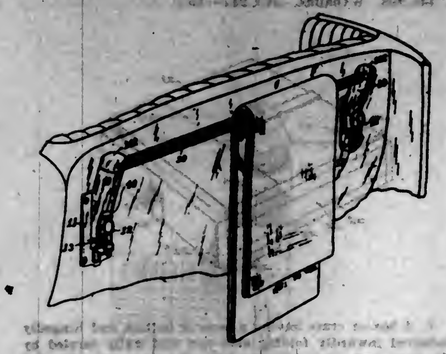


1. In a torpedo, in combination, a shaft, a pair of turbine wheels mounted upon said shaft, a worm associated with said shaft, pinions meshing with said worm and a propeller supporting means driven by said pinions.

1,394,285. [illegible]. [illegible], Cleveland, Ohio. Filed May 27, 1920. Serial No. 384,976. 2 Claims. (Cl. 25—120.)

1. A brick molding device comprising complemental form and follower members, the form member being provided with a series of molding chambers and consisting of parallel side walls and transversely spanning terminal and intermediate webs connecting the side walls, transverse clip rounds connecting the extremities of the side walls beyond the terminal webs, the follower member having depending guide cars adapted for sliding engagement with the exterior surfaces of the terminal webs of the form members, and a series of intermediate plungers terminally spaced apart and from said guide cars to form intervals for the reception respectively of said terminal and intermediate webs, the said guide cars being of a height equal to twice the height of the form member to dispose the plungers in spaced relation to a pallet for the purpose specified.

1,394,286. VEHICLE-WHEEL. WILLARD W. DE LONG and JAMES A. ROOK, Berkeley, Calif. Filed Aug. 13, 1918. Serial No. 249,666. 2 Claims. (Cl. 152—46.)

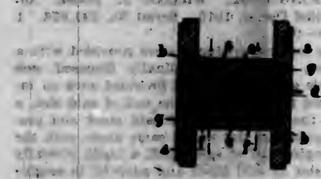


1. A vehicle wheel comprising a hub having a cylindrical flange thereon, parallel side plates on each side of said flange and provided with flanges encircling the hub, a rim disposed about said hub, housing plates inclosing the hub fixed to said rim, the outer portions of said plates being parallel and forming a sliding engagement with said hub plates, parallel annular plates fixed on said housing plates and spaced from and radially aligned with said hub plates, a resilient cushion surrounding the flange between said side plates, a second resilient cushion on the rim between said parallel annular plates, a resilient air tube interposed between said housing and said rim cushions, and a protective strip interposed between said tube and the edges of said parallel annular plates and said hub plates.

1,394,287. AUTOMOBILE BORE-BALL. PATRICK F. DWYER, Cleveland, Ohio. Filed Feb. 25, 1920. Serial No. 361,120. 8 Claims. (Cl. 45—28.)

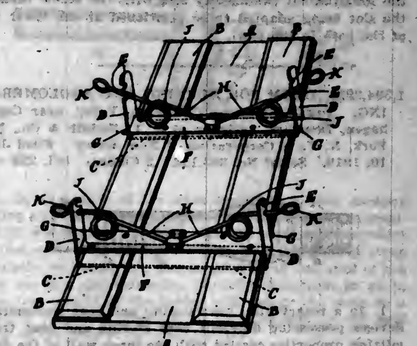
1. In a valve seat, a pair of bearings adapted to be secured to a supporting surface, a pair of extension members

slidably engaging said bearings respectively and having lateral openings therein, a rail engaging said extension



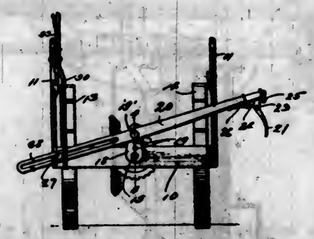
members and having its ends inserted in said openings, and a pair of caps on the end of the extension members and holding the rail in place.

1,394,288. RADIATOR-CAP. CLIFFORD B. DOSSETT, Janesville, Miss. Filed Nov. 25, 1919, Serial No. 340,479. Renewed July 16, 1921. Serial No. 485,789. 1 Claim. (Cl. 220—33.)



In combination with the filling neck of a radiator, a closure cap therefor having a flange telescopically engaging within the neck, a tubular bearing member secured upon one side of the neck, a leaf spring having one end secured centrally upon the cap and having its other end revolubly and slidably adjustably mounted within said bearing member, and an adjusting nut threaded upon said shank and engaging against said bearing member, said nut providing means whereby the tension on said spring may be varied.

1,394,289. MAGNETO-ARMATURE. MAURICE DUTEN, Levallois-Perret, France, assignor to La Société Duten, Doublet & Cie., Levallois-Perret, Seine, France. Filed Mar. 30, 1921. Serial No. 457,112. 1 Claim. (Cl. 171—207.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

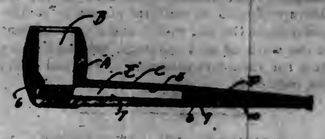


A rotor member, comprising a pair of stool end pieces each provided with an opening; and a core consisting of a plurality of sectional laminæ, a pair of cheek plates between which said laminæ are pressed, and cheek embedding through said cheek plates and laminæ to form the parts into a compact rigid bundle; said core having mortised ends which are shaped to conform generally to the shape of the openings in the end pieces and are in intimate contact with the walls of said openings, said end pieces abutting against the shoulders produced by the mortised formation of the core ends.

1,394,290. TROUSERS AND LIKE PRESS. NORMAN VINCENT DYER, Highgate, London, England. Filed June 16, 1920. Serial No. 389,365. 3 Claims. (Cl. 100—57.)

1. An apparatus of the class described comprising top and bottom pressing boards bodily movable toward and away from one another, a plurality of guide standards extending vertically above the bottom board at opposite sides thereof and forming retaining guides for the top board, and spring means carried by the top board and engageable with said vertical standards.

1,394,291. CORN-THINNER. RALPH DEWEY ESTES, Estes, Va. Filed Nov. 18, 1919. Serial No. 338,942. 4 Claims. (Cl. 97—45.)

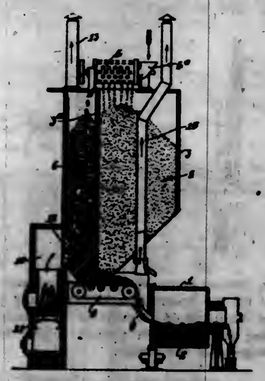


3. A corn thinner comprising a carrier frame, a chopping hoe carried by the frame and movable in a plane at an angle to the direction of progress of the frame, and means for adjusting the hoe with respect to the frame in the plane of progress of the frame.

1,394,292. PIPE. WILLIAM EWART, Niagara Falls, Ontario, Canada. Filed Jan. 10, 1920. Serial No. 350,656. 5 Claims. (Cl. 131—12.)

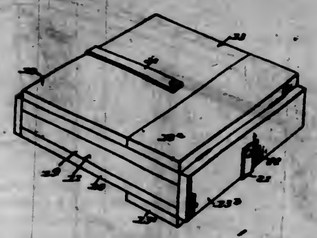
3. The combination with a pipe including a bowl and a stem having a bore communicating with the bowl, of a supplemental stem fitted in the bore and having a longitudinally extending passageway, the inner end of the sup-

plemental stem projecting into the bowl, and external screw threads formed on the inner end of the supplemental stem, the supplemental stem having a longitudinally ex-



tending slot formed in its inner end communicating with the longitudinal passageway and with the screw threads, the slot being adapted to be positioned at the lower end of the bore in the bowl.

1,394,293. DRUM FOR BURNING AND AGGLOMERATING. JOHAN SIGISMUND FASTING, Valby, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed June 10, 1919. Serial No. 303,116. 2 Claims. (Cl. 222—7.)



1. In a rotary kiln, heat storing and heat transmitting devices possessing different heat storing and heat transmitting properties carried with the inner wall of the drum and extending generally at right angles to the direction of travel of the material to be treated and to the products of combustion and spaced with relation to each other and affording some lateral support to said material.

1,394,294. GRINDING IN BALL-MILLS. JOHAN SIGISMUND FASTING, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1921. Serial No. 452,477. 6 Claims. (Cl. 83—9.)

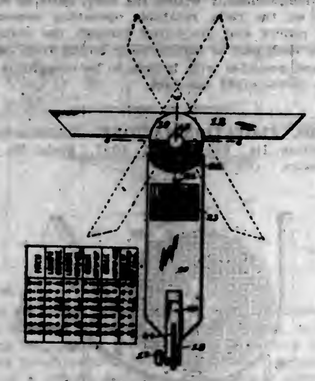
1. The improvement in grinding moisture-bearing material containing larger bodies and finer bodies in ball mills which consists in heating separately the larger bodies of the mill-charge, mingling the heated larger bodies and the moisture-bearing finer bodies in the grinding chamber, heating and drying the finer bodies through contact with the larger bodies and carrying on the grinding.

1,394,296. FOLDING BOX OR CRATE. CHRISTIAN F. FIELDING, Juneau, Wis. Filed Mar. 1, 1921. Serial No. 448,906. 6 Claims. (Cl. 217—15.)

1. A box or crate having a base or bottom and hingedly mounted inwardly folding side and end walls carried by the base, and a top or cover hingedly connected with the upper edge of one of said walls and being of sectional construction with its sections hinged together to fold around the edge portions of the folded walls and bottom.

1,394,296. GLASS COMPOSITION AND METHOD OF MAKING SAME. ELBERT H. FISHER, Toledo, Ohio. Filed Dec. 13, 1920. Serial No. 430,416. 24 Claims. (Cl. 106—36.1.)

1. A glass comprising more than 60% of silica, one or more oxids of the second periodic group having a thermal expansion of less than 4 as compared to silica, and not more than about 6% of alkali metal oxids of the first periodic group.



1,394,297. HATPIN. EDWARD BERNARD FLANNERY, Denver, Colo. Filed May 19, 1921. Serial No. 470,801. 6 Claims. (Cl. 132—60.)

1. In an article of the class described, a frame comprising a bowed member and sleeves supported at the ends thereof, sleeves fitted within the first-mentioned sleeves, and a pin having a shank fitted through one of the last-mentioned sleeves and into the other last-mentioned sleeve.

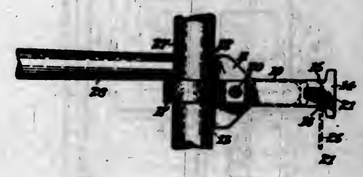
1,394,298. FRAMING-TOOL. WILLIAM E. FOGGS, Nogales, Ariz. Filed Dec. 2, 1919. Serial No. 341,876. 1 Claim. (Cl. 33—90.)

A roof framing tool comprising a stock provided with a slotted converging end, a longitudinally disposed web secured to one side of said stock and provided with an inwardly beveled end terminating at one end of said slot, a block secured to the opposite side of said stock and provided with a longitudinal slot in the same plane with the slot in the converging end of said stock, a blade pivotally mounted in the slot in said block and adapted to engage the beveled end of said web and bearing a graduated scale for coöperation with one edge of said block, a segmental scale carried by said stock and bearing an indicator, a

blade provided with beveled ends, parallel disks secured to opposite sides of the last mentioned blade and pivotally

secured to said stock adjacent to said shield and bearing a graduated scale for coöperation with said indicator and means for securing said blades in adjusted position.

1,394,299. ATTACHING MEANS FOR ARTIFICIAL TEETH. JOSEPH B. FOSTER, Roanoke, Va. Filed Aug. 23, 1920. Serial No. 405,449. 3 Claims. (Cl. 32—12.)



1. A device of the class described comprising an artificial tooth portion and anchoring means secured in said artificial tooth portion and extending laterally through the side thereof at an acute angle to the vertical axis of said tooth portion, as and for the purpose set forth.

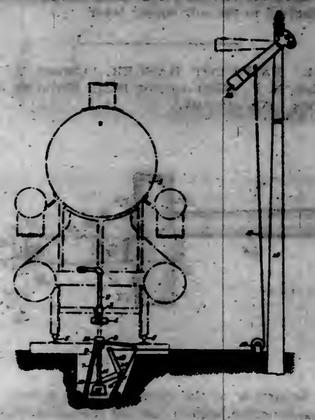
1,394,300. REINFORCED-RUBBER ARTICLE. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Mar. 22, 1920. Serial No. 367,759. 1 Claim. (Cl. 137—90.)

A hose having inner and outer tubular portions of relatively-hard wear-resisting rubber, a tubular fabric layer embedded in the outer portion, a soft rubber layer uniting the inner and outer portions, and a reinforcement comprising a metallic helix incased in a fabric sheath embedded in and vulcanized to the soft rubber layer.

1,394,301. PAINT-POT HANGER. GEORGE A. HAYES, Fort Lee, N. J. Filed Apr. 16, 1921. Serial No. 461,862. 2 Claims. (Cl. 248—24.)

1. In an article of the class described, a body member having an extended head at one end thereof in the extremities of which there are teeth adapted to engage the outer portion of the upright of a ladder, and a U-shaped strap pivotally connected in a central position in the head of the body member and extending laterally therefrom so as to span the upright of the ladder and engage the same in a position oppositely disposed to that engaged by the said teeth on the head of the body member.

1,394,302. SANITARY FIXTURE. WINFIELD E. HINSDALE and MARTIN W. LANSING, Trenton, N. J., assignors to Trenton Potteries Company, Trenton, N. J., a Corporation of New Jersey. Filed Jan. 16, 1920. Serial No. 351,834. 18 Claims. (Cl. 4—1.)

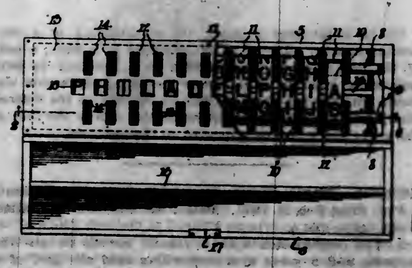


10. In a lavatory support, the combination of a supporting member adapted to be embedded in a wall; a pair of brackets; means for securing said brackets to said supporting member, said means including adjustable elements whereby the brackets may be brought to the desired position with reference to the horizontal and to the face of the wall; and a lavatory secured to the brackets.

1,394,303. TRAIN-STOP. GEORGE PAUL HORAN, Rutland, Vt. Filed Feb. 9, 1921. Serial No. 443,640. 3 Claims. (Cl. 246—204.)

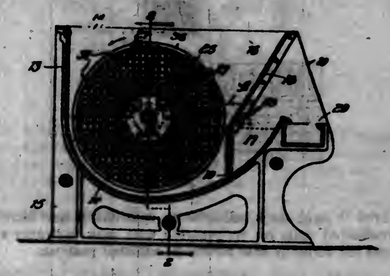
1. The combination with a vehicle having an air line thereon, and a valve arm controlling said air line, of a vertically movable plunger adapted to be positioned in the path of movement of said arm and cause the opening of

the air flow when the vehicle passes the mast, a weight, and a link suspending the weight from the lower end of



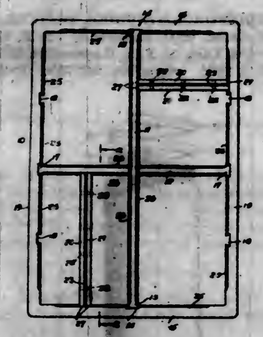
the plunger and operating to return the plunger to its lowered position when permitted.

1,394,304. HATPIN-FASTENER. Lucien G. Hunn, Los Angeles, Calif. Filed Nov. 11, 1920. Serial No. 423,235. 2 Claims. (Cl. 132—71.)



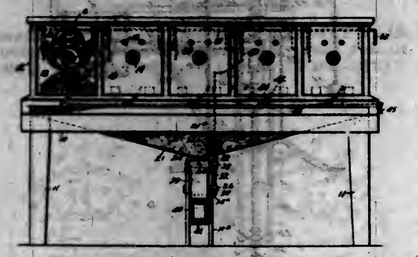
1. A hat-pin fastener comprising the combination of a hat-pin having a pointed shank formed with a flattened and broadened end adjacent to the point, and a member formed with a hub, said member and hub having an opening through the center of same of such a size that the flattened and broadened end of the hat-pin can pass therethrough, and means coöperating with said member and hub in forming a circular opening in the fastener that slidably and detachably supports the hat-pin shank, but of such a diameter that the flattened and broadened end of the hat-pin cannot pass therethrough, and means for detachably attaching said fastener and a hat-pin to a hat.

1,394,305. EDUCATIONAL DEVICE. Albert B. Hurley, Wilmington, Del., assignor to L. W. Hurley, Seaford, Del. Filed Oct. 9, 1920. Serial No. 415,815. 3 Claims. (Cl. 35—9.)



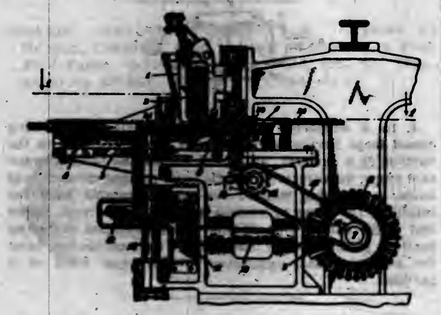
1. In an educational device a hollow body, a cover secured to the upper face thereof and provided with pairs of transversely disposed slots and also provided with slight openings between the slots, a pair of parallel rods arranged longitudinally within the body, pairs of rollers rotatable on the rods, rotatable operating elements fixed to the rollers and projecting through the slots, and a tape for each pair of rollers to be wound from one to the other and provided with indicia to be brought into registration in the sight openings.

1,394,306. FLOTATION-MACHINE. Durrell P. Hyde, Evanston, Ill. Filed July 7, 1917. Serial No. 179,224. 5 Claims. (Cl. 83—85.)



1. A flotation machine, comprising a tank adapted to contain an ore pulp and divided into two chambers, and a plurality of laterally spaced, foraminated, rotary disks partially submerged in the pulp contained in one of said chambers and adapted when rotated to entrap air from above the surface of the pulp and to carry it into the same where it is liberated as bubbles to form a froth on the surface of the pulp and to cause the froth to be discharged into the other of said chambers at a point below the upper edges of said disks.

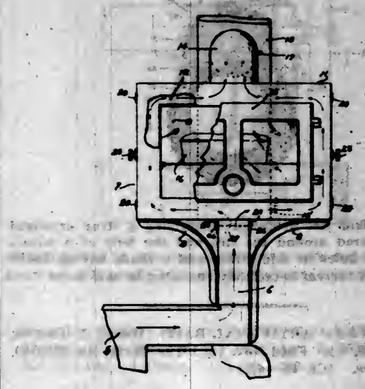
1,394,307. PRINTER'S CHASE. Edward Jackson, New York, N. Y. Filed Jan. 25, 1921. Serial No. 439,829. 2 Claims. (Cl. 101—391.)



1. A printer's chase, comprising a rectangular frame having the inner faces of its members provided with rabbets and dovetail grooves, dividing bars extending at right angles to each other and having dovetail ends fitting in the grooves of the frame, the said bars having rabbets along their upper edges, and a pair of adjustable clamping bars each provided at its ends with lugs projecting from the top and of the same width as the bar, said lugs being seated on the rabbets of the frame and dividing bars.

1,394,308. BALL-GAME APPARATUS. William G. Jackson, Pompton Lakes, N. J. Filed June 18, 1920. Serial No. 389,190. 10 Claims. (Cl. 46—80.)

1. An apparatus of the class described, including a supporting structure, a target supported thereon, said target affording an opening through which a thrown ball may pass and being movably mounted to yield inwardly to the impact of a thrown ball, and signal means subject to a ball passing into the structure through said opening and subject also to a ball gravitationally moving away from the target after a yielding of the latter.



1,394,309. CUTTING MECHANISM. Charles A. Jumbost, Croton Falls, N. Y., assignor to American Assembling Machine Company, Inc., Memphis, Tenn., a Corporation of Delaware. Filed Dec. 10, 1919. Serial No. 343,697. 3 Claims. (Cl. 164—61.)

1. Cutting mechanism for a pack of sheets comprising: a clamp for holding a pack of sheets with one edge exposed, means for moving the clamp in a given path during the cutting action, a rotating cutter, having a tapering edge, at one side of and beneath the clamp and intersecting the path of travel of the exposed edge of the sheets, an upper thrust roller at the other side of the clamp engaging one side of the sheet pack above the plane of the cutter, means for rotating the cutter and thrust roller in the same direction as that of the advancing movement of the clamp, and a lower thrust roller beneath the cutter and occupying an inclined position in contact with the pack of sheets.

1,394,310. COOKING-OVEN. Frank Kreusler, Sr., Milwaukee, Wis. Filed May 12, 1920. Serial No. 381,090. 4 Claims. (Cl. 126—17.)

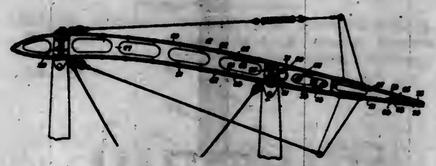
1. A cooking oven comprising a food receiving compartment, a heating chamber surrounding the sides, top, bottom and rear of said compartment, a door communicating with the front of the compartment; means for introducing

heated gases to and from the heating chamber, doors forming the side walls of the heating chamber to permit access thereto.

1,394,311. RADIATOR-CORE. Frederick F. Lang, Detroit, Mich. Filed July 22, 1919. Serial No. 312,648. 1 Claim. (Cl. 257—129.)

A radiator tube corrugated to provide relatively small and closely associated water channels spirally arranged throughout the entire length of the tube, and air passages spirally arranged exteriorly of and between the water channels, the opposite ends of said tube being reduced to provide shoulders, and reduced extremities crimped, with said channels flattened in overlapped relation.

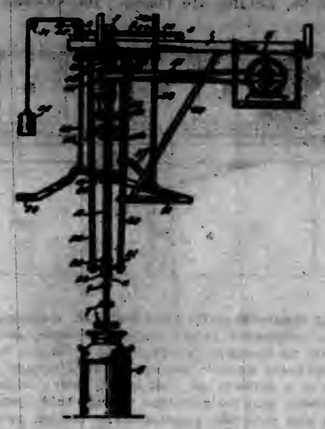
1,394,312. NON-SKID TIRE-PROTECTOR. Edward W. Lemcke, Jr., Baltimore, Md. Filed Apr. 26, 1921. Serial No. 464,514. 1 Claim. (Cl. 152—14.)



A non-skid tire protector comprising a strap arranged to be secured around the tire and the felly of a wheel, reinforced holes in said strap, and a chain having hooks on the end thereof detachably engaging in said holes

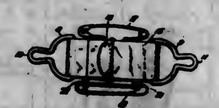
1,394,313. ARTIFICIAL BAIT. Henry T. Lemper, Fredonia, Ky. Filed Nov. 14, 1919. Serial No. 338,049. 4 Claims. (Cl. 43—42.)

1. An artificial bait comprising a buoyant body having an inclined surface for causing the body to dive when pulled in the water, said body having a groove at the surface thereof into which an implement can be inserted to be moved longitudinally in said groove, a weight slidable in the groove to be moved by such implement, and a longitudinal strip extending along the groove and secured to the body, said strip bearing against the weight to frictionally hold the weight in adjusted position and permitting of the insertion of such implement into said groove for moving the weight.



1,394,314. AEROPLANE. Henry Joseph Le Pul, New York, N. Y. Filed May 20, 1920. Serial No. 382,968. 5 Claims. (Cl. 244—29.)

1. In an aeroplane, a wing comprising a relatively fixed front portion, a relatively movable rear portion and an aileron carried by the rear portion and independently movable, the aileron extending from a point intermediate of the length of the wing to the outer end of the same.



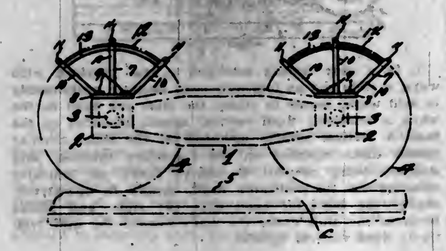
1,394,315. AGITATOR. Claude Le Roy Lewis, Omaha, Nebr. Filed Sept. 18, 1920. Serial No. 411,066. 2 Claims. (Cl. 192—17.)

1. In an apparatus of the class described, a supporting structure, a hollow rotary shaft mounted therein, a blade carrying shaft mounted to reciprocate in and rotate with said hollow shaft, means for rotating said shafts, and

means operable on the lowering and raising of the inner shaft to throw into and out of operation respectively the rotating means.

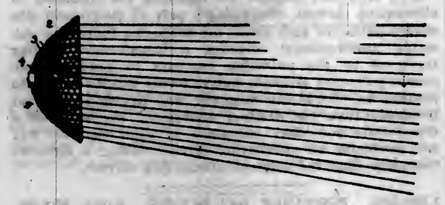
1,394,316. GARMENT-SUPPORTER. Joseph H. L'Heureux, Lowell, Mass. Filed Feb. 12, 1921. Serial No. 444,563. 4 Claims. (Cl. 24—82.)

4. In a supporter of the class described comprising closed loops having restricted eyes for attachment to the buttons of a garment, an elastic connecting band between said loops, an adjustable elastic band trained through said loops, a clamping member for said adjustable band for retaining the same in various adjustable positions, upper and lower safety pins having offset U-shaped fastening portions secured to the inner side of said connecting band for attaching said supporter to the waist band of a garment.



1,394,317. SASH-FASTENER. Cyrus H. Loutrel, South Orange, N. J., assignor to The National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed Jan. 28, 1921. Serial No. 440,575. 6 Claims. (Cl. 292—128.)

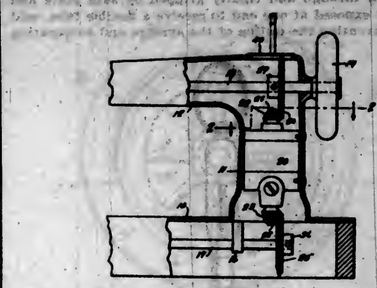
1. In a sash fastener, a casing having a front plate and side walls and an open back, a dowel pin at each end of each side wall, a hollow post extending from the inner face of the casing, a perforated fastener member pivoted around said post, one of the end walls being extended to



form a finger grip, and a fastening member passed through the sash and engaging the latter and the post and serving as a means of positive securement of the casing to the sash.

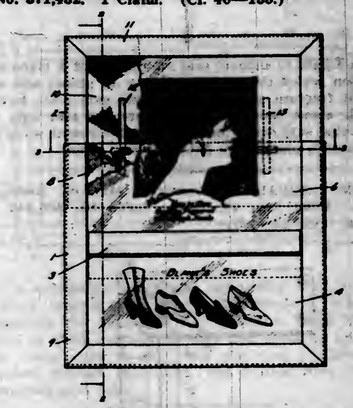
1,394,318. WHEEL-HOLDER FOR RAILWAY-CARS. Ottis M. McGuire, Bridgeport, Nebr. Filed June 24, 1921. Serial No. 480,084. 1 Claim. (Cl. 105—217.)

A wheel and truck holding device of the character described, said device comprising a plate secured to the truck adjacent the journal box, said device having upwardly and radially extending arms, the upper ends of said arms arching over the upper side of the wheel at spaced points from each other and a connecting bar connecting the ends of the arched portions of the arms together, said bar being disposed on the opposite side of the wheel.



1,394,319. HEADLIGHT-REFLECTOR. Charles A. McNeal, Columbus, Ohio, assignor of one-half to Fred Earl Fuller, Columbus, Ohio. Filed Jan. 15, 1920. Serial No. 351,551. 1 Claim. (Cl. 240—41.)

A headlight reflector of concave form, made up of a multiplicity of plane units angularly related to each other, said units being individually of comparatively small size and each having an inclination with respect to the axis of the reflector differing from that of any other unit, said units disposed in the reflector so as to reflect the rays of light from a common source located at the focus of the reflector downwardly and forwardly in a substantially definite cone of equally distributed light rays.



1,394,320. DRIVING MECHANISM FOR SEWING-MACHINES. Arthur T. Mack, Cleveland, Ohio, assignor to The Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 17, 1918. Serial No. 258,868. 12 Claims. (Cl. 112—220.)

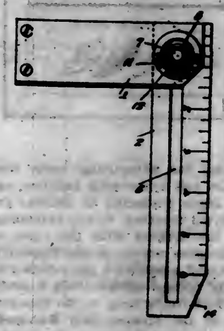
1. A standard sewing machine head, a needle bar and shuttle actuating means suitably housed, an interconnecting hollow standard, an electric motor vertically mounted within said standard, and gears on the armature shaft

of said motor in meshing engagement with corresponding gears on said needle bar and shuttle actuating means.

1,394,321. SHEET-METAL BACKING-FRAME. Jacob Mandel, New York, N. Y. Filed Apr. 5, 1920. Serial No. 371,432. 1 Claim. (Cl. 40—155.)

A backing frame for advertising cards comprising a frame formed from two telescoping sections, each section having bent over edges producing an annular groove when the sections are fitted together, means extending from one of said sections interlocking with the other section for limiting the telescoping action of the respective sections in both directions and a partition plate fitting against one of said sections and formed substantially S-shaped in cross section with one face conforming to the appearance of the bent over edges of the frames, said S-shaped partition formed with opposite facing grooves for receiving upper and lower cards said cards being positioned to extend into said annular groove and into said oppositely facing grooves whereby said partition plate is held in place in said frame.

1,394,322. HYDROMETER-SYRINGE. Herbert S. Marshuts, New York, N. Y., assignor to American Thermo-Ware Company, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1919. Serial No. 347,951. 5 Claims. (Cl. 265—45.)

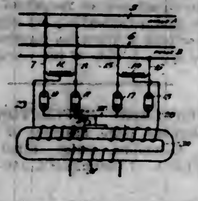


1. A hydrometer syringe comprising a tubular transparent casing containing a hydrometer element and having a collapsible bulb on its upper end, an apertured plug fitting within the lower end of said casing, a plate of yielding material at the lower end of said plug and ex-

leading laterally beyond the plane of the other side and having an irregular edge portion, and a tube extending through and tightly gripped by said plate and plug and exposed at one end to receive a flexible tube, said plate preventing the rolling of the syringe and coöperating

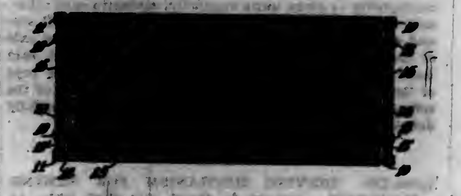
with said bulb to support said casing free of a plane surface upon which the instrument may be placed and also to avoid fracture of said casing; and said plate having a width about equal to the diameter of said bulb for maintaining said casing substantially horizontal when the instrument is placed on a flat horizontal table.

1,394,323. SQUARE. FREDERICK MATSON, Redlands, Calif. Filed Aug. 21, 1920. Serial No. 405,040. 1 Claim. (Cl. 33—102.)



A device of the class described comprising a head having a slot therein extending through one side, one end and a portion of the other side, a blade pivotally and slidably mounted in the head and having its major portion occupying the slot when the device is in folded condition and the wall of the partly closed side of the slot forming a shoulder at its end for holding the blade at right angles to the head when the device is used as a square, clamping means for holding the blade in adjusted position, such means consisting of a bolt passing through said head adjacent its open end and having a rectangular part located in the slot and the blade having a slot therein for receiving the rectangular part, a dial on the head, an indicator on the bolt for coöperating with the dial and a clamping nut for holding the blade in adjusted position.

1,394,324. GEAR-TESTING MACHINE. Jerome L. Masserano, Highland Park, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 27, 1920. Serial No. 433,128. 3 Claims. (Cl. 33—181.)

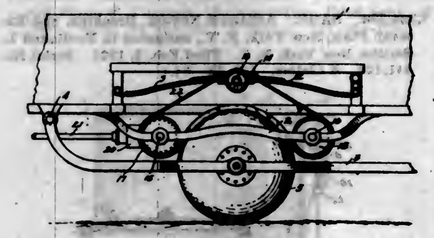


1. In a gear testing machine, a base provided with ways, a slide and an indicator head mounted reciprocably in said ways, means to clamp the slide and head in the ways, a relatively fixed vertical spindle mounted on the base, a vertical spindle mounted on the slide, circular master disks mounted on the respective spindles, said spindles being adapted to receive gears, an indicator mounted on the indicator head, means to operatively engage the indicator head with the slide, and means to press the slide along the ways toward the said relatively fixed vertical spindle.

1,394,325. FREQUENCY-CHANGER. FRIEDRICH WILHELM MEYER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 15, 1917. Serial No. 202,191. 4 Claims. (Cl. 172—281.)

1. A frequency changer for changing the frequency of alternating current, comprising a pair of electrolonic discharge paths for each phase for producing therefrom pulsating unidirectional currents, a transformer winding traversed by the pulsating currents to produce component pulsatory magneto-motive forces which combine to produce an alternating magnetic flux having a different frequency than the original alternating current, and a transformer secondary energized by said resultant flux and producing an alternating current having a different frequency than the original alternating current.

1,394,326. PORTABLE BED-SPRING. SABIN MIKIEL, Elizabethport, N. J. Filed Apr. 15, 1921. Serial No. 461,554. 3 Claims. (Cl. 5—69.)

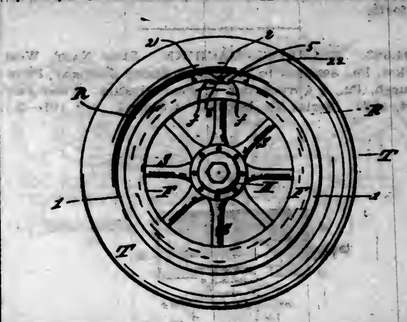


2. In a bed, a frame comprising head and foot elements including transverse angle beams, side beams uniting said head and foot element, bracing brackets hooked upon the said angle beams and presenting diagonal extensions detachably engaging said side beams.

1,394,327. SAFETY LOCK MECHANISM. ARTHUR R. MILLER, Sacramento, Calif. Filed Apr. 6, 1920. Serial No. 371,695. 17 Claims. (Cl. 70—129.)

1. In a vehicle safety lock, the combination with a steering column and a hand wheel thereon, of a sleeve fixed to the said wheel and having an opening, and a lock having a pair of bolts one arranged substantially crosswise of the other; one of said bolts adapted to be locked to the steering column and the other bolt adapted to interlock with the opening in said sleeve.

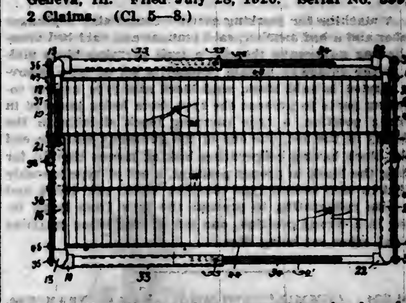
1,394,328. VEHICLE-DRIVE. EDWIN S. MILLER, Massillon, Ohio. Filed June 1, 1920. Serial No. 385,549. 3 Claims. (Cl. 74—21.)



1. The combination with a vehicle traction wheel, of a pair of pulleys having fixed relationship to each other, an endless belt around the pulleys having its lower run engaging the periphery of the wheel, and an elastically supported pulley supporting the upper run of said belt.

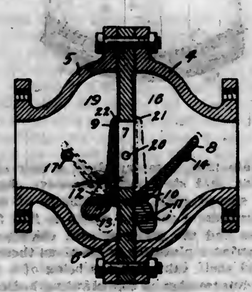
1,394,329. PROCESS OF RECLAIMING WASTE LEATHER. JOHN KEARSLEY MITCHELL, Rosemont, Pa. Filed Dec. 15, 1919. Serial No. 345,039. 3 Claims. (Cl. 252.)

1. The process of reclaiming waste leather from articles containing leather and vegetable components, which comprises the steps of heating the leather sufficiently to render it brittle when dry while preventing substantial injury to the vegetable components, breaking up the leather while in the dry state and mechanically separating the broken up leather from other components of the articles treated.



1,394,330. WHEEL-RIM. AINES HART MOMYER and GEORGE M. MOMYER, Brooklyn, N. Y. Filed Aug. 21, 1920. Serial No. 405,027. 1 Claim. (Cl. 301—63.)

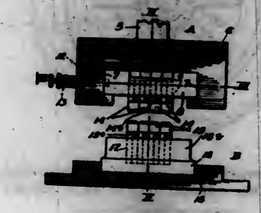
A transplit demountable rim comprising a major section having its ends spaced apart and connected by a two part inwardly opening toggle, the sections thereof being pivoted together and to the ends of the major section, the inner sides of the toggle sections being pro-



vided with transversely extending oppositely facing shoulders together adapted to act as a driver.

1,394,331. COLLAPSIBLE BED. GEORGE A. C. MONROE, Geneva, Ill. Filed July 28, 1920. Serial No. 399,454. 2 Claims. (Cl. 5—8.)

1. A collapsible bed frame comprising head and foot portions formed with telescoping members, side rails connecting the head and foot portions, links hingedly united at their confronting ends and pivotally united at their outer ends to the head and foot portions, rods attached through said links, and flexible wire elements connecting said rods.



1,394,332. EMERGENCY-VALVE. CLAUS D. MYRE, West Hoboken, N. J. Filed July 12, 1919, Serial No. 310,475. Renewed May 12, 1921. Serial No. 468,976. 5 Claims. (Cl. 137—139.)

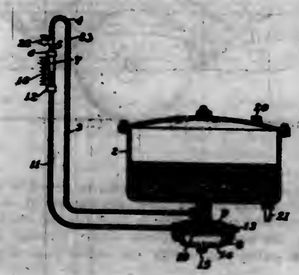
1. An emergency valve having two pivotal parts forming a chamber between them, a valve-controlled passageway around said parts, and means to regulate the pressure

in said chamber whereby the pressure may be equalized on the two sides of each of said parts, for the purpose set forth.

1,394,232. STAMPING-MACHINE. JOHN NAGY, West View, Pa., assignor to Pittsburgh Stamp Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 14, 1921. Serial No. 484,626. 4 Claims. (Cl. 101—8.)

1. A machine for marking articles comprising a plunger member and a bed member, said plunger and said bed member having guideways therein, a type carrying block slidable in the guideway in said plunger, a set of type removably carried in said block, said block and type having cooperating parts to prevent the type from being inserted in a wrong position, a type carrying block slidable in the guideway of the bed, one end of the guideway and one end of the block having coöperating locking means therein for holding the block in proper position, a set of type movably carried in said second type carrying block, said block and type also coöperating to prevent the type from being inserted in a wrong position, one set of type being matrices and the other set being dies.

1,394,234. COMMINUTING-MILL. RAY C. NEWHOUSE, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Aug. 23, 1917. Serial No. 188,258. 4 Claims. (Cl. 83—9.)

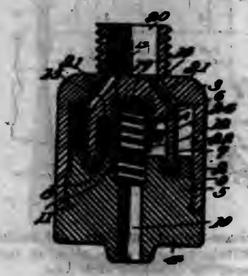


3. In combination, a rotary shell, a pair of transverse walls dividing said shell into successive chambers, said walls being spaced apart longitudinally of said shell to form an intermediate chamber which is free from comminuting bodies and the other of said chambers adjoining, said walls having a plurality of openings therethrough adjacent to said shell, said openings being of a size adapted to prevent transgression of comminuting bodies to said intermediate chamber while permitting the passage of comminuted material through either of said walls, and means within said intermediate chamber for elevating material delivered thereto through said openings.

1,394,236. MARKER-SHELL. HARRY J. NICHOLS, Washington, D. C. Filed Dec. 18, 1919. Serial No. 345,163. 11 Claims. (Cl. 102—29.)

9. A marker projectile including a shell body, a marker to float on the water and means for ejecting the marker rearwardly from said body when the projectile strikes the water.

1,394,236. GAGE. ABRAHAM NOVICK, Brooklyn, and EDWARD FISH, New York, N. Y., assignors to Ferdinand L. Smithe, New York, N. Y. Filed Feb. 2, 1921. Serial No. 441,722. 6 Claims. (Cl. 73—54.)



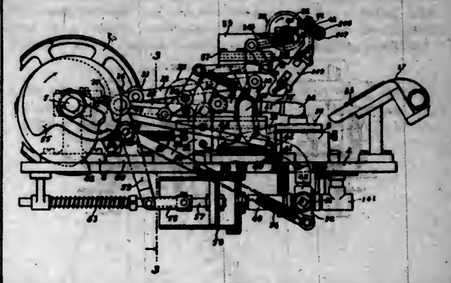
1. In a gage for liquids the combination of a tank for the liquid to be gaged, a diaphragm box including a chamber having a yieldable diaphragm forming one wall thereof, a pipe connecting the bottom portion of said tank with said diaphragm box chamber, a transparent portion in said pipe, said diaphragm box-chamber and that portion of said connecting pipe extending from said chamber to said transparent portion being filled with an indicating liquid, that portion of said pipe extending from said tank to said transparent portion being filled to a point relatively near said transparent portion with liquid similar to that to be gaged, and an air space in said pipe between the levels of the two liquids.

1,394,237. AUTOMATIC CYLINDER-COCK. CARL RICHARD NORDBERG, Altoona, and WILLIAM FILLMORE KOON, Duncansville, Pa. Filed May 17, 1920. Serial No. 381,901. 8 Claims. (Cl. 121—134.)

1. An automatic cylinder cock including in combination a casing adapted to be attached to an engine cylinder,

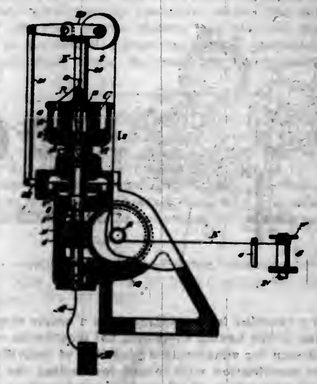
means for dividing said casing into an inner chamber and an outer chamber and forming a passageway connecting said inner and outer chambers through which the water and steam from the cylinder passes to said inner chamber, said inner chamber having an outlet, a valve seat about

said outlet, a valve located in said inner chamber and adapted to engage said valve seat, and a spring for normally holding said valve off said seat, said valve being constructed and arranged to close when the steam under pressure passes through said passageway.



1,394,238. SHEET-METAL LOCKER. JOHN O. NYMAN and JOHN P. PEARSON, Canton, Ohio. Filed Sept. 10, 1920. Serial No. 409,303. 5 Claims. (Cl. 45—118.)

3. A metal locker structure comprising end walls and partition walls having angular flanges at their front and rear edges, channel frame portions spot welded to said flanges and extending down below said walls forming legs for the locker the front frame member being bent backwardly at the upper end of each wall forming a top frame member, outturned flanges being provided upon the front and top frame members, rear walls provided with inturned angular flanges around their edges, means for connecting the flanges of said rear walls to the rear frame members, a top wall provided at its rear end with a downturned portion having an inwardly disposed flange resting upon the top flange of the rear wall and beneath the outturned flanges of the top frame members, a bottom wall provided with a downturned flange resting upon the inturned flange at the lower edge of the rear wall and hinged doors mounted upon the front frame members and arranged to butt against the outturned flanges on said front frame members.



1,394,239. LABELING-MACHINE. JAMES O'CONNOR, New York, N. Y. Filed Feb. 11, 1920. Serial No. 357,958. 6 Claims. (Cl. 216—55.)

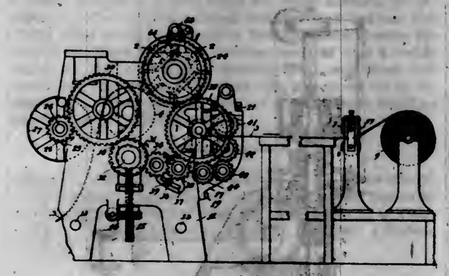
5. In a labeling machine the combination of a slide, a picker pivotally mounted on said slide, a label receptacle, a gumming station for the label, a support for the article to be labeled, cam actuated means for oscillating the picker from the label receptacle to the gumming station while the

slide is at rest, means for moving the slide, and means for simultaneously oscillating the picker for moving the picker from the gumming station to the article support.

1,394,240. MACHINE FOR MAKING TINSEL AND THE LIKE. BENJAMIN M. OSBUN and HARRY D. WALKER, Chicago, Ill., assignors to Benjamin Electric Manufacturing Company, a Corporation of Illinois. Filed Oct. 1, 1917, Serial No. 194,219. Renewed Apr. 22, 1920. Serial No. 375,913. 10 Claims. (Cl. 28—6.)

4. A machine of the class referred to having, in combination, a rotatably mounted tubular spindle; a turbine having a rotor fixed upon the spindle; a worm on the spindle at one side of the turbine; a worm-wheel meshing with said worm; a capstan driven by the worm-wheel; a winding head fixed upon the spindle at the other side of the turbine and adapted to support a spool of covering filament, said capstan being arranged to draw a core through the spindle, worm, rotor and winding head; and means on the winding head and the spindle for guiding the covering filament to the core.

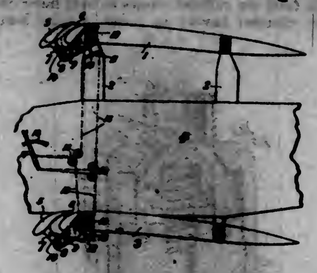
1,394,241. STOP MECHANISM FOR LOOMS. JOHN OUELLETTE, New Bedford, Mass. Filed June 30, 1919. Serial No. 307,591. 7 Claims. (Cl. 139—51.)



7. In a stop mechanism for looms having a lay with opposite shuttle boxes, rock shafts, detector fingers on the rock shafts positioned adjacent the shuttle boxes, stop operating mechanism on the breast beam, means for actuating said stop operating mechanism comprising a dagger

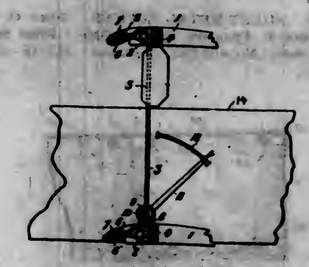
located adjacent the ends of the rock shafts, arms on the rock shafts adjacent said dagger and normally maintaining said dagger in inoperative position, and spring means for

retaining the detector fingers adjacent the shuttle boxes, and said arms in the path of said dagger, said means being removable and adjustable independently of the rock shafts.



1,394,342. MACHINE FOR MAKING SHINGLE-STRIPS. FREDERICK C. OVERBURY, Hillsdale, N. J., assignor to The Flint-Kote Company, Inc., Boston, Mass., a Corporation of Massachusetts. Continuation of application Serial No. 396,579, filed June 4, 1920. This application filed Oct. 23, 1920. Serial No. 418,905. 10 Claims. (Cl. 164—28.)

9. In a machine for producing from a single sheet a pair of roofing strips having their original lengthwise edges cut out in design for simulating a plurality of individual shingles, the combination with means for feeding the sheet, of a support over which the sheet is fed, a rotating cutter located between the support and feeding means, said cutter having supporting members and cutting members associated with the supporting members and an additional cutting edge extending longitudinally of the feed of the sheet.

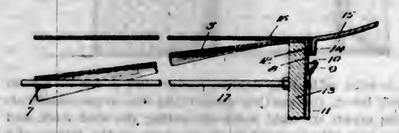


1,394,343. WING AND SIMILAR MEMBER OF AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Apr. 27, 1921. Serial No. 464,895. 6 Claims. (Cl. 244—12.)

1. In aeroplane flying machines; wing structures, each comprising a wing-section main wing, a wing-section auxiliary wing extending adjacent the edge of said main wing and in a direction transversely of the line of flight, downwardly extending arms on said auxiliary wing, means for pivotally supporting the lower ends of said arms, and means for rocking said arms on said pivotal supports in one direction to bring said auxiliary wing into contact with said main wing and for rocking said arms in the opposite direction on said pivotal supports to distance said auxiliary wing from said main wing to produce an open slot between said auxiliary wing and said main

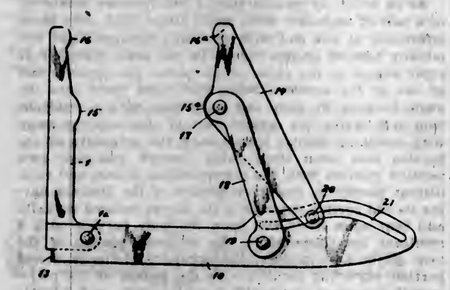
wing and simultaneously to displace said auxiliary wing downward relatively to said main wing to increase the effective camber of the combined structure.

1,394,344. WING AND SIMILAR MEMBER OF AIRCRAFT. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Apr. 27, 1921. Serial No. 464,897. 4 Claims. (Cl. 244—12.)



1. In aeroplane flying machines; wing structures each comprising a wing-section main wing, a wing-section auxiliary wing parallel to and adjacent the edge of said main wing, a plurality of pivots carried by said main wing at about right angles to the chord thereof, a plurality of arms each having one end mounted on one of said pivots, a pivot carried by the opposite end of each arm and at an angle to the first-mentioned pivot carried by said main wing, a plurality of members proceeding from said auxiliary wing at right angles to the axes of said angularly arranged pivots carried by said arms to engage said angularly arranged pivots support said auxiliary wing, means for connecting said members to said auxiliary wing to permit of relative movement between said members and said auxiliary wing, and means for rocking said arms about said pivots carried by the main wing in a parallel manner to bring the auxiliary wing away from or into contact with said main wing to partially open or close a slot between said auxiliary and main wings and simultaneously to cause a change to take place in the angle formed by the chord of said auxiliary wing with the chord of the main wing whereby when said auxiliary wing is distanced from said main wing the opening of the slot on the under surface in the direction of the longitudinal axis of the machine is greater than the opening on the upper surface, and when said auxiliary wing is closed on to said main wing said auxiliary wing lies snugly thereto.

1,394,345. RAZOR-STROP. MACK PEECHER, Denver, Colo. Filed Sept. 18, 1920. Serial No. 411,206. 4 Claims. (Cl. 51—200.)



2. A razor strop having a body formed from a plurality of strands of hair, the ends of the strands being secured together and the intermediate portions being capable of spreading laterally when a razor blade is pressed thereon.

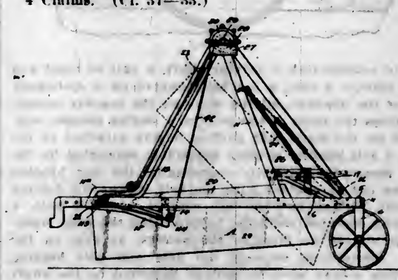
1,394,346. ATTACHMENT FOR MOTOR-VEHICLES. IGNATIUS POULTON PERRYMAN, Memphis, Tenn. Filed Jan. 15, 1920. Serial No. 351,667. 1 Claim. (Cl. 180—90.)

The combination with the cowl, dash and hood portions of an automobile, of a moisture shield underlying the hood portion and inclining forwardly and downwardly from the dash portion, the rear end of said shield extending over the top edge of the dash portion and having its free edge portion bent to provide a depending flange portion, and a gutter co-extensive with the lower edge of said flange and underlying the line of connection of the cowl portion with the hood portion.

1,394,347. TIRE-CALIPERS. ROBERT M. PIERSON, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 3, 1917. Serial No. 205,064. 7 Claims. (Cl. 33—143.)

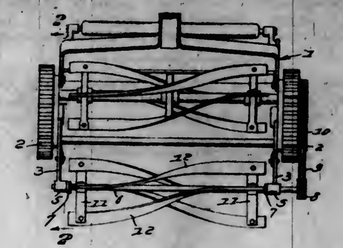
1. The pneumatic tire calipers having measuring portions representing respectively normal transverse diameter and the predetermined safe distorted diameter for any one of a number of sizes of tires, a bar, a pair of arms thereon adapted to embrace the tire between them, one of said arms being mounted to extend transversely or fold longitudinally of the bar, and means for guiding said arm in a single continuous movement from its folded position into its several operative tire-measuring positions.

1,394,348. VENTILATION ADJUSTMENT FOR SHOE-CAPS. JOHN PIETROWSKI, Chicago, Ill. Filed Jan. 28, 1921. Serial No. 440,602. 1 Claim. (Cl. 36—3.)



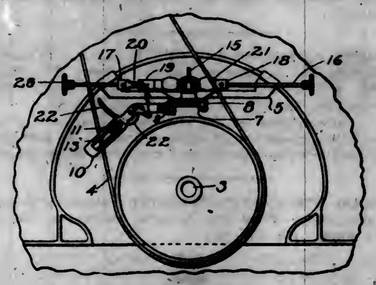
The combination with a shoe, of a tip having a plurality of elongated tapered openings therein, extending from the point of the tip, rearwardly thereof and arranged in fan-like formation, a transversely curved shutter located beneath the tip and provided with similar openings adapted to register with the tip openings, means for pivotally securing one end of the shutter beneath the tip in a manner to permit of transverse pivotal movement and means extending from the tip for manipulating the shutter.

1,394,349. COVERING FOR MEATS. LYLE J. PLETCHER, Berwyn, Ill., assignor to Figaro Chemical Co., Dallas, Tex., a Corporation of Arizona. Filed Dec. 6, 1920. Serial No. 428,717. 4 Claims. (Cl. 99—8.)



1. A preservation coating comprising a mixture of paraffin and an aromatic asphaltum compound, the asphaltum compound being present in more than 50% of the mixture.

1,394,350. EXCAVATING-MACHINE. HINES A. POWERS, Farry, Okla. Filed Feb. 9, 1920. Serial No. 357,152. 4 Claims. (Cl. 37—33.)



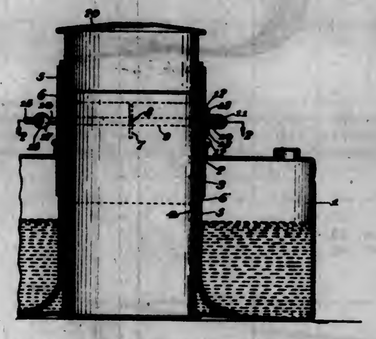
1. In a machine of the class described, a supporting structure, a shovel mounted for bodily and tilting movement in said structure, a rotary drum mounted in said structure, a cable wound on said drum and connected to said shovel, said cable being of a length and so wound on the drum as to permit it to be payed off on one side to provide for the raising of the shovel to dumping position and on reversing of the drum to be paid off on the other side to permit return of the shovel to loading position whereby the shovel may be held in any desired position.

1,394,351. LAWN-MOWER. LOUIS C. W. PRIENOW, Norfolk, Nebr., assignor to Paul G. Schilling, Norfolk, Nebr. Filed June 7, 1920. Serial No. 387,082. 1 Claim. (Cl. 56—294.)

The combination with a lawn mower, of brackets mounted on the frame of the latter and at either side thereof, the brackets having bearings formed in their forward ends which project beyond the forward end of the mower, a shaft journaled in said bearings, spiders carried upon the shaft and provided with radial arms, the arms of one spider having an angular displacement with respect to the arms of the other spider, spiral shaped blades mounted between the arms of the two spiders, and connections between the shaft and one of the mower wheels, whereby the shaft, the spiders and the blades are rotated for the useful purpose specified.

1,394,352. BELT-SHIPPER. GEORGE R. QUIMBY and HORACE F. PARKER, Rondsville, Mass. Filed Oct. 21, 1920. Serial No. 418,367. 2 Claims. (Cl. 64—4.)

1. In combination, a driving shaft, a pair of tight and loose pulleys, a belt, a bracket mounted on a stationary part of the machine, sliding ways on the bracket extending across the faces of the pulleys, a sliding member supported on the ways, belt guiding fingers attached to the slide, a belt binding member adjustably supported by the slide, means for normally maintaining the belt binding member out of contact with the belt, means for forcing the belt binding member into contact with the belt, a manually operated shaft for reciprocating the slide transversely across the faces of the pulleys, an arm on the shaft, connections between the arm and belt binding actuating means whereby motion imparted to the shaft creates a binding action on the belt.

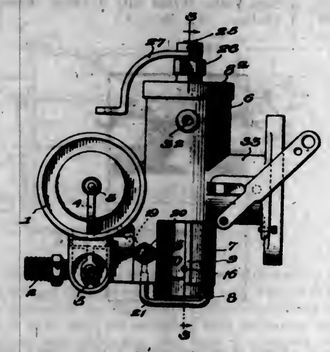


1,394,353. RAKE. PAUL REINWALD, Menlo Park, Calif. Filed Sept. 15, 1919. Serial No. 323,815. 1 Claim. (Cl. 55—10.)

A rake construction comprising a head bar of rectilinear cross section, teeth consisting each of a single piece of wire bent to form parallel shanks connected by a straight bight portion or bar and having the free ends thereof passing laterally rearward through the head bar parallel to the bottom thereof, said ends being clenched over upwardly at the back of the head bar and driven

into it, said shanks being bent downwardly near the bight portion, at an acute angle with the main axis of the shanks to form a claw arm.

1,394,354. LAMP-WICK REGULATOR. JOSEPH C. ROBERT, Jr., Agricultural College, Miss. Filed Feb. 19, 1921. Serial No. 446,236. 8 Claims. (Cl. 67—65.)

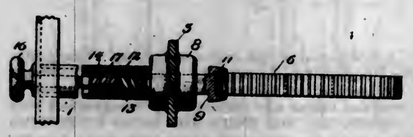


1. A wick adjusting device, comprising a double armed pivoted lever, the portion connecting the arms constituting the pivot, the said arms encircling the said wick and having inwardly projecting pins to engage the latter, and a stationary bearing in which the said pivot is mounted.

1,394,355. BELT-FASTENER. HOYDEN C. ROBINSON, Long Lake, N. Y. Filed July 20, 1917. Serial No. 181,763. 1 Claim. (Cl. 24—33.)

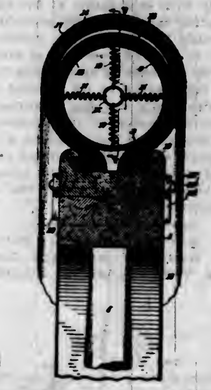
As an article of manufacture, a belt fastener consisting of a pair of malleable sheet metal strips, each strip being bifurcated at one end with resultant divergent and terminally tapered prongs turned in the same direction at right angles to the plane of the strip, the opposite end of one of the members being bent upon itself into the angle between its body and its prongs with a resultant loop and having the central part of the loop cut away with resultant tubular spaced ears, the extremity of the portion bent upon itself being tapered and bent into parallel relation with the corresponding prongs and equidistant therefrom, the other member of the fastener having its end portion opposite to its prongs reduced laterally and bent upon itself and upon the body portion with a resultant loop disposed in the cut-away portion of the loop of the first member, the extremity of the narrowed portion extending parallel with the prongs of the corresponding member, and equidistant therefrom, and a pintle through the medium of which the loop portions are pivotally connected.

1,394,356. CARBURETER. EDMUND T. ROBY, Decatur, Ill., assignor of one-half to Thomas C. Buxton, Decatur, Ill. Filed Dec. 13, 1918. Serial No. 266,610. 8 Claims. (Cl. 261—62.)



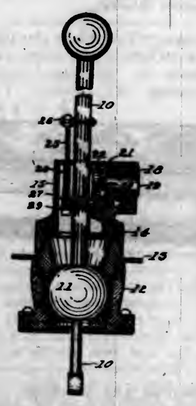
1. In a carbureter, the combination, with a tubular casing open at one end, for the admission of air, of a tubular member disposed within, and having an open end coincident with the open end of, said casing, said casing and member being arranged to provide therebetween a mixing-chamber, said member being provided with an air-aperture communicating with said mixing-chamber, and with a series of atomizing-perforations adjacent said air-aperture, a gasolene-conveying pipe entering said casing and communicating with said perforations, and a rotary valve revolubly mounted on said member and controlling passage to said mixing-chamber, through said air-opening and atomizing-perforations, of the air and gasolene.

4. In a carbureter, the combination of a casing; a tubular casing of smaller diameter nested in said first casing to provide a mixing chamber between said casings, said smaller casing being open at one end and having an air outlet in its side wall delivering to said mixing chamber; gasolene feeding means delivering through the wall of said inner casing adjacent the air outlet; a sleeve valve revolubly mounted on said inner casing and controlling both the air outlet and gasolene feed to the mixing chamber; and means for operating said valve exteriorly of said casing.



6. In a carbureter, the combination of a casing having a removable cap at one end; an open ended casing of smaller diameter nested in said first casing, and having an air outlet in its side wall delivering to the mixing chamber between the two casings; gasolene feeding means traversing said open ended inner casing and delivering adjacent the air outlet to the mixing chamber; an open ended sleeve valve revolubly seated on said inner casing, and having a port controlling both the air outlet and gasolene feed; and a valve operating spindle mounted in and projecting through the said closing cap for said outlet casing.

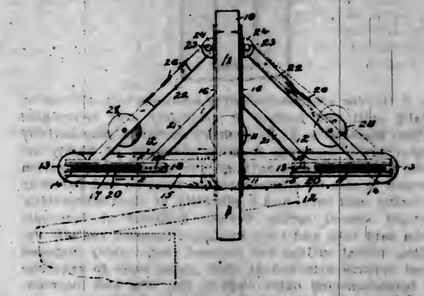
1,394,357. GEAR-SHIFT LOCK. THOMAS ROSE, Philadelphia, Pa. Filed July 11, 1918. Serial No. 244,340. Renewed Aug. 29, 1921. Serial No. 496,755. 5 Claims. (Cl. 70—90.)



1. The combination with a driving gear shiftable into operative position, of a slide having teeth engageable with the teeth of the gear and having flanges embracing the sides of the gear, and means for moving the slide to and from operative position.

1,394,358. CUSHION-TIRE FOR VEHICLE-WHEELS. JOSEPH ROSICK, Dawson, N. Mex. Filed Feb. 10, 1921. Serial No. 443,900. 6 Claims. (Cl. 152—8.)

5. A tire for vehicles including an inner tube circumferentially split and formed of relatively stiff deformable resilient material so as to normally assume a substantially circular cross sectional form, a plurality of highly resilient members of substantially crescent form in elevation arranged in side by side contiguous relation and partially embracing said tube, and a plurality of circumferentially arranged spaced spring devices fastened at intervals within said tube and each including opposed radially extending helical springs and opposed transversely disposed helical springs attached at their outer ends to the tube and interconnected outer ends to the tube and interconnected centrally of the tube at their inner ends.



1,394,359. LOCK FOR CONTROLLING LEVERS. AUGUSTUS C. SAXTON and HENRY J. MENARD, Chicago, Ill., assignors to H. R. Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed July 15, 1916. Serial No. 109,435. 3 Claims. (Cl. 70—128.)

1. In a device of the class described, a lever having an enlargement adapted to coöperate with another member to

form a universal connection, a universal bearing member on which said lever enlargement is mounted, a conical opening in said bearing member to permit said lever to have free, limited movement in all directions, a casing completely surrounding the body portion of said lever above said enlargement and having a chamber in its upper portion, a cover integral with said casing having a slot therein slidably fitted around said lever, a locking member formed integrally with said casing at the bottom thereof, entirely surrounding said lever, and adapted to fit within the conical opening in said bearing member when in a lowered position, to prevent movement of said lever, means housed within the chamber in said casing to engage said lever and lock said casing in its lowered position, and means housed within said chamber to automatically raise said casing upon the release of said locking means, said rasing means comprising a rod attached at its two ends to the control lever and passing through the said cover, and a spring surrounding said rod and engaging with its lower end the lower support for the rod, and with its upper end the cover of the casing.

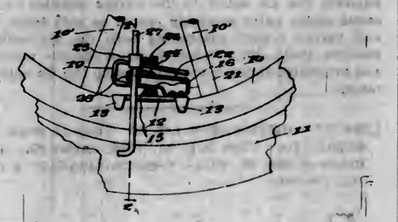
1,394,360. SAFETY DEVICE FOR CLOTHES-WRINGERS. WILLIAM A. SCHNEBLER, Glen Ridge, N. J. Filed Jan. 19, 1921. Serial No. 438,307. 3 Claims. (Cl. 68—32.)

1. A safety device for clothes wringers comprising a pair of oppositely projecting arms having bearings at their ends for supporting rollers in said bearings, a belt passing over the rollers and adapted to pass on its upper reach between the rolls of a wringer, and a guard hinged at its top end above the rolls and projecting at an angle downwardly and outwardly and having at its lower end a transverse fender normally resting slightly above the upper reach of the belt, the guard being adapted to swing freely in an upward direction.

1,394,361. ORNAMENTAL ROPE COVERING FOR FURNITURE AND OTHER ARTICLES. JEAN MAXIMILIAN SCHORPP, Easton, Pa. Filed Apr. 16, 1920. Serial No. 374,417. 4 Claims. (Cl. 41—34.)

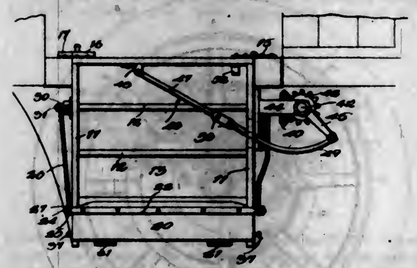
1. The combination with an object, of an ornamental rope covering secured on the exposed surfaces thereof, said covering including outstanding loop chains along the edges or corners of the object.

1,394,362. LETTER-SHEET. DAVID D. SCHULMAN, Brooklyn, N. Y.; Florence R. Schulman, administratrix of said David D. Schulman, deceased, assignor to The Munro & Harford Company, New York, N. Y., a Corporation of New York. Filed July 9, 1918. Serial No. 244,129. 7 Claims. (Cl. 283—1.)



1. As an article of manufacture, a letter-sheet comprising a blank portion and a pictorial portion, the sheet being folded upon itself, the pictorial portion being hidden by the folded portion, and the blank portion exposed.

1,394,363. BLOCK-PACK. SIBYL A. SCOTT, New York, N. Y. Filed Nov. 26, 1920. Serial No. 426,663. 4 Claims. (Cl. 206—65.)

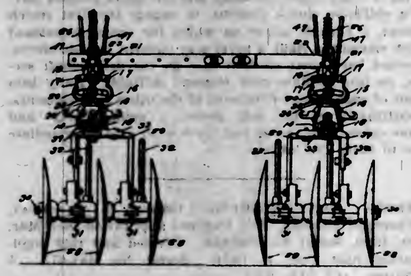


1. A block pack comprising a plurality of wedge-shaped interleaved members, the butts of adjacent members being turned in the opposite directions; and means adhered to the said butts for maintaining said members in fixed relation, said means embodying a fibrous paster adhesively secured to said pack and to the butts of the members forming one side of said pack.

1,394,364. DEFLATION-ALARM FOR TIRES. CHARLES H. SEBER and GEORGE C. BERLIN, Caldwell, Idaho. Filed Apr. 1, 1921. Serial No. 457,738. 2 Claims. (Cl. 116—34.)

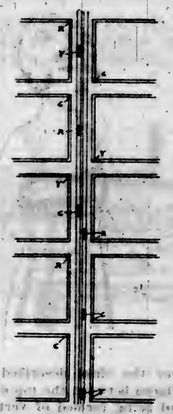
1. A deflation signaling device comprising a base adapted for attachment to the felly of a wheel, a metallic sounding bar mounted on the base, a flexible arm mounted on the base and having a projection for striking contact with the sounding bar, said flexible arm having a bifurcation with one of the furcations thereof extending away from the sounding bar, and an adjustable actuating rod carried by the said furcation.

1,394,365. EXTENSION-STEP. ALBERT EDWARD SEIBERT, Frankfort, Mich. Filed Mar. 14, 1921. Serial No. 452,139. 9 Claims. (Cl. 105—430.)



1. The combination with a railway step having stringers and a hinged door, of an extension step hinged to the step, links connected to the step, means connecting the said links to said door for swinging said extension step to its operative position when the door is elevated, and stop elements disposed in the path of travel of said links to limit the movement of the same.

1,394,366. HEADDRESS. GEORGE M. SHARP, Washington, D. C. Filed Apr. 22, 1920. Serial No. 375,863. 1 Claim. (Cl. 2—166.)



A head dress composed of two strips of flexible non-elastic material, stitched together upon a line inclined to the marginal edges, said stitching including a gathering of the seam a distance from one end thereof and the remote end of said strips gathered to a tie.

1,394,367. CULTIVATOR ATTACHMENT. BENTON E. SIMS, Oxford, Ala. Filed Aug. 29, 1919. Serial No. 320,073. 3 Claims. (Cl. 97—37.)

1. An agricultural implement having a bearing, a bearing movable relatively thereto, and means to selectively secure different implements to the movable bearing.

1,394,368. SYSTEM OF TRANSPORTATION CONTROL. HERBERT THOMAS SMITH, Toronto, Ontario, Canada. Filed May 17, 1920. Serial No. 382,058. 1 Claim. (Cl. 104—28.)

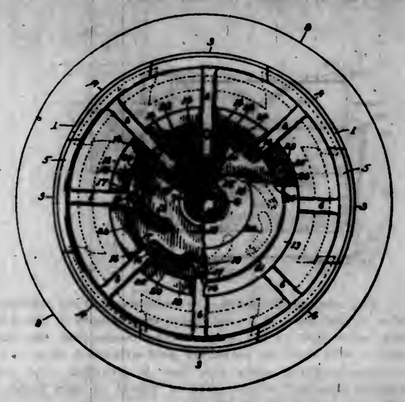
A system of transportation control, consisting in designating the cars on the route with consecutive differentiating signals in groups of three and arranging along the route signal points in corresponding differentiating series and stopping cars only at points where the car signals correspond with the stationary signals.

1,394,369. QUICK-ADJUSTMENT WRENCH. HORACE M. SPRAGUE, Denver, Colo. Filed Dec. 27, 1920. Serial No. 433,389. 3 Claims. (Cl. 81—158.)

1. In a wrench of the character described, a toothed shank having a fixed jaw thereon, a jaw slidably mounted on said shank, a stem in swinging engagement with said jaw having an abutment head on its free end, a threaded nut slidably mounted on said stem having a counterbore, which incloses said abutment head, an expansion coil spring on said stem interposed between said abutment head and the end of said counterbore, to hold said nut against the bottom of said jaw, said nut being normally in threaded engagement with said shank, thereby to adjust said jaw on said shank and to permit the quick sliding adjustment of said jaw on said shank, when out of mesh with said shank, and means for causing said nut to swing back into mesh with said shank, and for holding said nut in such position.

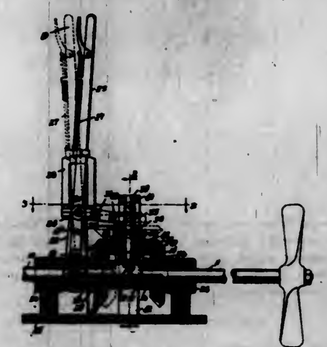
1,394,370. CORSET-TOP PAD. LUELLA STARKEY, Enid, Okla., assignor of one-half to Otto F. Decker, Enid, Okla. Filed May 22, 1920. Serial No. 383,566. 3 Claims. (Cl. 2—75.)

2. A device of the class described comprising a pad adapted to be placed between the top of the corset and the bottom, said pad being formed of vertical and horizontal strips of flexible material spaced apart to form ventilating openings and means for detachably connecting the pad with the corset.



1,394,371. MACHINE FOR MIXING FLOUR AND OTHER MATERIALS. ALBERT A. STRAUSS, New York, N. Y. Filed Feb. 9, 1916, Serial No. 77,130. Renewed Apr. 26, 1921. Serial No. 464,567. 9 Claims. (Cl. 83—28.)

1. A mixing machine comprising a receptacle for the material to be mixed, an upright mixing screw mounted to turn in said receptacle, an insert surrounding said screw and located within the receptacle at a distance from its inner wall to form an annular chamber therewith, the lower end of the insert being open and at a distance above the bottom of the receptacle so that the space at the bottom of the receptacle, below the lower end of said insert, communicates directly with the lower end of said annular chamber.



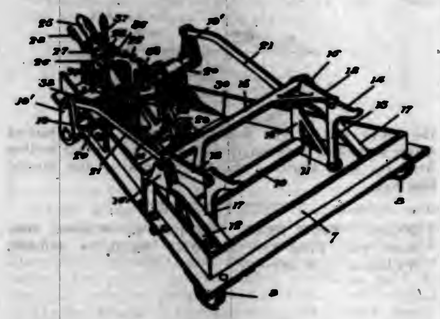
1,394,372. WHEEL. CHARLES A. SULLIVAN, Detroit, Mich. Filed Aug. 30, 1920. Serial No. 406,759. 7 Claims. (Cl. 152—20.)

7. In a vehicle wheel, the combination of a felly formed of a plurality of independently movable sections arranged end to end in abutting relation, a hub, a casing on the hub having radial guide ways, spokes secured to the sections and movable endwise in said guide ways, a member rotatively mounted on said hub and formed with cam

slots and teeth, means on said spokes engaging said cam slots, and a pinion in said casing engaging the teeth on said rotatable member for turning the same.

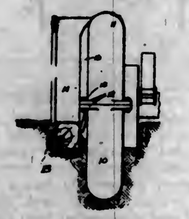
1,394,373. REVERSING MECHANISM FOR SHAFTS. KARL R. TELLEFSEN, Brooklyn, N. Y. Filed Aug. 10, 1920. Serial No. 402,654. 4 Claims. (Cl. 74—58.)

3. A reversing mechanism of the class described including drive and driven shaft sections, the driven section having a rigid clutch element and the drive section having a shiftable clutch element, to engage the first clutch element, a slidable sleeve on which the second-mentioned clutch element is rigid, a bevel gear element on said sleeve, a second bevel gear element fast on the drive shaft section, an intermediate gear element shiftable axially into or out of engagement with both of the other gear elements, a shifting lever for said sleeve, a second lever, and means connecting the second lever with said intermediate gear to shift the latter.



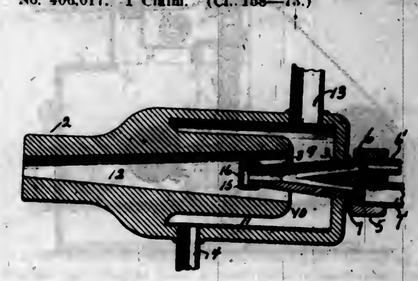
1,394,374. DRAFT-RIGGING. GEORGE E. THACKRAY, Westmont borough, Pa. Original application filed Mar. 10, 1920. Serial No. 364,618. Divided and this application filed Feb. 1, 1921. Serial No. 441,673. 5 Claims. (Cl. 213—42.)

5. In a draft rigging, a draw-bar chamber formed by an upwardly extending trough in the car bottom and a trough-shaped supporting plate secured below the same, top and bottom cheek plates mounted and secured therein, each provided with a pair of substantially rectangular slots, a yoke of U-shape provided with a closure, slidably mounted between said cheek plates and adapted to be



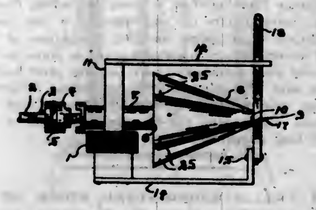
supported and guided thereby, a forward and after follower plate with reduced end portions mounted within and adjacent the closure and the end of said yoke, respectively, the reduced ends of which follower plates project beyond said yoke and into the slots of the cheek plates aforesaid, and a spring between said follower plates.

1,394,375. JACK. TORE TORKILDSON, Lake City, S. D. Filed Sept. 2, 1920. Serial No. 407,748. 7 Claims. (Cl. 251—1.)



1. A jack comprising a pair of substantially horizontal rock shafts one above the other, arms extending from said shafts, a vertical lift bar pivoted to said arms to be raised and lowered with said arms by a parallelogram movement, and actuating means connected to one of said shafts for rocking same.

1,394,376. ROTARY JACK FOR VEHICLES. FAUSTINO R. URBANO, New York, N. Y. Filed Nov. 17, 1920. Serial No. 424,663. 5 Claims. (Cl. 180—7.)

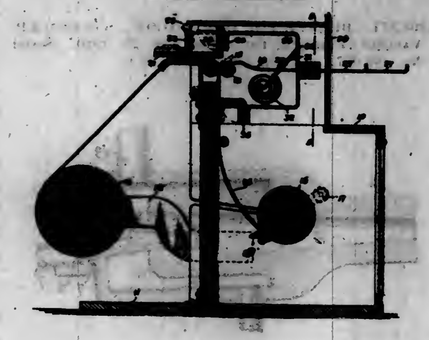


1. A rotary jack comprising a body adapted to be applied to a wheel over the tire thereof to present an annular tread surface about the tire casing; together with an eccentric mounted on said body at a side thereof and presenting an annular auxiliary tread surface.

1,394,377. BURNER FOR GAS AND OIL. CORNELIUS P. VALLELY, Bradford, Pa. Filed Aug. 25, 1920. Serial No. 406,017. 1 Claim. (Cl. 158—73.)

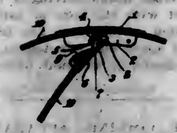
An apparatus of the character described, comprising an internally passaged injector barrel having an enlarged air space therein, an internally apertured boss formed integral with and extending rearwardly from said injector barrel and projecting into said air space, a forwardly projecting two feed single discharge nozzle extending through said air space and having its discharge end disposed within the aperture in said boss forming an annular space around said nozzle, a cap detachably mounted on the end of said discharge nozzle having a reduced aperture in axial alinement with the bore of said nozzle, ingress ports for admission of air and gas in communication with said annular space and adapted to be drawn therethrough by the discharge of fluid under pressure from said nozzle.

1,394,378. WIRE-COILING APPARATUS. MICHAEL VOGELSONG, Toledo, Ohio. Filed July 21, 1920. Serial No. 397,943. 7 Claims. (Cl. 140—71.)



1. A rotary multi-cornered tapered mandrel provided with a wire engaging seat transversely of the end of the mandrel at the tapered region thereof, and a member coacting during mandrel rotation for holding a wire in said seat, said member being movable as to the seat for freeing wire therefrom.

1,394,379. CHECKING-MACHINE. FRANK R. WAINWRIGHT, Jersey City, N. J. Filed Feb. 9, 1921. Serial No. 443,619. 5 Claims. (Cl. 101—90.)

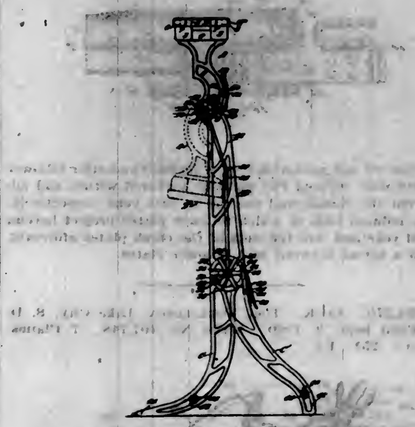


1. A checking machine, including a plurality of projectible type carrying members, movable inking strips adapted to normally bear against the type carried by

said members, and means for projecting said members to permit the same to render an imprint, the type carried

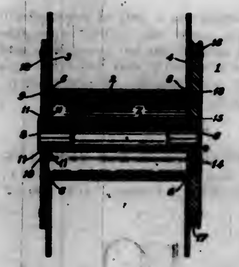
by said members moving said strips out of their path of travel upon being projected.

1,394,380. BUCKLE. OEL E. WARDNER, New Britain, Conn., assignor to The Traut & Hine Mfg. Company, New Britain, Conn., a Corporation of Connecticut. Filed July 22, 1921. Serial No. 486,745. 2 Claims. (Cl. 24—191.)



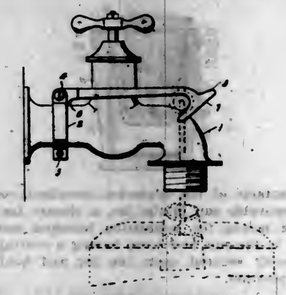
1. A buckle comprising a plate having rearwardly extending flanges at its upper and lower edges forming a belt passage therebetween, a pivot extending from flange to flange intermediate the ends thereof, a cam comprising a channeled sheet metal member, trunnions at the end thereof mounted to turn on said pivot, a plate having ears at one end also mounted to turn on said pivot and located between said trunnions, said plate having a limited free swinging movement independently of said cam in both directions, and means for securing one end of the belt to said last mentioned plate.

1,394,381. FOLDING STAND, STOOL, OR OTHER LIKE ARTICLE. SIMON W. WARDWELL, Providence, R. I.; Carl V. J. Christensen, Edwin C. Smith, Arthur A. Armington, and Willard W. Bardsley executors of said Simon W. Wardwell, deceased. Filed Jan. 17, 1919. Serial No. 271,690. 10 Claims. (Cl. 45—74.)



1. In a folding stand, stool or like article of utility, the combination with a main central section comprising uprights, of a cross-frame connected to the upper and lower ends of the uprights, an upper section having uprights hinged to those of the central section, legs hinged to the lower ends of the central section, and detent-means on the hinges preventing turning action thereof to maintain the parts of the stand in extended relation.

4. In a folding stand or like article of utility, the combination with a central section comprising opposite parallel uprights formed with bearings at their upper and lower ends, of an upper section comprising uprights having bearings at their lower ends, pivots connecting said bearings, a top supported on the upper ends of the last-named uprights, folding legs pivoted to the bearings at

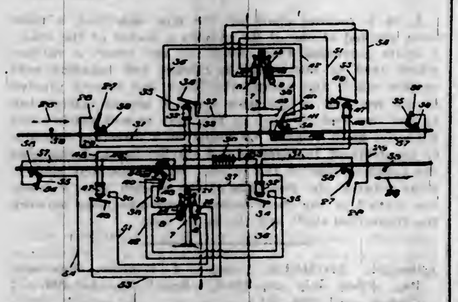


the lower end of the central uprights, and a lateral frame extending between the sides of the central section with its ends abutting the inner sides of the several bearings.

1,394,382. WIRE REEL. CHARLES K. WARNER, Oakmont, Pa. Filed Feb. 19, 1921. Serial No. 446,483. 6 Claims. (Cl. 242—77.)

3. In a metal reel, the combination with an inner reel structure comprising a sheet metal drum and a flat sheet metal head at each end of said drum, said drum and heads being welded together over substantially their entire interengaging surfaces, of an outer reel structure comprising a central hollow hub and a flat metal disk welded on said central hub at each end thereof and located outside of said sheet metal head and having a plurality of openings therethrough, and masses of fused metal in said openings for securing said end disks against said heads.

1,394,383. FAUCET-HOLDER ATTACHMENT. HENRY G. WHITMORE, Newburyport, Mass. Filed May 5, 1921. Serial No. 467,031. 6 Claims. (Cl. 248—24.)

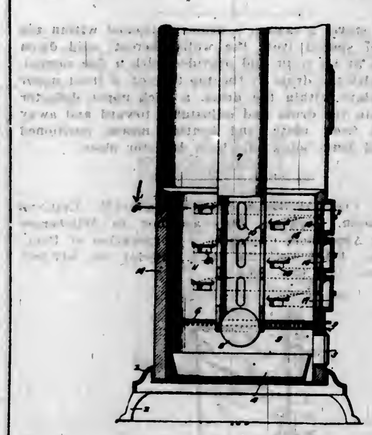


2. A vessel holding attachment for faucets comprising a clamp, and a hook pivotally connected to the clamp and comprising spaced members to extend along opposite sides of the faucet.

1,394,384. AUTOMOBILE-TRUCK CHAIN. MAHLON A. WHITTEN, Mars Hill, Me. Filed Mar. 31, 1920. Serial No. 370,420. 1 Claim. (Cl. 152—4.)

A tread armor comprising a plurality of identical units each comprising side plates spaced to occupy opposite sides of a tire and with a connecting tread, each side plate being depressed upon the inner surface and outer surface respectively to form offset extensions, said depressions being so proportioned that they are occupied by the extensions of adjacent units and pivoted thereto to form an endless flexible tread structure having its connected side plates lying in the same plane and allowing the units to be used interchangeably or reversibly with other units.

1,394,385. SIGNAL DEVICE FOR RAILROAD-CROSSINGS. LUKE P. V. WILLIAMS, Whiteland, Ind. Filed May 23, 1921. Serial No. 471,841. 6 Claims. (Cl. 246—126.)



6. A signal mechanism including a signal device having means for indicating the approach of a train and means to indicate when the train is leaving, and devices controlling said signal device by the approach, passing and leaving of a train to set said signal device accordingly, to indicate when the train is approaching and leaving.

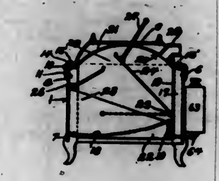
1,394,386. CHRISTMAS-TREE STAND. EDWARD ABBERT WILSKE, Vineland, N. J. Filed Feb. 2, 1921. Serial No. 441,888. 4 Claims. (Cl. 240—10.)

4. A device of the character described, including a shallow pan shaped base, a receptacle in said base, tree supporting means associated with the receptacle, an annular series of lights in the base, a vari-colored disk having a central opening adapted to expose said receptacle, supporting means for said disk having rolling engagement therewith when the disk is rotated, and means for rotating the disk.

1,394,387. DRAFT APPLIANCE FOR STOVES AND FURNACES. HAL E. WILSON, Detroit, Mich. Filed Apr. 12, 1921. Serial No. 460,670. 3 Claims. (Cl. 126—77.)

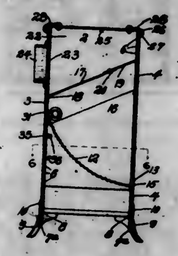
1. In a stove, a fuel chamber, air supply conduits arranged peripherally in the wall thereof and opening into said chamber at different points both vertically and peripherally, air chambers communicating with the atmosphere and with which said conduits communicate, and dampers for opening and closing said chambers.

1,394,388. JAR-WRENCH. DON CARLOS WISENBERG and WILBUR WISENBERG, Peru, Ind. Filed Oct. 28, 1920. Serial No. 420,196. 11 Claims. (Cl. 81—3.1.)



1. In a jar wrench, the combination, of a pair of bearing plates pivotally connected, handles upon said bearing plates, and a plurality of arcuate jaw segments recipro-

cably engaging said bearing plates, said arcuate portions arranged concentrically of the pivot of said bearing

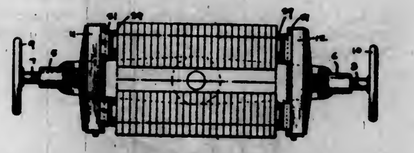


plates, and adapted to advance toward or retract from said pivot upon relative movement of said bearing plates.

1,394,389. COMBINATION REFLECTOR-STOVE. ETIENNE WITZBERGER, Carnegie, Pa., assignor to Witzberger Heating Appliances Company, a Corporation of Pennsylvania. Filed Feb. 1, 1921. Serial No. 441,634. 8 Claims. (Cl. 126—89.)

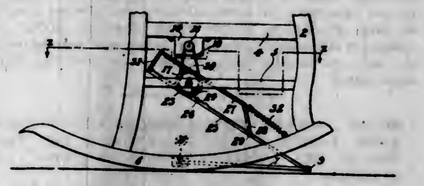
4. In a stove, a casing, a drum positioned within the casing and spaced from the walls thereof, said drum being open at its front and provided with a flue communicating with the drum at the top thereof, a front upper deflector plate within the drum, a back upper deflector plate within the drum and adjustable toward and away from said front plate, and heating means positioned within said drum below said back deflector plate.

1,394,390. COLLAPSIBLE HEATING-STOVE. ETIENNE WITZBERGER, Carnegie, Pa., assignor to Witzberger Heating Appliances Company, a Corporation of Pennsylvania. Filed Feb. 25, 1921. Serial No. 447,683. 9 Claims. (Cl. 126—86.)



1. In a stove of the character described, a body consisting of hinged foldable front and back and end plates, foot members provided with elements arranged and adapted to engage about the corner portions of the body when the body is set up, said foot members acting to hold the plates substantially at right angles to each other, and means for detachably securing the foot members to said body.

1,394,391. DENTAL-COTTON HOLDER AND WASTE-RECEIVER. NICHOLAS I. WOOLSEY, New York, N. Y. Filed July 8, 1919. Serial No. 309,292. 4 Claims. (Cl. 32—5.)



1. A receptacle of the character described, comprising a jar, a removable cup in the jar, a closure for the cup and having means for permitting bunched material to be inserted in the cup, and a cap having a central opening and removably secured upon the jar and holding said closure in position.

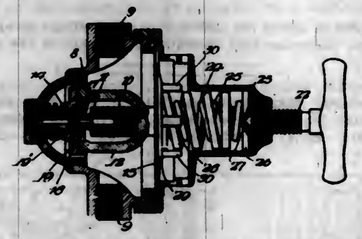
1,394,392. APPARATUS FOR EDGING TILES AND THE LIKE. ALFRED N. ZAVAGNO, San Francisco, Calif. Filed Apr. 30, 1920. Serial No. 378,008. 7 Claims. (Cl. 51—216.)

2. An apparatus for edging tiles comprising a supporting base; adjustable frames rotatably mounted in juxtaposition on said base; chucks slidably mounted on said frames and rotatable tile engaging means positioned on said chucks.

1,394,393. MUSICAL ROCKING-CHAIR. ANTONI ZUBRYD, Jersey City, N. J. Filed Mar. 9, 1921. Serial No. 451,001. 2 Claims. (Cl. 155—188.)

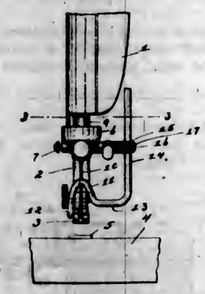
1. In a rocking chair of the type described, a floor lever pivoted at one of its ends to a rocker of the chair, a shaft journaled transversely of the chair, a ratchet wheel fixed to said shaft, a ratchet rod engaging said ratchet wheel and having the lower end thereof pivoted to the free end of the floor lever, a second ratchet bar having one end pivoted to the first named ratchet bar with the teeth thereof extending in a direction opposite to the teeth of the first named ratchet bar and engaging the opposite side of the ratchet wheel, resilient connections between the free ends of the ratchet bars, a music box carried by the chair bottom and connections between the transverse shaft and the music box.

1,394,394. THIMBLE. GEORGE J. BALKEY, Glenshaw, Pa. Filed July 25, 1919. Serial No. 313,194. 2 Claims. (Cl. 223—51.)



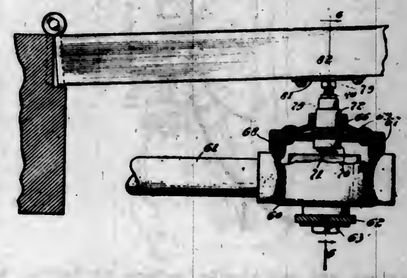
1. A thimble comprising a hollow body having a substantially V-shaped thread cutting member struck up

from the body at a point spaced from the lower edge of the body and relatively near thereto and extending parallelly with the edge, so that the edges of said



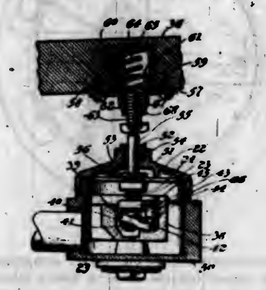
struck-up portion extend in a circumferential direction, said member being so struck out that it is substantially parallel with the outer surface of the body throughout its length.

1,394,395. FLUID-PRESSURE-REGULATING VALVE. CHARLES L. BASTIAN, Chicago, Ill. Filed Jan. 22, 1919. Serial No. 272,421. 14 Claims. (Cl. 50—23.)



1. In a pressure regulating valve, the combination of an inlet nozzle, a support having a recess therein, a disk arranged in said recess in operative position to seal the nozzle, and a retainer engaging said disk peripherally and on the outer face thereof and threadedly engaging said recess to secure the disk in said support.

1,394,396. NEEDLE AND OIL GUARD FOR SEWING-MACHINES. WALTER J. BEATTIE, Cohoes, N. Y., assignor to The Beattie Manufacturing Company, Cohoes, N. Y., a Corporation of New York. Filed Feb. 4, 1920. Serial No. 356,134. 1 Claim. (Cl. 112—261.)

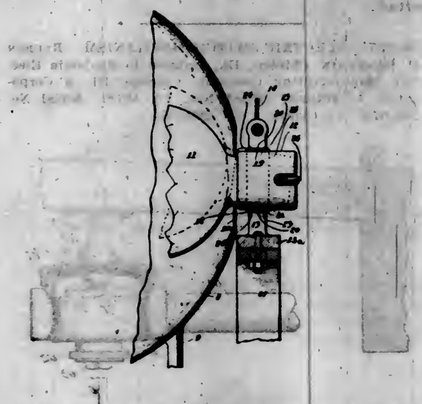


The combination with the presser-foot-bar, needle-bar and needle of a sewing-machine; of a bracket mounted upon the presser-foot-bar and provided with a bearing-aperture extending vertically therethrough; and a needle-guard formed of a single piece of wire bent to form an upwardly extending needle-guarding loop having a needle-guarding member extending rearwardly from the outer leg of said loop, and a lateral extension from the other leg of said loop terminating in a vertical spindle rotatively mounted in the bearing-aperture in said bracket; and a screw for securing said spindle in said bearing-aperture.

1,394,397. ELECTRIC-SWITCH MECHANISM. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 18, 1918. Serial No. 263,073. 11 Claims. (Cl. 200—54.)

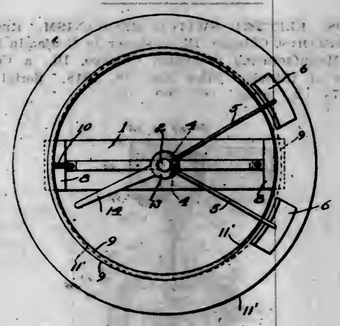
2. In a device of the character described, in combination, a circuit-controlling switch; a casing for said switch; an operating plunger for said switch; a cap for said casing, said cap carrying a telescoping means including a resilient buffer, said telescoping means being operable through said resilient buffer to actuate the said plunger to operate said circuit-controlling switch.

1,394,398. ELECTRIC-SWITCH MECHANISM. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 18, 1918. Serial No. 263,074. 2 Claims. (Cl. 200—54.)



1. In a device of the character described, the combination with a door, of a circuit-controlling switch, means for operating said switch, a primary movable element, and movable means interposed between said element and said first mentioned means, through which said switch may be operated by said primary movable element, and adjustable means mounted on said door operable to determine the amount of movement transferred to said primary element by the movement of said door.

1,394,399. HEADLIGHT. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 27, 1919. Serial No. 279,659. 3 Claims. (Cl. 240—44.)



1. In a lamp support for a headlight, a split clamping ring having an integral support, shoulder portions on

said ring, and a resilient second split ring for holding a lamp standard, said second ring embodying means

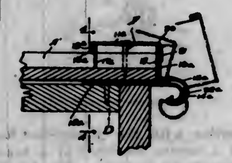
co-acting with said shoulder portions for limiting the tilting movement of said standard.

1,394,400. RUBBER-TIRE SETTER. ANDREW P. BEAU, Staten Island, N. Y. Filed Aug. 28, 1919. Serial No. 320,467. 2 Claims. (Cl. 157—6.)

1. An automobile rubber tire setter comprising a standard, means supporting the same, a sleeve slidably mounted on said standard, arms pivotally connected to said sleeve and extending downwardly and outwardly both on the same side of a diameter of the tire to be set, blocks attached to the outer ends of said arms, respectively, the outer surface of said blocks conforming to the shape of the tire and being arranged to press the tire outwardly and downwardly over the rim, means for forcing said sleeve longitudinally of said standard, and means interposed between the standard and its support for resisting the reaction of said arms on said standard.

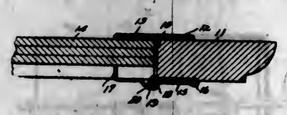
1,394,401. FILM-WINDING MEANS FOR CAMERAS. HIRAM HYATT BERRY, New York, N. Y. Filed Jan. 28, 1920. Serial No. 354,540. 3 Claims. (Cl. 242—71.)

1. In a winding means for cameras, a slide adapted to be mounted to have guided movement on a camera, means to turn the winding spool of the camera by said slide, a spindle, means to turn said spindle by said slide, and a spiral series of stop projections on said spindle



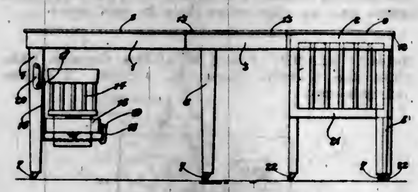
adapted to arrest the slide in various positions according to the particular stop presented in the path of the slide.

1,394,402. BRAKE-DRUM, PULLEY, OR THE LIKE. MARC BIRKIGT, Bois-Colombes, France. Filed Mar. 28, 1919. Serial No. 285,880. 11 Claims. (Cl. 188—218.)



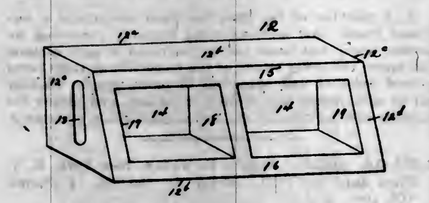
5. A brake drum having a body of aluminum and a thin lining of a hard metal capable of resisting wear on a surface of said body whereon frictional effects are experienced.

1,394,403. FLASHING. OSCAR BOLL, West Hoboken, N. J. Filed Dec. 1, 1920. Serial No. 427,571. 5 Claims. (Cl. 108—26.)



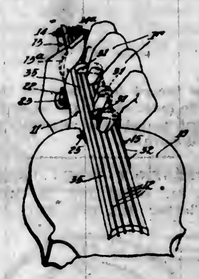
4. A flashing comprising an element adapted to lie on the surface of the material to which the flashing is applied, a second flashing element to which the first element is adapted to be secured, and separate members fitting the first element and adapted to conform to the surface of the material to which the flashing is applied, said members and said first-mentioned element having co-engaging means to engage the one with the other, so that said members of various forms may be applied to said first-mentioned element.

1,394,404. FLASHING. OSCAR BOLL, West Hoboken, N. J. Filed Feb. 17, 1920. Serial No. 359,273. Renewed Dec. 3, 1920. Serial No. 428,148. 4 Claims. (Cl. 20—5.)



1. A flashing including a channel body adapted to receive a member at one side of the joint to which the flashing is to be applied, one flange of said body being returned on itself and carried beyond the body to constitute a projecting portion to overlap the material at the opposite side of the joint, and a cover plate hinged to said body at the opposite side of the latter from said flange, said cover plate being of a width to extend beyond the body and overlap the adjacent material.

1,394,405. EFFICIENCY-TABLE. WILLIAM F. BRENNAN, Collinsville, Ill. Filed Jan. 17, 1921. Serial No. 437,946. 2 Claims. (Cl. 45—31.)



2. A table for household use, comprising supporting legs, an arm having one end pivoted to one of said legs and being movable from a vertical position to a position in which said arm extends outwardly from the leg to which it is pivoted, a short arm in connection with the first-named arm, a support having its end pivoted to said arms and arranged for horizontal turning movement, a chair pivoted with said support for horizontal turning movement, a device for locking said support from turning, and an element supported by the table for holding the first-named arm in its outwardly extended position.

1,394,406. BUILDING-BLOCK AND WALL. ELNATHAN CALVERT, Des Moines, Iowa. Filed Apr. 12, 1919. Serial No. 289,646. 2 Claims. (Cl. 72—41.)

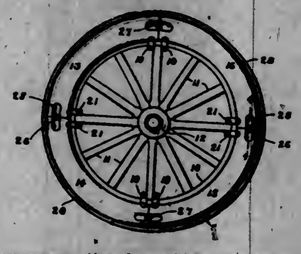
1. A wall formed of hollow blocks, each block being made of concrete and formed with an outer face and side surfaces at right angles to said outer face and an inclined inner face lying in a single plane and forming oblique angles with the side surfaces and a cavity opening to the inclined inner face, said blocks being inverted in adjacent vertical rows to bring a wider side surface of one block into overlapping relation with the wider side surface of an adjacent block in another row and course.

1,394,407. ATTACHMENT FOR STRINGED INSTRUMENTS. ABRAHAM CHERNIAVSKY, Los Angeles, Calif. Filed May 24, 1920. Serial No. 383,755. 7 Claims. (Cl. 84—314.)

1. In combination with a stringed instrument, a guide extending longitudinally of the fingerboard, and transversely extending finger checks carried adjustably on the guide.

1,394,408. UMBRELLA. PAUL L. COOK, Chattanooga, Tenn. Filed Sept. 20, 1919. Serial No. 325,231. 2 Claims. (Cl. 35—26.)

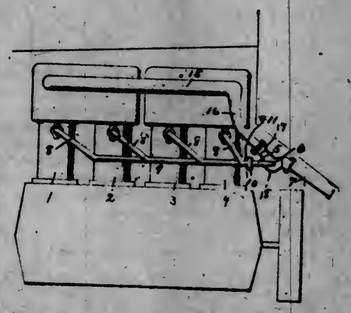
2. A folding umbrella having a rib in relatively movable sections, a block fixed to each section and slidably mounting the complementary section, a cover secured to one of the sections and to the block thereon, a stretcher having a bifurcated portion, and the last mentioned block being disposed in said portion and braced thereby against axial movement, and means to pivot the last mentioned block to the stretcher, the said section being disposed in vertical alinement and the pivot means engaging such block intermediate the transverse planes of the sections.



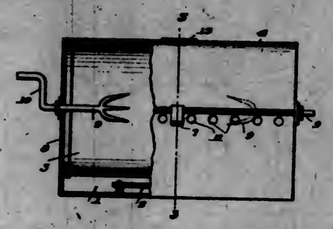
1,394,409. MILK-BOTTLE CAP. IDA DAVIS, San Antonio, Tex. Filed May 6, 1919. Serial No. 295,150. 2 Claims. (Cl. 215—38.)

1. A closure for milk bottles and like wide-mouthed receptacles comprising two similar sections, each embodying

a top and a depending rim, hingedly connected by means of their top portions and having the ends of the rim overlapping when in closed position, an arm projecting from the outer end of one of the rims and curved concentric with the hinged joint between the two sections, and a stud on the inner end of the other rim to coöperate with the said arm to hold the relatively movable section open in adjusted position.

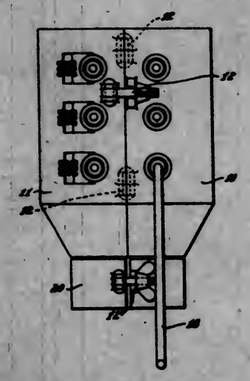


1,394,410. EMERGENCY-TIRE. PETER M. GARSON, Philadelphia, Pa. Filed Jan. 24, 1921. Serial No. 439,561. 4 Claims. (Cl. 152—23.)



2. An emergency tire for vehicle wheels comprising a plurality of non-resilient tubular inter-engageable sections, each of said sections having an inner arcuate face adapted to seat on—and spaced opposed radially disposed lugs for engaging the sides of—the wheel rim, bayonet slots in said lugs, a reduced annular flange at one end of the section for insertion into the abutting end of the adjoining section, opposed indents at each end of the tubular section, means for connecting abutting sections together at the indented portions, and means for coöperation with the bayonet slotted lugs for clamping the tire rigidly to the wheel rim.

1,394,411. AUXILIARY EXHAUST-PORT. HARRY JAMES GRAKE, Victoria, British Columbia, Canada. Filed July 8, 1919. Serial No. 309,318. 3 Claims. (Cl. 60—32.)

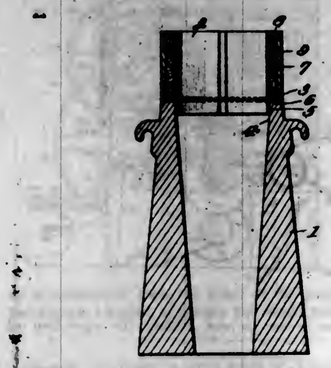


1. The combination with an internal combustion engine embodying a plurality of cylinders, pistons, a main exhaust header and means to exhaust into the header at predetermined points successively in the cycle of operation, of an auxiliary header arranged as a blower in relation to the main header, and means to exhaust from one cylinder into the auxiliary header at a point in the cycle coinciding with the first mentioned exhaust from another cylinder.

1,394,412. ROASTER. ARTHUR A. GREENICK, Buffalo, N. Y. Filed May 11, 1920. Serial No. 380,619. 1 Claim. (Cl. 53—5.)

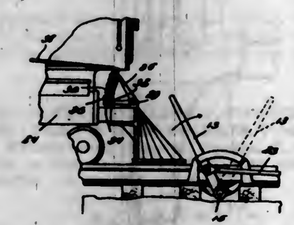
A device of the class described comprising a heating chamber having an opening therein adapted to be placed over a burner, a cylindrical roasting chamber having side flanges removably supported on the heating chamber and having its lower portion projecting into said chamber, rotatable forked rods projecting through the ends of the roasting chamber and adapted to engage the article to be roasted, one of said rods having a handle thereon outside of the roasting chamber, a removable cover for the roasting chamber and an observation hole in said cover.

1,394,413. CLAMP. FRANK K. HOBBS, Guymon, Okla. Filed Nov. 9, 1920. Serial No. 422,909. 3 Claims. (Cl. 254—29.)



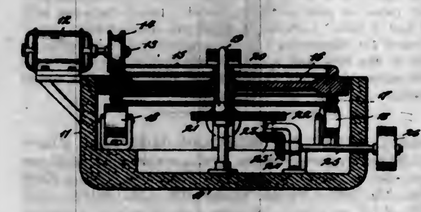
1. A machine of the class described comprising a sectional frame, said sections being hingedly connected together, upper and lower rollers journaled in each section, the upper and lower rollers of the respective sections being geared together and operating in pairs, means whereby all of said rollers are rotated in unison, and means for holding said sections of the frame operatively associated.

1,394,414. BELT. JOSEPH E. HOGAN, New York, N. Y. Filed June 22, 1920. Serial No. 390,863. 4 Claims. (Cl. 106—23.)



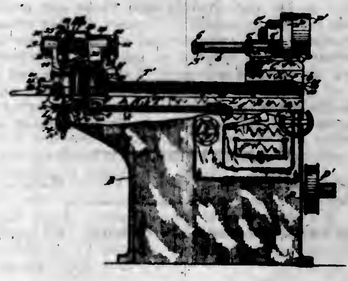
1. A waist line belt made from a composition of rubber, cork in powdered form, and a binder, so combined as to provide a slightly elastic, non-absorbent article of great tensile strength.

1,394,415. FEEDER FOR INGOT-MOLDS. BLOOMFIELD H. HOWARD, Washington, D. C., and ERNEST J. TURNER, Pittsburgh, Pa. Filed Oct. 1, 1920. Serial No. 414,060. 7 Claims. (Cl. 22—147.)



1. A feeder for ingot molds adapted to be removably supported by the upper end of the mold, and having an annular refractory material receiving channel open at its upper end and its lower end closed by the upper end of the mold.

1,394,416. AUTOMATIC SWITCH-OPERATING MEANS. MERRITT TALMAGE JACKSON, Faber, Va. Filed Mar. 5, 1921. Serial No. 449,679. 3 Claims. (Cl. 246—339.)



2. A tappet for use on a piece of railway rolling stock comprising a swinging tappet arm with a transverse pin, a swinging member having a slot receiving said pin and adapted to act against and move the pin, a spring carried by said member and interposed between the same and the pin to cushion the movement of the pin independently of the member, means to adjust the member, and means to adjustably fix the member.

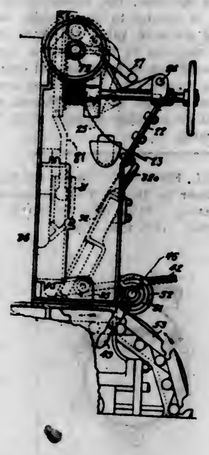
1,394,417. POWER-WHEEL. JOHN KROTH, Forks, N. Y. Filed Mar. 18, 1921. Serial No. 453,213. 1 Claim. (Cl. 74—26.)

In a device of the class described, the combination of a concrete well, a source of power secured thereto and comprising a drive wheel, a plurality of idler rollers supported by said well, a horizontally disposed power wheel, a rail secured to the upper surface of said wheel and engaged by said drive wheel, a rail secured to the lower surface of said wheel and riding on said rollers, a shaft upon which said power wheel is pivotally mounted, said shaft being supported at its lower end by said well, a bridge for supporting the upper end of said shaft, a gear secured to said power wheel, and gearing operable by said gear for operating any desired mechanism.

1,394,418. GRINDING-MACHINE. GEORGE W. LANT, Providence, R. I., assignor to Abrasive Machine Tool Co., East Providence, R. I., a Corporation of Rhode Island. Filed Dec. 3, 1917. Serial No. 205,068. 23 Claims. (Cl. 51—95.)

1. In a grinding-machine, the combination with a reciprocating table, of means to reciprocate said table, a headstock swiveled on said table to adapt it to be adjusted in angular relation to the table, a rotary-member mounted on the headstock, a longitudinal drive-shaft and a train of gearing connecting the rotary-member to be driven from the drive-shaft in its different positions of angular adjustment in relation thereto while being reciprocated with the table.

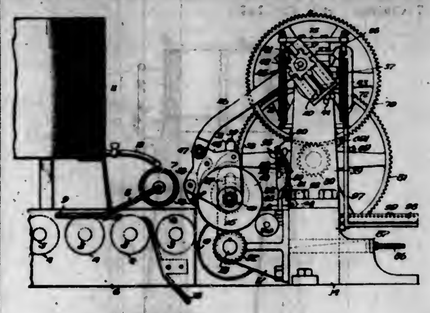
1,394,419. RADIAL ENGINE. ARVID G. LARSON, Grinnell, Iowa, assignor to Dodge Tool Company, Grinnell, Iowa, a Corporation. Filed Nov. 4, 1919. Serial No. 335,757. 3 Claims. (Cl. 123—55.)



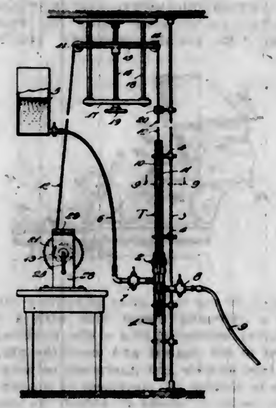
1. In a device of the class described; a shaft having a crank thereon; a crank case for said crank; a series of cylinders arranged radially around the crank and secured to said crank case; pistons in said cylinders; connecting rods connecting said pistons with said crank; a valve seat in the head of each cylinder; a valve on the interior of the cylinder for coacting with said seat, having a stem projecting from the head of the cylinder; means for yieldingly holding the valve seated; means for operating said valve from a cam shaft, each cylinder having an intake port in its side; an annular fuel manifold adjacent to said crank case; and conducting chambers for connecting the manifold with the intake ports of the respective cylinders, the said conducting members being so mounted that expansion of the cylinders may be permitted without cracking the manifold.

1,394,420. DOOR-BUFFER. OSCAR A. LAWRENCE, San Francisco, Calif. Filed Dec. 13, 1915, Serial No. 66,620. Renewed Nov. 19, 1920. Serial No. 425,290. 1 Claim. (Cl. 16—77.)

A door buffer having a casing open at one end and an annular retainer frictionally held by a flange thereon within the open end of said casing, said retainer having a shoulder on the end opposite said flange and projecting laterally beyond the casing; a bumper slidable within the said casing and projecting through the retainer and having a shoulder thereon adapted to engage said retainer for limiting the outward movement of said bumper and a plurality of springs positioned between the bumper and the closed end of the casing of a tension insufficient to break the frictional engagement between the retainer and casing.



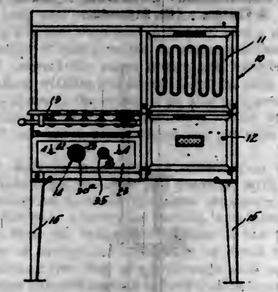
1,394,421. FURNACE. WILLIAM LLOYD, Hazleton, Pa., assignor to Coxe Traveling Grate Company, Port Carbon, Pa., a Corporation of Pennsylvania. Filed May 15, 1918. Serial No. 234,673. 14 Claims. (Cl. 110—40.)



1. In a mechanical stoker, a hopper, an ignition plate over which the fuel passes from the hopper to the furnace grate, and means for adjusting said ignition plate bodily toward and from the fire box, together with a cut-off gate arranged in the hopper above the ignition plate and serving to control the supply of fuel to the ignition plate.

1,394,422. RUBBER-PUNCHING MACHINE. HARVEY F. MARANVILLE and HORACE D. STEVENS, Akron, Ohio, assignors to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Oct. 7, 1919. Serial No. 328,988. 9 Claims. (Cl. 164—22.)

1. In a machine of the character described, the combination of a die for cutting rubber stock, a compression plunger within the die, and means causing the plunger to descend upon the rubber and compress it to a predetermined thickness prior to and during the operation of the die.

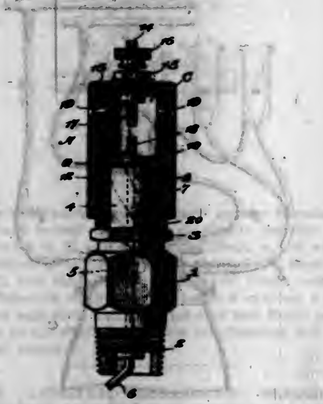


1,394,423. DEVICE FOR CALIBRATING TRANSPARENT TUBES. AUGUST MAZZI and FRANK MARTINI, Vineland, N. J. Filed July 1, 1920. Serial No. 393,370. 12 Claims. (Cl. 73—151.)

1. In a device for calibrating open ended transparent tubes, a liquid container having an upwardly facing tube-seat provided with an opening adapted to communicate with the interior of the tube to be calibrated through one of the open ends of the tube, means to interchangeably secure tubes on said seat and prevent leakage between said seat and a tube, a chain of duplicate displacement members each for displacing a predetermined cubic quantity of liquid in the tube and a suspending element to lower said displacement members through the tube into said liquid container.

1,394,424. AUTOMATIC STOVE OR THE LIKE. JAMES M. MERRITT, Los Angeles, Calif., assignor of forty-one per cent. to C. F. Jaques, San Francisco, Calif. Filed Dec. 13, 1920. Serial No. 430,208. 11 Claims. (Cl. 161—1.)

1. In a cook stove having a panel part and embodying a burner and a control valve for the burner, automatic time control mechanism for the valve comprising an adjustable catch mechanism arranged back of the panel



to be adjustable from the front of the panel, and a clock mechanism adapted to release the catch mechanism.

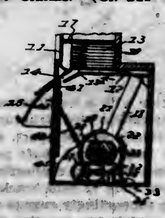
1,394,425. CROSSTIE FOR RAILWAY-CARS. LOUIS G. MILLER and EDWARD C. LONG, Westmont borough, Pa. Filed Apr. 18, 1921. Serial No. 462,473. 14 Claims. (Cl. 105—239.)

1. A polygonal shaped cross-tie for railway car bodies comprising two riveted flanged trough-shaped members provided with an integrally thickened central web portion.

1,394,426. AUXILIARY SPARKING UNIT FOR SPARK-PLUGS. FRANK E. WADE, Camden, N. J., assignor to Wade Manufacturing Company, Camden, N. J., a Corporation of New Jersey. Filed Jan. 29, 1920. Serial No. 355,004. 3 Claims. (Cl. 123—169.)

1. A sparking unit for spark plugs, including in combination with the central conductor and the insulator surrounding the same, a tubular hood closed at one end and open at the other to thereby telescopically fit over the insulator, a wire binding terminal carried by the hood, and a metallic member engaging with the hood and conductor and to prevent displacement of the hood.

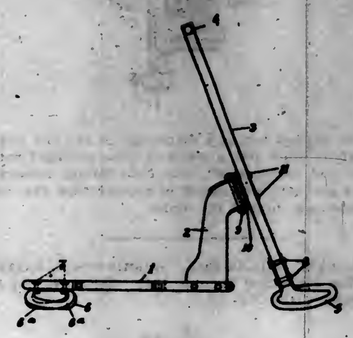
1,394,427. SOUND-BOX. WASHINGTON C. KANTNER, Reading, Pa. Filed June 25, 1920. Serial No. 391,573. 5 Claims. (Cl. 274—27.)



1. A sound box having a diaphragm at one end and an outlet at its other end, a series of disks arranged within said box and spaced apart, said disks having registering openings gradually decreasing in number from the vibratory diaphragm toward the outlet.

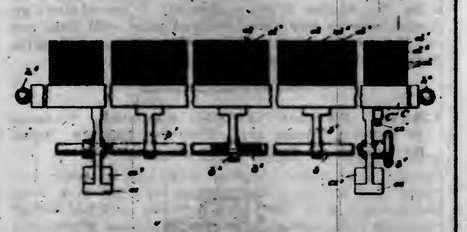
1,394,428. SOUND-BOX. WASHINGTON C. KANTNER, Reading, Pa. Filed Nov. 19, 1920. Serial No. 425,137. 5 Claims. (Cl. 274—27.)

1. A sound box having a vibratory diaphragm at one end and a plate at the other end provided with an outlet and a cup like member having a plurality of spaced disks arranged between said sound box and plate, said disks and cup like member being provided with openings registering with the outlet opening of said plate.



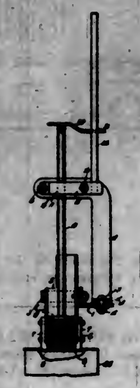
1,394,429. ENVELOP-VENDING MACHINE. CHARLES W. KENNUM, Tucson, Ariz. Filed Dec. 16, 1919. Serial No. 345,206. 7 Claims. (Cl. 211—8.)

1. An envelop vending machine having a follower plate for successively advancing envelops to a discharge outlet,



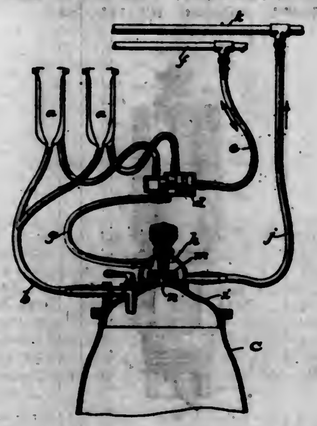
an operating shaft, a clutch having one of its members revolubly mounted upon said shaft and carrying the follower plate, said follower plate being yieldingly held in its normal position, a sleeve mounted upon the operating shaft and carrying the other of said clutch members, a cam carried by said sleeve and engaged by a pressure spring for holding the sleeve in its normal position, and coin controlled means for keying said sleeve to the operating shaft.

1,394,430. SCOOTER. GEORGE MAXIMILIAN ALEXANDER KOEHN, Eccles, near Manchester, England. Filed Aug. 24, 1920. Serial No. 405,690. 1 Claim. (Cl. 280—16.)



An ice scooter comprising in combination a platform, a steering head, a swivel connection between said platform and said steering head, a sheet metal runner arranged on edge mounted on said steering head, a pair of sheet metal runners arranged on edge mounted on said platform at an angle to one another so that their points of contact with the horizontal plane do not lie on a line inclined to the horizontal axis of the scooter.

1,394,431. REED FOR SPACING WARP-THREADS. CHARLES LEA, Boston, Mass., assignor to American Warp Drawing Machine Company, Boston, Mass., a Corporation of Maine. Filed Sept. 17, 1915. Serial No. 51,164. Renewed Jan. 19, 1921. Serial No. 438,525. 16 Claims. (Cl. 28—30.)



11. The combination with a longitudinal supporting bar, a collapsible and expansible reed structure mounted thereon having dents normally spaced apart, supporting brackets for said bar, a longitudinal shaft parallel with said bar, a series of arms pivotally connecting said bar with said shaft, the upper ends of said brackets being formed and proportioned to supportingly engage the under side of said bar when the reed is in operative position while allowing said bar to swing downwardly therefrom, substantially as described.

1,394,432. LABEL-FEED DEVICE. JAMES QUINCY LEAVITT, Ogden, Utah, assignor of one-half to H. L. Herrington, Ogden, Utah. Filed Aug. 4, 1920. Serial No. 401,155. 8 Claims. (Cl. 216—42.)

1. A label feed device, comprising an open ended receptacle, spurs at the lower end of the receptacle projecting inwardly thereof and adapted to prevent accidental falling of a label out of the receptacle, a rod exerting downward pressure on the labels, a post, and a link slidably mounted on the post and at its free end engaging the upper end of the rod preventing upward movement of the rod.

1,394,433. MILKING-MACHINE. MEREDITH LEITCH, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 27, 1919. Serial No. 333,491. 6 Claims. (Cl. 31—101.)

1. In a milking machine, the combination with the teat cups, the milk pail provided with an air outlet, a milk pipe connecting the teat cups and milk pail, and a suction pipe, of a plurality of check valves in series controlling the pail outlet and arranged to allow the free ejection of air through said outlet into the suction tube and preventing by their joint action the passage of liquid or vapor through said outlet into the pail.

2. In a milking machine, the combination with the teat cups, the milk pail provided with an air outlet, a milk pipe connecting the teat cups and milk pail, and a suction pipe, of a plurality of check valves in series positioned to independently control the same outlet and adapted to freely open to allow withdrawal of air from the pail, said valves tending to close in the event of an absolute pressure in the suction tube exceeding the pressure within the pail, the closure of one valve neutralizing any leakage in another valve.

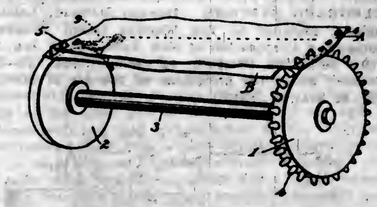
3. In a milking machine, the combination with double chamber teat cups, the milk pail provided with an air outlet, a connection between the milk chambers of the teat cups and the pail, a source of suction, and means affording a passage from the inflation chambers of the teat cups to the source of suction, of a plurality of check valves in series permitting free flow of air through said pail outlet to said passage but cooperating to seal said pail outlet against a reverse flow of air, vapor or liquid.

4. In a milking machine, the combination with the teat cups, the milk pail provided with an air outlet in its top, a milk pipe connecting the teat cups and the pail, and a suction pipe, of a stopper-shaped flanged valve extending into said outlet, and seating against the top of the pail adjacent said outlet, and a cup-shaped valve overlying and surrounding the first valve and seated against a part of the top of the pail concentric to the seat of the first valve.

5. In a milking machine, the combination with double chamber teat cups, the milk pail provided with an air outlet in its top, a milk pipe connecting the milk chambers of the teat cups and the pail, a suction tube, and a tubular connection from the inflation teat cup chambers, of a valve chamber communicating with the pail outlet, said tubular connection and said suction tube and affording a passage for exhaust air from both the inflation chambers of the teat cups and the pail to the suction tube, and a compound check valve controlling the outlet from the pail to said passage.

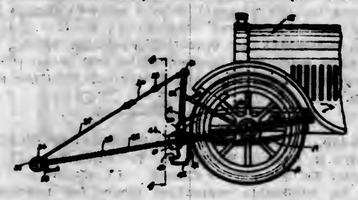
1,394,434. BAND-CUTTER. CHARLES L. LOFFLER, Minneapolis, Minn. Filed Apr. 18, 1918. Serial No. 229,372. 2 Claims. (Cl. 130—1.)

1. In a band cutter having a shaft angular in cross section, a blade having an angular opening in one side of its body adapted to fit snugly over the shaft, a side of said opening being opened to permit removal of the blade from the shaft, said blade having an integral flange bent outwardly therefrom at the inner end of said opening, a collar fitted over said shaft and engaging over said flange to hold the blade on the shaft, and means for clamping said blade and collar together.



1,394,435. AUTOMATIC GREASE-CUP. WILLIAM CORBET MACHADO, Montecito, Calif., assignor of one-half to Dimitries Gymnastis, Santa Barbara, Calif. Filed Nov. 27, 1920. Serial No. 426,858. 1 Claim. (Cl. 184—45.)

A grease cup having an outturned upper edge, a closure head received over said cup and having an inturned lower edge, a spring positioned in the space between said cup and head with said spring abutting against said outturned and inturned edges for yieldably forcing said closure head downwardly upon said cup, a valve at the lower end of said cup for controlling the discharge of grease therefrom, and

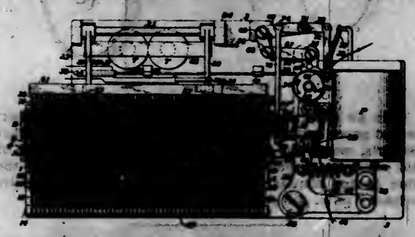


an inwardly opening spring pressed check valve arranged in the upper end of the closure head.

1,394,436. AUTOGRAPHIC REGISTER. ALBERT W. METZNER, Dayton, Ohio, assignor to The Standard Register Company, Dayton, Ohio, a Corporation of Ohio. Filed July 8, 1919. Serial No. 309,336. 8 Claims. (Cl. 282—21.)

3. In an autographic register, a feeding device for perforated paper comprising a pair of interconnected sprocket elements, means for rotating them simultaneously, one of said elements having equally interspaced teeth, and the other having similarly spaced teeth, covering part of its periphery only, for the purpose described.

1,394,437. SAFETY DEVICE FOR AUTOMOBILES. WILLIAM MEYER, Crystal Lake, Ill. Filed Oct. 25, 1920. Serial No. 419,419. 15 Claims. (Cl. 293—28.)



1. A device of the class described comprising a collapsible apron; springs tending to project said apron forwardly; an upwardly extending trigger serving to hold said apron releasably in collapsed condition; and a crossbar carried by said trigger for releasing the trigger by backward pressure thereon, substantially as described.

1,394,393. SCREWDRIVER. James H. Hicks, St. Louis, Mo. Filed Sept. 19, 1919. Serial No. 324,972. 1 Claim. (Cl. 145—50.)

A screw driver, comprising a shank provided with a main screw driving tip, and a double expansible starting tip on said shank and movable beyond said driving tip, and expansible thereby, adapted to grip and hold the screw while being set, said starting tip being adapted to be moved clear of said driving tip while the screw is being driven.

1,394,439. CODE-TRANSPOSING APPARATUS FOR TELEGRAPH SYSTEMS. Donald Murray, London, England, assignor to The Western Union Telegraph Company, a Corporation of New York. Filed Jan. 20, 1919. Serial No. 272,140. 12 Claims. (Cl. 178—3.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

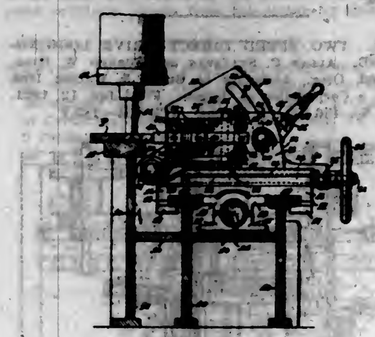
1. Apparatus for transposing signals from one telegraph code into another, comprising a group of selecting devices representing one telegraph code, a second group of juxtaposed selecting devices representing another telegraph code, and means for operating upon the second group under the mechanical control of the first group, so as to transpose a signal from the first group into the second group.

1,394,440. ADJUSTABLE SUPPORT OR BRACKET. John R. Osann, Buffalo, N. Y. Filed July 27, 1920. Serial No. 399,220. 9 Claims. (Cl. 45—91.)

1. An adjustable supporting device for mirrors and the like comprising holding means to which the mirror is secured, a pair of arms to which said holding means is pivoted at separated points to permit the mirror to swing in one plane, a pair of attaching members adapted to be secured to a support, and a pivotal connection between each of said arms and its related attaching member, one of said arms having a slot through which the pivot passes and which is arranged to permit an adjustment of said arm toward and from said support.

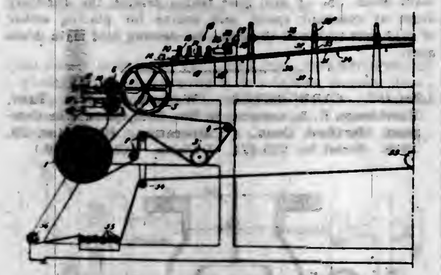
6. A supporting device for mirrors and the like comprising means for attaching said device to a support, a holding member provided with bent ends which engage the edges of the mirror, a securing device movable toward and back of the mirror for feeding the mirror against said ends of the holding member, and a bearing piece which extends between said securing device and the mirror back and is loosely retained in a hole in said holding member.

1,394,441. SAFETY-HOLDER FOR NECKTIES. Josef Paser, Zurich, Switzerland. Filed Feb. 24, 1920. Serial No. 360,641. 4 Claims. (Cl. 2—64.)



1. A safety-holder for neckties of the self-adjusting type and adapted to be looped around the neck, comprising in combination, a flat abutting plate provided at the top with a recess to engage with and allow the said plate to be pressed against the collar stud from below, and at least one pin rigidly mounted on and secured at substantially right angles to the flat abutting plate, the said pin being the means crosswise to penetrate the slip and the loop of the knot of the tie.

1,394,442. BONDED ARTICLE OF MAGNESIA AND ALUMINA. Ross C. Purdy, Buffalo, N. Y., and Milton F. Beecher and Abraham Albert Klein, Worcester, Mass., assignors to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 7, 1919. Serial No. 329,160. 14 Claims. (Cl. 106—11.)

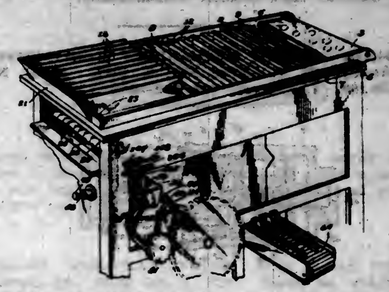


1. The method of making a bonded article of magnesia and alumina comprising mixing pre-shrunk granules of one ingredient with the other ingredient in finely divided condition and heat treating the mixture below the melting point of any eutectic of the magnesia-alumina system to bond the materials into a unitary mass.

1,394,443. CARRIAGE AND SWIVEL CUTTING-HEAD FOR PLANERS. Charles B. Brabeck, Covington, Va. Filed Oct. 14, 1920. Serial No. 416,661. 24 Claims. (Cl. 90—59.)

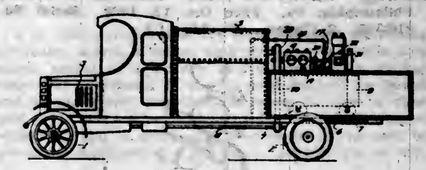
1. A swivel cutting head for planers or the like comprising a reciprocating carriage, a tool post adjustably supported on said carriage, means for adjusting said tool post on said carriage to the movement of said carriage, an apron pivotally connected at one end and on each of two opposite sides of said post, and means for securing a cutting tool on each of said aprons so that the cutting ends of the tools are pointed toward the ends of the aprons pivoted to said post.

1,394,444. METHOD OF AND APPARATUS FOR COATING PAPER. Frederic Payson Reed, East Orange, N. J., assignor, by mesne assignments, to Charles C. Orcutt, Long Branch, N. J. Filed June 21, 1918. Serial No. 241,103. Renewed Jan. 10, 1921. Serial No. 436,888. 10 Claims. (Cl. 91—9.)



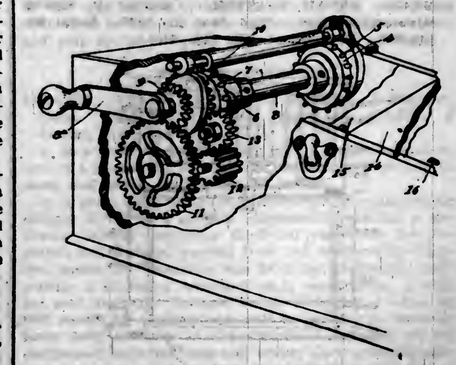
1. In a coating machine, the combination of means for applying a liquid coating material to one face of a continuous sheet of paper; a carrier movable endwise over the coated face of the sheet; a holder connected to said carrier to move therewith and adjustable vertically relatively to said carrier toward and from the sheet; and a plurality of members attached to said holder and extending into contact with said face so as to distribute the coating material evenly thereover and to work it into the sheet.

5. The process of coating paper, which consists in applying a mixture of size and liquid color to one face of a continuous sheet of paper; distributing the mixture evenly over said face and working it into the sheet; and subjecting the sheet so treated to a heating action of high intensity, while maintaining it out of contact with the heating element.



1,394,445. EGG TESTING AND SORTING MACHINE. Charles O. Rogers, William Penn, Pa. Filed Mar. 17, 1921. Serial No. 453,059. 6 Claims. (Cl. 99—6.)

1. An egg testing and sorting apparatus comprising means for progressively feeding a plurality of eggs, inspection holders adapted to receive the eggs, means for turning the eggs while in said inspection holders and



manually controlled means for causing the eggs to be discharged into different predetermined channels.

1,394,446. OIL-GAS-MAKING APPARATUS. Alexander Seidler, Chicago, Ill., assignor to Frederick C. Austin, Chicago, Ill. Filed Nov. 25, 1918. Serial No. 263,953. 16 Claims. (Cl. 158—36.)

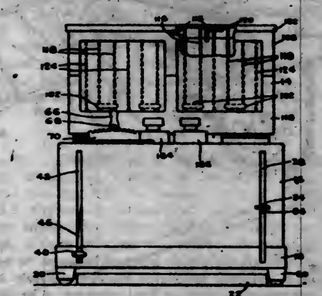
1. In apparatus of the character described, the combination of a boiler for producing steam pressure, a compressed air reservoir at one side of said boiler, an oil tank at the other side of said boiler, so arranged that the reservoir and tank will be heated by the boiler, an air compressor mounted on the structure to supply compressed air to said reservoir, and to furnish air pressure to the oil tank, means for heating the boiler, a steam connection leading from the boiler, an oil feeding connection leading from said tank, and an air pipe leading from said reservoir.

1,394,447. AUTOGRAPHIC REGISTER. John Q. Sherman and Albert W. Metzner, Dayton, Ohio; said Metzner assignor to said Sherman. Filed July 8, 1919. Serial No. 309,353. 9 Claims. (Cl. 282—21.)

1. In an autographic register, a feeding device for moving a plurality of films of paper over a writing surface,

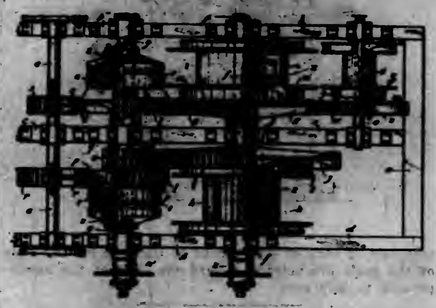
and then issuing them from the machine, and means in connection with said feeding device for feeding and issuing different sized sections simultaneously.

1,394,448. CLUTCH MECHANISM. MAGGIE SETNEY, Brooklyn, N. Y. Filed Nov. 5, 1917. Serial No. 200,260. 12 Claims. (Cl. 192—88.)



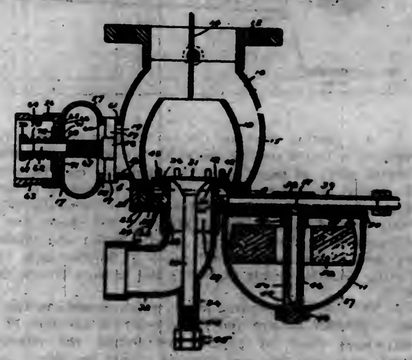
7. A clutch comprising positive locking jaws, friction clutch members, and fluid pressure actuated pistons for either actuating the clutch parts in succession or selectively actuating them as desired.

1,394,449. LUMINOUS PILE. THEODORE C. SMITH, Philadelphia, Pa. Filed Oct. 12, 1920. Serial No. 416,545. 2 Claims. (Cl. 240—1.)



1. A luminous pile comprising a retaining member having a nap, a self-luminous material in a dry or powdered state immersed in said nap and a transparent member disposed across said retaining member and covering the self-luminous material.

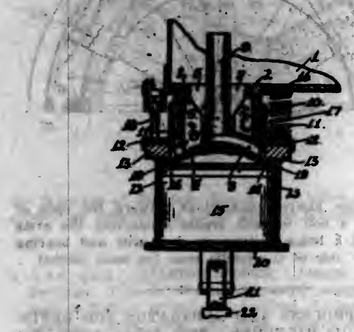
1,394,450. BREAD-TOASTER. CHARLES P. SMITH, Minneapolis, Minn. Filed June 22, 1920. Serial No. 390,706. 18 Claims. (Cl. 219—19.)



5. A bread toaster comprising an oven having slots for insertion of slices of bread, heating means associated with said oven, and means for automatically cutting off the supply of heat and moving the toasted bread outwardly through said slots when the toasting operation is completed.

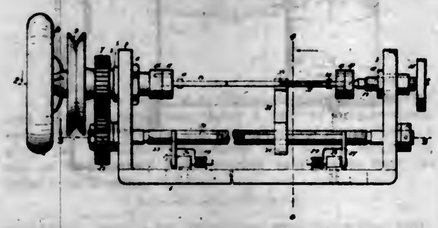
1,394,451. TWO-SPEED DIRECT-DRIVE LOGGING-ENGINE. ALLAN C. SULLIVAN and JOSEPH W. GILL, Portland, Oreg., assignors to Smith & Watson Iron Works, a Corporation of Oregon. Filed Jan. 12, 1921. Serial No. 436,693. 8 Claims. (Cl. 254—185.)

1. In an engine of the character described, a driven shaft, a main drum and an auxiliary drum loose on such shaft, a gear adjacent each drum, means for operatively connecting either of said drums, with its gear, a driving shaft, two different speed gear trains in constant mesh connecting the driving shaft with said main drum gear, said gear trains being normally inoperative to drive said main drum, one of said gear trains driving the auxiliary drum at constant speed, and means for placing either of said gear trains in the state for driving said main drum gear.



1,394,452. CARBURETER. WALTER STURGIS TAFT, Providence, R. I., assignor to The Taft-Carburetor Company, Hartford, Conn., a Corporation. Filed Mar. 30, 1918. Serial No. 226,421. 1 Claim. (Cl. 261—16.)

In combination, a carbureter having a mixing chamber, mechanism constructed and arranged for supplying air directly to the said mixing chamber, a float chamber for supplying fuel in gaseous form to the said mixing chamber, a fuel supply tube interconnecting the float chamber and mixing chamber, and an air conducting tube connected to the said fuel supply tube, the said connecting tube being extended outwardly from the carbureter structure and having a control cock in the extended portion, whereby an explosive mixture will be supplied to the mixing



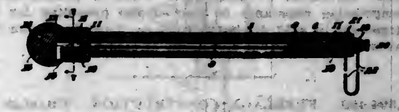
chamber through the cooperation of the said mechanism and the fuel supply tube, and the quantity of fuel delivered to the mixing chamber will be controllable by means of air that is admitted by the control cock and at a point relatively remote from the carburetor structure.

1,394,453. FILLING-VALVE FOR SYRUPERS. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Dec. 6, 1920. Serial No. 428,555. 5 Claims. (Cl. 226—71.)

1. In a filling valve for syrupers, the combination with a displacement member adapted to enter a can to be filled to determine the syrup volume supplied, of a pliant cushion member associated with the rim of the displacement member and depending therefrom.

1,394,454. METHOD OF MAKING THERMOPHONE ELEMENTS. ANTHONIUS M. VAN DOORN, Boston, Mass., assignor to American Thermophone Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 2, 1920. Serial No. 349,105. 1 Claim. (Cl. 29—169.5.)

That improvement in the art of making thermophone elements which consists in supporting two pairs of metal bars in opposition to each other, winding a length of Wollaston wire spirally about said metal bars so that such winding shall be equidistant apart and form loops between the bars, cutting the wire between adjacent bars so as to leave each set of loops with their ends attached to the bars, then etching the loops.



1,394,455. REGISTER. CURTIS HUSSEY VENOMS, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Jan. 22, 1921. Serial No. 439,127. 1 Claim. (Cl. 235—95.)

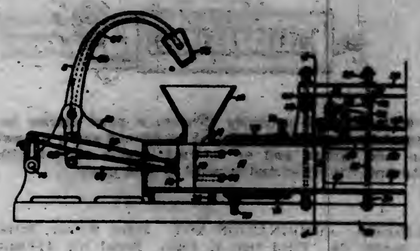
In a register, the combination of a casing, totalizing number wheels and trip number wheels, a common supporting shaft for the totalizing wheels and having the first totalizing wheel fixed thereto, means to actuate the first totalizing wheel, a resetting shaft axially in line with the first mentioned shaft and having the trip

wheels mounted rotatably thereon, a pawl carrier engaged by the end of said first mentioned shaft, a pawl on said carrier, and an internal ratchet carried with the first trip wheel and engaged by said pawl.

1,394,456. COMBINATION TOY. JOHN WENAT, Pittsburgh, Pa. Filed Oct. 1, 1920. Serial No. 414,043. 12 Claims. (Cl. 46—46.)

1. A combination toy of the class described comprising a tubular barrel, a piston head reciprocable within said barrel, means to reciprocate said piston head, a stopper removably positioned in the forward end of the barrel and having a port therethrough, means to open or close said port, and means to detachably fasten said stopper within the end of said barrel whereby the device may be selectively employed as a pop gun or a water gun at will.

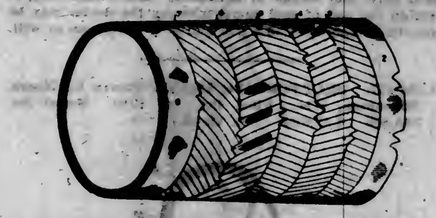
1,394,457. BELT-FORMING DRUM. EDWIN C. WIESS, Milwaukee, Wis. Filed Dec. 10, 1919. Serial No. 343,809. 6 Claims. (Cl. 18—2.)



1. A device of the character described provided with a segmental cylindrical portion, a gate pivotally secured to one edge of the cylindrical portion, and end plates adapted to be secured to the end portions of the segment and gate for maintaining them in extended position.

1,394,458. PRESS. GEORGE E. WHITNEY, Bridgeport, Conn. Filed Jan. 16, 1919. Serial No. 271,384. 6 Claims. (Cl. 100—23.)

3. In a press, the combination with a compressing member, of a pusher for pushing the material in front of the same, and means for heating the pusher.



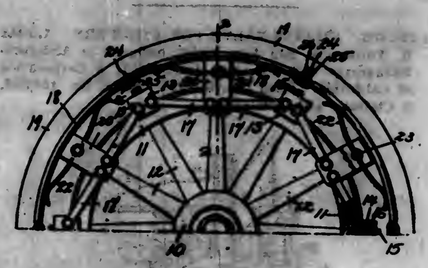
6. A press comprising, in combination, a reciprocating plunger acting in a suitable compressing chamber, a discharge passage providing frictional resistance for the compressed material passing from the compressing chamber, means for regulating the frictional resistance, comprising a frictional retarding plate constituting a wall for said discharge passage, means including a series of bell cranks for holding said wall to permit the latter to move longitudinally in the direction of travel of the compressed material, said bell cranks each pivotally connected at the end of one arm to said wall, and each connected to said wall by yielding compression means at the

said of the other arm, said bell cranks intermediately fulcrumed to an abutment, and said reciprocating plate and bell cranks organized and operating to permit longitu-

dinal movement of said plate when a predetermined compression resistance is reached and providing for enlargement of said discharge passage, dependent upon the extent of longitudinal movement of said plate.

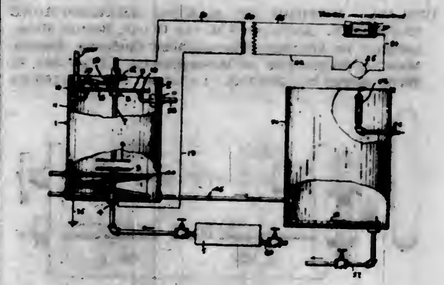
1,394,459. FUSELAGE-CONSTRUCTION. CHARLES F. WILLARD, New York, N. Y., assignor, by mesne assignments, to L-W-F Engineering Company, Inc., College Point, Long Island, N. Y., a Corporation of New York. Filed Oct. 18, 1916. Serial No. 126,326. 5 Claims. (Cl. 244—31.)

3. A fuselage comprising a plurality of layers of wood, each layer consisting of a plurality of spirally directed wooden strips, and fabric between the wood layers and means for biding them together.



1,394,460. AEROPLANE CONSTRUCTION. CHARLES F. WILLARD, New York, N. Y., assignor to L-W-F Engineering Company, Inc., College Point, Long Island, N. Y., a Corporation of Michigan. Filed Jan. 12, 1918. Serial No. 211,471. 7 Claims. (Cl. 244—30.)

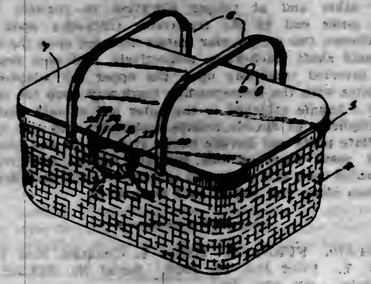
1. An aeroplane fuselage having a continuous surface and a tail post at the rear end thereof and a block so interposed between the fuselage and the tail post that the exposed surfaces of the mentioned parts are continuous.



1,394,461. WHEEL. HERMAN YEOMIN, Newark, N. J. Filed Oct. 8, 1919. Serial No. 329,169. 6 Claims. (Cl. 152—8.)

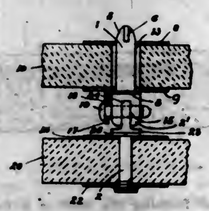
6. A wheel comprising a wheel proper, spaced clips embracing the felly of the wheel proper, cushion elements under the clips, arc-shaped cradles with projecting ends embracing the felly of the wheel proper between the clips, links connecting the arms with the clips, a tire

on the cradles, slotted connections between the ends of the cradles, a bolt in each cradle connecting the arms thereof, and a brace resting on each bolt and bearing on the inner side of the cradle near the ends thereof.



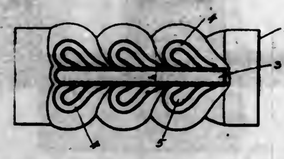
1,394,462. PROCESS AND APPARATUS FOR REFINING LIQUID MIXTURES. SETH FRANK ALDEN, San Francisco, and HAROLD C. ENDT, Los Angeles, Calif.; said Eddy assignor to Petroleum Rectifying Company of California, a Corporation of California. Filed Dec. 22, 1916. Serial No. 138,621. 10 Claims. (Cl. 204—24.)

1. The process of separating the component liquids of a liquid mixture, such as an oil-water emulsion, which comprises maintaining an electric field between electrodes immersed in said mixture, alternately increasing the intension of the field, sufficiently to cause current to flow through the mixture, and decreasing the intensity of the field, sufficiently to substantially prevent passage of current, and separating the coalesced like particles into distinct liquids.



1,394,463. BASKET. ANDREW J. ALLEN, La Grange, Ill. Filed Dec. 20, 1920. Serial No. 432,085. 3 Claims. (Cl. 217—124.)

1. The combination with a receptacle having an open top and a lid seating on said top for closing the same, of bails carried by the receptacle sides for holding the lid in place, said lid having projections at its opposite edges over which the bails are adapted to seat, and a yoke-shaped lever encircling one of the bails and pivoted to the receptacle side, said bail being pivotally connected to

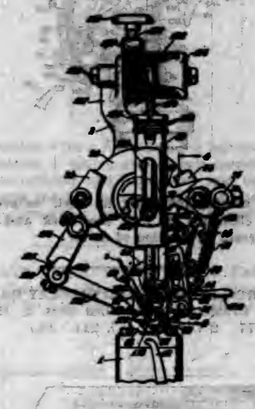


the branches of the yoke-shaped lever below the pivotal connection between the latter and the receptacle side.

1,394,464. AILERON-HINGE. ALFRED DEVANPORT BENTLEY, Toronto, Ontario, Canada, assignor of one-half to United Enterprises Limited, Toronto, Ontario, Canada. Filed June 18, 1920. Serial No. 389,845. 5 Claims. (Cl. 244—31.)

1. An aileron hinge in combination with the aeroplane and aileron frames, comprising a pair of bolt members each inserted through the adjacent frame structures, a pivot pin connecting said bolts, and means secured to one of said frames and engaging said pin to lock the bolts from turning.

1,394,465. DIE AND PROCESS FOR MAKING CUP-HANDLES. JAMES BENTON, East Palestine, Ohio. Filed Aug. 24, 1920. Serial No. 405,670. 9 Claims. (Cl. 26—27.)

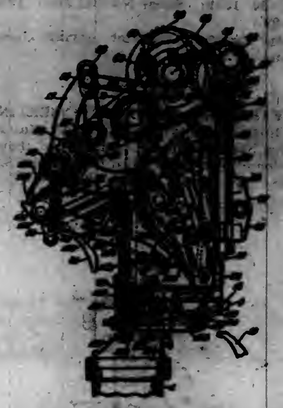


1. In a method of making cup handles the forming of a plurality of cup handles integrally with a connecting member by pressing from a bat.

1,394,466. STORAGE-BATTERY SEPARATOR AND METHOD OF PRODUCING SAME. ROBERT L. BOYER, Trenton, N. J., assignor to Joseph Stokes Rubber Company, Trenton, N. J., a Corporation of New Jersey. Filed Sept. 29, 1919. Serial No. 327,803. 12 Claims. (Cl. 204—29.)

1. A storage battery separator having comminuted wood incorporated therein.

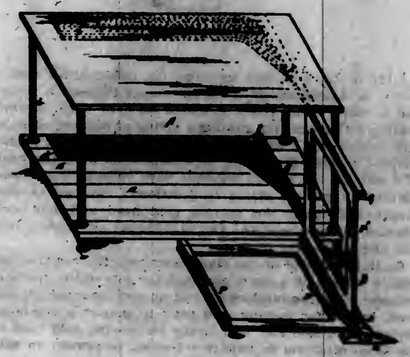
1,394,467. FASTENER AND SLUG INSERTING MACHINE. JOHN H. BRUNINGA, St. Louis, Mo., assignor to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 15, 1918. Serial No. 262,688. 48 Claims. (Cl. 1—28.)



1. In a string nailing machine, the combination with a frame, of a head mounted for movement thereon, a throat and a coöperating driver mounted on said head, a work feeding awl, means for guiding a string of connected nails into said throat, a feeding member mounted on said frame, adapted to feed the string by engagement with the head of a nail on the string, together with coöperating means, adapted to cut the string to position a cut nail in said throat, and means for moving said head and said awl, adapted to move said awl and said throat alternately into and out of the line of drive.

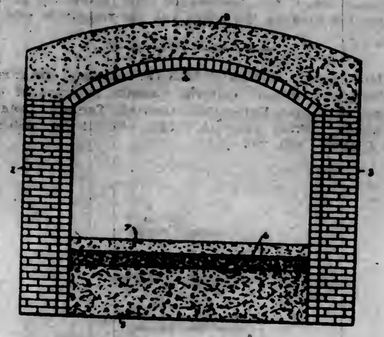
6. In a machine of the class described, the combination with a frame, of a head mounted for movement thereon, fastener inserting mechanism and an awl mounted on said head, means for moving said head to impart a clearance movement to said awl, and means for moving said head in the same direction to impart a feeding movement to said awl.

1,394,468. FASTENER AND SLUG INSERTING MACHINE. JOHN H. BRUNINGA and HARRY H. EMISS, St. Louis, Mo., assignors to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 15, 1918. Serial No. 262,697. 85 Claims. (Cl. 1—30.)



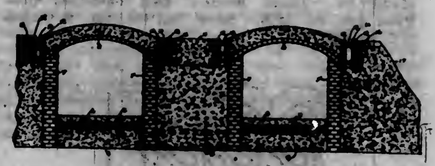
1. In a string-nailing machine, the combination with a frame and a driver thereon, of a throat positioned in the line of drive, a guide for a string of connected nails, a movable nail-receiving member, feeding and cutting means constructed and arranged to engage the head of a nail on the string and feed the string into said nail-receiving member, and constructed and arranged to cut the string to position a cut nail in the said nail-receiving member,

means for moving said self-receiving member to position the nail therein in the line of drive, and work feeding and



puncturing means, including an awl, coöperating with said other elements to feed the work and to form a puncture therein in the line of drive.

1,394,469. RUG STORING AND DISPLAY RACK. ARNOLD M. CASS, Bridgeton, Ind. Filed Sept. 2, 1920. Serial No. 407,677. 2 Claims. (Cl. 211—22.)

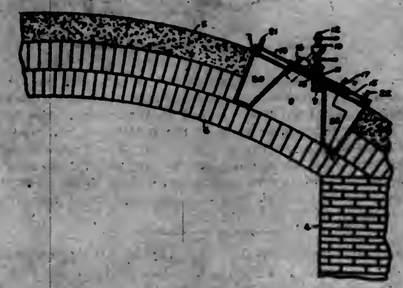


1. In a rug storing and display rack, the combination of a framework, comprising an upper and lower platform, suitable supporting posts adapted to support the upper platform above the lower, a multiplicity of track-ways mounted upon the lower platform and extending along the rear part of said platform, a series of curved extensions of said tracks, a series of switches, mounted one each, at the end of said curved extensions of said track-ways, a transverse track-way extending from the rear to the front edge of said platform and adapted to register with the curved track-ways, when the corresponding switches are properly placed, and a corresponding system of track-ways, and switches, suspended from the upper platform, immediately over and in proper alignment with corresponding track-ways upon the lower platform, with a displacement comprising a revolving shaft, normally extended upon turn and bearing-blocks and positioned at right-angles to said platforms, two track-ways extending throughout the length of said shaft, said track-ways being disposed upon the shaft at right-angles one to the other and at proper elevation to register with the outer end of the transverse track-way upon the platforms, two rectangular frames mounted upon the sides of said shaft track-ways, respectively, and each bearing an inverted trackway upon the upper bar adapted to register with the corresponding track-way upon the shaft, and a handle attached to the outer end of said shaft, a multiplicity of flexible frames comprising end and intermediate posts and flexible bands attached to and binding said posts together and suitable casters and rollers mounted upon said posts and adapted to guide said flexible frames along and within said track-ways.

1,394,470. FURNACE. HENRY L. CHARLES, New York, N. Y. Filed Jan. 23, 1920. Serial No. 353,392. 1 Claim. (Cl. 263—46.)

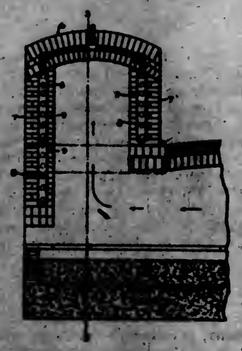
The method of forming the roof of a furnace of the class described consisting in molding an integral structure of highly refractory material over the fire brick arch of the furnace, allowing the same to set, and baking the same with the furnace gases.

1,394,471. ORE-SMELTING FURNACE. HENRY L. CHARLES, New York, N. Y. Filed Jan. 23, 1920. Serial No. 353,393. 3 Claims. (Cl. 263—46.)



1. In combination with a furnace of the class described an abutment between the side walls of adjacent furnaces, and means in combination therewith for varying the width of said abutment adjacent the ends of the arch roofs of said furnaces.

1,394,472. SMELTING OF ORES. HENRY L. CHARLES, New York, N. Y. Filed Jan. 23, 1920. Serial No. 353,394. 1 Claim. (Cl. 75—27.)



The method of smelting ores consisting in applying means after the ore is smelted for changing the relative specific gravities of the slag and metal for separating the same.

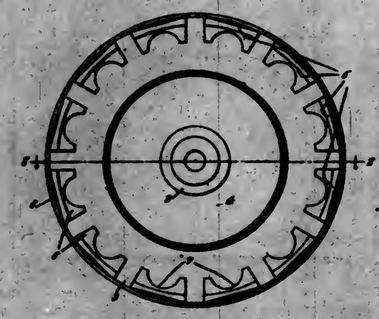
1,394,473. ORE-SMELTING FURNACE. HENRY L. CHARLES, New York, N. Y. Filed Jan. 23, 1920. Serial No. 353,395. 5 Claims. (Cl. 263—24.)

1. In combination with a furnace of the class described and the ore inlet therefor, of a water box surrounding said ore inlet and a water jacket around said ore inlet nozzle.

1,394,474. ORE-SMELTING FURNACE. HENRY L. CHARLES, New York, N. Y. Filed Jan. 23, 1920. Serial No. 353,396. 2 Claims. (Cl. 263—44.)

1. In combination with a furnace of the class described and adjacent the throttle portion of the flue thereof, means for shutting part of the heat therefrom.

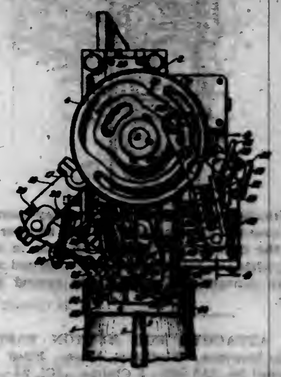
1,394,475. COUNTER FOR LOCKS. EDWARD HARRIS CASSEY, Hartford, Conn., assignor to The Veeder Manufacturing Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 16, 1921. Serial No. 451,452. 1 Claim. (Cl. 70—6.)



The combination with a lock having a key-operated cylinder, of a counter, a spring pressed belt member, a plate secured to the cylinder and having an arm in operative engagement with the belt member and a second arm, and an operative connection between said second arm and the counter.

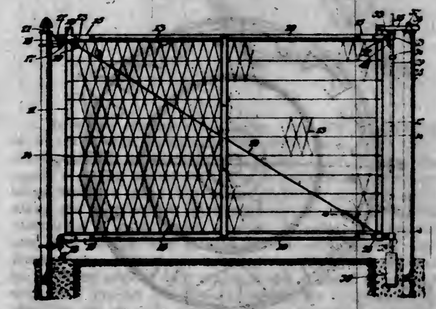
1,394,476. ATTACHER FOR BUTTON-FASTENERS. HARRY H. DANIELS, Winthrop, Mass. Filed Dec. 19, 1919. Serial No. 346,005. 5 Claims. (Cl. 24—208.)

1. An attacher for a button base, comprising clamping members for engaging opposite sides of a material piece, one thereof having a projection through said material piece, and the other thereof having means permitting said projection to be passed freely therethrough to operative position and adapted for automatic self-binding engagement with said projection as said members are pressed into assembled relation.



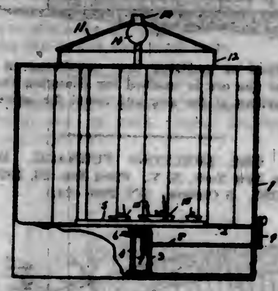
1,394,477. WHEEL. EDWARD PARK DICKEY, Harvey, Ill. Filed Apr. 21, 1919. Serial No. 291,501. 2 Claims. (Cl. 301—42.)

1. A wheel rim comprising a circular primary tread and a secondary tread disposed laterally to and radially nearer



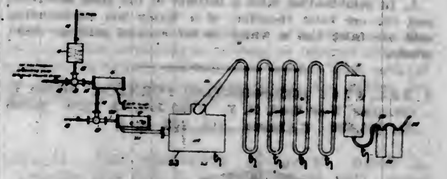
the center from the primary heads; said secondary head being composed of symmetrical sections all a regular polygon separated at the angles thereof to provide unobstructed and breaking recesses and positioned to provide interrupted load bearing surfaces as chords of the primary tread and forwardly and rearwardly presented traction shoulders in planes substantially radial to said circumference.

1,394,478. FASTENER AND SLUG-INSERTING MACHINE. STEPHEN A. DOSTER, St. Louis, Mo., assignor to Champion Shoe Machinery Company, St. Louis, Mo., a Corporation of Missouri. Filed July 19, 1918. Serial No. 245,730. 36 Claims. (Cl. 1—28.)



1. In a machine for selectively inserting fasteners or slugs, the combination with driving means, of means for guiding strings of connected fasteners and connected slugs, a throat adapted to selectively receive the strings from said guiding means, feeding and cutting means, constructed and arranged to selectively feed the strings by engagement with the head end of a fastener or slug on a selected string, and constructed and arranged to cut the selected string, adapted to selectively position a cut fastener or slug in said throat, work puncturing and feeding mechanism including a work feeding awl, and means for moving said awl and said throat into and out of the line of drive.

1,394,479. GATE. FREDERICK W. EWALD, Brooklyn, and HERBERT G. THOMSON, New York, N. Y.; said Ewald assignor to said Thomson. Filed Dec. 30, 1919. Serial No. 348,328. 2 Claims. (Cl. 256—73.)



1. In a gate, a frame structure including upper and lower parallel rails, two pairs of vertical bars at the respective ends of said rails, the bars of each pair being in spaced relation to each other, parallel chord members on said bars embracing the rails and connected thereto at the respective corners of the structure, upper and lower hinge elements fitted between and secured to said bars and chord members at one end of the structure, one of said elements having a diagonal perforation therein, a tensioning member fitted to said perforation, and a diagonal brace rod engaged at one end with said member and secured at its opposite end to the frame structure.

1,394,480. KALEIDOSCOPE. WILLIAM E. FRANN, Camden, N. J. Filed Dec. 29, 1919. Serial No. 348,174. 2 Claims. (Cl. 88—16.)

1. A kaleidoscope comprising a body open at its upper end, a hood mounted on said body and disposed across the opening, said hood being spaced from the top of the body to permit an angular view of the interior of the body, a series of mirrors within the body disposed at angles to each other within a circle and producing the general effect of a star in horizontal cross section and a lamp mounted in the center of the hood above the common center of the series of mirrors.

1,394,481. PROCESS OF CRACKING AND DISTILLING OIL. JAMES T. FENTON, Salt Lake City, Utah. Filed May 1, 1920. Serial No. 378,216. 2 Claims. (Cl. 196—25.)

1. The hereinbefore described process of treating oils which consists in cracking or disrupting the molecular structure of the oils by heat supplied solely by the direct contact of superheated steam under pressure with said oils while in a subdivided and agitated condition and while continuously flowing from a source of supply toward a condenser; so controlling the heat and pressure of the superheated steam as to crack a portion of the constituents of the oil, passing the cracked and uncracked constituents to a separator, there expanding and separating said constituents, drawing off the heavier fractions, and then progressively condensing the lighter fractions of the product.

1,394,482. SUBMARINE SIGNALING. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Mar. 29, 1917. Serial No. 158,457. 5 Claims. (Cl. 181—0.5.)

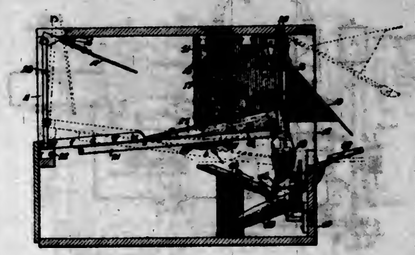
1. Means for locating the direction of submarine sounds, comprising a plurality of submarine sound detectors,

means for acoustically insulating each one of said detectors from the other detector, and means for rotating into and maintaining in any desired position the sound

screen acoustically-insulating means, whereby the intensity of the received signals is caused to vary and indicate the direction from which the sounds are received.

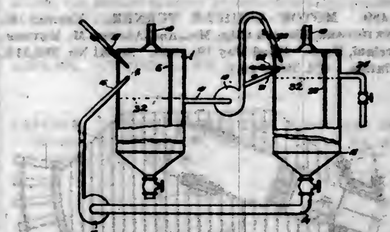
1,394,483. METHOD AND APPARATUS FOR SUBMARINE SIGNALING. REGINALD A. FESSENDEN, Chestnut Hill, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed July 21 1919. Serial No. 312,318. 3 Claims. (Cl. 116—27.)

1. In the art of submarine and airship signaling, a vessel, a source of sound located on said vessel, a receiver of sound located on said vessel, and a sound shadow producing means located between said source of sound and said receiver of sound.



1,394,484. THERMOMETER. WALTER H. FITTS, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed May 12, 1919. Serial No. 296,692. 6 Claims. (Cl. 73—52.)

1. A thermometer having a reservoir for expansible fluid, the expansion of which provides an indication of the temperature to be measured, said reservoir consisting of an exteriorly threaded shell of conducting material whereby it may be placed in intimate contact with a solid body the temperature of which it is desired to measure.

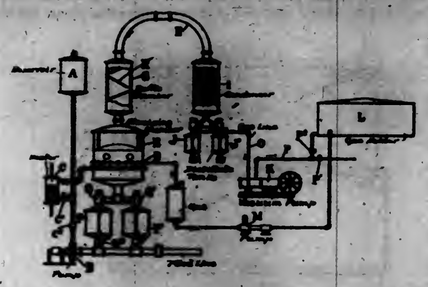


1,394,485. TRAP-NEST. ALBERT G. FOSTER and PERCY M. FOSTER, Berkeley, Cal. Filed Dec. 19, 1919. Serial No. 345,561. 7 Claims. (Cl. 119—47.)

1. A trap nest, comprising a housing, an entry door and two exit doors through the walls thereof, a false floor within the housing pivoted midway its length for vertical swinging movement, a nest on one end of the false floor, an egg tray below said nest, a pivotal support for said tray, said support being adapted to normally lock one of the exit doors, and with the presence of an egg on the tray to unlock the normally locked exit door and lock the other exit door, means whereby the presence of a hen on the nest will act to swing the nest and its supporting floor down-

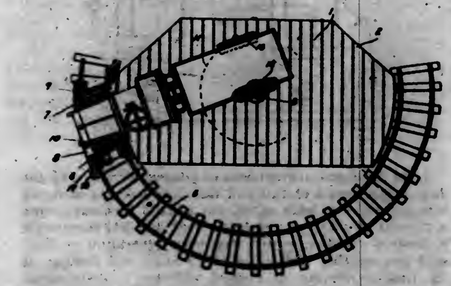
wardly and close the entry door, tread members exterior of the exit doors and means whereby the presence of a hen upon either of said tread members will cause the nest and its supporting floor to swing upwardly and open the entry door, and the upward movement of the supporting floor causing an egg to roll from the tray and permit the pivot support of said tray to return to its original locked position.

1,394,486. PROCESS OF TREATING OILS. ARTHUR E. FOSTER, Washington, D. C. Filed Oct. 15, 1917. Serial No. 196,691. 21 Claims. (Cl. 196—26.)



1. In the chemical treatment of mineral oil products, the step of directing a plurality of traveling free jets of liquid into contact with each other, one of said jets comprising a mineral oil product, and another of said jets comprising a chemical adapted to react with such mineral oil product, said jets meeting each other at an angle and flowing, at the time of meeting, at a speed sufficient to disintegrate each other.

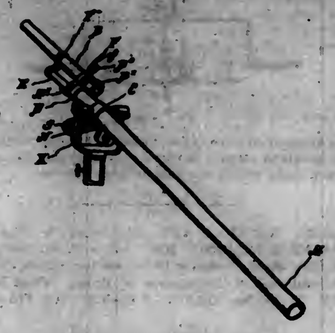
1,394,487. IGNITER. CHARLES M. FRENCH, Seymour, Conn. Filed Mar. 21, 1921. Serial No. 454,189. 4 Claims. (Cl. 87—7.1.)



1. An igniter comprising a cylinder, a cross head arranged in said cylinder, means for raising and lowering said cross head, a wick arranged in said cylinder and secured to said cross head, a cap mounted on the upper end of said cylinder, a cup removably mounted on the cylinder, and a pyrophoric element mounted on said cup.

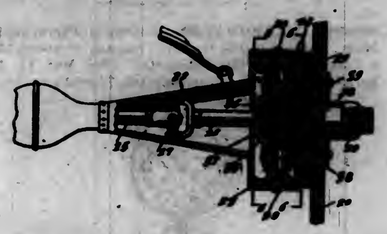
1,394,488. PROCESS OF FRACTIONALLY DISTILLING MIXTURES CONTAINING HYDROCARBONS. EDWARD H. FRANCIS, Kingsport, Tenn. Filed July 10, 1919. Serial No. 309,249. 8 Claims. (Cl. 196—37.)

1. In the process of fractionally distilling a complex liquid mixture containing hydrocarbons, heating such liquid in transit from a reservoir to a temperature below the average boiling point of the fraction to be distilled while in the mixture but sufficiently to vaporize such fraction from the mixture upon atomization with an inert gas, immediately subjecting the thus heated mixture to such atomization with an inert gas in a separating chamber, condensing the vaporized fraction and promptly removing the residue from said chamber.



1,394,489. MOTOR-VEHICLE TURNER. VERNON E. FUNKHOUSER, Kansas City, Mo., and ALFRED M. MEYERS, Merriam, Kans. Filed May 19, 1920. Serial No. 382,518. 7 Claims. (Cl. 104—44.)

1. In a turn table for vehicles, a platform, a rotatable wheel support carried by the platform, blocks for checking the rear wheel of the motor vehicle to the wheel support, an arcuate track concentric with the wheel support, and a carriage for supporting the front wheels of the vehicle movable over the track.

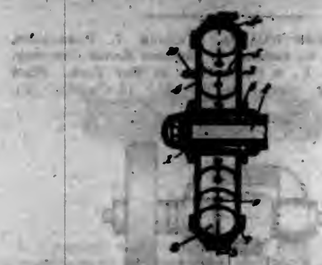


1,394,490. NON-RECOIL GUN. JULIAN A. GILES, Derby, Conn., assignor to The General Ordnance Co., Groton, Conn., a Corporation of Connecticut. Filed Oct. 3, 1918. Serial No. 256,686. 21 Claims. (Cl. 89—40.)

2. In a non recoil gun of the character described, the combination with a trunnion head, and a forward barrel held therein, said forward barrel being provided with segmental screw threads on the exterior of its rear end and with a rearwardly projecting segment having internal segmental screw threads therein, of a rear barrel having external segmental screw threads engaging said internal screw threads on the rearwardly projecting segment of the forward barrel, and having a forwardly projecting segment provided with internal segmental screw threads engaging

the external segmental screw threads on the forward barrel, with means for turning said rear barrel about its axis for locking and unlocking said coacting screw threads, and for swinging said rear barrel laterally to clear said front barrel, substantially as described.

1,394,491. AXLE-MOUNTING. NICHOLAS J. GONDOLF, New Orleans, La. Filed Sept. 20, 1919. Serial No. 325,071. 2 Claims. (Cl. 301—133.)

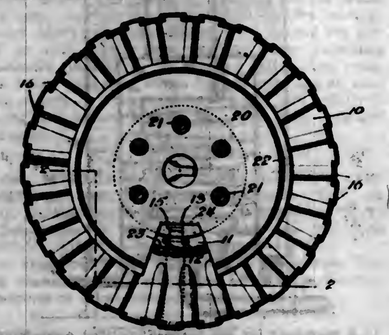


1. A shaft or axle having an outer vertically swinging wheel supporting extension, a bearing sleeve through which the said extension is rotatable having vertically extending portions at its outer end, a stationary housing around the axle or shaft having an enlarged cylindrical portion around the said bearing sleeve and open at its outer end, a plate interfitting the outer end of the said cylinder and having a vertical slot in which the said extensions of the bearing sleeve are slidably disposed to prevent rotation of the sleeve, fastening members entering said cylinder in a circumferential series and extending into said plate to detachably hold the latter in place, and means within the cylinder and interposed between the same and the said bearing sleeve to tension vertical yielding movements of the swinging part of the axle or shaft, as described.

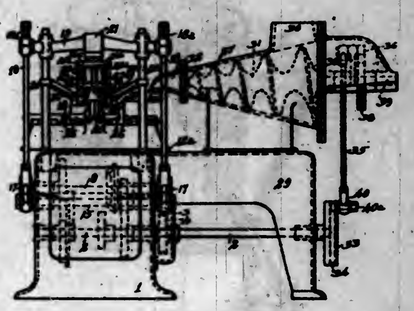
1,394,492. CUSHION VEHICLE-WHEEL. WILLIAM B. GOODWIN, Columbus, Ohio. Filed May 12, 1919. Serial No. 296,339. 2 Claims. (Cl. 152—30.)

2. A cushion vehicle wheel comprising a hub, annular disks secured to and spaced apart upon the hub, a tire located at the peripheries of the disks, and a series of concentric arched rings located between the disks, between

the hub and the tire, and secured to the disks, the rings having their convex sides facing the hub, said rings being spaced apart, the spaces between the tire and the outermost ring, the hub and the innermost ring, and between the rings communicating.



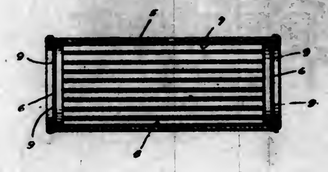
1,394,493. COMBINATION AUTOMOBILE-CREEPER. CHARLES J. GRAESER, Pittsburgh, Pa., assignor of one-half to Thos. Trepanowski, Pittsburgh, Pa. Filed Jan. 21, 1920. Serial No. 352,126. 4 Claims. (Cl. 5—9.)



4. A combination automobile creeper embodying hinged seat and back sections, forward legs hinged to the seat section, rear legs hinged to the rear section in a manner to fold transversely of the longitudinal axis of the rear section and to be disposed between the seat and rear sections when in folded position, coöperating means carried by the rear section and legs for engagement with the seat section for holding the rear section in vertical position and alined with the rear legs and coöperating means carried by the rear legs and rear section for holding the rear legs perpendicular relative to the seat section.

1,394,494. SAFETY AND GUIDE ATTACHMENT FOR MACHINE-GUN MAGAZINES. SAMUEL G. GREEN, U. S. Army. Filed July 2, 1919. Serial No. 308,302. 5 Claims. (Cl. 89—33.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

1. A safety and guide attachment for machine gun magazines of the drum type, consisting of a plate adapted to partly cover the feed-way, and a lip carried by the plate resting across the feed-way.

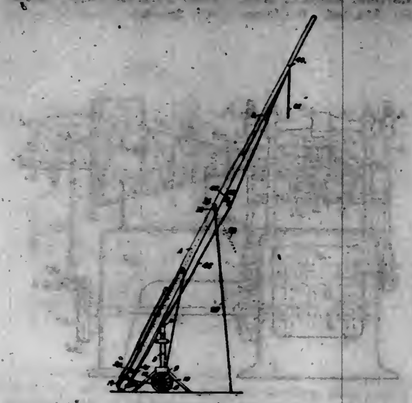


1,394,495. CLAY-WORKING MACHINERY. WALTER A. GRUNSMAN, Birmingham, Mich., assignor to Joseph L. Marcero, Pontiac, Mich. Filed July 30, 1919. Serial No. 314,246. 6 Claims. (Cl. 25—6.)

1. In a clay working machine, a base, a rotatable top thereon, molds on the said top, means for rotating the top a quarter of a turn at a time, means for opening and closing the molds, and means for brushing out the molds, means for inserting clay into the molds, means for coring out the molded clay, and means for opening the molds to deliver the molded product at each successive quarter turn of the machine top.

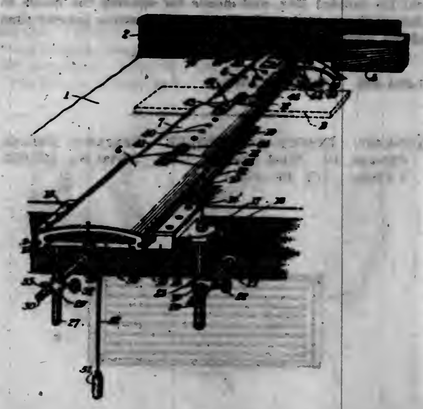
1,394,496. [WITHDRAWN.]

1,394,497. INSECT-DESTROYER. BENJAMIN HELLER, Chicago, Ill. Filed Nov. 29, 1920. Serial No. 427,054. 1 Claim. (Cl. 43—131.)



An insect exterminator, comprising a container, closures for the ends of the container and provided with insect entrances, and a cellular filler in the container, said filler being treated with a poisonous substance, and its cells being accessible from the entrance openings and running in the direction of the length of the container between the aforesaid end closures thereof.

1,394,498. LADDER-RAISING DEVICE. HUBERT J. HOPKINS, San Francisco, Calif. Filed Feb. 18, 1920. Serial No. 359,604. 16 Claims. (Cl. 228—5.)

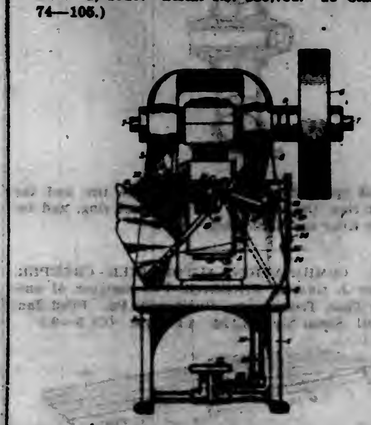


1. The combination with a ladder of the character described, of a carriage adapted to support one end thereof, wheels on the carriage, means permitting tilting move-

ment of the ladder with relation to the carriage, means for locking the ladder against tilting movement about the

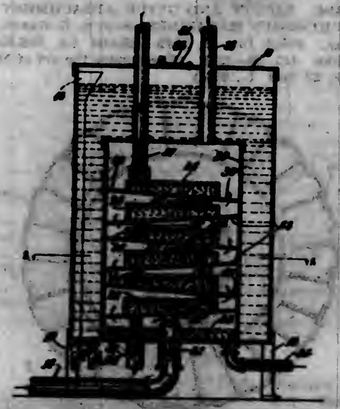
carriage, and means permitting vertical movement of the carriage with relation to the ladder.

1,394,499. JOINTER-GUARD. PHINEAS C. INGSTRUM, Rochester, N. Y. Filed May 11, 1920. Serial No. 380,627. 12 Claims. (Cl. 144—251.)



1. In a machine having a rotary cutter mounted on a table and projecting through a slot therein, the combination with a guard having a cam end and normally covering the slot, of a toggle arm pivoted to the guard, the toggle arm being adapted to move the guard as the work is fed toward the cutter into a position where the work will come in contact with the cam end on the guard.

1,394,500. METHOD OF MAKING ABRADING-TOOLS. CLARENCE ROSCOE KING, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 4, 1918. Serial No. 261,166. 2 Claims. (Cl. 12—38.)



1. The method of making abrading tools, comprising mixing emery, a vulcanization accelerating compound, and alkaline grains with rubber while heating the rubber to render it more plastic, subjecting the mass to high pressure for a few minutes to shape the tool and thereafter vulcanizing the tool for several hours in a single heat treatment, while confining the mass to prevent deformation thereof.

1,394,501. PRESS-GUARD. WILLIAM J. PARKINSON, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Nov. 21, 1919. Serial No. 339,751. 13 Claims. (Cl. 74—105.)

1. In a safety guard for punch presses, the combination of a bed, a frame and a ram movable in the frame with a safety guard, operating mechanism for the safety guard adapted to move said guard across the bed and back at each actuation of the ram, a lever for contacting with a part of the safety guard when the same is at rest, the lever alone receiving and taking up the shock from the safety guard when it returns from an actuation.

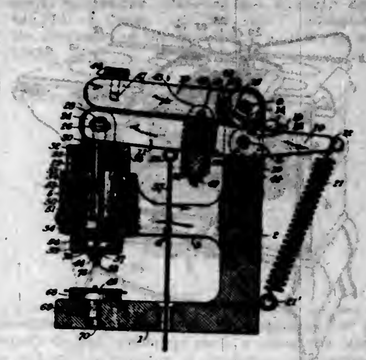
1,394,502. CONDENSING APPARATUS. JOSEPH Y. PISCEK, Gallup, N. Mex., assignor of one-half to John Gullas, Gallup, N. Mex. Filed Apr. 20, 1920. Serial No. 375,185. 4 Claims. (Cl. 196—13.)

1. A condenser for the purpose specified comprising an outer casing, an inner casing spaced at sides and top from the sides and top of said outer casing, and means providing zigzag vapor and water passages leading between top and bottom of said inner casing.

1,394,503. DENTAL X-RAY-FILM PACKET. RAYMOND R. TAYLOR, Rochester, N. Y. Filed Jan. 8, 1919. Serial No. 270,167. 6 Claims. (Cl. 250—94.)

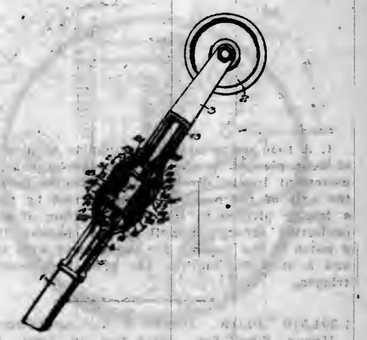
2. A package comprising a sheet of sensitive material, a protective sheet on each side thereof, a protective envelop containing said sensitized material and said first named sheets and a strip of material lying partially beneath one of said inner protective sheets and extending through said envelop to form a tab, by manipulation of which the protective sheet and envelop may be disrupted to furnish access to the sensitive material.

1,394,504. METHOD OF REGISTERING PROJECTED IMAGES. JOHN G. CAPSTAFF, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 5, 1920. Serial No. 371,462. 2 Claims. (Cl. 88—16.4.)



1. The method of perfecting the registration of two images of the same subject projected through independent optical systems and superposed from opposite directions upon the same exposure and focusing plane that consists of inserting in said plane a focusing screen upon which projected images are visible by reflected and by transmitted light, inserting into said optical systems contrasting color filters whereby additive color images are projected on said screen from opposite sides, examining said additive images, one by reflected and one by transmitted light, upon said screen for the presence of color fringes caused by imperfect registration and relatively adjusting said optical systems to correct such imperfect registration.

1,394,505. CELLULOSE-ETHER SOLVENT AND COMPOSITION. JOHN M. DENOHUE, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 10, 1921. Serial No. 436,284. 3 Claims. (Cl. 134—79.)

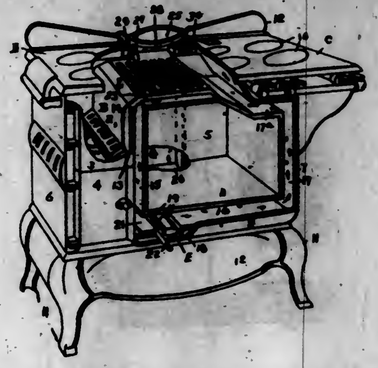


1. A viscous flowable film-forming composition, consisting essentially of an alkyl ether of cellulose dissolved in a mixture of chloroform and ethyl alcohol.

1,394,506. RIVETING-MACHINE. HARVEY C. GEARS, Rochester, N. Y. Filed June 21, 1920. Serial No. 390,569. 10 Claims. (Cl. 78—82.)

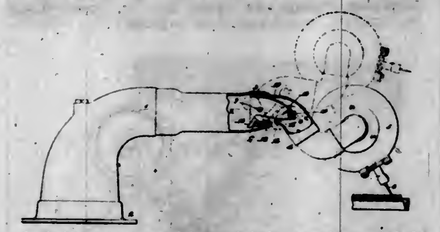
1. In a riveting machine, the combination with a reciprocating work-holding pad, of a riveting tool confined to a predetermined path by the pad, a lever for reciprocating the work-holding pad, and a hammer for striking the riveting tool, the lever actuating the hammer.

1,394,507. TROLLEY-HARP CARRIER. CHARLES J. DORRANCE, Chicago, Ill. Filed Apr. 21, 1920. Serial No. 375,541. 18 Claims. (Cl. 191—59.)



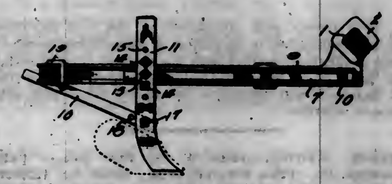
1. In a trolley pole attachment of the kind described and in combination, a plurality of coöperating members in direct electrical contact with one another, a coöperating body part of yieldable material arranged between the said members, and adjustable means for connecting said members together.

1,394,508. STOVE. JOHN W. DU PUY, Beaver Falls borough, Pa. Filed Nov. 10, 1920. Serial No. 423,029. 9 Claims. (Cl. 126—36.)



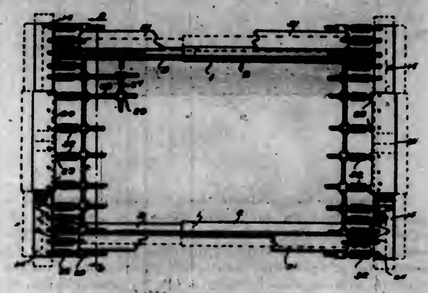
1. In a cooking stove, the combination of an oven, a bottom flue beneath said oven and into which the products of fuel combustion are discharged, a vertical flue at each side of said oven connected at their lower ends with the ends of said bottom flue, a pair of top flues above said oven, one of said top flues being di-

rectly connected with each of said vertical flues and said top flues being sealed from each other, and a throat box



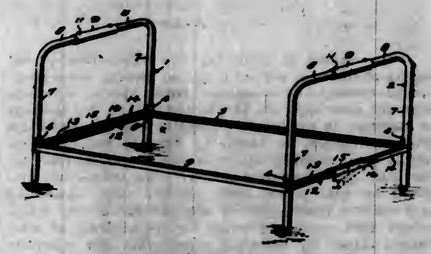
at the rear of said stove directly connected to each of said top flues.

1,394,509. TONE-ARM. LOUIS D. NADEL, Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Filed Jan. 23, 1919. Serial No. 272,681. 4 Claims. (Cl. 274—23.)



1. A tone-arm comprising a tubular member, a tubular element pivoted in the member and capable of pivotal movement in the direction perpendicular to the line of the axis of the member, a pin carried by the element, a trigger pivoted to the pin, a portion of said trigger projecting through a wall of the element, there being a notch in the member for engagement with the trigger, and a stop for limiting the pivotal movement of the trigger.

1,394,510. PLOW. JOSEPH E. NAIL and THEOPHILUS P. HENRY, Eden, Tex. Filed Dec. 14, 1920. Serial No. 430,649. 2 Claims. (Cl. 97—1.)



1. In a wheel plow attachment of the class described comprising a longitudinally extending, offset channel beam, a vertically adjustable, bifurcated pivotally supported standard carried thereby, said beam being located in the bifurcation and an angularly extending, adjustable brace adapted to be secured to the frame of the wheel plow and to the standard.

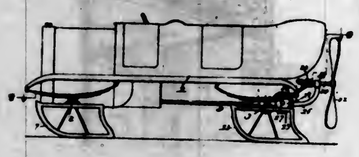
1,394,511. BED-SPRING. ABRAHAM TAMARIN, FRANK TAMARIN, and MAX HENDLER, Hudson, N. Y., assignors to Komfytite Spring and Bed Corporation, Hudson, N. Y., a Corporation of New York. Filed Mar. 1, 1921. Serial No. 448,778. 2 Claims. (Cl. 5—65.)

1. An adjustable bed spring comprising a pair of telescopic side members, brackets arranged on the ends of said side members, an end member secured to the pair of brackets at each end of the spring, said end members comprising a pair of angle irons, one of which is secured to each of said brackets, an angle iron member arranged to receive the adjacent ends of said angle irons, said member being provided with flanges to retain said angle irons in position, and a spring structure comprising a pair of sections, each of said sections being secured at its ends to said angle irons, said spring structures being overlapped at the center and secured to said angle iron member.

1,394,512. ADJUSTABLE BEDSTEAD. ABRAHAM TAMARIN, FRANK TAMARIN, and MAX HENDLER, Hudson, N. Y., assignors to Komfytite Spring and Bed Corporation, Hudson, N. Y., a Corporation of New York. Filed Mar. 14, 1921. Serial No. 452,035. 2 Claims. (Cl. 5—8.)

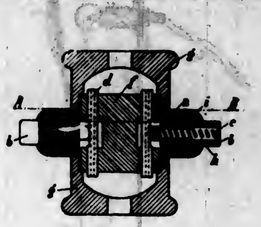
1. An adjustable bedstead comprising a head board and a foot board, side rails connecting said head board and foot board, said head board and foot board each comprising a pair of posts and a transverse member connecting said posts, means for adjusting said transverse member, an end rail connecting each pair of posts, each of said end rails comprising a pair of channel shaped sections, one of said sections being secured to each post, a locking member hinged to one section adjacent its inner end, and means for retaining the other section within said locking member.

1,394,513. SASH-LOCK CONSTRUCTION. CHARLES ALDONESI, Dumont, N. J. Filed Oct. 22, 1920. Serial No. 418,841. 8 Claims. (Cl. 292—60.)



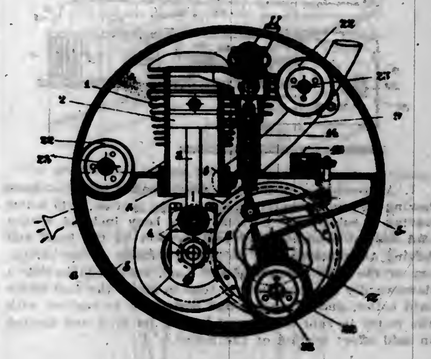
1. In window construction, the combination of upper and lower sliding sashes, having horizontal openings

through the frame of the lower and extending into the frame of the upper sash, respectively, adapted to aline when both sashes are closed, said upper sash opening having a locking socket extension, the upper sash having a vertical guideway of length less than that of the sash and communicating with said upper sash opening, a barrel in said lower sash opening, having a keyhole slot therein, a spindle mounted in said barrel, having a head adapted to be inserted in said socket extension, or



alined with said guideway, or positioned in front of said guideway, in non-obstructing position, when said horizontal openings are alined, said spindle having three spaced projections of which two, one, or none, are adapted to pass through said slot, in one angular position of said spindle, and in accordance with whether said head is the first, second or third of the positions referred to, said projections being adapted to lock said spindle against axial movement, upon rotation of said spindle to a different angular position, in any of said three positions.

1,394,514. SLEIGH ATTACHMENT FOR AUTOVEHICLES. OSCAR T. BACKLUND, Deer Lodge, Mont. Filed Mar. 5, 1919. Serial No. 280,808. 1 Claim. (Cl. 180—3.)

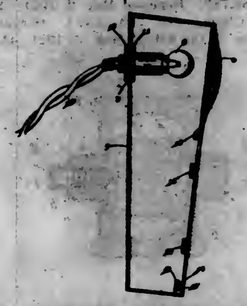


The combination with an auto vehicle having forward and rear axles, the latter of which is a differential axle, of runners mounted on both axles, a frame mounted on the rear axle, a propeller rotatably mounted in the frame, a countershaft journaled in the frame, gears carried at the ends of the countershaft, gears carried on the two sections of the differential axle and meshing with the aforesaid gears, a beveled gear mounted on the countershaft, a second shaft journaled in the frame, a beveled gear carried by said second shaft and meshing with the first said beveled gear, and a universal connection between said latter shaft, and the propeller whereby motion is transmitted to the latter in the manner specified.

1,394,515. ROTARY ELECTRIC SWITCH. ANTON ALBERT BUCK, Zurich, Switzerland. Filed Aug. 6, 1917, Serial No. 184,782. Renewed Mar. 2, 1921. Serial No. 449,272. 1 Claim. (Cl. 200—155.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A rotary electric switch for connecting up two electric resistances, which consists in the combination of a transversely divided cylindrical shell, a concentric block fixed in said shell, a plurality of cylindrical longitudinally disposed pin contacts carried in a circular line in said block, an annular disk turnably engaged between and projecting concentrically from the periphery of said shell, and diametral spring-tube contacts secured in the annular disk for automatic engagement and disengagement between any two of said cylindrical pin contacts.

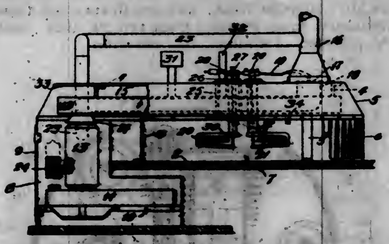
1,394,516. MOTORCYCLE. ANTOINE BURLAT and ALFRED RENAUDIN, Lyon, France. Filed Feb. 24, 1920. Serial No. 360,782. 3 Claims. (Cl. 180—10.)



1. In a motor cycle a motor fixed centrally within a wheel of said cycle, a cylindrical casing surrounding said motor, a wheel hub surrounding said casing, gearing between said casing and hub, roller bearings between said wheel hub and said casing and elastic means whereby the power of the motor is transmitted to said wheel in a constant and even manner.

1,394,517. AUTOMOBILE LAMP AND LICENSE-PLATE HOLDER. JOHN K. MCCULLAGH, Toronto, Ontario, Canada. Filed May 20, 1921. Serial No. 472,752. 1 Claim. (Cl. 40—132.)

A device of the character stated, comprising a housing, a lens positioned therein, means to illuminate said lens, a license plate positioned in the front wall of said housing, and a longitudinal member within the housing at the bottom thereof, having a longitudinal groove to receive

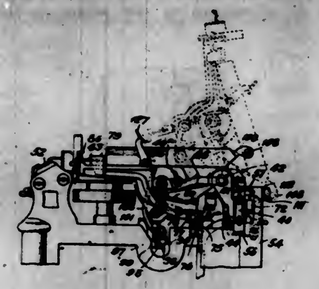


said license plate and outwardly extended transfixing leg members stamped from the vertical wall of said member

to engage and resiliently press said license plate against the inner face of the wall of the housing.

REISSUES.

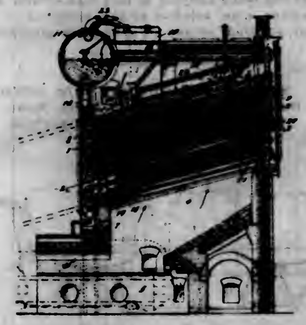
15,207. BROODER. MARY CHASE BARON, Hampden Meadows, R. I. Filed Jan. 12, 1921. Serial No. 436,571. Original No. 1,329,494, dated Feb. 3, 1920, Serial No. 289,710, filed Apr. 12, 1919. 8 Claims. (Cl. 119—34.)



1. A brooder, comprising a drum shaped boiler, a hood having an approximately circular body portion, said boiler having a substantial portion of its body inclosed within and shaped concentrically with respect to the hood and having an offset portion projecting outside of the periphery of the body portion of the hood, said hood having a downwardly flared peripheral edge to direct the heat under said boiler, and a heating flue positioned to contact with the water in said boiler, and having its inlet end located in said offset portion of the boiler.

15,208. RUST-RESISTING ALLOY OF IRON. GEORGE H. CHARLS, Canton, Ohio. Filed Mar. 21, 1921. Serial No. 454,228. Original No. 1,363,564, dated Dec. 28, 1920, Serial No. 332,912, filed June 30, 1920. 8 Claims. (Cl. 75—1.)

1. A rust-resisting alloy comprising iron, and small but effective amounts of copper and molybdenum.



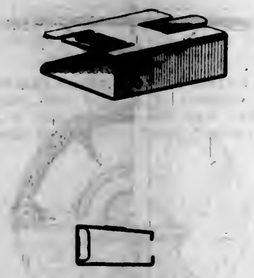
15,209. TYPEWRITING-MACHINE. FREDERIC W. HULLAM, Tottenville, N. Y., assignor of one-half to Mary R. Millard, Middlebury, Conn. Filed Feb. 2, 1921. Serial No. 442,285. Original No. 1,290,987, dated Mar. 11, 1919, Serial No. 108,758, filed June 18, 1915. 23 Claims. (Cl. 197—64.)

1. In a typewriting machine, in combination, a carriage supported at the rear of the machine, a carriage structure pivotally mounted thereon and supported at the front on a guide rail, and a locking means to prevent an endwise movement of the carriage under the influence of the motor spring, said locking means being ineffective when the carriage structure is in normal operating position on the guide rail and becoming effective as the carriage is raised therefrom.

2. In a typewriting machine, in combination, with a carriage structure of the visible type, a truck at the rear of the machine to form a traveling support for the carriage, a pivotal connection intermediate the truck and the carriage whereby the carriage may be pivotally swung upward about the truck, and locking means to prevent an endwise movement of the carriage under the influence of the motor spring when the said carriage is being swung upward.

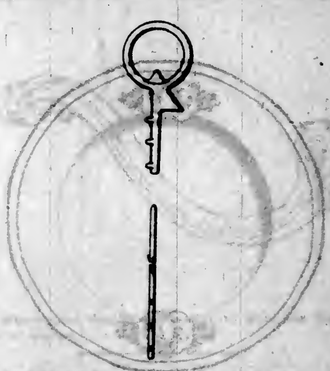
15,210. SUPERHEATER-BOILER. ARTHUR D. PRATT, Short Hills, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed May 14, 1921. Serial No. 469,568. Original No. 1,206,246, dated Nov. 28, 1916, Serial No. 54,708, filed Oct. 8, 1915. 6 Claims. (Cl. 122—476.)

3. A water tube boiler having longitudinal water tubes, a superheater having transversely extending heat tubes between the water tubes, and baffling for directing the products of combustion, said baffling having a horizontally extending baffle above the lower water tubes to expose them to the flame and gases for the major portion of their length and an upwardly projecting baffle extending therefrom transversely of the water tubes above the superheater and arranged to give the gases a restricted upward transverse pass across the water tubes located above the superheater.



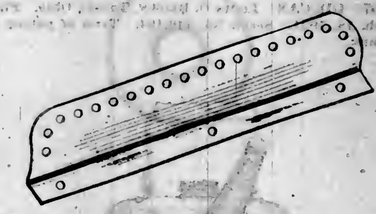
DESIGNS.

59,401. HANDLE FOR A SPOON, KNIFE, FORK, OR ANALOGOUS UTENSIL. GROSVENOR N. ALLEN, Oneida, N. Y. Filed May 14, 1920. Serial No. 382,197. Term of patent 14 years.



The ornamental design for a handle for a spoon, knife, fork, or analogous utensil, as shown.

59,402. MATCH-BOX HOLDER. HARRY L. BEACH, Coshocton, Ohio. Filed Mar. 12, 1921. Serial No. 451,830. Term of patent 7 years.

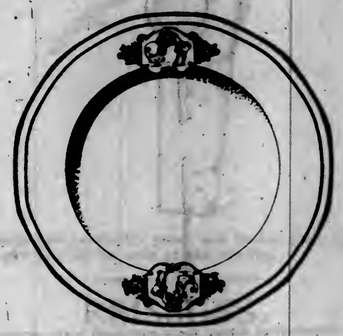


The ornamental design for a match box holder, substantially as shown.

59,403. COMBINED BOTTLE-OPENER AND DOOR-LOCK. OLIVER E. BENNETT, New York, N. Y. Filed Feb. 23, 1921. Serial No. 447,339. Term of patent 14 years.

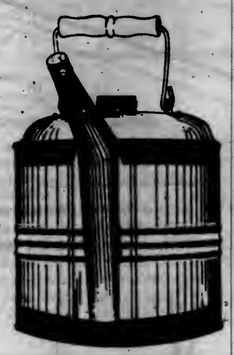
The ornamental design for a combined bottle opener and door lock, as shown.

59,404. TOE-PLATE FOR THE RUNNING-BOARDS OF AUTOMOBILES. CUTHBERT C. BERGSTROM, Denver, Colo. Filed Dec. 13, 1919. Serial No. 344,599. Term of patent 14 years.



The ornamental design for a toe plate for the running boards of automobiles as shown.

59,405. HANDLE FOR SPOONS, FORKS, OR SIMILAR ARTICLES. MORTON BERNSTEIN, New York, N. Y. Filed Mar. 10, 1921. Serial No. 451,300. Term of patent 14 years.

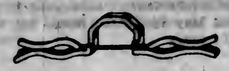


The ornamental design for a handle for spoons, forks, or similar article, as shown and described.

59,406. PLATE OR SIMILAR ARTICLE. ALPHONSE BIER, Brooklyn, N. Y. Filed June 10, 1921. Serial No. 476,579. Term of patent 7 years.

The ornamental design for a plate or similar article, as shown.

59,407. OIL-CAN. LOUIS O. BROWN, Toledo, Ohio. Filed Feb. 18, 1921. Serial No. 446,194. Term of patent 14 years.

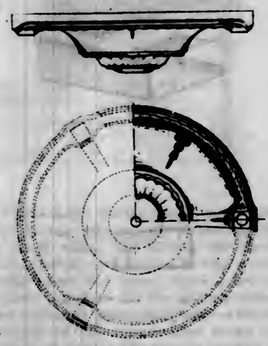


The ornamental design for an oil can, as shown.

59,408. COLLAR-CLASP. FIRM B. BYERS, New York, N. Y. Filed May 3, 1921. Serial No. 466,622. Term of patent 14 years.

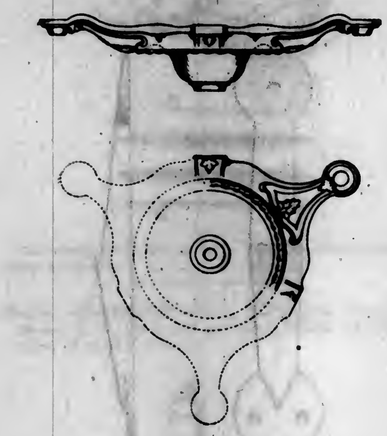
The ornamental design for a collar clasp, as shown.

59,409. COLLAR-CLASP. FIRM B. BYERS, New York, N. Y. Filed May 3, 1921. Serial No. 466,623. Term of patent 14 years.



The ornamental design for a collar clasp, as shown.

59,410. RIVET-PUNCH. LUCIUS L. CAILLET, Riverside, Calif., and CLYDE C. CAILLET, Johnstown, Colo. Filed Jan. 3, 1919. Serial No. 269,540. Term of patent 14 years.



The ornamental design for a rivet punch, as shown.

59,411. SUPPORT-PLATE FOR LIGHTING-FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,032. Term of patent 3½ years.

The ornamental design for a support plate for lighting fixtures as shown.

59,412. SUPPORT-PLATE FOR LIGHTING-FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,033. Term of patent 3½ years.

The ornamental design for a support plate for lighting fixtures as shown.

59,413. SOCKET-COVER FOR LIGHTING-FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,037. Term of patent 3½ years.

The ornamental design for a socket cover for lighting fixtures as shown.

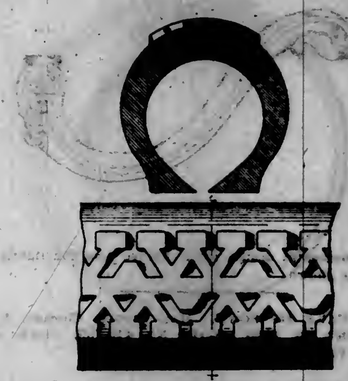
59,414. SOCKET-COVER FOR LIGHTING-FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,038. Term of patent 3½ years.

The ornamental design for a socket cover for lighting fixtures as shown.

59,415. FIXTURE-ARM FOR LIGHTING-FIXTURES. THURE DAHL, New York, N. Y., assignor to Lightolier Company, a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,039. Term of patent 3½ years.

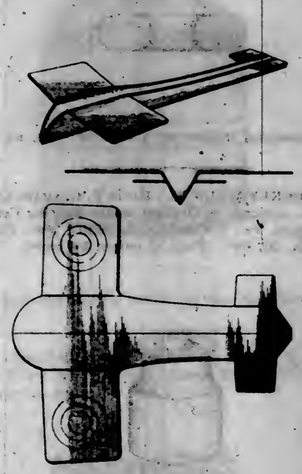
The ornamental design for a fixture arm for lighting fixtures as shown.

59,416. CAKE OF SOAP. MAX FINGER, Chicago, Ill. Filed Oct. 26, 1920. Serial No. 419,739. Term of patent 14 years.



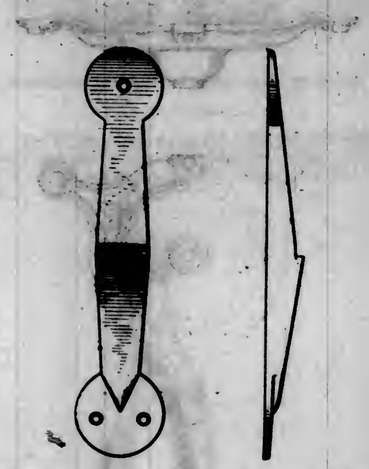
The ornamental design for a cake of soap, as shown.

59,417. SOCKET-WRENCH. DAVID F. GRAHAM, Coudersport, Pa., assignor to Graham Roller Bearing Company, Coudersport, Pa., a Corporation. Filed Mar. 22, 1920. Serial No. 367,880. Term of patent 3½ years.



The ornamental design for a socket wrench as shown.

59,418. TIRE FOR MOTOR-VEHICLES. Charles Grew, Boston, Mass., assignor to George Grew Tire Company, Boston, Mass. Filed May 10, 1921. Serial No. 468,629. Term of patent 14 years.

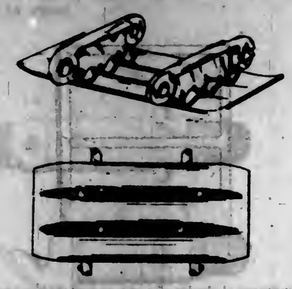


The ornamental design for a tire for motor vehicles as shown.

59,419. FLYING TOY. Riddle D. Haworth, Pittsburgh, Pa., assignor to Haworth & Dewhurst, Limited, Pittsburgh, Pa., a Partnership composed of Riddle D. Haworth, J. Fred Haworth, and A. R. Darragh. Filed June 28, 1920. Serial No. 392,527. Term of patent 3½ years.

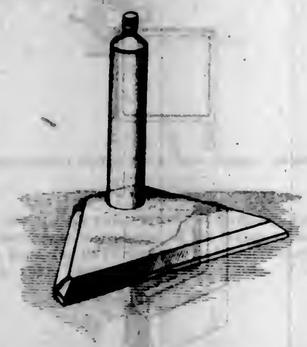
The ornamental design for a flying toy as shown.

59,420. ICE-BOX-DOOR CLEAT. August G. Hillenbrand, Jr., Jersey City, N. J. Filed May 10, 1921. Serial No. 469,984. Term of patent 3½ years.



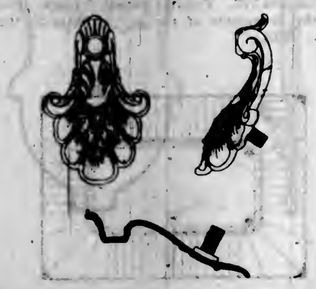
The ornamental design for an ice box door cleat, as shown.

59,421. PLANING-MACHINE FRAME. Ira T. Howard. Canton, Ohio. Filed Nov. 5, 1920. Serial No. 422,056. Term of patent 14 years.



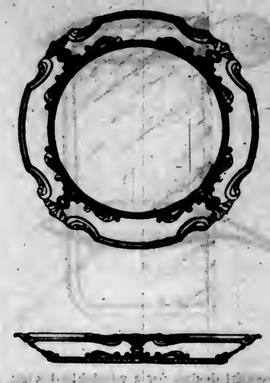
The ornamental design for a planing machine frame, as shown.

59,422. TREAD-BELT LINK. Charles A. Johnson, Toledo, Ohio. Filed June 28, 1920. Serial No. 392,108. Term of patent 3½ years.



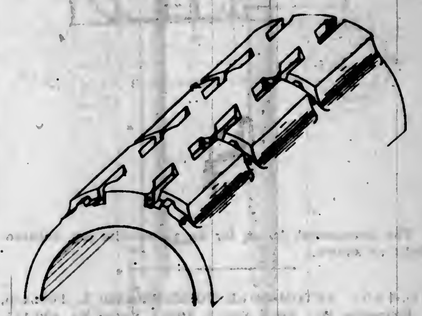
The ornamental design for a tread belt link, substantially as shown.

59,423. ADVERTISING-SIGN. Clifford G. King, Providence, R. I. Filed Nov. 17, 1920. Serial No. 424,795. Term of patent 14 years.



The ornamental design for an advertising sign, as shown.

59,424. ARM FOR LIGHTING-FIXTURES. Stephen Kostszewski, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Mar. 9, 1921. Serial No. 450,974. Term of patent 7 years.

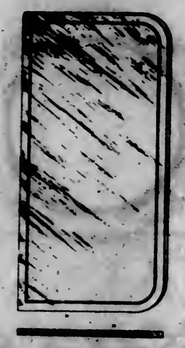


The ornamental design for an arm for lighting fixtures, as shown.

59,425. RING FOR LIGHTING-FIXTURES. Stephen Kostszewski, New York, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Mar. 9, 1921. Serial No. 450,975. Term of patent 7 years.

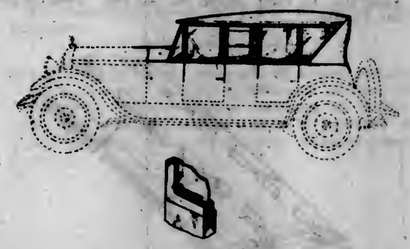
The ornamental design for a ring for lighting fixtures, as shown.

59,426. NON-SKID TREAD FOR AIRLESS OR PNEUMATIC TIRES. John A. MacMillan, Dayton, Ohio. Filed Dec. 17, 1920. Serial No. 431,487. Term of patent 7 years.



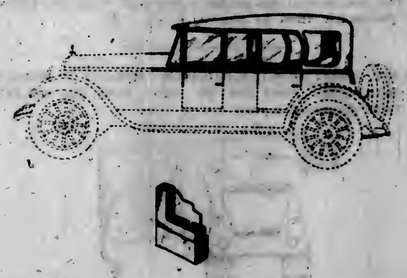
The ornamental design for a non-skid tread for airless or pneumatic tires as shown.

59,427. CLOTHESLINE-HOLDER. Francis T. Murray, Chicago, Ill. Filed Nov. 20, 1920. Serial No. 425,572. Term of patent 7 years.



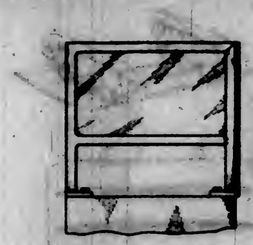
The ornamental design for a clothesline holder as shown.

59,428. WINDSHIELD-WING. Ralph D. Parkes, San Francisco, Calif., assignor of one-fourth to Francis M. Wright and one-fourth to Charles J. Cluan, San Francisco, Calif. Filed Aug. 31, 1920. Serial No. 407,270. Term of patent 3½ years.



The ornamental design for a windshield wing, as shown.

59,429. AUTOMOBILE TOP. Willard L. Pollard, Evanston, Ill. Filed Aug. 6, 1921. Serial No. 490,414. Term of patent 14 years.

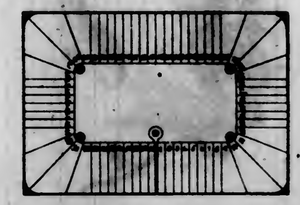


The ornamental design for an automobile top, substantially as shown.

59,430. AUTOMOBILE TOP. Willard L. Pollard, Evanston, Ill. Filed Aug. 6, 1921. Serial No. 490,415. Term of patent 14 years.

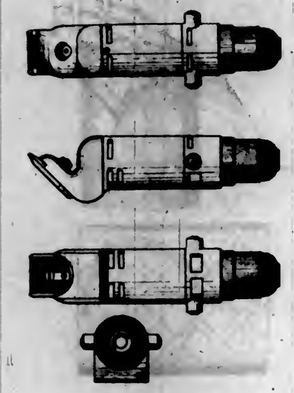
The ornamental design for an automobile top, substantially as shown.

59,431. AUTOMOBILE-PANEL. Willard L. Pollard, Evanston, Ill. Filed Aug. 6, 1921. Serial No. 490,416. Term of patent 14 years.



The ornamental design for an automobile panel substantially as shown.

59,432. AUTOMOBILE-PANEL. Willard L. Pollard, Evanston, Ill. Filed Aug. 6, 1921. Serial No. 490,417. Term of patent 14 years.

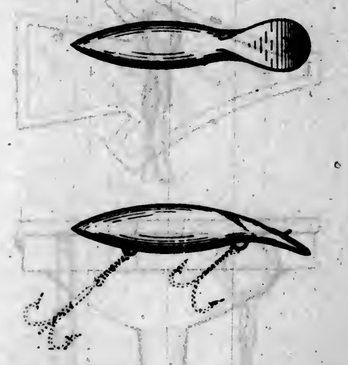


The ornamental design for an automobile panel substantially as shown.

59,433. GAME-BOARD. Albert Romez-Cuillier and Jean Célier, Bordeaux, France. Filed Dec. 31, 1920. Serial No. 434,377. Term of patent 7 years. (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

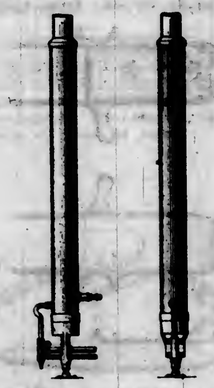
The ornamental design for a game board, as shown.

59,434. HAIR-CLIPPER. Ervin J. Rust, Cleveland, Ohio, assignor of one-half to S. T. Rinker, Cleveland, Ohio. Filed June 1, 1921. Serial No. 474,274. Term of patent 14 years.



The ornamental design for a hair clipper, as shown.

59,435. BACK FOR LIGHTING-FIXTURES. John William Schuler, Providence, R. I., assignor to Alfred Vester Sons, Inc., a Corporation of Rhode Island. Filed Mar. 5, 1921. Serial No. 450,105. Term of patent 7 years.

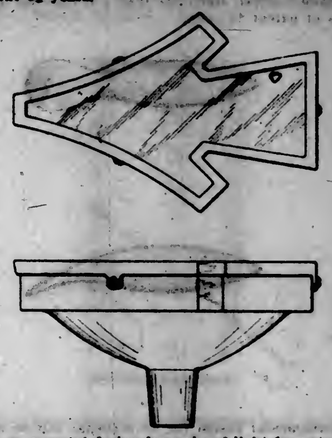


The ornamental design for a back for lighting fixtures, as shown.

59,436. ARTIFICIAL BAIT. Fillmore M. Smith, Syracuse, N. Y., assignor, by mesne assignments, to James Heddon's Sons, Inc., Dowagiac, Mich., a Corporation of Michigan. Filed Mar. 22, 1915. Serial No. 16,290. Term of patent 14 years.

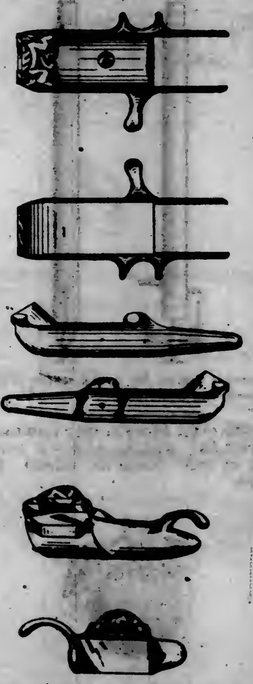
The ornamental design for an artificial bait as shown.

59,437. GAS WATER-HEATER. Joseph Oscar Smith, Los Angeles, Calif., assignor of one-half to John B. Reeves, Los Angeles, Calif. Filed Oct. 12, 1920. Serial No. 416,559. Term of patent 14 years.



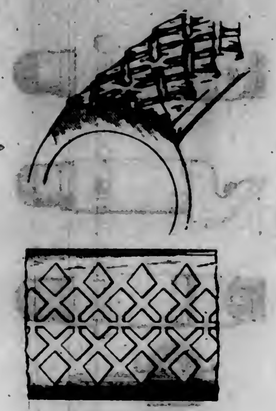
The ornamenal design for a gas water heater substantially as shown and described.

59,438. CONTAINER FOR SACHET-POWDER OR SIMILAR ARTICLES. William S. Stock, Portland, Oreg. Filed Dec. 23, 1920. Serial No. 432,878. Term of patent 7 years.



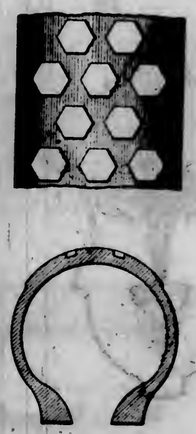
The ornamental design for a container for sachet powder or similar article, as shown.

59,439. SIGNAL-LIGHT FOR AUTOMOBILES. John H. Wiggs and James B. Stubenvazz, Los Angeles, Calif. Filed Aug. 17, 1920. Serial No. 404,574. Term of patent 3½ years.



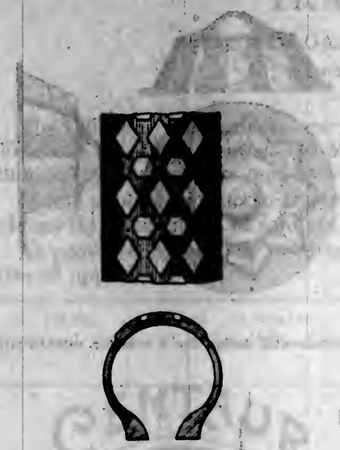
The ornamental design for a signal light for automobiles as shown.

59,440. CASE FOR HAIR-CUTTING MACHINES. Epifanio V. N. Tomasulo, Cincinnati, Ohio. Filed Apr. 4, 1921. Serial No. 458,548. Term of patent 14 years.



The ornamental design for a case for hair cutting machines, substantially as shown.

59,441. TIRE. Roland S. Trogner, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Filed Mar. 23, 1921. Serial No. 454,905. Term of patent 3½ years.

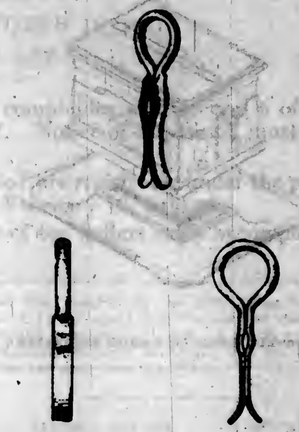


The ornamental design for [illegible]

59,442. TIRE. Roland S. Trogner, Akron, Ohio, assignor to the Goodyear Tire & Rubber Company, Akron, Ohio. Filed Mar. 23, 1921. Serial No. 454,906. Term of patent 3½ years.

The ornamental design for a tire as shown.

59,443. TIRE. Roland S. Trogner, Akron, Ohio, assignor to the Goodyear Tire & Rubber Company, Akron, Ohio. Filed Mar. 23, 1921. Serial No. 454,907. Term of patent 3½ years.

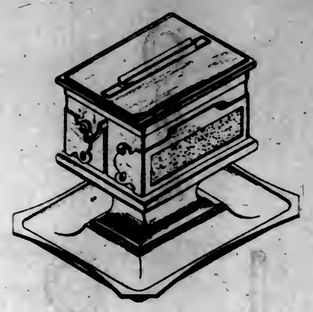


The ornamental design for a tire as shown.

59,444. AUTOMOBILE-SIGNAL. Louis Vote, McDonald, Pa. Filed Apr. 26, 1921. Serial No. 464,696. Term of patent 3½ years.

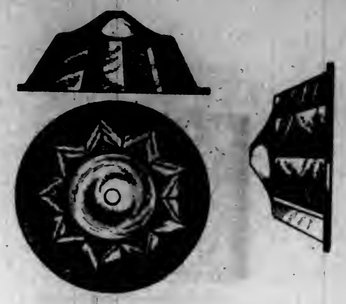
The ornamental design for an automobile signal as shown.

59,445. CLOTHESPIN. Henry White, Minor, N. D. Filed May 23, 1921. Serial No. 471,902. Term of patent 14 years.



The ornamental design for a clothespin, as shown.

59,446. PLATE OR SIMILAR ARTICLE OF TABLEWARE. Harry C. Whorf, Winthrop, Mass., assignor to Waldorf System Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed May 26, 1921. Serial No. 472,921. Term of patent 14 years.



The ornamental design for a plate or similar article of tableware, as shown.

59,447. MATCH-BOX. WILLY ZEBRA, New York, N. Y. Filed Dec. 6, 1920. Serial No. 428,320. Term of patent 3½ years.

The ornamental design for a match box as shown.

59,448. REFLECTOR. EDWARD ZIMMERMANN, Jr., Fairview, N. J. Filed Mar. 10, 1921. Serial No. 451,201. Term of patent 3½ years.

The ornamental design for a reflector substantially as shown.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 18, 1921.

[PUBLISHED OCTOBER 25, 1921.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 106,587. (CLASS 39. CLOTHING.) RICE & HUTCHINS INCORPORATED, Boston, Mass. Filed Oct. 3, 1917.

Particular description of goods.—Boots, Shoes, and Slippers Made Wholly or in Part of Leather or Textile Material.

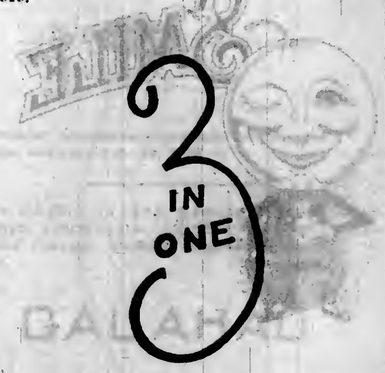
Claims use since June 12, 1915.

Ser. No. 106,719. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) G. F. KRUEGER & CO. INC., Indianapolis, Ind. Filed Oct. 11, 1917.

The lining appearing on the letters forming part of the drawing is for shading purposes only, while the lining on the ground and the border of the figure indicates color, red and blue, respectively, no claim being made to the letters "L I N E" apart from the mark as shown.

Particular description of goods.—A Polish for Varnished and Enameled Surfaces, Furniture, and the Like.

Claims use since Sept. 26, 1917.



Ser. No. 115,591. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) TOMODA GOSHI KAISHA, Tokyo, Japan. Filed Feb. 3, 1919.

URARGOL

Particular description of goods.—A Preparation for Gonorrhea.

Claims use since May 1, 1918.

Ser. No. 116,598. (CLASS 39. CLOTHING.) HOSIERY CLEARING HOUSE, INC., New York, N. Y. Filed Mar. 15, 1919.

Particular description of goods.—Hosiery.

Claims use since Feb. 28, 1919.

Ser. No. 124,208. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE FOX RIVER COMPANY, Elgin, Ill. Filed Oct. 27, 1919.

ARISTO

Particular description of goods.—Scouring-Powders for Cleaning Wood, Metal, Enamelled, and other Glossy Surfaces, and Soaps.
Claims use since Mar. 25, 1919.

Ser. No. 126,727. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) HOLDEN-LEONARD COMPANY, New York, N. Y. Filed Jan. 2, 1920.

LUELLA

Particular description of goods.—Worsted and Woolen Textile Fabrics in the Piece.
Claims use since Dec. 1, 1919.

Ser. No. 129,153. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE SMILE CO., Minneapolis, Minn. Filed Mar. 2, 1920.

Particular description of goods.—A Sugar Preparation from Fruit Acid for Making Sherbet, Ices, Cake-Frosting.
Claims use since on or about Jan. 18, 1911.

Ser. No. 129,616. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MINNIE WUNDER, Los Angeles, Calif. Filed Mar 12, 1920.

The portrait is that of my daughter, Alice Wunder Bayley, whose written consent to the use thereof is filed. No claim is made to the words "Hair Off" apart from the mark shown.
Particular description of goods.—A Superfluous-Hair Remover.
Claims use since 1915.

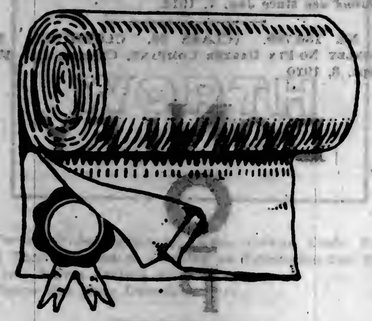
Ser. No. 129,790. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) THE MARATHON TIRE & RUBBER COMPANY, Cuyahoga Falls, Ohio. Filed Mar. 16, 1920.

VICTORY

Particular description of goods.—Composition Soling Material in Sheet Form.
Claims use since May 15, 1919.

Ser. No. 131,531. (CLASS 20. LINOLEUM AND OILED CLOTH.) TILOLEUM LTD., London, England. Filed Apr. 22, 1920.

TILOLEUM



Particular description of goods.—Linoleum in the Upper Surface of which Grooves are Formed and Filled with Cement.
Claims use since Dec. 29, 1910.

Ser. No. 131,723. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LOUIS B. FRANCHINA, Cleveland, Ohio. Filed Apr. 28, 1920.

Being a facsimile of the applicant's signature.
Particular description of goods.—Hair-Tonics.
Claims use since Feb. 1, 1920.

Ser. No. 132,003. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) REDCOMB SPRING, New York, N. Y. Filed May 6, 1920.

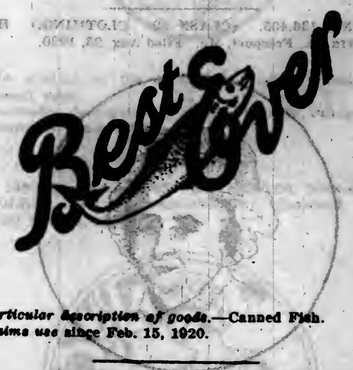
The applicant hereby disclaims the exclusive right to the representation of a roll of cloth apart from the mark as shown.
Particular description of goods.—Woolen Piece Goods and Worsted Piece Goods, Worsted and Cotton Piece Goods, Worsted Woolen Piece Goods, Fancy Worsted Piece Goods, and Decorated Worsted Piece Goods.
Claims use since about Dec. 24, 1919.

Ser. No. 132,719. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE BALSAMEA CO., San Francisco, Calif. Filed May 21, 1920.

SYRUP LEPTINOL

Particular description of goods.—Medical Preparation Used in the Treatment of Epidemic Influenza, Pneumonia, Bronchitis, Bronchial Asthma, Whooping-Cough, and Respiratory Diseases.
Claims use since December, 1919.

Ser. No. 134,182. (CLASS 39. CLOTHING.) GOLDSTEIN-LASAR COMPANY, INC., New York, N. Y. Filed June 24, 1920.



Applicant disclaims any rights to the words "Real Values" apart from the mark shown in the drawing.
Particular description of goods.—Hosiery.
Claims use since May 1, 1920.

Ser. No. 134,488. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN MILLER, Mobile, Ala. Filed June 30, 1920.

MILLER'S ROSY

Particular description of goods.—An Antiseptic and Eczema Preparation.
Claims use since about June 15, 1919.

Ser. No. 134,953. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) K. HOVDEN COMPANY, Monterey, Calif. Filed July 14, 1920.

Particular description of goods.—Canned Fish.
Claims use since Feb. 15, 1920.

Ser. No. 136,010. (CLASS 29. BROOMS, BRUSHES, AND DUSTERS.) PERCY B. T. WILLIAMS, Philadelphia, Pa. Filed Aug. 11, 1920.

Silk [redacted] Drawn

Particular description of goods.—Toothbrushes.
Claims use since June 24, 1920.

Ser. No. 136,256. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) HADFIELDS LIMITED, Sheffield, England. Filed Aug. 19, 1920.

GALAHAD

Particular description of goods.—Harness-Bits, Stirrups, Harness-Buckles, Harness-Rings, Harness-Chains, Harness-Hooks, and Harness-Staples.
Claims use since Feb. 22, 1918.

Ser. No. 136,334. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) MUTUAL TRADING COMPANY, New York, N. Y. Filed Aug. 23, 1920.

ORIOLA

Particular description of goods.—Phonographs, Talking-Machines, and Records Therefor.
Claims use since Jan. 5, 1918.

Ser. No. 136,465. (CLASS 39. CLOTHING.) H. E. DAVIS CO., Freeport, Me. Filed Aug. 25, 1920.

Consisting of a portrait of Martha Washington, deceased.
Particular description of goods.—Leather Shoes.
Claims use since 1895.

Ser. No. 136,765. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) ROCHESTER STAMPING COMPANY, Rochester, N. Y. Filed Sept. 2, 1920.

AZTHMK

Particular description of goods.—A Medicine to be Used in the Treatment of Asthma, Hay-Fever, Catarrh, and Bronchitis.
Claims use since June 1, 1902.

Ser. No. 150,007. (CLASS 12. CONSTRUCTION MATERIALS.) Dorite Manufacturing Company, New York, N. Y. Filed July 5, 1921.

DORITE

Particular description of goods.—Stucco and Composition Flooring.
Claims use since about June 1, 1921.

Ser. No. 150,014. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Pauline H. Jackson, Birmingham, Ala. Filed July 5, 1921.

OUTCLIPSE

Particular description of goods.—Hair-Toner.
Claims use since May 27, 1921.

Ser. No. 150,018. (CLASS 32. FURNITURE AND UPHOLSTERY.) McDougall Company, Frankfort, Ind. Filed July 5, 1921.

Domestic Sciences

Particular description of goods.—Kitchen-Cabinets.
Claims use since May 1, 1921.

Ser. No. 150,020. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) John C. Milligan, Louisville, Ky. Filed July 5, 1921.

EUREKA

Particular description of goods.—A Compound for Treating Corns, Callouses, Warts, and Bunions.
Claims use since 1902.

Ser. No. 150,021. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Milwaukee-Waukesha Brewing Company, Waukesha, Wis. Filed July 5, 1921.

FOX HEAD

Particular description of goods.—Ginger-Ale, Root-Beer, Mineral Water, and Soda-Water.
Claims use since Dec. 1, 1894.

Ser. No. 150,080. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Emile P. Plançon, Brooklyn, N. Y. Filed July 6, 1921.

VAPOROINT PLANCON

Consisting of the words "Vaporoint Plançon."
Particular description of goods.—An Ointment for the Treatment of Cuts, Bruises, Wounds, Old Running Sores, Leg-Ulcers, Boils, Sore Breasts, and Chapped Hands.
Claims use since June 27, 1921.

Ser. No. 150,104. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) Leon Gawurin, New York, N. Y. Filed July 7, 1921.

GUACO

Particular description of goods.—A Preparation Used Internally for Coughs, Colds, and Headaches.
Claims use since July 1, 1911.

Ser. No. 150,109. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JULIUS KALISER, Inc., New York, N. Y. Filed July 7, 1921.

KILINSEKT

Particular description of goods.—A Powder Used as an Insect-Destroyer.
Claims use since Apr. 10, 1921.

Ser. No. 150,125. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) YORK LABORATORIES COMPANY, York, Pa. Filed July 7, 1921.

MASSET SAN-RAMA

Particular description of goods.—A Medical Compound for the Treatment of Venereal Diseases.
Claims use since June 7, 1921.

Ser. No. 150,156. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MABLE ROWE, Detroit, Mich. Filed July 8, 1921.

Particular description of goods.—Hair-Tonic.
Claims use since Apr. 20, 1921.

Ser. No. 150,185. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) CANTRELL & COCHRANE, LIMITED, Dublin, Ireland. Filed July 9, 1921. Under ten-year proviso.

CANTRELL & COCHRANE

Consists of the words "Cantrell & Cochrane."
Particular description of goods.—Ginger-Ale, Ginger-Beer, Sarsaparilla, and Bottled Soda-Water.
Claims use since about 1868.

Ser. No. 150,222. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ARMSTRONG CHEMICAL COMPANY, Washington, D. C. Filed July 11, 1921.

"WIL-GRO"

Particular description of goods.—Hair-Restorative.
Claims use since July 1, 1921.

Ser. No. 150,232. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH H. BISHOP, Baltimore, Md. Filed July 11, 1921.

No claim being made to the words "Sage Sulphur and Tar Compound" apart from the mark shown.
Particular description of goods.—Hair-Tonic.
Claims use since July 7, 1921.

Ser. No. 150,235. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHERAMY, Inc., New York, N. Y. Filed July 11, 1921.

COR D'OR

Particular description of goods.—Perfumes, Satchets, Talcum Powder, Face-Powder, Cold-Cream, Rouge, Brilliantine, and Toilet Water.
Claims use since June 11, 1921.

Ser. No. 150,216. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHERAMY, Inc., New York, N. Y. Filed July 11, 1921.

GIRLY GIRL

Particular description of goods.—Perfumes, Sachets, Talcum Powder, Face-Powder, Cold-Cream, Rouge, Brilliantine, and Toilet Water.
Claims use since June 11, 1921.

Ser. No. 150,237. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHERAMY, Inc., New York, N. Y. Filed July 11, 1921.

MYO-SAN

Particular description of goods.—Perfumes, Sachets, Talcum Powder, Face-Powder, Cold-Cream, Rouge, Brilliantine, and Toilet Water.
Claims use since June 11, 1921.

Ser. No. 150,218. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHERAMY, Inc., New York, N. Y. Filed July 11, 1921.

LOV-LOR

Particular description of goods.—Perfumes, Sachets, Talcum Powder, Face-Powder, Cold-Cream, Rouge, Brilliantine, and Toilet Water.
Claims use since June 11, 1921.

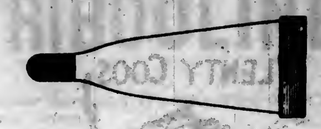
Ser. No. 150,220. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CHERAMY, Inc., New York, N. Y. Filed July 11, 1921.

CADORE

Particular description of goods.—Perfumes, Sachets, Talcum Powder, Face-Powder, Cold-Cream, Rouge, Brilliantine, and Toilet Water.
Claims use since June 11, 1921.

Ser. No. 150,232. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) LEWIS GRAFFLIN, St. Louis, Mo. Filed July 11, 1921.

FIBRERITE



Particular description of goods.—Absorbent Shredded Wood-Fillers for Fibrous Sheets and other Forms Composed of Mechanical Fibers of Pine and/or other Woods and Containing Bark.
Claims use since June 29, 1921.

Ser. No. 150,233. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) LEWIS GRAFFLIN, St. Louis, Mo. Filed July 11, 1921.

TESTITE

Particular description of goods.—Strengthening or Reinforcing Shredded Wood-Fillers for Fibrous Sheets and other Forms Composed of the Mechanical Fibers of Pine and/or other Woods and Not Containing Bark.
Claims use since June 29, 1921.

Ser. No. 150,253. (CLASS 2. RECEPTACLES.) H. PLANTEN & SON, Inc., Brooklyn, N. Y. Filed July 11, 1921.

Trade-mark consisting of artificially and distinctively coloring the cap of tubular containers black, as illustrated in the accompanying drawing, the showing of the tubular container in said drawing being solely for purposes of illustration, indicating the black colored cap referred to, and no claim being made to the picture of the container.

Ser. No. 150,263. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE EDWARD C. ROBERTS COMPANY, Tulsa, Okla. Filed July 12, 1921.

El Dorado

Particular description of goods.—Insecticides.
Claims use since about July 27, 1920.

Ser. No. 150,307. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SAMUEL M. BOOTH, Billings, Mont. Filed July 13, 1921.

PLENTY COOS

Particular description of goods.—A Medicine for Use as a Blood-Purifier.
Claims use since May 25, 1921.

Ser. No. 150,316. (CLASS 38. PRINTS AND PUBLICATIONS.) INTERNATIONAL ASSOCIATION OF LIONS CLUBS, Chicago, Ill. Filed July 13, 1921.

Particular description of goods.—Periodicals Issued Monthly, Bulletins, and Circulars Used Between the Different Units of the Association for the Furtherance of Its Objects.
Claims use since Jan. 13, 1920.

Ser. No. 150,330. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) WHY-SOL BATTERY SOLUTION COMPANY, Cincinnati, Ohio. Filed July 13, 1921.

"WHY-SOL"

Particular description of goods.—A Solution for All Makes of Lead-Plate Batteries.
Claims use since Mar. 22, 1921.

Ser. No. 150,344. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) AMERICAN TRADING COMPANY OF NEW ORLEANS, Wilmington, Del., and New York, N. Y. Filed July 14, 1921.

Particular description of goods.—Turpentine.
Claims use since June 10, 1921.

Ser. No. 150,345. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JAMES R. ANGELL, New Orleans, La. Filed July 14, 1921.

ANGELL'S

Particular description of goods.—A Syrup Remedy for Coughs and Whooping-Coughs, Colds, and Bronchitis.
Claims use since 1899.

Ser. No. 150,347. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BLANDING & BLANDING, INC., Providence, R. I. Filed July 14, 1921.

Albu-Ferrum

Particular description of goods.—A Remedy Valuable in the Treatment of Chlorosis, Anemia, Scrofula, and All Impoverished Conditions of the Blood and a Tonic and Restorative in General Debility and Convalescence from Wasting Diseases.
Claims use since Mar. 1, 1921.

Ser. No. 150,349. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) BLANDING & BLANDING, INC., Providence, R. I. Filed July 14, 1921.

LINOMUL

Particular description of goods.—A Remedy Indicated in Pulmonary Diseases, Chronic Coughs and Colds, Acute and Chronic Bronchitis, the After Effects of La Grippe, Wasting Diseases, Rickets, Scrofula, Whooping-Cough, and General Debility.
Claims use since Mar. 1, 1921.

Ser. No. 150,350. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) BIANCHINI, FERIER, Lyon, France. Filed July 14, 1921.

TRIBOULINE

Particular description of goods.—Piece Goods of Silk, Wool, and Cotton.
Claims use since Apr. 28, 1921.

Ser. No. 150,356. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) GRAND RAPIDS VARNISH CORPORATION, Grand Rapids, Mich. Filed July 14, 1921.

MICH-A-LAC

Consists of the coined word "Mich-a-Lac."
Particular description of goods.—Varnishes.
Claims use since Nov. 6, 1918.

Ser. No. 150,362. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) LEWIS BROTHERS, INC., New York, N. Y. Filed July 14, 1921.

Particular description of goods.—Hair-Dressing.
Claims use since January, 1921.

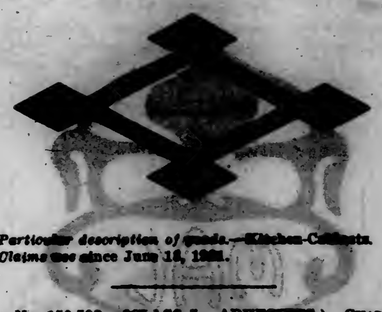
Ser. No. 150,391. (CLASS 43. THREAD AND YARN.) THE AMERICAN THREAD COMPANY, Jersey City, N. J. Filed July 15, 1921.

LAKE ISLAND

Particular description of goods.—Spool-Cotton, Sewing-Cotton, Thread, and Cotton Yarn.
Claims use since 1898.

Ser. No. 150,412. (CLASS 32. FURNITURE AND UPHOLSTERY.) EDWARD MAURICE TURNER, Rochester, N. Y. Filed July 15, 1921.

JUNIOR



Particular description of goods.—A Folding Crib for Children.
Claims use since June 29, 1921.

Ser. No. 150,423. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) J. FREDERICK L. SINGER, St. Louis, Mo. Filed July 15, 1921.

ACOMA

Particular description of goods.—A Medicinal Tablet for Prevention of Attacks of Epilepsy.
Claims use since June 20, 1921.

Ser. No. 150,474. (CLASS 32. FURNITURE AND UPHOLSTERY.) G. I. SELLERS & SONS COMPANY, Elwood, Ill. Filed July 16, 1921.

Particular description of goods.—Kitchen Cabinets.
Claims use since June 15, 1921.

Ser. No. 150,502. (CLASS 5. ADHESIVES.) CHARLEY LUTHER BROWN, Oklahoma, Okla. Filed July 18, 1921.

RAV-ON

Particular description of goods.—Tire-Sealing Compound.
Claims use since Apr. 20, 1921.

Ser. No. 150,523. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ELECTRO CHEMICAL REFINERIES, INC., Chicago, Ill. Filed July 18, 1921.

ALCOH-OIL

Particular description of goods.—A Solvent and Menstruum and Substitute for Ethyl Alcohol.
Claims use since June 6, 1921.

Ser. No. 150,564. (CLASS 38. PRINTS AND PUBLICATIONS.) INTERNATIONAL ASSOCIATION OF LIONS CLUBS, Chicago, Ill. Filed July 18, 1921.

LIONS CLUB MAGAZINE

Consisting of the words "Lions Club Magazine."
Particular description of goods.—A Monthly Periodical.
Claims use since November, 1918.

Ser. No. 150,565. (CLASS 32. FURNITURE AND UPHOLSTERY.) THE PARIS MANUFACTURING COMPANY, Cleveland, Ohio. Filed July 18, 1921.

Winade

Particular description of goods.—Window-Shades.
Claims use since Mar. 1, 1919.

Ser. No. 150,572. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JULIUS G. SCHNEIDER, Eldorado Springs, Mo. Filed July 18, 1921.

HOPI

Particular description of goods.—Medicine Used in the Treatment of the Blood.
Claims use since November, 1920.

Ser. No. 150,588. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MAURICE J. TIERAN, Springfield, Ohio. Filed July 18, 1921. Under ten-year proviso.

DIAMOND DEW

Particular description of goods.—A Toilet Preparation for External Application to the Skin to Improve and Beautify the Complexion and for Medicinal Use by Such Application in Cases of Skin Eruptions.
Claims use since July, 1906.

Ser. No. 150,712. (CLASS 12. CONSTRUCTION MATERIALS.) JUNIUS H. STONE CORPORATION, New York, N. Y. Filed July 20, 1921.

RUBBERSTONE

Particular description of goods.—Composition Flooring in Blocks and Sheets.
Claims use since on or about Apr. 1, 1920.

Ser. No. 150,747. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) D. & H. HEIDGERD, New York, N. Y. Filed July 21, 1921.

D & H

Particular description of goods.—Woolens and other Textiles Used in Men's Wear Trade—to wit, Pongee Silk, Linen Duck, Cotton Duck, Silk Vestings, Mohair Suitings, and Corduroy.
Claims use since September, 1916.

Particular description of goods.—Woven Cotton Piece Goods—Namely, Drills, Striped and Checked Colored Woven Piece Goods of All Descriptions.

Claims use since January, 1919.

Ser. No. 151,062. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE PYORR-LARIS COMPANY, St. Louis, Mo. Filed July 28, 1921.

Royd

Particular description of goods.—Tooth-Paste.

Claims use since about July 22, 1921.

Ser. No. 151,222. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) M. J. KOIDERA, Cicero, Ill. Filed Aug. 1, 1921.

BOHEMIAN

Particular description of goods.—A Remedy for the Treatment of Rheumatism.

Claims use since July 1, 1921.

Ser. No. 151,282. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE ROSEVILLE COMPANY, Lawrenceburg, Ind. Filed Aug. 1, 1921.

SHELLACOL

Particular description of goods.—Alcoholic Solvent.

Claims use since Apr. 15, 1921.

Ser. No. 151,294. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ABDUL SATR, Burgettstown, Pa. Filed Aug. 2, 1921.

CIN-O-SANDAL

Particular description of goods.—Blood-Purifying Medicine.

Claims use since July 28, 1921.

Ser. No. 151,329. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OHIO VALLEY DRUG COMPANY, Wheeling, W. Va. Filed Aug. 3, 1921.

ALKA-FORMAL

Particular description of goods.—An Antiseptic and Prophylactic Solution.

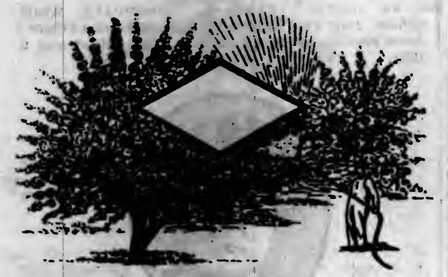
Claims use since June 1, 1921.

Ser. No. 151,330. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) OHIO VALLEY DRUG COMPANY, Wheeling, W. Va. Filed Aug. 3, 1921.

ALRHUSEAL

Particular description of goods.—Elixir Rhubarb Alkaline with Pancreatin.

Claims use since June 1, 1921.



Ser. No. 151,359. (CLASS 27. HOROLOGICAL INSTRUMENTS.) FABRIQUE DE MONTRES SELVA S. A., Bienne, Switzerland. Filed Aug. 4, 1921.

SELVA

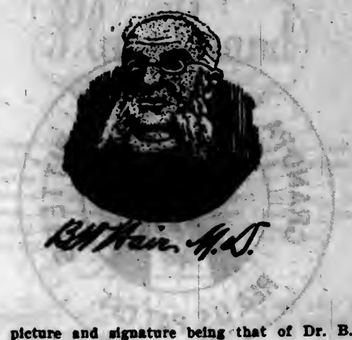
Particular description of goods.—Watches and Parts of Watches.

Claims use since Mar. 1, 1921.

Ser. No. 151,363. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JONSON EUREKA COMBINATION SPRAY CO., Yakima, Wash. Filed Aug. 4, 1921.

Particular description of goods.—Insecticide.

Claims use since Apr. 10, 1921.



Ser. No. 151,364. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JONSON EUREKA COMBINATION SPRAY CO., Yakima, Wash. Filed Aug. 4, 1921.

FUMI-TACT

Particular description of goods.—Insecticide.

Claims use since Apr. 10, 1921.

Ser. No. 151,377. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALPHONSE J. PATER, Hamilton, Ohio. Filed Aug. 4, 1921.

The picture and signature being that of Dr. B. W. Hair, deceased.

Particular description of goods.—A Preparation for the Treatment of Asthma.

Claims use since July 2, 1921.

Ser. No. 151,378. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) GUSTAVE PHILBERT, Nice, France. Filed Aug. 4, 1921.

STYX

Particular description of goods.—Insecticides for the Destruction of Flies, Fleas, Mosquitoes, Butterflies, Mites, and Bugs.

Claims use since May 19, 1921.

Ser. No. 151,441. (CLASS 27. HOROLOGICAL INSTRUMENTS.) VITTORI & CO. DOLMY WATCH CO., La Chaux-de-Fonds, Switzerland. Filed Aug. 4, 1921.

DOLMY

Particular description of goods.—Watches and Parts of Watches.

Claims use since Oct. 6, 1919.

Ser. No. 151,442. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) A. B. WOODWARD MEDICINE COMPANY, Marlin, Tex. Filed Aug. 4, 1921.

No claim being made to the words "Bitters" or to "Reg. U. S. Pat. Trade Mark" apart from the mark shown, the picture being that of A. B. Woodward, deceased, formerly of Jewett, Tex.

Particular description of goods.—A Blood and Liver Tonic.

Claims use since July 23, 1921.

Ser. No. 151,505. (CLASS 32. FURNITURE AND UPHOLSTERY.) ABRAHAM CULP, New York, N. Y. Filed Aug. 6, 1921.

Consists of the word "Culptone" inscribed across a lyre associated with the words "Trade Mark" and "New York," but no claim being made herein to the words "Trade Mark" and "New York" apart from the mark shown.

Particular description of goods.—Phonograph-Cabinets.

Claims use since October, 1918.

Ser. No. 151,552. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) Oak Corner Mills, Anderson, S. C. Filed Aug. 8, 1921.

Particular description of goods.—Piece Goods—Namely, Sheetings and Drills.

Claims use since Mar. 22, 1901.

Ser. No. 151,575. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSIE BROCKHOFF, Salt Lake City, Utah. Filed Aug. 9, 1921.

The picture being a portrait of myself.

Particular description of goods.—A Medicinal Preparation for the Treatment of Diseases of the Female Organs.

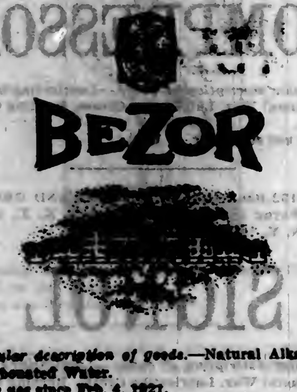
Claims use since June 27, 1921.

Ser. No. 151,701. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SIDNEY BLUMENTHAL & CO. INC., New York, N. Y. Filed Aug. 12, 1921.

Cubseal

Particular description of goods.—Pile Fabrics in the Piece.

Claims use since Nov. 27, 1920.



Ser. No. 151,553. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) Theodore R. Kane, Philadelphia, Pa. Filed Aug. 12, 1921.

SPEEDO

Particular description of goods.—Non-Alcoholic, Non-Cereal, Maltless Beverage Sold as a Soft Drink and Syrup for Making the Same.

Claims use since June 1, 1920.

Ser. No. 151,724. (CLASS 45. BEVERAGES, NON-ALCOHOLIC.) THE SPICELAND SANITARIUM, Spiceland, Ind. Filed Aug. 12, 1921.

Particular description of goods.—Natural Alkaline, Saline, Carbonated Water.

Claims use since Feb. 4, 1921.

Ser. No. 151,934. (CLASS 27. HOROLOGICAL INSTRUMENTS.) JOSEPH BARFIELD, New York, N. Y. Filed Aug. 19, 1921.

Beaux Arts

Particular description of goods.—Watches and Watch-Movements.

Claims use since Oct. 1, 1920.

Ser. No. 152,139. (CLASS 15. OILS AND GREASES.) THE REFINO COMPANY, Denver, Colo. Filed Aug. 24, 1921.

Particular description of goods.—Gasolene.

Claims use since July 1, 1921.

Ser. No. 152,205. (CLASS 32. FURNITURE AND UPHOLSTERY.) JOHN H. JOHNS, New York, N. Y. Filed Aug. 26, 1921.

The word "Brand" is disclaimed except as used in connection with the other features of the mark shown in the drawing.

NIAGARA

Particular description of goods.—Dyes, Dyestuffs, and Colors.
Claims use since June 5, 1901.

147,503. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE NATIONAL AMMONIA COMPANY, St. Louis, Mo. Filed June 23, 1921. Serial No. 149,553.

AQUA AMMONIA
PEERLESS
TRADE MARK

Particular description of goods.—Aqua Ammonia.
Claims use since June 15, 1910.

147,504. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) NATIONAL MATCH-NAKERS MACHINE CO. INC., Brooklyn, N. Y. Filed Mar. 15, 1921. Serial No. 144,781.

National

Particular description of goods.—Mayonnaise-Machines.
Claims use since July 19, 1919.

147,505. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) NEW JERSEY OPTICAL CO., Newark, N. J. Filed Dec. 6, 1920. Serial No. 140,670.

REALFIT

Particular description of goods.—Eyeglass Frames and Mountings.
Claims use since on or about Sept. 21, 1915.

147,506. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE NEWTON STEEL COMPANY, Youngstown, Ohio. Filed Aug. 16, 1920. Serial No. 136,176.

NEWSTEEL

Particular description of goods.—Coke-Plates, Black Sheets, (Pickled and Non-Pickled,) and Black Sheets Blued.
Claims use since May 31, 1920.

147,507. (CLASS 22. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) The Goodell-Boyer Co., Logansport, Ind. Filed June 28, 1920. Serial No. 134,212.

BOYER

Particular description of goods.—Chemical Fire-Engines with Certain Equipment and Hand Fire-Extinguishers.
Claims use since May, 1909.

147,508. (CLASS 37. PAPER AND STATIONERY.) Paper Manufacturers Co. Inc., Philadelphia, Pa. Filed Apr. 7, 1921. Serial No. 145,954.

Particular description of goods.—Paper for Wiping Ink from the Faces of Dies.
Claims use since Dec. 1, 1905.

147,509. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) J. H. Parker & Son Incorporated, Parkersburg, W. Va. Filed June 21, 1921. Serial No. 146,626.

NAILIT

Particular description of goods.—Porcelain Insulators.
Claims use since Apr. 1, 1918.

147,510. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) Thomas Paulson & Son, Inc., Brooklyn, N. Y. Filed May 25, 1921. Serial No. 148,287.

"HECLA" BRONZE

Particular description of goods.—Bronze Castings.
Claims use since March, 1898.

147,511. (CLASS 13. HARDWARE AND PLUMBERS' AND STEAMFITTERS' SUPPLIES.) Penn Brass Manufacturing Co., Cleveland, Ohio. Filed Apr. 22, 1921. Serial No. 146,658.

PENN

Particular description of goods.—Certa'n Plumbing Supplies.
Claims use since Nov. 1, 1919.

147,512. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) Perfect Automatic Egg Timer and Manufacturing Company, Chicago, Ill. Filed Nov. 16, 1920. Serial No. 139,737.

Perfect AUTOMATIC

Particular description of goods.—Time-Controlled Egg-Boilers.
Claims use since Jan. 1, 1917.

147,513. (CLASS 13. HARDWARE AND PLUMBING AND STEAM-FITTING SUPPLIES.) Charles H. Pugh, Limited, Birmingham, England. Filed Jan. 10, 1921. Serial No. 142,630.

ALFRED APPLEBY

Particular description of goods.—Driving-Chains for Cycles and Motorcycles.
Claims use since February, 1897.

147,514. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) Schalk Chemical Company, Los Angeles, Calif. Filed Aug. 25, 1921. Serial No. 152,188.

SAVABRUSH

Particular description of goods.—Paint and Varnish Remover.
Claims use since Feb. 27, 1917.

147,515. (CLASS 22. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) Snap-On Wrench Company, Milwaukee, Wis. Filed Mar. 14, 1921. Serial No. 144,750.

Snap-on

Particular description of goods.—Wrenches.
Claims use since Feb. 2, 1920.

147,516. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) Southland Steamship Company, Wilmington, Del. Filed June 13, 1921. Serial No. 149,104.

LEBBY

Particular description of goods.—Electric Searchlights and Electric-Lighting Outfits and Fixtures.
Claims use since Jan. 14, 1914.

147,517. (CLASS 7. CORDAGE.) George W. Southwick, Stamford, Conn. Filed Sept. 15, 1920. Serial No. 137,245.

SOUTHWICK'S FIBRE HYDE
ROUND BELT LACING

Particular description of goods.—Cotton Belt-Lacing.
Claims use since June 1, 1920.

147,518. (CLASS 37. PAPER AND STATIONERY.) Standard Check Book Co., Inc., Richmond, Va. Filed Apr. 19, 1921. Serial No. 146,400.

FLAT-STUB

Particular description of goods.—Check-Books.
Claims use since February, 1920.

147,519. (CLASS 9. RECEPTACLES.) Sealshipt Insulating Company, Great Barrington, Mass. Filed May 26, 1921. Serial No. 146,892.

IT WILL NOT BREAK

Particular description of goods.—Vacuum-Jacketed Receptacles.
Claims use since Jan. 1, 1919.

147,520. (CLASS 3. BAGGAGE, HORSE EQUIPMENTS, PORTFOLIOS, AND POCKETBOOKS.) John Steinbis & Co. Inc., New York, N. Y. Filed Feb. 18, 1921. Serial No. 143,791.

POCKET

Particular description of goods.—Pocketbooks.
Claims use since June 19, 1919.

147,521. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) St. Louis Electrical Works, St. Louis, Mo., assignors to Valley Electric Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 8, 1920. Serial No. 136,574.

ST. LOUIS

Particular description of goods.—Rectifiers for Alternating Currents.
Claims use since about June 1, 1914.

147,522. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) Superior Lamp M'f'g. Co., New York, N. Y. Filed Aug. 27, 1920. Serial No. 135,570.

SUPERIOR

Particular description of goods.—Certain Named Electric Accessories for Automobiles.
Claims use since November, 1913.

147,522. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) THE THOMPSON-DENYSE CO., Seattle, Wash. Filed Nov. 26, 1920. Serial No. 140,217.

Cedro Piano

Particular description of goods.—Piano and Furniture Polish.
Claims use since June 15, 1915.

147,524. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) TRION COMPANY, Trion, Ga. Filed May 20, 1921. Serial No. 143,001.

TRION

The word "Trion" is stamped upon the goods in blue—that is, the letters are lined in blue, as indicated in the drawing, upon which the trade-mark is shown.
Particular description of goods.—Cotton Goods in the Piece.
Claims use since 1861.

147,525. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) U. S. BALL BEARING MANUFACTURING COMPANY, Chicago, Ill. Filed Dec. 13, 1920. Serial No. 141,647.

Strom

The lining shown in the drawing and in the specimens is to express shading and is not intended to designate any color.
Particular description of goods.—Ball-Bearings.
Claims use since on or about the first day of November, 1918.

147,526. (CLASS 2. RECEPTACLES.) GEORGE SOMMAR WARD, New York, N. Y. Filed July 1, 1921. Serial No. 149,940.

WARD'S KLEEN-RITE SPOONHOLDER

Particular description of goods.—Soda-Spoon Holders.
Claims use since Mar. 1, 1920.

147,527. (CLASS 37. PAPER AND STATIONERY.) WHITING PAPER COMPANY, Holyoke, Mass. Filed Apr. 30, 1921. Serial No. 147,071.

THE BEST WRITING PAPERS ARE WHITING PAPERS

Particular description of goods.—Writing-Papers and Mailing-Envelops.
Claims use since March, 1920.

147,528. (CLASS 2. RECEPTACLES.) THE YOUNGSTOWN BOILER & TANK CO., Youngstown, Ohio. Filed Feb. 11, 1921. Serial No. 143,468.

Youngstown TANKS

Particular description of goods.—Tanks.
Claims use since Apr. 1, 1919.

LABELS

REPORT
OF THE
COMMISSIONER OF PATENTS
TO THE
SECRETARY OF THE INTERIOR
FOR THE FISCAL YEAR ENDED JUNE 30, 1921.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 8, 1921.

SIR: I have the honor to submit herewith the following report of the business of the United States Patent Office for the fiscal year ended June 30, 1921:

The Patent Office is in a deplorable condition.

In July, 1919, the then Commissioner, Newton, testifying before the House Committee on Patents, said:

> I have been connected with the Patent Office since 1891 and I am sure that the Office was never in so poor a condition as it is now.

From that time, July, 1919, to June 30, 1921, the Patent Office suffered a loss of 163 examiners. These men who were *scientifically trained and also members of the bar* have been replaced by inexperienced men, fresh from college, without any knowledge of patent law or any legal training. Moreover, the men who resigned were familiar, through years of experience, with the particular art with which they were engaged, and it takes years to train new men to take their places.

During the time that the Patent Office has been losing the 163 men aforesaid, the number of applications received in this Office has increased by leaps and bounds. In the year preceding former Commissioner Newton's testimony the Patent Office received 62,755 applications for patent; in the fiscal year just closed it received 84,248 applications, an increase of 34 per cent. Trade-mark applications jumped from 8,561 to 15,884, or an increase of 85.5 per cent.

The loss of 163 legally and scientifically trained examiners out of a force of 437 would make it impossible to keep up the work even if there had been no increase, but since, during the period referred to, the patent work has increased 34 per cent. and the trade-mark work 85.5 per cent., the situation has become hopeless. This is graphically shown by the fact that when Commissioner Newton testified in July, 1919, there were 18,000 patent applications awaiting action, whereas when the new administration began in March, 1921, there were 42,000 applications awaiting action, and at the close of the fiscal year 1921 there were 49,000 applications awaiting examination.

The actual situation is further shown by the fact that a number of divisions are over eleven months behind with their work. As one example, reference may be made to one of the chemical divisions where five out of nine examiners have been appointed in the last few months. At the close of the fiscal year one of these had been in the Office only one week, another three weeks, another seven weeks, another two months.

One out of every four examiners has resigned in 16 months and more than one-half (or 231 out of 437) have resigned in 32 months.

Relief is imperative.

The *only way* to stop the continuous stream of resignations is to increase the salaries.

These examiners, paid in 1848 the same as Congressmen ($2,400), have had an increase of only 10% since that time. House bill 7077 is designed to partially remedy the situation and to provide slightly larger salaries for the examiners, pending the general reclassification of Federal employees. Some increase is necessary to get suitable men to fill the vacancies and to retain the men already in the Office.

The same bill also increases the fees, so that relief is provided without costing the taxpayer a single cent.

The Patent Office is breaking at the very moment it should be responding to the fullest extent to the depressed industrial conditions of the country. The Secretary of Labor reports that there are over 5,000,000 unemployed in this country and the Patent Office should be helping to provide new avenues for employment, whereas it is retarding industry by holding up for a year or more patents upon which new industries would be started.

The entrance salary of assistant examiners is $1,500 per annum, while the entrance salaries of clerks of city post-offices is $1,400. Assistant examiners must take a three-day examination in higher mathematics, advanced chemistry and physics, one foreign language, technics, (embracing the application of the sciences to all the mechanical, electrical and chemical industries,) and the reading of mechanical drawings, while the candidates for postal clerks take but one day's examination, based upon the requirements of a common school education. The position of insurance claims examiners in the Bureau of the War Risk pays an entrance salary of from $1,800 to $2,500, although the Civil Service examination covers a time of only one day and the qualifications are based upon a common school education and a course in and graduation from a

law school. The candidate for entrance into the examining corps of the Patent Office, not only takes a much severer course of study than the candidates of either of the other positions mentioned, but he has to pass the most exacting examination of a general nature given by the Civil Service Commission. These instances are cited as illustrative, among many others that could be given, of the inequality of conditions and as one of the main reasons for the present critical situation in this bureau. In fact, by comparison, the position of patent examiner has degenerated from the best paid to one of the poorest paid of the technical positions in the Government service.

The outstanding feature of the year's business is not only the maintenance of the abnormal volume of work which was presented the previous fiscal year, but its decided increase. In applications for patents for inventions received, there was a gain of 22% over the fiscal year 1914, the heaviest year before the war, and 35% over the fiscal year 1918; while in the total applications received (including trade-marks and designs), there was an increase of 32% and 47%, respectively.

The receipts of money increased from $2,615,697.33 to $2,712,119.69, or almost $100,000. The expenditures increased at greater rapidity, from $2,427,776.76 to $2,640,373.96, or over $200,000 more than the previous year, reducing the net surplus from the year before from $179,135.96 to $71,745.73. Most of the increase went into printing and photolithographing on account of the increased cost of such service in the Government Printing Office and the increased bids from the contractor for reproduction work. Part of the last named item, however, is offset by a large increase in the stock of copies of patents for sale.

It is apparent, from the figures given and the conditions cited, that the business presented to this Office is altogether too large in volume for the present personnel to properly perform, and that unless remedial measures are effected to provide both an increase in force and salary sufficient to provide a competent and experienced personnel, the present deplorable condition will become intolerable.

Attention is invited to the following statistical tables and matter as presenting more specifically the information concerning the details of the business of the fiscal year:

STATISTICS.

Applications received during fiscal year ended June 30, 1921.

With fees:		
Applications for patents for inventions	84,248	
Applications for patents for designs	5,235	
Applications for reissues of patents	296	
		89,779
Applications for registration of trade-marks	15,884	
Applications for registration of labels	1,466	
Applications for registrations of prints	527	
		17,877
Total, with fees		107,656

During the year 89,779 applications for patents, including reissues and designs, and 163,564 amendments in pending cases were filed. The number of letters constituting the miscellaneous correspondence received and indexed was 325,195.

The number of printed copies of specifications of patents sold was 2,196,132, for which a revenue of $219,613.20 was received by the Office, this amount being an increase of $22,915.05 over the receipts of last year. A total of 1,082,985 copies of patents was shipped to foreign Governments. The whole number of copies of patents furnished for sale, for governmental use, and for foreign Governments was 3,653,040.

The Office received for record 36,186 deeds of assignment, containing on an average 453.29 words per deed.

Typewritten copies of 27,205,600 words, and photostatic copies of 19,395,200 words of records, aggregating 46,600,800 words were furnished at 10 cents per hundred words, for which the Office received $46,600.80, and for certifying to these copies $2,550.25 additional, making a total of $49,151.05. For 13,140 certified printed copies, etc., the Office received $11,054.40. For 182,023 photostatic copies of foreign patents, etc., the Office received $35,732.95, and for 77,833 photographic copies, $12,142.65. For all of this class of work the Office received a total of $108,081.05. The Office furnished to other departments, without charge, 1,059 photostatic copies, and made for its own use 7,345 copies; 10,522 photographic copies were made for its own use.

Respectfully submitted.

THOMAS E. ROBERTSON,
Commissioner of Patents.

The honorable the SECRETARY OF THE INTERIOR.

Patents Nos. 1,394,516 to 1,395,242.

THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 291—No. 4. TUESDAY, OCTOBER 25, 1921. Price—$5 per year.

[PUBLISHED OCTOBER 31, 1921.]

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.

Printed copies of patents are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

Nolan Act—Reciprocity of Belgian Laws Recognized.

(Order No. 2,701.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 20, 1921.

Notice is hereby given that the laws of Belgium are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently the privileges specified in said act will be extended to the subjects of Belgium, subject to the limitation that extensions will not be granted to relieve defaults falling under section 2 of the act for a longer period than seven years, five months, and nine days.

THOMAS E. ROBERTSON,
Commissioner.

Nolan Act—Limitations Removed and All Privileges Extended to Citizens of Austria.

(Order No. 2,702.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 21, 1921.

Notice is hereby given that Order No. 2678, recognizing the laws of Austria as conferring benefits reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, is modified by removal of the limitation of extensions under section 2 of the act to a period of seven years and two months. Citizens of Austria are now entitled to all the privileges of the Nolan Act.

THOMAS E. ROBERTSON,
Commissioner.

Nolan Act—Reciprocity of German Laws Recognized.

(Order No. 2,703.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 21, 1921.

Notice is hereby given that the laws of Germany are recognized as affording to citizens of the United States privileges substantially reciprocal to the privileges accorded by the Nolan Act of March 3, 1921, (41 Stat. L., 1313,) and that consequently all the privileges specified in said act will be extended to its citizens.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., October 7, 1921.

Isaac Newlin, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Simon Levi Company, 715 J Street, San Diego, Calif., for registration of a trade-mark and trade-mark registered April 4, 1911, No. 81,407, to Isaac Newlin of New York, N. Y., and having failed to obtain service upon the registrant, notice is hereby given that unless said Isaac Newlin, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default.

This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

THOMAS E. ROBERTSON,
Commissioner.

Adverse Decisions in Interference.

PATENT No. 1,355,098.

On September 22, 1921, a decision was rendered that John M. Weiss and Charles R. Downs were not the first inventors of the subject-matter covered by claims 1 and 2 of their Patent No. 1,355,098, subject, "Catalytic oxidation of anthracene," and no appeal having been taken within the time allowed such decision has become final.

Notice—Attorney's Address.

Many letters are being returned to this Office for lack of street address. The attorney's full post-office address should be given in every power of attorney. The prompt delivery of communications will thereby be facilitated.

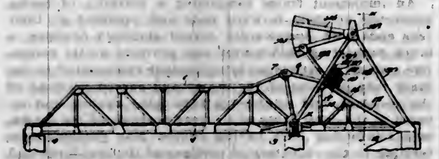
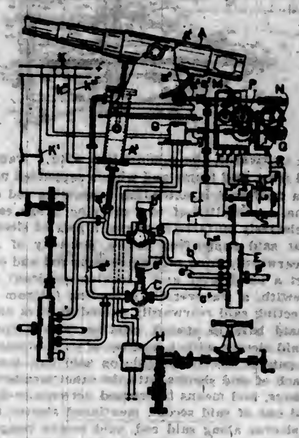
PATENTS



GRANTED OCTOBER 25, 1921.

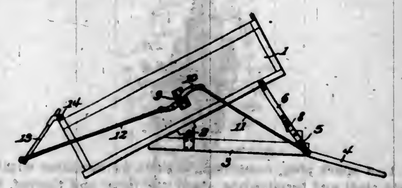
1,394,518. ELECTRIC HEATING UNIT. CHARLES C. ABBOTT, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 30, 1919. Serial No. 334,454. 12 Claims. (Cl. 219—64.)

1. An electric heating unit comprising a metallic sheath and a plurality of helical resistance elements embedded in pulverulent heat-refractory insulating material compacted to a dense mass around said elements within the sheath.



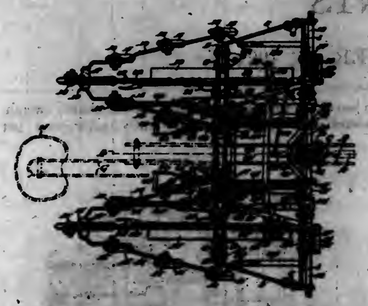
1,394,519. BASCULE-BRIDGE. HUGO A. F. ABT, Chicago, Ill. Filed Aug. 11, 1920. Serial No. 402,837. 8 Claims. (Cl. 14—36.)

1. A bascule bridge having a rotatable bridge leaf, a rotatable counterweight, said leaf and counterweight having axes remote from each other, a power device, a link for connecting said leaf to said power device, and a second and separate link for connecting the counterweight to the power device.



1,394,520. APPARATUS FOR THE ELECTRICAL LONG DISTANCE CONTROL OF THE VALVE-GEAR OF A HYDRAULIC GUN-POINTING GEAR. WALTHER AKEMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Nov. 19, 1920. Serial No. 425,105. 6 Claims. (Cl. 89—41.)

1. An electrical long distance control apparatus for the valve gear of a hydraulic gun pointing mechanism comprising the combination with a gun barrel, a sighting device, a transmitter, a receiver, means connecting said transmitter and said receiver for synchronous operation, a hydraulic gun pointing mechanism, means for supplying a hydraulic medium to said hydraulic mechanism, a system of valves for controlling said hydraulic medium, said system including a slide valve, a pair of quick acting valves, a stroke apparatus for controlling said slide valve, a circuit closing device, said circuit closing device comprising independently operatable sections, one section being connected to and operatable by the gun barrel, the other section being connected to and operated by said receiver, means connecting said stroke apparatus to said gun barrel, a controlling motor, an automatic switch, said automatic switch being electrically interposed between



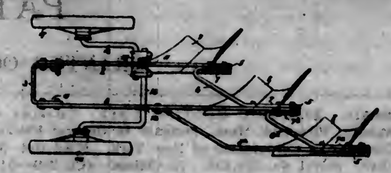
said circuit closing device and said controlling motor, and means connecting said controlling motor to said stroke apparatus.

1,394,521. END-GATE-OPERATING MECHANISM. GLEN AKERS, Roanoke, Va., assignor to Jennings Automatic Dump Body, Inc., Roanoke, Va., a Corporation of Virginia. Filed Dec. 1, 1919. Serial No. 341,793. 4 Claims. (Cl. 298—23.)

1. The combination with a dump body for trucks and the like having an end-gate pivoted at its upper edge to the rear end of said body, of an operating lever whereby said body may be actuated to move to and from inclined dumping position, a rocker arm pivoted intermediate its ends upon said body at a point intermediate the ends of the latter, a link connecting one end of said rocker arm to the lower portion of said end-gate, and a link connecting the other end of said rocker arm to said lever, whereby movement of said lever for actuating said body to rock to dumping position simultaneously swings said end-gate to and retains it in open dumping position, and vice versa.

1,394,522. CULTIVATOR. CHARLES J. ALLEN, Moorestown, N. J., and JOHN M. HOWARD, Media, and DAVID E. RICHIE, Lansdowne, Pa. Filed Oct. 27, 1920. Serial No. 419,844. 10 Claims. (Cl. 97—35.)

3. In a cultivator, the combination with a frame, axles supported from said frame and wheels supported upon said axles, of a transversely extending supporting rod adjacent said frame, a plurality of tool carrying gangs each comprising relatively movable members, a pair of sleeves movable about said supporting rod, a plurality of bars extending rearwardly from said supporting rod and operative to support a hand lever and a locking quadrant coöperative therewith, a transversely extending fulcrum bar rigidly connecting said rearwardly extending bars and maintaining said bars in spaced relation, means connecting each of said sleeves with a member of each of said gangs, a second pair of sleeves slidable on said bar, means connecting each of said sleeves with the other member of each of said gangs, and means interposed between each of said levers and one of said second mentioned sleeves for moving said sleeves along said rod, said means comprising a three armed lever fulcrumed on said fulcrum bar and a link connecting one of the arms of said lever with the adjacent sleeve and movable in two directions with respect thereto.

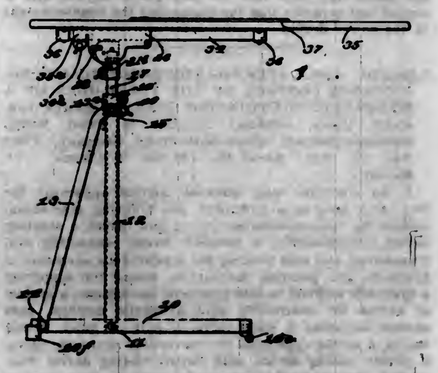


1,394,523. SPARK-PLUG. OGILBEE ALLEN, Jr., Chicago, Ill., assignor to Allen Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed May 17, 1920. Serial No. 381,924. 2 Claims. (Cl. 123—169.)

1. A spark plug, comprising a shell, an insulator within said shell and terminating above the inner end thereof, so that an open chamber is left at the inner end of the shell, a terminal rod extending through said insulator and projecting beyond the inner end of the shell, and an inwardly tapering or conical metallic carbon-rejecting element surrounding said terminal, said element having greater heat conductivity than said terminal and having a highly polished surface.

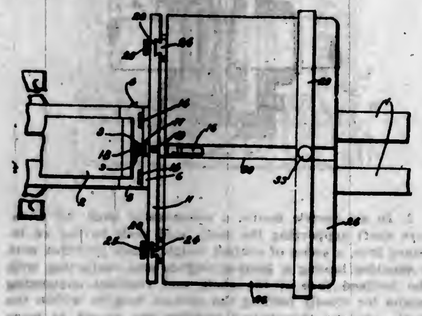
1,394,524. PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor, to Oliver Chilled Plow Works, South Bend, Ind. Filed Dec. 29, 1919. Serial No. 348,065. 4 Claims. (Cl. 97—38.)

1. A plow structure comprising a plurality of plow beams, plow standards integral with the rear ends of said beams, a brace extending from one plow beam to another, said brace having integral extensions at its respective ends, said extensions lying directly against rear portions of two beams and the plow standards and constituting supplemental members of the latter, plow bases, and transverse bolts projecting through parts of said plow bases and through said standards and also through said supplemental standard members.



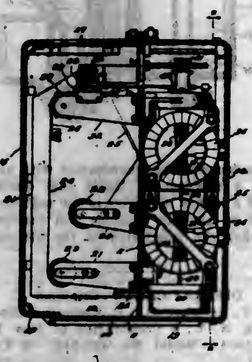
1,394,525. PLOW. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed May 23, 1921. Serial No. 471,757. 1 Claim. (Cl. 97—2.)

An implement frame comprising a plurality of beams connected at their forward ends and provided at their rear ends with downwardly curved standard portions, a brace connecting said beams and provided at its respective ends with extensions lying against and secured to the inner rear portions of the beams and curved portions of the standard, and reinforcing bars lying against and secured to the outer faces of the rear portions of the beams, said reinforcing bars having curved rear portions conforming to the curvature of portions of the standards and secured to the same.



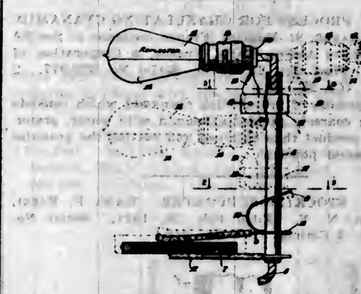
1,394,526. UNIVERSAL TABLE. EUGENE C. AMSDEN, Boston, Mass. Filed Aug. 3, 1920. Serial No. 401,007. 9 Claims. (Cl. 45—74.)

1. A universal foldable table, comprising a base, a standard mounted for folding movement with respect thereto, and a table top mounted for folding movement with respect to said standard, the mounting of said top with respect to said standard being constructed and arranged to permit said top to be located with the standard approximately under the longitudinal center thereof or adjacent one end thereof at will, and also to permit angular adjustment of said top about a longitudinal median line thereof.



9. A universal foldable table comprising a base, a standard mounted for folding movement with respect thereto, a bracket embracing said standard, means for clamping said bracket to said standard, a table top pivotally connected to said bracket, an annular slot in said bracket, a collar in said slot and means attaching said collar to said standard.

1,394,527. MORTISING-MACHINE. ALLUWEE C. ANDREWS, Greenville, Tex. Filed Aug. 23, 1920. Serial No. 405,538. 6 Claims. (Cl. 144—78.)



1. A mortising attachment for a machine having a bed or frame and a power-driven shaft spaced from and parallel to said bed or frame, said attachment comprising a bracket adjustable along the frame; a carrier adjustable to the bracket transversely of the frame; a hollow chisel on the carrier; a support adjustable on the carrier transversely of the frame; a table mounted for reciprocation on the support toward and away from the chisel; an abutment adjustable on the table toward and away from the chisel; means for reciprocating the table; means for retaining all of the aforesaid adjustable parts in adjusted positions; a boring bit in said chisel; and means for connecting said bit to said shaft.

1,394,528. ELECTRIC-METER CONSTRUCTION. DONALD JAMES ANGUS, Indianapolis, Ind. Filed May 20, 1918. Serial No. 235,573. 12 Claims. (Cl. 234—5.5.)

1. A meter, comprising a casing having a partition dividing it into front and rear compartments, stationary and movable meter elements mounted in said rear compartment, a record sheet and means for moving it mounted in said front compartment, a marking device coöperating with said record sheet and controlled by said movable meter element, a liquid chamber associated with said meter elements in said rear compartment, and a filling tube extending from said liquid chamber through said partition into said front compartment, and there being provided with a filling opening at a lower level than the top of said liquid chamber.

1,394,529. ELECTRIC-LAMP FIXTURE. LE ROY ARMITAGE, East Orange, N. J. Filed May 24, 1920. Serial No. 383,713. 3 Claims. (Cl. 240—52.)

1. An electric lamp fixture comprising a post, a jaw fixed to said post, a second jaw having a spring arm portion, said second jaw and its spring arm portion having openings slidably receiving said post, and a lamp socket adjustably carried by said post.

1,394,530. SYRUP-MEASURING DEVICE FOR BOTTLE-FILLERS. HARRY ALEXANDER, Jersey City, N. J., assignor to New York Bottlers' Supplies Manufacturing Co., Hoboken, N. J., a Corporation of New Jersey. Filed Feb. 17, 1921. Serial No. 445,626. 5 Claims. (Cl. 225—21.)

1. A syrup measuring device for bottle fillers embodying therein a valve casing having a vertical, axial opening extending therethrough, and a filling and a discharge head therein having the same degree of eccentricity with relation to said opening and opening upwardly of said casing, said filling head communicating with a source of syrup supply and said discharge head communicating with said axial opening in said casing, a horizontal disk seat carried by said casing and having ports therein registering with said heads respectively, a valve structure comprising a circular valve block seating upon said disk seat, and a plug

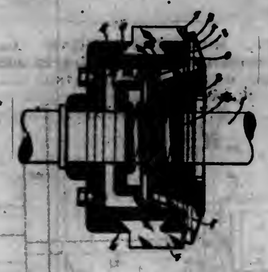
rotatably mounted in said axial opening, a measuring cup surmounting said block, said block having a passage therethrough communicating with said cup at one end thereof, and opening toward said disk at the other end thereof, and said plug having an opening therein one end of which is adapted to register with said discharge head and the other end of which is adapted to communicate with the discharge nozzle, means seating said block upon said valve seat, and means whereby said valve mechanism may be actuated to bring said passage into register with either, or neither, of said heads.

1,394,531. [WITHDRAWN.]

1,394,532. PROCESS FOR GRANULATING CYANAMID. LÉONCE BARRÉ, St.-Maurice, France, assignor to Société des Produits Azotés, Paris, France, a Corporation of France. Filed Oct. 24, 1919. Serial No. 332,977. 2 Claims. (Cl. 23—13.)

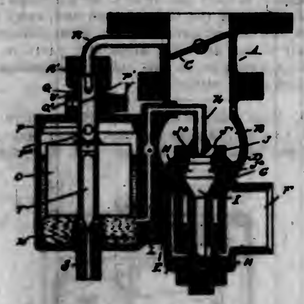
1. The process of granulating cyanamid which consists in treating coarsely divided cyanamid with water, granulating the product thus obtained and coating the granules with cyanamid powder.

1,394,533. STOCKING-SUPPORTER. EMMA F. BARRI, Brooklyn, N. Y. Filed Feb. 26, 1921. Serial No. 448,533. 2 Claims. (Cl. 24—246.)



2. In a stocking supporter, the combination of an upper base member having a central pendent tongue in the lower portion of which is an opening and also having barrels at opposite sides of the upper portion of said tongue, a lower base member having an upwardly extending central tongue arranged in the said opening of the upper base member and hingedly connected thereto, a resilient clamping portion of greater length than width carried by and extending from the face of the lower base member, a broad and open bail having a lower cross bar to coöperate with the lower side of said clamping portion and also having inwardly directed trunnions journaled and secured in the said barrels of the upper base member, and a flexible tape arranged back of the base members and connected with the upper portion of the upper base member and the lower portion of the lower base member; said flexible tape being of a greater width than the tongues of the upper and lower base members and also of a greater width than the length of the resilient clamping portion on the lower base member.

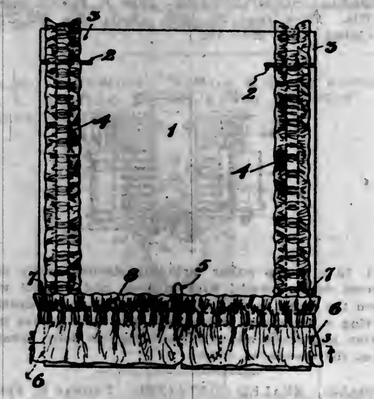
1,394,534. HEAT TREATMENT OF ALUMINUM ALLOYS. EARL BLOUGH, Parnassus, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Nov. 30, 1917. Serial No. 204,540. Renewed Dec. 28, 1920. Serial No. 433,691. 25 Claims. (Cl. 148—11.)



1. In a method of heat-treating aluminum alloy of the kind described to improve certain of its physical properties, especially tensile strength, the steps comprising subjecting the said alloy to heat at a temperature above about 460° C., and, without working the alloy, subjecting it for a period of time to heat at a lower temperature.

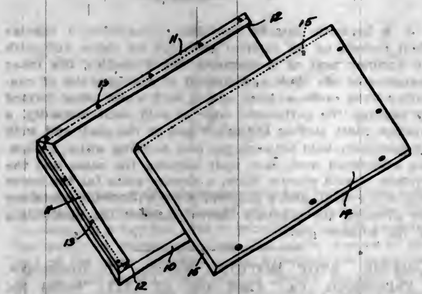
1,394,535. ELECTRIC MOTOR. HOWARD BERESH, St. Louis, Mo., assignor to The Advance Electric Company, St. Louis county, Mo., a Corporation of Missouri. Filed July 12, 1920. Serial No. 396,436. 7 Claims. (Cl. 172—279.)

2. In an electric motor, a commutator shell, an armature shaft supporting the shell, said shell having an inclined face, a series of contact weights each provided with a shoulder having a beveled surface and contacting with the inclined faces of the shell, and resilient supporting means for closely holding the contact weights within the shell, whereby the contact weights are caused to move axially and radially.



1,394,536. CARBURETER. WILFRED O. CHASE, Detroit, Mich. Filed May 18, 1916. Serial No. 98,317. 17 Claims. (Cl. 261—46.)

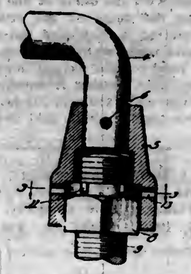
1. In a carbureter, the combination with an air suction conduit, of a downturned liquid fuel discharge nozzle therein, and a hollow air valve below said nozzle adapted to be lifted by the air pressure and coacting with the nozzle to vary the restriction of the air passage about said nozzle.



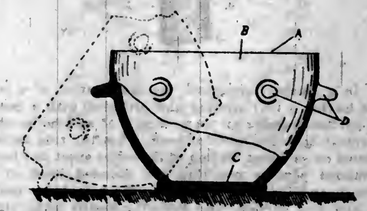
1,394,537. DISPLAY-CARD. CHARLES C. COHN, New York, N. Y., assignor to I. B. Kleinert Rubber Company, New York, N. Y., a Corporation of New York. Filed Feb. 9, 1921. Serial No. 443,542. 2 Claims. (Cl. 211—34.)

1. An article of the class described comprising a card having a slot at one of its ends to receive folded portions of an article of wearing apparel, said card also having slits at its opposite end with shoulder portions between

said slits and the edge of the card to enter into looped shoulder straps on the article of wearing apparel.



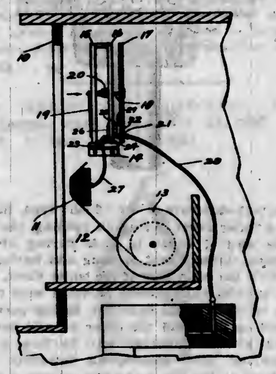
1,394,538. DRAWING-BOARD. JOSEPH F. COPELAND, Drexel Hill, Pa. Filed May 24, 1920. Serial No. 383,970. 6 Claims. (Cl. 45—131.)



5. A drawing board comprising a base provided upon a plurality of sides with a fixed marginal raised portion or rim the outer faces of which are flush with the outer faces of said base at least one side of said base being free of a raised portion to permit insertion of a mount, a fibrous mount removably fitted upon said base in abutting relation with said rim and means for securing said mount to place.

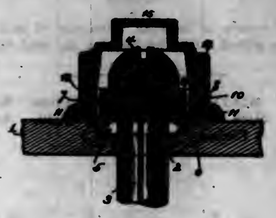
1,394,539. WRENCH. FRANK DANIELSON, Chicago, Ill. Filed June 1, 1920. Serial No. 385,556. 3 Claims. (Cl. 81—121.)

1. The combination with a bolt provided with a transverse opening and a nut provided with paired openings adapted to be alined therewith, of a socket wrench provided with means to indicate when one of said pairs of openings is alined with the opening in said bolt.



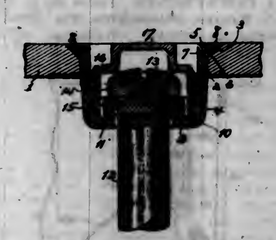
1,394,540. MIXING-BOWL. ALEXANDER S. DIACK, Detroit, Mich. Filed July 17, 1920. Serial No. 396,998. 3 Claims. (Cl. 65—61.)

1. A mixing bowl having a base rim and a plurality of projections from its side, the rim and any two adjacent projections forming supporting points for maintaining the bowl in stable equilibrium when tilted upon its side.



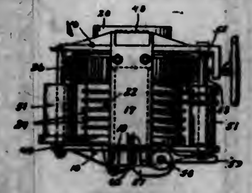
1,394,541. TRANSPOSING DEVICE FOR PNEUMATIC MUSICAL INSTRUMENTS. LOUIS DE S. DIBERT and ROBERT C. WINTER, Philadelphia, Pa. Filed June 15, 1920. Serial No. 389,236. 7 Claims. (Cl. 84—57.)

7. In an automatic musical instrument the combination of a tracker-bar and a pneumatic action with a transposing device comprising a fixed member and a rotatably mounted



member each provided with equally spaced air ducts disposed upon an arc of a circle, tubes connecting the ducts of the tracker-bar with the ducts of one of said members, tubes connecting the ducts of the other member with said pneumatic action, a cushioned rod supported by the fixed member and upon which the rotatable member is fixed, a pointer fixed to said rod for indicating the extent to which the movable member is rotated and means between said movable and fixed member for relatively securing said members together with said ducts in register.

1,394,542. STAYBOLT STRUCTURE. JOHN ROGERS FLANNERY and ETHAN I. DODDS, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Dec. 7, 1920. Serial No. 428,967. 2 Claims. (Cl. 85—1.5.)

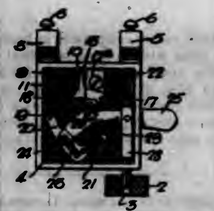


1. In a staybolt structure, the combination of a boiler sheet having a bolt opening and provided with a beveled seat portion forming an integral part of said boiler sheet, a staybolt having a rounded head, a bearing ring movably mounted on said seat portion of the boiler sheet and having a rounded portion receiving the rounded head of the staybolt, and inclosing means for the bolt head, bearing ring and seat portion, said inclosing means being rigidly secured to the boiler sheet around said seat portion.

1,394,543. STAYBOLT STRUCTURE. JOHN ROGERS FLANNERY and ETHAN I. DODDS, Pittsburgh, Pa., assignors to Flannery Bolt Company, Pittsburgh, Pa. Filed Dec. 7, 1920. Serial No. 428,968. 1 Claim. (Cl. 85—1.5.)

In a staybolt structure of the "flush" type, the combination with a boiler sheet having an opening, the outer portion of the wall of which is made flaring, of a bearing sleeve passing through said opening and having its outer end flush with the outer face of the boiler sheet, said sleeve having an annular enlargement provided with two beveled faces, one of which rests upon the flaring portion of the wall of said opening and the other of said beveled faces coöperating with said flaring wall to form a groove, a weld occupying said groove, an inwardly projecting annular flange at the inner end of said sleeve and having a beveled face, a staybolt provided with a head having a rounded portion, a bearing ring movably mounted on the beveled annular flange of the sleeve and having a rounded portion on which the rounded portion of the bolt head is movable, and a closure within said bearing sleeve and having its outer end flush with the outer face of the boiler sheet.

1,394,544. STUMP-PULLER. JOHN K. FLYNN, Superior, Wis. Filed June 29, 1920. Serial No. 392,723. 3 Claims. (Cl. 254—182.)



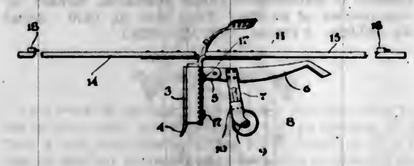
1. In a stump puller including simultaneously driven spaced drums formed with grooves, and a cable wound upon the drums, a dolly arranged adjacent one drum and having a peripheral groove mating with a groove in the latter, and screw means for shifting the dolly toward or from the associated drum.

1,394,545. SEALED CONTAINER. THOMAS H. FRENCH, Pacific Grove, Calif. Filed Sept. 24, 1919. Serial No. 326,030. 3 Claims. (Cl. 220—82.)

3. A hermetic display container comprising a tubular shell formed on its interior adjacent its upper end with an annular seat of a diameter not exceeding the inner diameter of the shell and formed of spaced walls of concavo-convex cross section, one of said walls being formed by bending the peripheral edge of said shell inwardly, a window plate closing the upper end of the shell and with its periphery held between the seat forming walls, a packing associated with each wall between the same and the surface of said closure plate, a closure plate for the lower end of the shell, and a follower plate within the container for pressing the contents thereof against the under face of the window plate.

1,394,546. STOP-MOTION. SAMUEL H. GOLDSTEIN, Philadelphia, Pa. Filed Aug. 15, 1921. Serial No. 492,384. 5 Claims. (Cl. 19—25.)

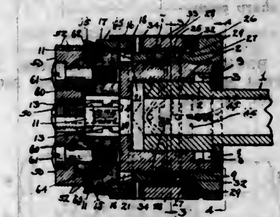
1. The combination in a stop motion of a casing; a bolt slidably mounted therein; a setting lever pivoted



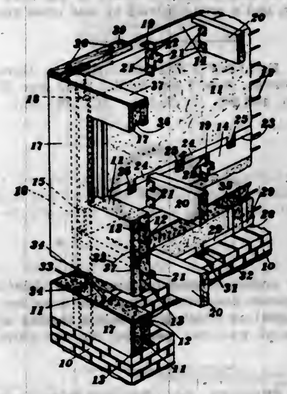
to said bolt and projecting outside of said casing; an arm pivoted at one end to the casing and having a longitudinally extending slot for the reception of a projection on said setting lever; a spring operative on the lever and tending to project the bolt; a hook coöperative with the arm for holding it with the setting lever and bolt in a set position; with a thread-controlled finger operative to move the hook to an arm-releasing position.

1,394,547. TIRE-MOLD. WILLIAM E. GREBE, Syracuse, N. Y. Filed Feb. 7, 1920. Serial No. 357,067. 3 Claims. (Cl. 18—38.)

1. A tire mold comprising opposing sections confining a mold cavity for receiving a rough tire casing, one of the sections being formed with means for conducting a fluid under pressure to the mold cavity directly in contact with the inner face of the casing to exert an internal pressure on the casing in the mold cavity, and means located outside of the mold cavity for preventing the escape of such fluid from the mold cavity, substantially as and for the purpose described.



1,394,548. ROAD-DRAG. JOHN ANDREW GUTRIDGE and JAMES AYNUB WOOD, McLoud, Okla. Filed Apr. 21, 1920. Serial No. 375,527. 3 Claims. (Cl. 37—5.)



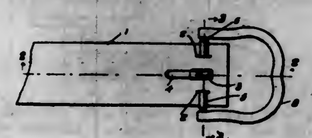
1. A device of the character specified comprising a cutting blade, a tongue connected with each end of the blade to swing on a vertical axis to permit the tongue to extend forwardly or rearwardly from the blade, means at each end of the blade for raising and lowering the same, each of the said means comprising a handle pivoted to the blade near its top and having a standard depending therefrom, a caster wheel connected with each standard, and a reinforcing beam of wood secured to the rear face of the blade, the lower edge of the blade curving forwardly and being sharpened to form a cutting edge.

1,394,549. SELF-OPENING DIE-HEAD. WILLIAM C. HAFEMEISTER, Cleveland, Ohio, assignor to The Metal Parts Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 19, 1918. Serial No. 258,862. 11 Claims. (Cl. 10—95.)

1. In a device of the character described, the combination of a body; chaser dies mounted in said body; a ring movable longitudinally of said body and operatively connected with said dies variously to position the same; a second ring rotatably mounted on said body, said first and second rings having coöperative cam-faces whereby rotation of said second serves to move said first longitudinally of said body, and a cylindrical casing surrounding both rings and being fixedly attached to said second ring and having positioning connection with said first ring.

1,394,550. CONCRETE BUILDING-SLAB. MILTON B. HENRICK, Omaha, Nebr. Filed Sept. 22, 1920. Serial No. 412,037. 6 Claims. (Cl. 72—16.)

2. A slab for building construction comprising a cementitious body, a top reinforcement molded in the upper edge of the slab and having recesses therein and said body having therein corresponding recesses for the reception of the ends of girders of a building, and a bottom reinforcement embedded in the lower edge of the slab and having projections adapted to interlock with the opposite sides of the top reinforcement of the subjacent slab.

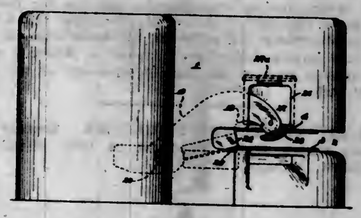


1,394,551. AERIAL TOY PROJECTILE. THOMAS G. HITT, Seattle, Wash. Filed Mar. 24, 1920. Serial No. 368,376. 1 Claim. (Cl. 46—46.)

In an aerial toy projectile, a hollow cylinder with one end open and adapted to be rested upon a flat surface, a

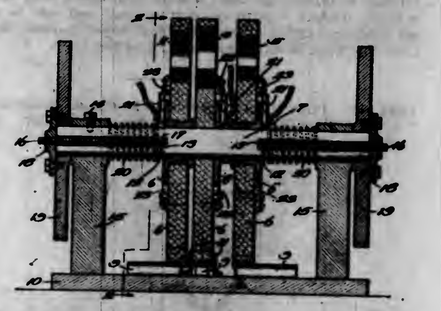
wall disk closing the other end of the cylinder, a hollow cone shaped cap formed integral with the cylinder and surmounting the disk, said cap terminating at its outer end into a sharp point.

1,394,552. BUCKLE. HERMAN HOSSCHEN, Freeport, Minn. Filed May 11, 1920. Serial No. 380,449. 4 Claims. (Cl. 24—178.)



1. A buckle comprising a cross pin adapted to be inserted through a strap, a body having parallel portions provided with threaded sockets to receive the ends of the pin and draw said parallel portions of the body toward one another, and a prong carried by said cross pin.

1,394,553. HOLLOW CASTING. HERMAN HOFFER and JACOB HOFFER, New York, N. Y. Filed Apr. 23, 1921. Serial No. 463,865. 3 Claims. (Cl. 18—45.)

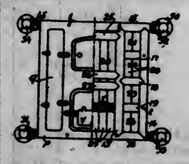


1. As an article of manufacture, an artificial product of the character designated, comprising a hollow core of fibrous material on which is imposed a casting of plastic composition of wax and paraffin, for the purpose described.

1,394,554. PRESSER-ROLLER-RELEASING DEVICE. GREENE CARLTON HOSCH, St. Louis, Mo. Filed Sept. 23, 1920. Serial No. 412,220. 9 Claims. (Cl. 33—133.)

1. In a machine of the character described having a measuring roller, the combination of a presser roller, a movable presser roller above the measuring roller frame carrying the presser roller, a spring mounted to exert force on the presser roller frame and press its roller against the measuring roller, detent means coöperating with the presser roller frame to hold the same raised with the presser roller away from the measuring roller, and an actuating member coöperating with the detent means to inhibit temporarily the action of the spring on the presser roller frame to permit the presser roller frame and its roller to descend by gravity onto the measuring roller.

1,394,555. ELECTRICAL TRANSFORMER. HARRY L. ING, Springfield, Ill. Filed Oct. 6, 1920. Serial No. 415,083. 8 Claims. (Cl. 171—119.)

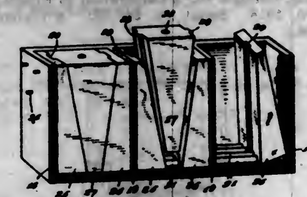


1. An electrical transformer comprising two relatively movable members, one including a plurality of coils of differing numbers of turns and the other including a coil adapted to be brought into and out of its full inductive relation with any coil of the first member by relative movement between the members.

1,394,556. PROCESS OF MAKING NITRODIAZO COMPOUNDS. WHITNEY B. JONES, Newark, N. J., assignor to Butterworth-Judson Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1920. Serial No. 363,759. 2 Claims. (Cl. 23—24.)

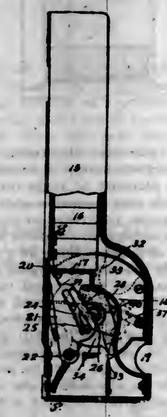
1. Process of making a nitro-diaso compound, comprising nitrating a metallic salt of 1-diaso-2-oxy-naphthalene-4-sulfonic acid.

1,394,557. HEATER FOR HOT-PIPE SYSTEMS. WALFRID KARLSSON, Wigbyholm, near Stockholm, Sweden, assignor to Aktiebolaget Tubus, Stockholm, Sweden, an Organization of Sweden. Filed May 20, 1920. Serial No. 383,026. 5 Claims. (Cl. 122—225.)



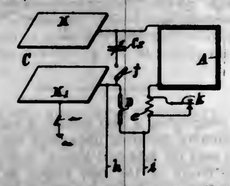
1. A heater for pipe systems, consisting of a set of members assembled to form a furnace in the center and a set of communicating flues on each side of the furnace, each member consisting of four vertical pipes and two horizontal pipes of at least the same length as the member and one or more pairs of short horizontal pipes connecting the vertical pipes into pairs, the short horizontal pipes of the intermediate members being more in number than those of the front and rear members so as to form communicating flues, the uppermost of which communicates with the furnace and the lowermost with the chimney or outlet.

1,394,558. PROCESS AND APPARATUS FOR THE MANUFACTURE OF RUBBER JARS. LOUIS E. KLUG, Indianapolis, Ind., assignor to Rub-Tex Products, Inc., Indianapolis, Ind., a Corporation of Indiana. Filed Dec. 29, 1920. Serial No. 433,746. 17 Claims. (Cl. 18—19.)



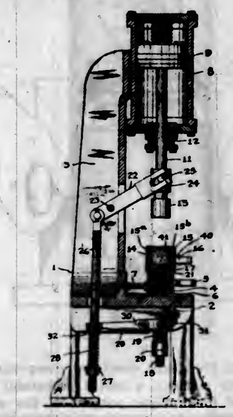
1. The process of making a partitioned jar, which consists in building up the bottom and walls of the jar of

sheets of suitable rubber material, putting one or more partitions of rubber material in place with their edges set-



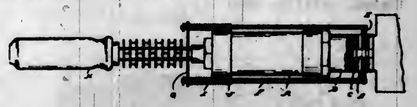
ting in grooves in the bottom and walls, and subjecting the material to heat and pressure to produce coalescing of the partitions, walls, and bottom where they meet.

1,394,559. COIN VENDING-MACHINE. EDWARD J. KOEHLER, Bronxville, N. Y., assignor to Messinger Automatic Sales Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 18, 1916. Serial No. 217,797. 1 Claim. (Cl. 194—93.)



In a vending machine, a coin slot, a rotatable disk having a coin notch in its periphery and an opening in its face, a coin detector bar associated with said disk, a detent on said bar for engaging said opening to lock the disk, a projection on the bar for engaging a proper coin, thereby holding the bar out of locking position and a protecting plate between the bar and the disk and having a wing portion covering the detector bar between the detent and the projection.

1,394,560. APPARATUS FOR TRANSMITTING RADIANT ENERGY. FREDERICK A. KOLSTER, Washington, D. C. Filed Nov. 27, 1916. Serial No. 133,520. 28 Claims. (Cl. 250—17.)



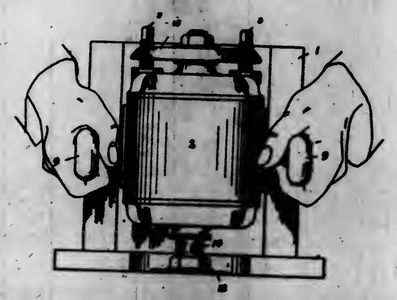
1. A radiator comprising a closed radiating circuit, an inductance in said circuit, and a capacity in said circuit comprising large separated areas, said capacity areas and said inductance serving as radiating elements, the distributed capacity and inductance of said circuit being substantially nil.

1,394,561. DIE-CASTING MACHINE. JOHN C. KOPP, Bellevue borough, Pa. Filed Oct. 14, 1920. Serial No. 416,876. 22 Claims. (Cl. 22—68.)

8. In a die-casting machine, the combination with a die, a receptacle and a plunger, of means for automatically lifting the receptacle to break the sprue when the plunger rises.

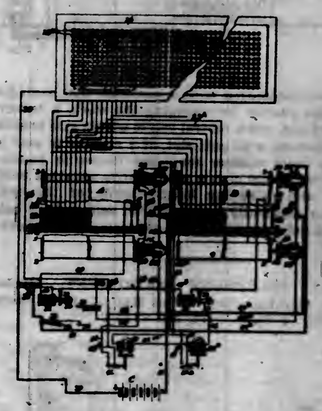
1,394,562. SOLDERING-IRON. FRANK KUHN, LAWRENCE H. THOMAS, and JULES G. SPIESS, Detroit, Mich., assignors to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed June 11, 1920. Serial No. 388,231. 3 Claims. (Cl. 113—106.)

1. The combination with a soldering tool having an annular edge portion for engaging the work, a transversely extending slot, and a central recess within said annular portion connecting with said slot, of a member in said central recess, a cross member connected therewith passing outward through said slot, a pair of rods engaging said cross member and extending longitudinally of the tool, and means for resiliently pressing upon said rods to hold said central member against the work during the withdrawal of the tool.



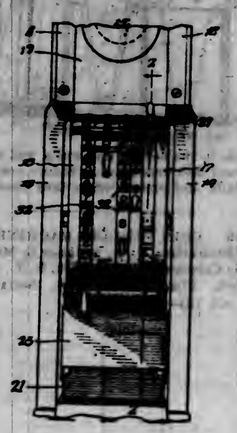
1,394,563. TELEPHONE INSTRUMENT. HUBERT A. LEISE, Meriden, Conn. Filed May 27, 1920. Serial No. 384,722. 1 Claim. (Cl. 179—115.)

A telephone instrument including a casing, a diaphragm-supporting shell mounted therein and formed in its outer



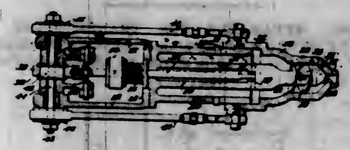
edge with a flange and with a notch opening through said flange, a single disk diaphragm resting upon the said flange and closing the open end of said notch.

1,394,564. PORTABLE POWER DEVICE. CHARLES F. LENDGREN, Duluth, Minn. Filed Sept. 3, 1920. Serial No. 408,042. 2 Claims. (Cl. 144—119.)



1. A device of the class described comprising an L-shaped supporting member, a motor adjustably mounted upon the face of the upright portion of the supporting member, a cutter carried on the shaft of the motor and operating substantially flush with the face of the horizontal portion of the supporting member and projecting beyond one side of same, and a handle adjacent each side of the motor fixed to the upright portion of the supporting member and extending outwardly in the same direction with the horizontal portion of the supporting member, substantially as described.

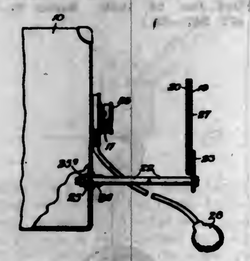
1,394,565. ELECTRIC SIGN. JOHN E. LONG, Hot Springs, Mont. Filed Aug. 24, 1917. Serial No. 187,989. 13 Claims. (Cl. 177—350.)



1. A light-board having lamps arranged thereon, and duplicate means for controlling the illumination of the lamps, said means including alternatively operative lamp circuit controlling sheets, with coöperating means for automatically stopping and starting the sheets.

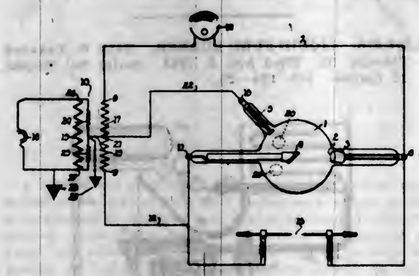
1,394,566. PERFORATING-MACHINE. WALTER H. LEMAN, Chicago, Ill., assignor to The American Perforator Company, Chicago, Ill., a Corporation of Illinois. Filed July 10, 1918. Serial No. 244,162. 8 Claims. (Cl. 101—26.)

8. A perforating machine comprising a reciprocable head, spaced arms carried thereby, a journal extending between said arms, a plurality of rings rotatably mounted on said journal, each ring having a series of groups of punch-receiving openings, positioned to be turned to bring a desired group of openings into register with a group of punches, said group of punches being on a different side of said journal from the side on which said head is located, and a plurality of handles, one secured to each ring, and operable between said reciprocable head and said set of punches, said series of groups of punch-receiving openings occupying materially less than the full circumference of the rotatable rings, whereby the movement of the handle between the reciprocable head and the group of punches will be sufficient to bring any desired one of the groups of punch-receiving openings into register with the group of punches.



1,394,567. HYDROCARBON-BURNER. JOHN W. F. MACDONALD, Brighton, Mass., assignor to The Merrill Process Company, a Corporation of Massachusetts. Filed Sept. 24, 1918. Serial No. 255,537. 13 Claims. (Cl. 158—74.)

1. A burner comprising a fuel nozzle, a valve therefor, an air nozzle slidably mounted upon said fuel nozzle and forming a valve seat for said fuel nozzle, regulating means connected respectively to the fuel nozzle valve and the air nozzle operable to adjust simultaneously said fuel valve and said air nozzle relatively to said fuel nozzle and to maintain a predetermined correlation between the

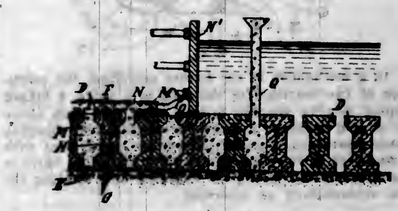


amount of fuel and air delivered throughout the range of said adjustment, whereby substantially perfect combustion of the fuel may be obtained irrespective of the amount of fuel delivered.

1,394,568. CAMERA ATTACHMENT. LOUIS MANDEL, Chicago, Ill. Filed Oct. 25, 1920. Serial No. 419,185. 4 Claims. (Cl. 88—24.)

1. In combination, a camera embodying a lens, a support for a negative or the like connected with the camera and movable into and out of a predetermined position in front of the lens, the said support having an opening therein in alinement with the said lens and into which opening the said lens is adapted to project to permit the said support to be moved into close proximity to the camera body or box.

1,394,569. INCREASING THE EFFICIENCY OF X-RAY TUBES. WILLIAM MEYER, Chicago, Ill. Filed Aug. 19, 1918. Serial No. 250,425. 8 Claims. (Cl. 250—84.)

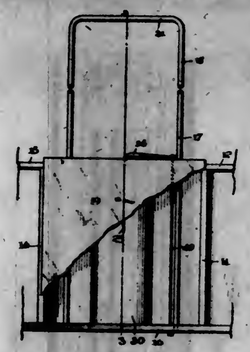


1. In combination, a source of current comprising a winding, said winding having end terminals and having an intermediate tap, an X-ray tube having an anti-cathode, an electrode constituting the cathode for said anti-cathode, and an anode, means for connecting the terminals of said winding to said cathode and said anti-cathode respectively and means for connecting the anode to the intermediate tap.

1,394,570. INNER FORM FOR CONCRETE-PIPE MOLDS. JOHN C. MITCHELL, East Orange, N. J. Filed Sept. 21, 1920. Serial No. 411,721. 7 Claims. (Cl. 25—128.)

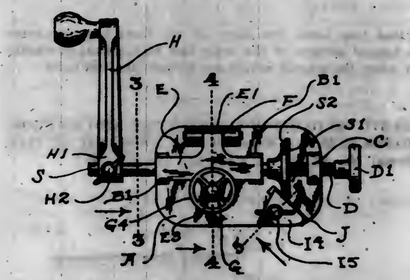
1. A means for reducing the circumference of the inner form for molded concrete pipes comprising, in combination, a sheet metal form split longitudinally, a hinged section adapted to swing inwardly from one edge of the same, projections from the two edges and slotted plates with which such projections engage adapted to draw said projections and hence the edges of the form together after the hinged section of the same has been swung inwardly and when the slotted plates are moved longitudinally.

1,394,571. SUBAQUEOUS STRUCTURE AND METHOD. DANIEL B. MORAN, Mendham, N. J. Filed Mar. 22, 1916. Serial No. 85,801. 2 Claims. (Cl. 61—64.)



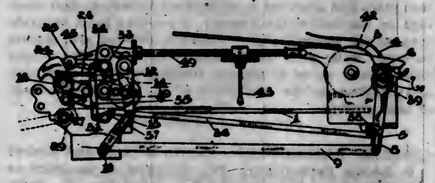
1. A method of building concrete dry docks or the like which comprises molding above ground concrete floor girders adapted to extend across the width of said dock, sinking said molded girders separately through the water into place and allowing them to come to independent bearings on the underlying support, depositing mass concrete through the water in plastic condition between said girders to firmly unite them and to distribute the strains among them jointly so as to make a continuous floor structure, and building up the side walls of the dock on the ends of said girders.

1,394,572. BLACKBOARD. CALVIN B. NEIL and ROBERT R. BOGGS, Fannettsburg, Pa., assignors of one-third to Juell M. Jones, Fannettsburg, Pa. Filed Dec. 31, 1920. Serial No. 434,258. 7 Claims. (Cl. 35—16.)



2. A blackboard comprising a frame having a compartment adapted for the reception of writing articles, a guide

having branches extending through said compartment, a slab having brackets slidably connected to the branches

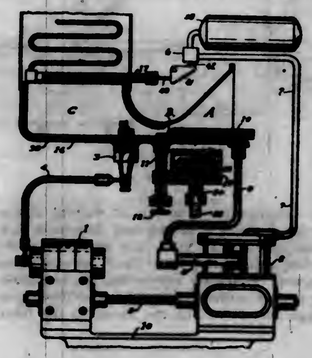


of said guide, and a weight connected to said slab for elevating the same.

1,394,573. VALVE-FACING TOOL. JOHN W. NIPPER, Knoxville, Tenn. Filed July 9, 1920. Serial No. 394,963. 6 Claims. (Cl. 82—1.)

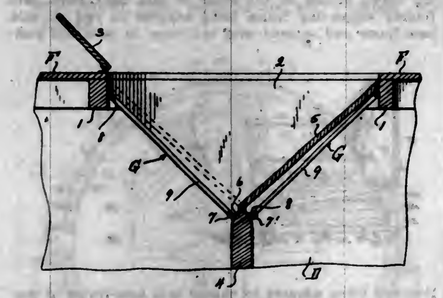
1. In a mechanism of the nature described, the combination of two bearings for the stem of a valve, a hinged clamping member adapted to bear upon said stem above each of said bearings, a screw for forcing said clamping member downward, a cutter located for engagement with the seat face of the head of the valve while the valve is being rotated, and means for engaging and rotating the valve, substantially as described.

1,394,574. SHEET-FEEDING MECHANISM FOR PAPER AND THE LIKE. ERNEST E. PALMER, Toronto, Ontario, Canada, assignor to Toronto Type Foundry Company, Limited, Toronto, Ontario, Canada. Filed Nov. 29, 1920. Serial No. 427,096. 9 Claims. (Cl. 271—37.)



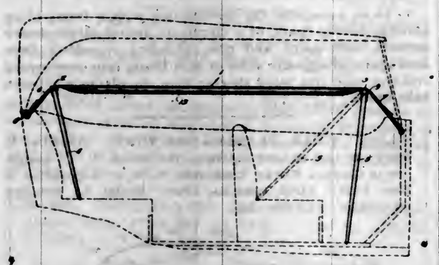
1. In sheet feeding mechanism, the combination of a cut-out rack; an oscillatable cam; a cut-out pawl pivoted on said cam adapted to engage the rack; means normally holding said pawl out of engagement with the rack; a pivoted detector finger operable by the passage of a sheet of paper and adapted to cause the engagement of the pawl with the rack; a vertically movable combing wheel; means operable by said cam for moving the combing wheel to its inoperative position; and yielding means tending to return the cam to its normal position.

1,394,575. SUSPENSION MEANS FOR ELECTRIC-LIGHTING FIXTURES. IRA L. PARK, Washington, D. C. Filed Jan. 28, 1920. Serial No. 354,627. 5 Claims. (Cl. 247—36.)



2. A suspension chain for electric lighting fixtures, comprising hollow links interlaced with each other, each link being composed of two sections separable from each other at its upper and lower part where it crosses the adjacent link, means for holding the sections together and an eyelet held by and between the meeting ends of the sections of the links, substantially as described.

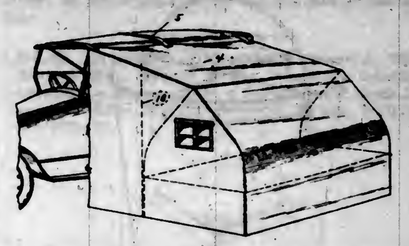
1,394,576. LIQUID-FUEL BURNER. HALE W. PARRISH, Chicago, Ill. Filed Apr. 3, 1918. Serial No. 226,365. 15 Claims. (Cl. 158—29.)



1. In a fuel burner, a fire-box, a spark plug and a fuel atomizer disposed in operative relation thereto, an electric generator operatively connected to the spark plug, an air-driven motor for driving the generator, and connections between the motor and the atomizer for utilizing the exhaust of the motor in the atomizer.

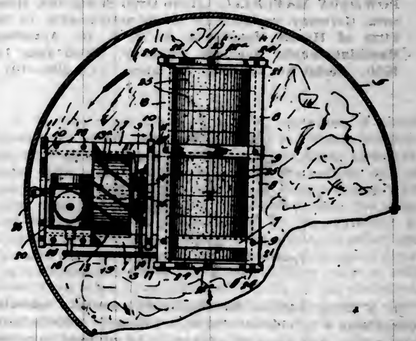
1,394,577. DUMP FOR GRAIN-ELEVATORS AND THE LIKE. HENRY A. PETERSON, Atwood, Kans. Filed Apr. 2, 1921. Serial No. 458,110. 3 Claims. (Cl. 130—19.)

1. In combination with a grain dump having a top opening, a dividing wall within the dump terminating below the top thereof, oppositely directed hook members carried by the upper portion of the dividing wall, and grid members bridging the space between the upper portion of the dividing wall and the ends of the top opening of the dump, the lower marginal portions of the grid members being engaged with the hook members.



1,394,578. COT. ISAAC S. PURCELL, Oak Park, Ill., assignor to Tentobed Company, Chicago, Ill., a Corporation of Illinois. Filed May 8, 1919. Serial No. 295,687. 1 Claim. (Cl. 5—72.)

A folding cot comprising end rails, a bed bottom connected at its ends to said rails respectively, a pair of eye bolts secured to each end rail, flexible tensioning elements secured at one end to respective eye bolts and adapted to have their other ends secured to fixed parts to initially tension the bed bottom, a supporting leg pivoted on each eye bolt and the supporting legs associated with each end rail being held in engagement with a support and in downward convergence by the initial tensioning of the bed bottom by said flexible elements and operable by movement thereof to a position of parallelism to increase the tension of said bed body and flexible elements and dispose said bed body at a greater elevation with respect to the support.

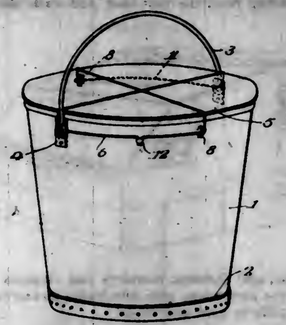


1,394,579. TENT. ISAAC S. PURCELL, Oak Park, Ill., assignor to Tentobed Company, Chicago, Ill., a Corporation of Illinois. Filed July 14, 1919. Serial No. 310,795. 9 Claims. (Cl. 135—1.)

8. An automobile tent including a cot, a frame having a ridge pole supported by the cot, a tent roof supported by the automobile and by the ridge pole and having a wall extending over the outer side of the frame and cot, a curtain depending from the tent roof and spaced from the cot to afford an anteroom between the cot and the automobile and to also screen off vision from the automobile, a screen depending from the tent roof, end walls secured to

the tent roof and forming complete end closures for the frame and the ante-room, and detachable means to secure the screen ends to said end walls.

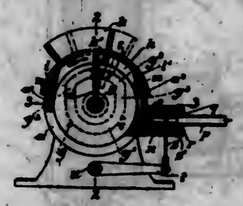
1,394,580. COMPRESSING MECHANISM. GLENN N. RAGER, near Roann, Ind. Filed Apr. 11, 1919. Serial No. 289,341. 9 Claims. (Cl. 100—56.)



1. A loose packer of the type indicated for use within a laterally bounded area, having a packing roller and a traction means of which the normal path of the movement is at an angle to the axis of said roller and tangential to the area.

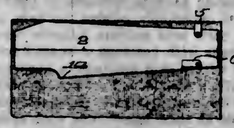
8. In a machine of the character described, a pair of spaced bars, bearing hangers provided at their upper ends with openings to detachably receive the bars, and serving to connect the bars, said bearing hangers being provided at their lower ends with bearings, a shaft having its ends removably held within said bearings, a packing roller carried by the shaft, a second pair of spaced bars extending transversely of the first pair and attached thereto, bearing hangers provided at their upper ends with openings to removably receive the second named bars and provided at their lower ends with bearings, a shaft having its opposite ends removably held within the second named bearings, a driving roller carried by the second named shaft, a motor carried by the second pair of bars, and driving connecting means between the motor and the driving roller.

1,394,581. COVER-SEALING MEANS. WILLIAM H. RAY, Monroe, Mich., assignor to The Weis Fibre Container Corporation, Monroe, Mich., a Corporation of Michigan. Filed Nov. 5, 1919. Serial No. 335,790. 8 Claims. (Cl. 217—89.)



1. In combination with a container having a removable cover, sealing means comprising wire stretched across the top of the cover, a handle having attaching means therefor, and instrumentalities including said attaching means for

connecting the wire to the sides of the container, below the edges of the cover, so that only the wire extends over



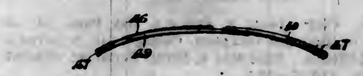
the cover, and whereby the wire is stretched straight across the cover from one side of the pail to the other.

1,394,582. FILLING-MACHINE FOR DOUGHY AND POWDERY MATERIAL. HUGO OTTO SCHILLING, Hamburg, Germany, assignor, by mesne assignments, to the Firm of Hasen Metallwerk G. m. b. H., Abteilung Maschinenfabrik, Hamburg, Germany. Filed June 11, 1920. Serial No. 388,886. 8 Claims. (Cl. 226—107.)

1. A filling machine for doughy and powdery material comprising a cylindrical casing, a rotatable radially movable piston, and a hopper adapted to be adjusted to predetermine the amount to be filled.

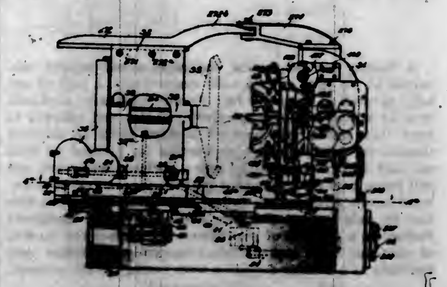
1,394,583. PATTERN FOR MAKING CLOTHING. GEORGE E. SMEAK, Chicago, Ill., assignor to Alfred Decker & Cohn, Inc., Chicago, Ill., a Corporation of Illinois. Filed Nov. 3, 1919. Serial No. 335,293. 6 Claims. (Cl. 33—14.)

1. As an article of manufacture, a pattern for use in cutting cloth, said pattern being provided with means for assisting the user in properly positioning the pattern on the cloth, having a longitudinal center line and side edges, the pattern being wider at one end than at the other, and said means comprising one or more gages pivoted on the narrower end portions of the pattern, the length of each gage being such that when extended its outer end is on a line which represents the maximum width of the pattern at one side of said center line.



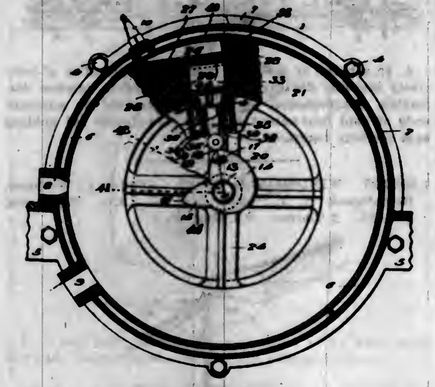
1,394,584. FOLDING-BED COUCH. MORRIS SHERMAN, St. Louis, Mo. Filed May 9, 1918. Serial No. 233,470. 2 Claims. (Cl. 5—46.)

1. In a foldable bed-frame comprising a base-frame, a supporting frame hinged thereon, and two opposed bed-frames hinged on said supporting frame, one of said opposed bed-frames having foldable supporting legs adapted to support the same in opened position, a folding supporting frame hinged on the other of said bed-frames, said folding supporting frame being adapted to rest on said base-frame and support said bed-frame in collapsed posi-



tion and being adapted to engage said base-frame to support said bed-frame in opened position, and means on said base-frame adapted to coöperate with the free end of said folding supporting frame for preventing accidental disengagement of said folding supporting frame from said base-frame when said bed-frame is in opened position.

1,394,585. AEROPLANE. GEORGE A. SPRATT, Coatesville, Pa. Filed Jan. 3, 1920. Serial No. 349,165. 4 Claims. (Cl. 244—31.)

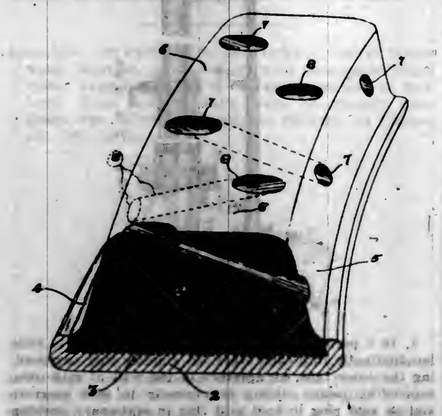


1. In an aeroplane, the combination with a frame of an aerofoil having spars, of a circularly arched fabric drawn between said spars, and ribs extending oppositely from said spars on opposite sides of said fabric into overlapping relation, said ribs being shorter than the distance between said spars.

1,394,586. GEAR-PLANING MACHINE. ARTHUR L. STEWART and ERNEST C. HEAD, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 21, 1920. Serial No. 390,363. 36 Claims. (Cl. 90—10.)

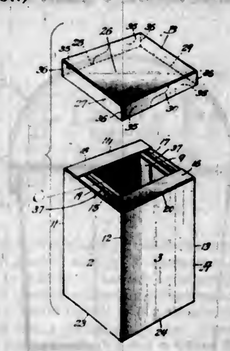
1. A gear cutting machine comprising a tool support and a blank support, one of which has a feeding movement relative to the other, a tool on said tool support having a cutting movement over a tooth face at one side of the horizontal central plane of the machine, and templet means controlling the tool to produce the curvature of said tooth face and adjustable to vary the angular relation of said curvature to the median radius of the tooth according to the relation between the tooth thickness and the radius of the circle on which the tooth profile is developed.

1,394,587. ROTARY GAS ENGINE OR MOTOR. ROBERT H. STEWARD, Greensboro, N. C., assignor to R. H. S. Motors, Incorporated, a Corporation of North Carolina. Filed July 31, 1920. Serial No. 400,393. 8 Claims. (Cl. 123—44.)



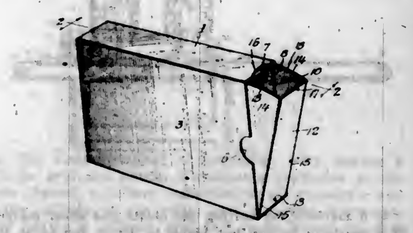
7. In a rotary explosive engine or motor, a casing provided with an inwardly projecting bearing, a cam integral with said bearing which projects vertically at a point at substantially the center of said casing, a drive shaft mounted in said bearing, a rotor mounted on said drive shaft having a piston cylinder and piston and means for operatively connecting the said piston with the said cam.

1,394,588. PROCESS OF MAKING A DEPILATORY FOR HIDES AND SKINS. ALBERT H. STONE, Boston, Mass. Filed May 23, 1919. Serial No. 299,248. 2 Claims. (Cl. 28—13.)



1. In the process of making a depilatory from lime and sodium sulfid liquor the improved step which consists in a prolonged agitation while hot of the result or product of the reaction of said ingredients, whereby the depilatory is obtained in solid form and latitude in the character of the ingredients used is afforded.

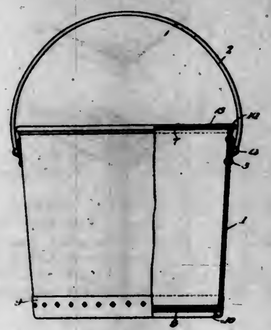
1,394,589. CUSHION-TIRE. BENJAMIN C. SWINEHART, Akron, Ohio. Filed Jan. 13, 1921. Serial No. 437,024. 5 Claims. (Cl. 152—1.)



3. A tire of the class described comprising an annular elastic body provided on each lateral side with a circumferentially extending series of regularly recurring holes which project therethrough and terminate in the peripheral face thereof at points adjacent the opposite side of the tire body.

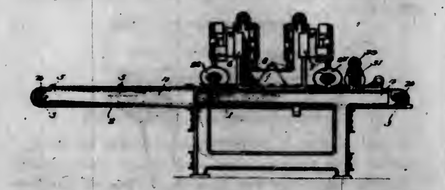
1,394,590. OPEN-END CONTAINER. ANDREW L. WEIS, Monroe, Mich., assignor to The Weis Fibre Container Corporation, Monroe, Mich., a Corporation of South Dakota. Filed Dec. 26, 1917. Serial No. 208,952. 5 Claims. (Cl. 229—37.)

4. In the construction of a fiber container, a single blank from which the entire container is formed, comprising four side wall sections having their lower ends provided with overlapping flaps to form the bottom wall of the container and having their upper ends provided with short flaps two of which are folded down upon the other two flaps at the four upper corners of the container, so that two opposite flaps are in a plane above the other two opposite flaps at the top of the container, with space forming a rectangular opening between the inner edges of said short flaps, when thus folded at the top of the container, thereby to form a stiffening flange for the four upper edges of the side wall section, the lower flaps of the top having ridges extending between the inner edges of the upper flaps, and a cap having a top wall to rest upon said upper flaps and said ridges of the lower flaps.



1,394,591. SLIDE-COVER BOX. ANDREW L. WEIS, Monroe, Mich., assignor to The Weis Fibre Container Corporation, Monroe, Mich., a Corporation of South Dakota. Filed Mar. 7, 1918. Serial No. 220,933. 4 Claims. (Cl. 229—17.)

1. A slide-cover-box comprising a rectangular cover-section, and a similarly shaped container-section adapted to telescope within the cover-section, said container-section having a closure extending the full height of the end thereof, which closure is hinged at its lower end to swing outward a limited distance at its upper end so that the height of the closure is practically the same when open as when closed, to prevent spilling of the contents of the box, and

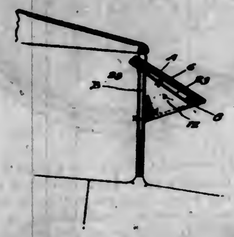


provided with side flaps for insertion in the cover-section, so that the flaps are held in place by the walls of the cover, the container-section and its closure being inseparable.

1,394,592. METAL-BOUND FIBER CONTAINER. ANDREW L. WEIS and WILLIAM H. RAY, Monroe, Mich., assignors to The Weis Fibre Container Corporation, Monroe, Mich., a Corporation of South Dakota. Filed Nov. 5, 1919. Serial No. 335,845. 5 Claims. (Cl. 217—5.)

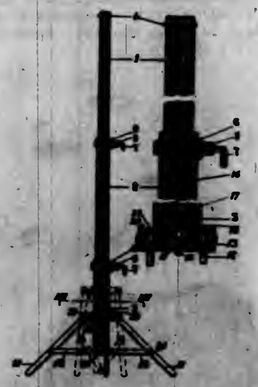
1. A container comprising a fiber body forming the sides of the container, a bottom which keeps the lower end of said body in expanded condition, and sheet metal binding in the form of a hoop which counteracts the said expansion of the body by the bottom and which reinforces the lower edges of said body and which has a lower channel portion forming a hollow annular base for the container and for holding said bottom in place, with the outer edge of the bottom engaging the outer side wall of the hoop and with the inner edge of said base engaging the inner surface of said bottom.

1,394,593. BOX AND PROCESS OF AND APPARATUS FOR THE MANUFACTURE THEREOF. ALBERT G. WETMORE, Plymouth, Ind. Filed Apr. 9, 1919. Serial No. 288,825. 26 Claims. (Cl. 144—7.)



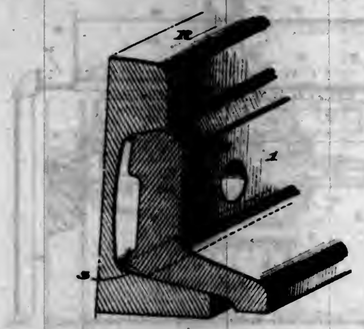
1. A machine for cutting the cleats and sheet material of a partially formed box blank to divide the blank into flexibly connected sections, comprising instrumentalities for entirely severing the cleats on a line extending across the blank, thereby forming oppositely disposed notches therein, leaving the sections of the cleats still connected end to end by the sheet material, a structure for supporting the blank during the operation, and cutting means disposed in position for severing the sheet material along said line, leaving the sections united merely by the flexible connection between them.

1,394,594. DUMPING-BARGE. ANDERS FREDRIK WIKING, Seattle, Wash. Filed Dec. 13, 1920. Serial No. 430,177. 11 Claims. (Cl. 114—80.)



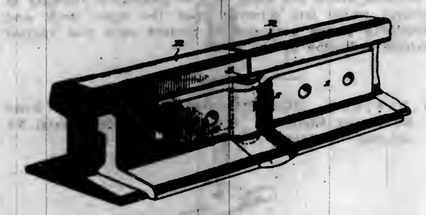
1. In a barge of the class described, a plurality of relatively movable floating sections arranged in tandem formation, complemental bin sections mounted on adjacent ends of said first-named sections, and means for holding said sections together.

1,394,595. WINDSHIELD-VISOR. AUGUST F. WINBERG, Boundbrook, N. J. Filed Aug. 23, 1920. Serial No. 405,422. 2 Claims. (Cl. 296—95.)



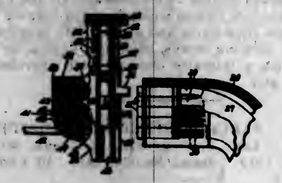
1. A visor for mounting on the swinging portion of a vehicle wind shield comprising a length of material having a triple seam at one edge forming a pocket, a loop on the free edge of the pocket containing a filler piece, and sides having a triple seam at the juncture of the sides with the major portion of the visor.

1,394,596. TELESCOPIC STAND. MAURICE J. WOHL, Long Island City, and MAX MAYER, New York, N. Y., assignors to M. J. Wohl & Co., Inc., Long Island City, N. Y., a Corporation of New York. Filed Feb. 26, 1921. Serial No. 448,037. 3 Claims. (Cl. 248—41.)



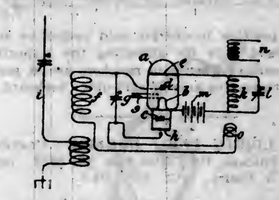
1. In a portable stand a pair of tubes adapted to slide longitudinally into each other, an annular ring surrounding the outer tube, an aperture in the wall of said tube, supporting means sliding transversely in said aperture and on said ring to hold said ring in stationary position on said tube and independent means on said ring to press said supporting means against said inner tube.

1,394,597. MEANS FOR LUBRICATING RAIL-JOINTS. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed July 7, 1921. Serial No. 483,033. 10 Claims. (Cl. 238—151.)



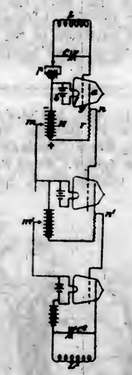
1. A rail joint having a bar provided at its head with lubricant supplying means for the fishing surfaces.

1,394,598. RAIL-END-SUPPORTING RAIL-JOINT. BENJAMIN WOLHAUPTER, New Rochelle, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed July 7, 1921. Serial No. 483,034. 8 Claims. (Cl. 238—244.)



1. A rail joint including a fishing bar and a separate shock-piece engaging the under side of the rail head.

1,394,599. TYPEWRITING-MACHINE. OSCAR WOODWARD, Babylon, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed June 18, 1918. Serial No. 240,607. Renewed Apr. 28, 1921. Serial No. 465,246. 14 Claims. (Cl. 197—177.)

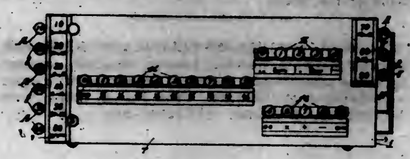


1. In a typewriting or like machine, the combination of a carriage; and tabulator mechanism for arresting the carriage, said mechanism comprising a plurality of key controlled operating stops, an arresting stop, and means for mounting said arresting stop so that it may be adjusted on and independently of its support to different set positions while the arresting stop is maintained on said support and so that the arresting stop may be set for coaction with any one of said operating stops to the exclusion of the others.

1,394,600. WIRELESS-TELEGRAPH RECEIVER. GEORGE MAURICE WRIGHT, London, England, assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed June 8, 1916. Serial No. 102,500. 9 Claims. (Cl. 250—20.)

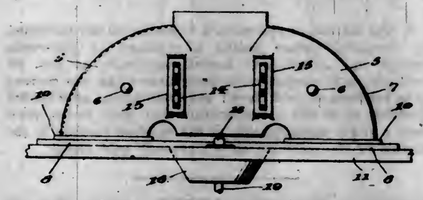
8. The method of operating a receiving circuit including an evacuated vessel having a plurality of electrodes therein, one of which is heated sufficiently to give off electrons, said method comprising impressing the current to be received on said circuit and maintaining said heated electrode at so low a temperature that there is not more than a slight magnification of the received current in the portion of the receiving circuit through said vessel.

1,394,601. THERMIONIC DEVICE. GEORGE MAURICE WRIGHT, London, England, assignor, by mesne assignments, to Radio Corporation of America, a Corporation of Delaware. Filed May 1, 1918. Serial No. 231,872. 5 Claims. (Cl. 179—171.)



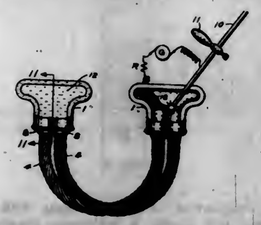
1. The combination of a thermionic relay having a cathode, grid and anode, a resistance connected to the anode thereof, a battery connected to the resistance and to the cathode of the relay, and a second thermionic relay having a cathode, grid and anode having its grid connected to the anode of the first and its cathode to a point in the battery between its terminals.

1,394,602. MASTER-KEYBOARD. WAYNE P. ZENT, Troy, N. Y. Filed Jan. 18, 1919. Serial No. 271,922. 12 Claims. (Cl. 276—7.)



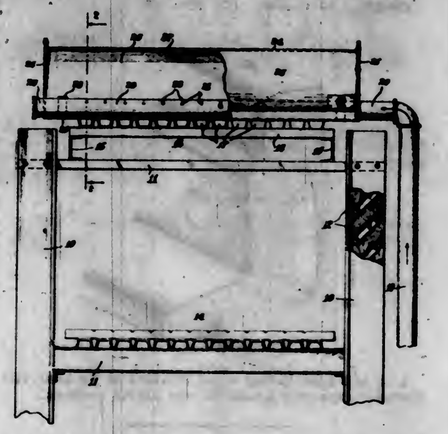
4. A master-keyboard having means whereby it can be supported in operative relation to another keyboard, key-

operating members shiftable into and out of position to operate respective keys of said other keyboard, means for shifting said key-operating members at will into and at



will out of position to operate said respective keys, and master-keyboard keys for actuating the respective key-operating members when said members are in position to operate the respective keys of said other keyboard.

1,394,603. LIQUID-FUEL BURNER. CLARENCE H. ALLISON, Chicago, Ill. Filed Mar. 10, 1921. Serial No. 451,355. 1 Claim. (Cl. 158—91.)



A liquid fuel burner comprising a base plate having air inlet openings and carrying a burner nozzle, an arched air tube having its ends open and seating over the air inlet openings of the base plate, the burner nozzle being located beneath the tube, and the latter having a bottom air outlet opening in line with the burner nozzle, air-controlling valves in the tube between its ends and the outlet opening, and a partition in the tube above the air-outlet opening, the valves being located on opposite sides of the partition.

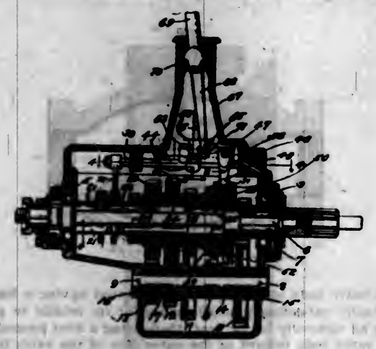
1,394,604. METHOD OF MANUFACTURING RAIL-BONDS. WILLIAM P. BOYARD, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Feb. 10, 1921. Serial No. 443,764. 11 Claims. (Cl. 219—41.)

1. The method of manufacturing a rail bond consisting of a ferrous member and a high conductivity cable united thereto comprising the steps of forming up a ferrous member with a recess and having a channel opening into the recess to receive the cable and having projecting lugs adjacent the channel to engage the cable, then inserting the cable into the channel, then securing the cable in position in the channel by bringing the lugs into strong engagement with the cable, then uniting the cable to the member and filling the recess by electro-thermo-deposition of a metal similar to that of the cable and fused to the cable and member.

1,394,605. COOLING-TOWER. EDWIN BUEHLER, Hoboken, N. J. Filed May 3, 1919. Serial No. 294,851. 4 Claims. (Cl. 261—111.)

1. In a cooling tower wherein the descending water is subject to direct contact with natural currents of air, the combination with a tower framework, a series of distributing decks spaced vertically apart, a distributer operating above the upper deck to produce a plurality of lateral water jets directed upon the upper deck, and shielding means arranged to protect such jets against lateral deflection by the wind.

1,394,606. NECKTIE FORM AND HOLDER. JOHN BUTTRAMO, Elgin, Ill. Filed Oct. 19, 1920. Serial No. 417,903. 1 Claim. (Cl. 2—84.)

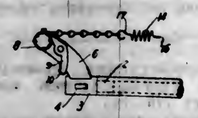


A tie form comprising a body formed of sheet material and having its intermediate portion of trapezoidal shape with the edges thereof rolled backwardly, the body having its upper corners formed with elongated tongues bent backwardly upon themselves and formed with openings adapted to receive securing means, said body having its lower end formed with a laterally elongated tab provided with an elongated slot.

1,394,607. VARIABLE-SPEED-TRANSMISSION MECHANISM. LEON J. CAMPBELL, Buchanan, Mich. Filed Dec. 8, 1919. Serial No. 343,343. 10 Claims. (Cl. 74—59.)

1. A variable speed transmission mechanism, comprising a plurality of gear wheels constantly in mesh, with the speed gear wheels loosely mounted on the driven shaft and the drive gear wheel loosely mounted on the driving shaft, means for selectively connecting the speed gear wheels to the driven shaft and for directly connecting the driving and driven shafts together, and means actuated

with said first named means for disconnecting the drive gear wheel from the driving shaft each time the speed



gear wheels are disconnected from the driven shaft and also when the driving and driven shafts are directly connected together.

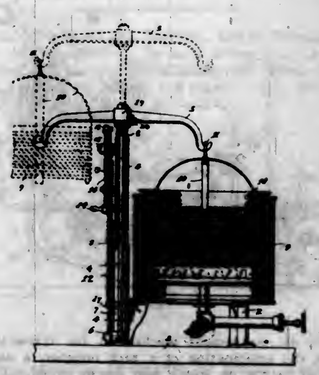
1,394,608. TOOL. STEPHEN A. DAVIES, Cleveland, Ohio, assignor of one-half to Frederick E. Buchser, Cleveland, Ohio. Filed Apr. 29, 1920. Serial No. 377,490. 8 Claims. (Cl. 66—1.)

1. A tool comprising the combination of a bolt and a member having a tongue and groove end to end connection, said member not exceeding in cross dimension the diameter of the shank of said bolt, the free end of said member being of reduced size and fashioned with an opening purposed for the insertion of an element whereby to effect the turning of said bolt when its head is inaccessible.

1,394,609. COLLAPSIBLE BED-SPRING. DAVID J. DAVIS and WILLIAM C. DAVIS, Columbus, Ohio; said William C. Davis assignor of forty per cent. to George Davis, Columbus, Ohio. Filed Sept. 20, 1915. Serial No. 51,587. 2 Claims. (Cl. 5—68.)

2. A bed spring comprising a frame-work, a web structure, a winding roller, chains on and directly connected to said web structure, and T-heads on said winding roller for the retention of any link of any chain.

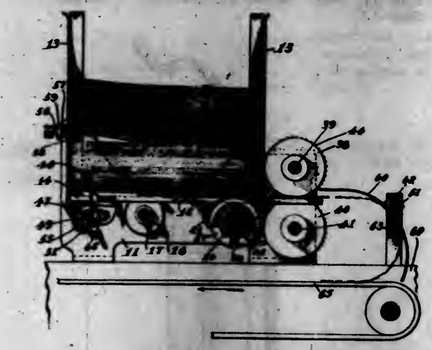
1,394,610. ROSIN PRODUCT. JUDSON A. DE CEW, Mount Vernon, N. Y., assignor to Process Engineers, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 6, 1920. Serial No. 415,149. 5 Claims. (Cl. 134—21.)



1. A method of imparting more water repellent characteristics to rosin and its precipitates which consists in mixing a melted wax with a melted rosin.

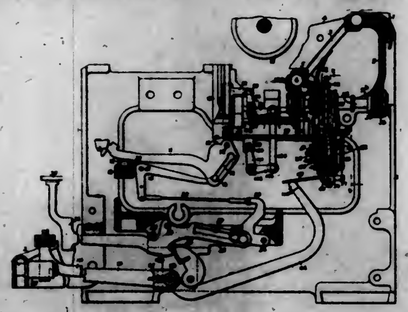
1,394,611. PUMP. PETAR DELICH, Duluth, Minn. Filed Mar. 24, 1921. Serial No. 455,286. 3 Claims. (Cl. 221—1.)

1. A combination device of the character described comprising a receptacle, a rubber bulb attached to the upper end of the receptacle and communicating with the interior thereof, a suction pipe normally communicating with the upper end of the receptacle, and a pet cock communicating with the interior of the receptacle for the purpose described.



1,394,612. APPARATUS FOR DIPPING VEGETABLES. WILLIAM DERNELL, Chicago, Ill., assignor to Dernell Potato Products Co., Chicago, Ill., a Corporation of Delaware. Filed July 28, 1919. Serial No. 313,722. 7 Claims. (Cl. 53—7.)

6. In an apparatus for treating vegetables, the combination with a container for heated liquid, of a rotatable

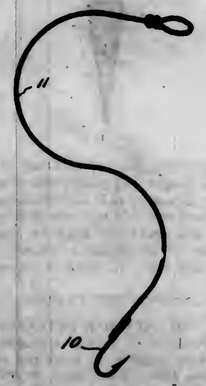


cross arm arrangement pivoted on a slidable vertical shaft member operable to lower and raise the carriers in and out of the container and rotatable to interchange the position of the carriers.

1,394,613. SHEET-FEEDING APPARATUS. FREDERICK A. DRURY, Jersey City, N. J., assignor to P. Lorillard Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 26, 1920. Serial No. 376,794. 12 Claims. (Cl. 271—41.)

1. In sheet feeding apparatus, a substantially horizontal, flat support for a stack of sheets; vertical guides for the stack, means for supporting the rear end of an upper portion of the stack, a sheet restraining member engaging below the stack near its rear end, a rotary feed member having a surface in the form of a segment of a cylinder engaging below the bottom of the stack near its front end, means supporting the feed member on a fixed axis of rotation and additional sheet gripping and feeding means for seising and withdrawing from the stack a sheet started from the stack by the feed member.

1,394,614. TYPEWRITING-MACHINE. ARTHUR J. DUDLEY, Jersey City, N. J., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Filed Nov. 16, 1920. Serial No. 424,523. 21 Claims. (Cl. 197—82.)

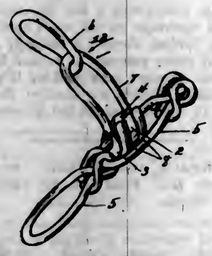


1. In an escapement mechanism for typewriting machines, the combination of a rack member, a dog, a key actuated carrier on which said dog is supported, another dog, a key actuated carrier for said last named dog, and a key which when actuated moves one of said carriers relatively to the other.

1,394,615. GAS-CONTROLLING VALVE. LOUISE E. BEWIS, Covington, Okla. Filed Apr. 2, 1921. Serial No. 457,940. 1 Claim. (Cl. 277—53.)

A valve body of the character described having a longitudinally extending passage formed at its middle to provide an upwardly facing seat, there being a duct formed in the valve body inward of the outer face of the valve body and extending beneath the seat and opening into the passage adjacent the opposite ends of the passage and on opposite sides of the seat, the duct being bowed away from said seat, a valve having a screwthreaded stem extending through the valve body whereby the valve may be raised and lowered, and a rotatable valve extending through the valve body and intersecting the by-pass duct and having a diametrically extending bore, the rotatable valve having an exterior handle and a pointer, the duct being of less diameter than the diameter of the passage extending through the valve body.

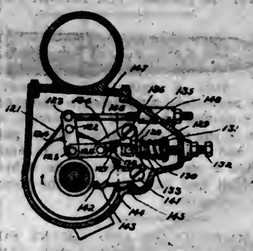
1,394,616. FISHING-TACKLE. CHARLES FREDERICKS, Brooklyn, N. Y. Filed Nov. 1, 1920. Serial No. 421,051. 3 Claims. (Cl. 43—28.)



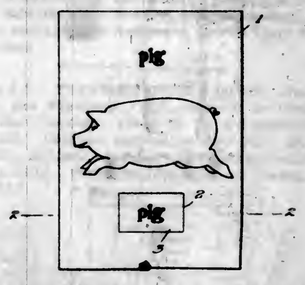
1. A fish hook in combination with a leader or lure having a glinting red appearance, substantially as described.

1,394,617. STOCK-WATERER. HENRY B. GOODRTY, Des Moines, Iowa. Filed Sept. 14, 1920. Serial No. 410,192. 2 Claims. (Cl. 119—73.)

1. In a waterer a casing, a tank in the upper part thereof spaced from the wall of said casing, a cover for said tank and casing, said casing having an opening in its wall below said tank, a trough having at its forward end means for co-acting with said casing for supporting said trough, a supporting member on said casing below the rear end of said trough, said trough being of less length than the diameter of said casing, a tube leading from said tank into said trough, the parts being so arranged that the trough may be raised at the forward end, slid off said support and then lowered into the lower part of said casing.



1,394,618. CHAIN CONNECTION. ALBERT P. GRIFFIN, Troy, N. Y. Filed Apr. 7, 1921. Serial No. 459,382. 4 Claims. (Cl. 24—232.)

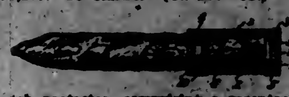


1. A chain-connection comprising in combination a core-piece having a pair of trunnions on opposite sides of a circumferential flange, and provided with an open link-receiving slot along one side of said flange and trunnions; and a U-shaped link having terminals rotatively engaging the respective trunnions and severally provided with link-receiving openings adapted to register with said open slot in one rotative position of said U-shaped link relatively to said core-piece.

1,394,619. ENGINE-STARTER. ALBERT J. HANSON, Portland, Me., assignor to Tidewater Equipment Corporation, Portland, Me., a Corporation of Maine. Filed Apr. 15, 1918. Serial No. 228,528. 10 Claims. (Cl. 290—36.)

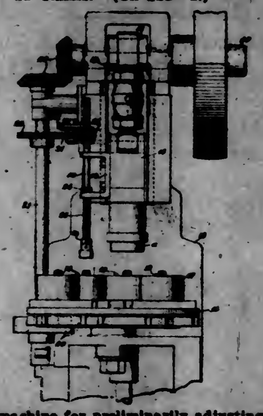
1. An engine starter comprising a starting spring, transmission mechanism arranged to be driven thereby, brake mechanism arranged to restrain said transmission mechanism, said brake mechanism including a means arranged to set the mechanism in braking position, means arranged to move said brake mechanism to release said transmission mechanism, means arranged to act automatically to lock said brake mechanism in release position, and means controlled by said starting spring and arranged automatically to move said locking means to unlock said brake mechanism.

1,394,620. EDUCATIONAL APPARATUS. MARY ALDEN MORGAN HAUPT, Chicago, Ill. Filed June 4, 1920. Serial No. 386,576. 5 Claims. (Cl. 35—9.)



4. An educational toy comprising a board having a word thereon, and a recess; a plurality of blocks each containing a word, including said first mentioned word and others and each adapted to fit into the recess.

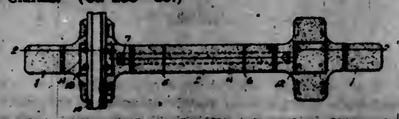
1,394,621. DOOR-SHAFT LEVER. DAVID HINDAHL, Chicago, Ill., assignor to National Dump Car Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 30, 1921. Serial No. 465,652. 9 Claims. (Cl. 105—309.)



8. Door operating mechanism for general service cars, comprising a shaft, a lever rigidly attached to said shaft, having arms in angular relation to each other, each of said arms being provided with means for its prolongation.

1,394,622. ASH-PROTECTOR AND CUTTER ADAPTABLE TO CIGARS AND CIGARETTES. Benjamin A. Hoffmann, New York, N. Y. Filed May 6, 1919. Serial No. 295,119. 10 Claims. (Cl. 131—61.)

1. An ash protector, comprising a receptacle, adapted to surround a portion of a cigar or cigarette, substantially closed except at the tip end, having an air passage to the lighted end, and constructed of light-transmitting material to provide a visual control of the lighted end, and means to attach and hold in place the receptacle upon the cigar or cigarette.



1,394,623. METHOD OF AND MEANS FOR ASSEMBLING SIFTER-TOP MEMBERS FOR CANS. George Holthaus, Baltimore, Md., assignor to The Tin Decorating Company of Baltimore, Baltimore, Md., a Corporation of New Jersey. Filed June 26, 1919. Serial No. 307,261. 22 Claims. (Cl. 113—1.)

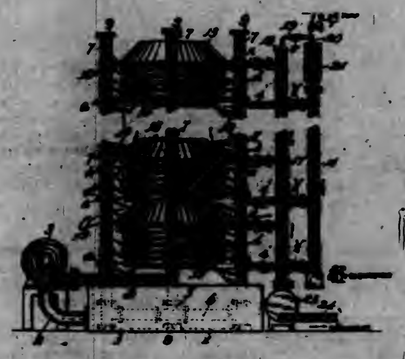
1. In a machine for preliminarily adjusting a rotatable cap on a can top prior to the crimping thereof, the cap and top having means adapted for registration and interengagement so as to limit the movement of the cap on the top in opposite directions, means for supporting the top and means for rotating the cap to bring the interengaging means into operative relation whereby an assembled top and cap in registry is provided ready for crimping.

16. In the art of assembling and crimping caps on can tops, in which the top and cap have means adapted for registration and interengagement so as to limit the movement of the cap on the top in opposite directions, the steps of placing the cap on the can top, stationarily supporting the can top while moving a continuous rotating element into contact with the cap for the rotation thereof on the can top until the means on the top and cap interengage, whereby an assembled can and top in proper registry is obtained, and in then crimping the cap on the top while the parts are thus in interengaged position.

1,394,624. RAILROAD-TIE. Perma C. Bemis, Chanute, Kans. Filed Aug. 6, 1920. Serial No. 401,624. 4 Claims. (Cl. 238—35.)

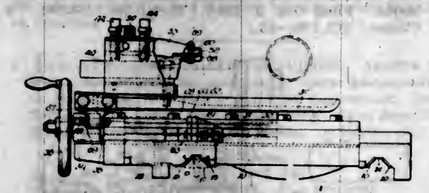
1. In a railroad tie, a plurality of sections disposed end to end adapted for limited vertical movement relatively to each other, means connecting the sections for holding them in operating position, and against endwise or tilting movement and rigid wear plates interposed between the sections, substantially as set forth.

1,394,625. FOLDING CRIB. John W. Kenney, Seneca Falls, N. Y., assignor to Kiddie-Town Products, Inc., Rochester, N. Y., a Corporation of New York. Filed Mar. 2, 1921. Serial No. 449,180. 3 Claims. (Cl. 5—58.)



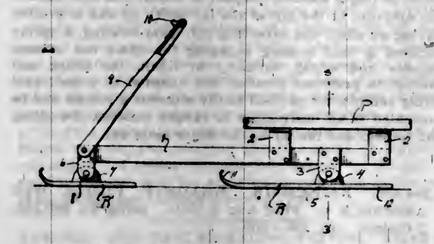
1. In a folding crib, the combination with a pair of opposite side frames, of a pair of parallel links pivotally connecting each end of each side frame with the corresponding end of the other side frame, and end frames pivoted to the respective pairs of links to fold therewith against the side frames.

1,394,626. INSECT-TRAP. Reinhold G. Koch, New York, N. Y. Filed Apr. 29, 1920. Serial No. 377,597. 1 Claim. (Cl. 43—121.)



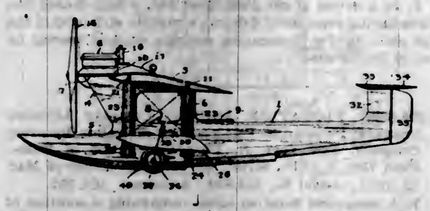
An insect trap, comprising a box provided with a plurality of spaced openings in its wall, each of the said openings having applied thereto a piece of material, and the said material being punched or broken inwardly with respect to the box whereby each opening is provided with converging irregular shaped portions of the broken material allowing an insect to enter but preventing its exit.

1,394,627. SURFACE CONDENSER. William Kondino, St. Louis, Mo. Filed Oct. 20, 1920. Serial No. 418,167. 12 Claims. (Cl. 257—37.)



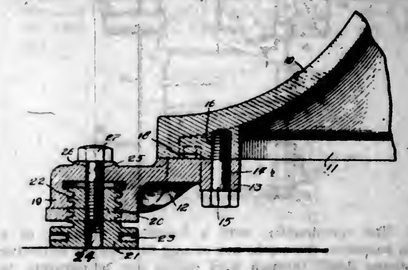
1. In combination with a surface condenser, a liquid spraying member positioned in proximity thereto and operating to induce a flow of atmospheric air toward the condenser and into the path of projection of the sprayed particles for cooling the latter, a deflector for intercepting the cooled liquid particles, means for collecting the particles so intercepted, and means for discharging the cooled liquid over the surface of the condenser.

1,394,628. LATHE-TOOL HOLDER. Le Roy Kramer and Alexander Boome, Chicago, Ill. Filed Feb. 28, 1918. Serial No. 219,551. 17 Claims. (Cl. 82—24.)



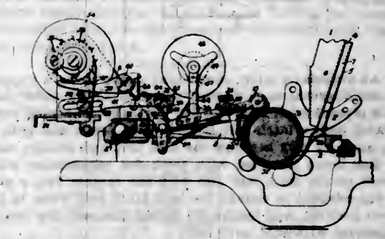
1. In a lathe tool holder, the combination with a cross slide, of a gang-tool holder associated therewith, means associated with said gang-tool holder for positioning the tools therein in predetermined relation to the line of cut and to the center line of the work when presented to the work, and means for arresting movement of the tool holder at a predetermined point in the advance thereof with respect to the work whereby to effect in cooperation with said tool-positioning means a correctly proportioned final shaping of that portion of the work thus cut.

1,394,629. SLED. John Leicht, Jr., Burlington, Iowa. Filed Feb. 9, 1920. Serial No. 357,164. 2 Claims. (Cl. 280—16.)



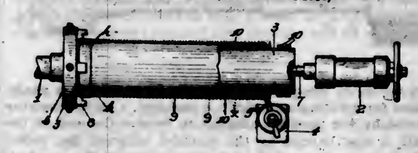
1. A vehicle of the class described comprising an elongated resilient bar, a platform supported by the rear end portion of the bar, a handle member engaged with the forward end portion of the bar, and fore and aft runners secured to the opposite end portions of the bar and underlying the same, turning movement of the handle flexing the forward end portion of the bar laterally.

1,394,630. AIRPLANE. Grover C. Loening, New York, N. Y. Filed May 13, 1919. Serial No. 296,802. 20 Claims. (Cl. 244—2.)



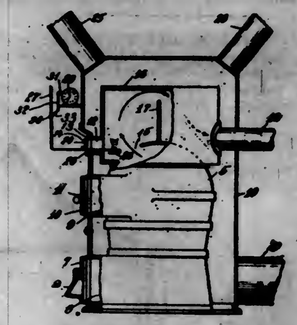
5. In a seaplane, the combination of a unit hull and superstructure, the latter formed by integral upward extensions of the sides of the hull, an engine bed on the top of the superstructure, and a pair of monoplane wings joined with the top of the superstructure at the sides of the engine-bed.

1,394,631. ADJUSTABLE SUPPORT. August E. Luschka and Joseph Folk, Laporte, Ind., assignors to U. S. Slicing Machine Company, Laporte, Ind., a Corporation of Indiana. Filed Sept. 8, 1919. Serial No. 322,357. 7 Claims. (Cl. 248—3.)



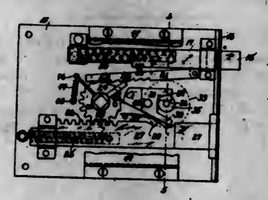
1. An adjustable support, comprising a threaded member for shifting the height of an object carried thereby, and means for locking said threaded member in various positions of adjustment, and a device for supporting said object on said threaded member, said device being offset relative to said threaded member to provide space for said locking means.

1,394,632. TYPEWRITING-MACHINE. Henry N. McKay, San Francisco, Calif., assignor to Remington Typewriter Company, Ilion, N. Y., a Corporation of New York. Original application filed Apr. 25, 1919, Serial No. 292,586. Divided and this application filed Nov. 20, 1919. Serial No. 339,287. 36 Claims. (Cl. 197—153.)



1. In a typewriting machine, the combination of a carriage, an auxiliary ribbon carrying bail or member carried by said carriage, and means for automatically lifting said bail or member at a predetermined point in the movement of the carriage.

1,394,633. PISTON-RING POT-CASTING AND METHOD OF MAKING PISTON-RINGS THEREFROM. Charles A. Marien, St. Louis, Mo. Filed Apr. 15, 1920. Serial No. 374,094. 6 Claims. (Cl. 29—156.6.)

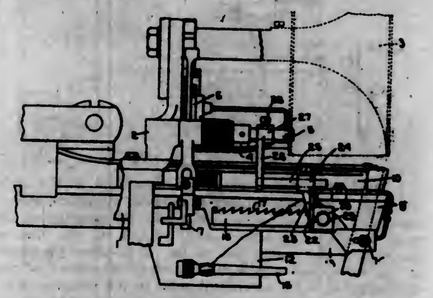


1. A piston-ring pot casting comprising a tubular shell, and a series of ring formations disposed circularly about the axis of the shell and spaced apart.

1,394,634. FURNACE ATTACHMENT. EDWIN COLE MASON, Madison, Wis. Filed July 15, 1920. Serial No. 396,369. 6 Claims. (Cl. 126—116.)

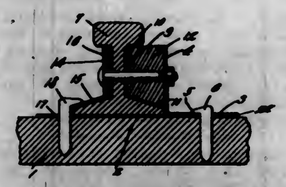
1. The combination with a household furnace, of a fluid burner in the smoke box of said furnace for initiating a strong draft through said smoke box preparatory to stoking the furnace.

1,394,635. AUTOMATIC LATCH. PASQUALE MATURO, New Haven, Conn. Filed Nov. 19, 1920. Serial No. 425,079. 3 Claims. (Cl. 292—181.)



1. An automatic latch, comprising a case plate, a tripper mounted thereon, said tripper provided at its outer end with a pivotal nose, a ratchet bar pivotally connected with the latch bolt, a latch bolt formed with a rack and with a latch notch, a disk between the lock bolt and ratchet bar, said disk being provided with teeth for engagement with the rack on the latch bolt and with the ratchet bar, a pivotal dog adapted to engage the said latch bolt when in its thrown position, and means for lifting the said dog out of engagement with said latch bolt.

1,394,636. SHOE-POLISHING DEVICE. JOHN O. MURRAY, Wenatchee, Wash. Filed Dec. 29, 1920. Serial No. 433,851. 1 Claim. (Cl. 15—37.)



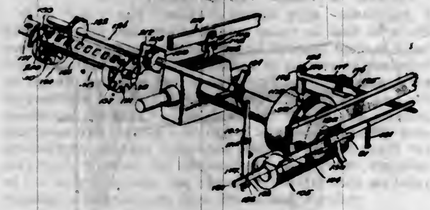
A device of the character described comprising a shaft, means for rotating said shaft, a mandrel, a socket member carried by the mandrel adapted to receive the end of the shaft, a stop carried by the mandrel adjacent the socket and projecting beyond the exterior surface of the mandrel, said mandrel having resilient arms struck therefrom, the ends of said arms being extended at right angles to form catches exteriorly of the mandrel, a cleaning and polishing implement including a hub, said hub having opposed recesses in one end thereof, and adapted to engage the mandrel, the catches of the mandrel being adapted to extend into the recesses when the opposite end of the hub is moved into engagement with the stop of the mandrel.

1,394,637. FILLING-END CATCHER FOR LOOMS. CHARLES E. NUTTING, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 2, 1918. Serial No. 256,581. 3 Claims. (Cl. 139—85.)

1. In a filling replenishing loom comprising a lay having an aperture therethrough to permit the discharge of an abandoned filling carrier and having a stand provided with a transferrer stud and a transferrer mounted thereon, a bracket carried by said transferred stud comprising complementary members forming a closed housing, a filling end catcher comprising a flexible plate formed of resilient material having a member adapted to engage the rear wall of the aperture in the lay as the lay beats up and a member having an offset end extending into said housing, a spring inclosed in said housing engaging the offset end of said member and acting normally to retain the filling end catcher in projected position but adapted to permit said filling end catcher to yield bodily whereby a smash will be prevented if an obstruction is caught between the filling end catcher and the lay as the latter beats up.

1,394,638. RAIL-CHAIR. WILLIAM F. PARHAM, West Asheville, N. C. Filed Aug. 2, 1921. Serial No. 489,236. 2 Claims. (Cl. 238—200.)

1. In a device of the class described, a loop-shaped fish plate having superposed flanges; a cushion strip within the fish plate; and a tie-engaging securing element bearing on one of the flanges.



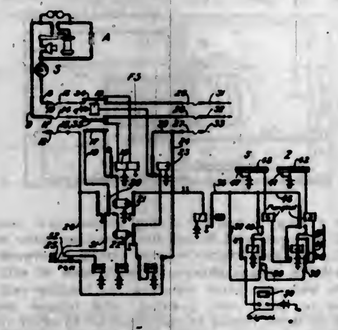
1,394,639. FLOTATION AGENT. CLEMENT LINWOOD PERKINS, Pittsburgh, Pa., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Dec. 3, 1918, Serial No. 265,164. Renewed Mar. 12, 1921. Serial No. 451,839. 6 Claims. (Cl. 252.)

1. A compound flotation agent comprising a solution of a solid amino compound in a liquid amino compound readily miscible with water.

1,394,640. CONCENTRATION OF MINERALS. CLEMENT LINWOOD PERKINS, Pittsburgh, Pa., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Dec. 3, 1918, Serial No. 265,165. Renewed Mar. 12, 1921. Serial No. 451,840. 10 Claims. (Cl. 83—85.)

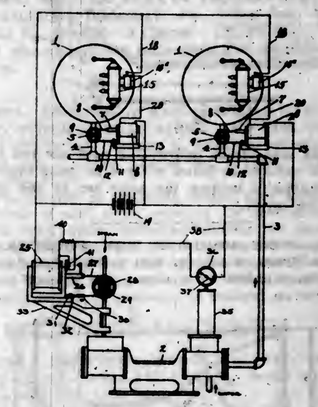
1. The method of effecting the concentration of minerals by flotation, which comprises adding to the mineral pulp a small amount of a compound flotation agent comprising a mixture of a plurality of amino compounds, and subjecting the resulting mixture to a flotation operation, substantially as described.

1,394,641. CALCULATING-MACHINE. ARTHUR F. POOLE, Kenilworth, Ill., assignor, by mesne assignments, to Remington Accounting Machine Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 15, 1916. Serial No. 120,233. 17 Claims. (Cl. 235—60.)



1. In a calculating machine, the combination of a set of totaliser wheels, a shaft having teeth mounted thereon, said teeth being adapted to actuate said totaliser wheels successively to carry said elements, a source of power, means to connect intermittently said source of power to said shaft, and means governed by said totaliser to cause said shaft to go through two complete cycles of carrying.

9. In a calculating machine, the combination of computing mechanism including carrying mechanism, operating mechanism, and means whereby an operation of said carrying mechanism through a cycle may, if necessary, cause an actuation of said operating mechanism through a second cycle to complete the carrying operation.



13. In a calculating machine, the combination with totaliser wheels, and carrying means capable of algebraic calculation, of means brought into action by the act of passing through zero for assuring an operation of the carrying mechanism through a second cycle.

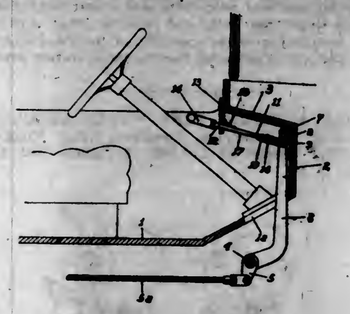
1,394,642. ELECTRIC SIGNALING SYSTEM. RALPH L. QUASS, Hawthorne, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1919. Serial No. 337,594. 3 Claims. (Cl. 177—311.)

3. In a signaling system, a signal, a circuit, a heat relay and a marginal relay included therein, a resistance short circuited by the operation of the heat relay, a second heat relay and marginal relay, means operated by said first marginal relay in operating for disconnecting the marginal relay and heat relay from said circuit and substituting said second heat relay and marginal relay, said latter relay operating upon the operation of the associated heat relay, and means actuated thereby for operating said signal.

1,394,643. ELECTRIC FEED-WATER REGULATOR. WILLIAM M. REICHART, Cleveland, Ohio. Filed Feb. 27, 1919. Serial No. 279,480. 5 Claims. (Cl. 137—101.)

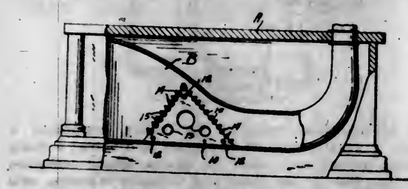
1. An electrical regulator for boilers, comprising a valve; a wheel connected to operate said valve; a chain passing around said wheel; a tension spring connected with one end of said chain and normally retaining said valve open; and an electro-magnet having an armature connected with the other end of said chain and adapted to close said valve.

1,394,644. BUCKLE. GEORGE ROTTMAN, New York, N. Y. Filed Jan. 12, 1920. Serial No. 350,944. 4 Claims. (Cl. 24—194.)



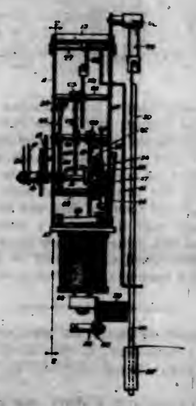
1. A buckle comprising a frame having a forward end, a parallel top and bottom, and a rear end offset from the frame, a channel-shaped brace connecting said top and bottom adjacent said rear end, a catch having its ends slidably engaging said top and bottom to coöperate with said forward end, the extremities of said top and bottom extending beyond said forward end, and said catch having its rear edge bent over to provide a recess to coöperate with the forward end, whereby when the end of a band is passed over said forward end, it may be forced into said recess and secured against said forward end by said catch.

1,394,645. BRAKE-OPERATING MEANS FOR MOTOR-VEHICLES. BENJAMIN F. SCHMIDT, Exeter, Calif. Filed Apr. 8, 1919. Serial No. 288,442. 2 Claims. (Cl. 74—39.)



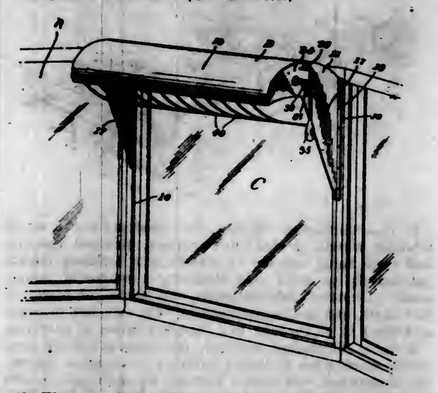
1. The combination with a shaft, and a lever-arm fixed thereto and projecting upwardly therefrom, of a link flexibly connected to the arm to allow relative vertical movement, said link being positioned at an angle to the

arm, a rigid guide bar extending rearwardly of the arm and parallel to the link, a guide strap fixed to the link, and engaging the bar, a pull rod pivoted to the rear end



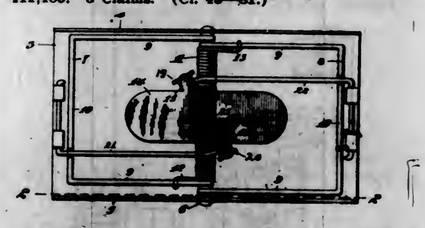
of the link, and means coöperating with the rod for allowing the same to be pulled without its being raised and for automatically holding the same set at any desired point in its travel.

1,394,646. TONE-MODIFIER FOR PHONOGRAPHS. WALTER SCOTT, Sheridan, Wyo. Filed Oct. 23, 1920. Serial No. 418,989. 4 Claims. (Cl. 181—27.)



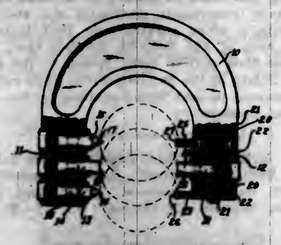
2. A tone modifier for phonographs comprising oppositely disposed, spaced, triangular plates, and a series of coiled contractile springs stretched across the space between said plates and engaged with the edges of the plates on two sides of the triangle.

1,394,647. TIME-INDINDICATING SYSTEM. ALFRED L. SOHM, Chicago, Ill. Filed Feb. 24, 1920. Serial No. 360,926. 6 Claims. (Cl. 58—24.)



1. In a time indicating system, the combination of a master clock comprising a clock train, a contact wheel connected to be driven by said train, an electro-magnet associated with said clock, a secondary circuit with which said electro-magnet is connected, a main contact lever associated with said contact wheel, means controlled upon engagement of said lever with said wheel for closing said secondary circuit, locking means controlled upon first closure of said circuit for locking said circuit closed independently of said lever and wheel, said magnet being adapted upon closure of such circuit to release said lever from said wheel to thereby open the circuit at such point, a second contact lever associated with said contact wheel, electro-magnetic unlocking means and a circuit therefor, engagement of said second contact lever with said contact wheel causing closure of said unlocking means circuit and actuation of said unlocking means to open said secondary circuit.

1,394,648. ANTIFROST DEVICE. FRANK C. STEWART, Springfield, Mo. Filed Oct. 25, 1920. Serial No. 419,340. 6 Claims. (Cl. 20—40.5.)

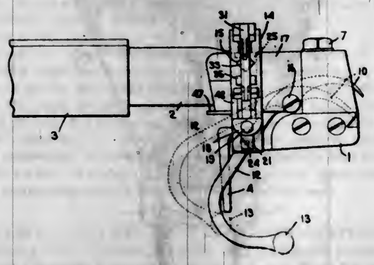


1. The combination with a transparent body, of an anti-frost device therefor comprising a transversely extending arcuate hood arranged at the upper edge of the body, heaters arranged in the hood, reflectors carried by the heaters, spaced guard fingers carried by the hood and arranged in front of the heaters, and means for swinging the heaters and reflectors so as to adjust the position thereof in relation to the body.

1,394,649. TRAP. GEORGE H. THOMPSON, Santa Barbara, Calif., assignor to Homer N. Duffey, Jr., Santa Barbara, Calif. Filed Sept. 20, 1920. Serial No. 411,485. 3 Claims. (Cl. 42—81.)

1. In a trap, a pair of spring pressed jaw members adapted to be extended in opposite directions under spring tension, a rockable trigger member arranged between said jaw members, means engageable with each of said jaw members and said pivot members for holding said jaw members in their open position, said trigger member adapted on being rocked in one direction to effect release of only one of the jaw members, and when rocked in the opposite direction to release the other jaw member.

1,394,650. THREAD-GAGE. MAX H. THOMS, Indianapolis, Ind., assignor to Howard Marmon, Indianapolis, Ind. Filed Aug. 23, 1920. Serial No. 405,876. 10 Claims. (Cl. 33—199.)



6. A "go" and "no-go" thread gage, comprising a body carrying two sets of gaging members each of which comprises a pointed member and an opposed toothed member which has teeth corresponding in spacing to the pitch of the thread, said two members of said two sets being respectively spaced apart the minimum distance and the maximum distance the tolerance of the thread permits, said gage also having a third set of gaging members comprising two opposed flat-ended members spaced apart the maximum distance the tolerance of the outside diameter of the thread permits, one gaging member of each set being adjustable toward and from its mating member.

1,394,651. AGRICULTURAL IMPLEMENT. GILBERT TOMPKINS, Thompson, Conn. Filed Dec. 30, 1919. Serial No. 348,258. 10 Claims. (Cl. 104—169.)

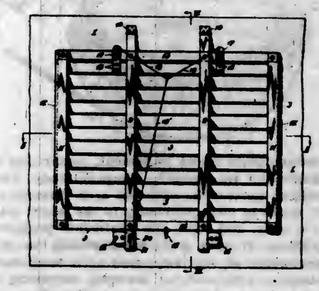
1. In a device of the character described the combination with a smooth runway, a support wheel mounted on said runway, a revoluble table secured to said wheel, and means operated by a side thrust of said wheel when it becomes at an angle to the line of draft to indicate such angular position of the support wheel and correct it.

1,394,652. TEMPLE-THREAD PARTER FOR LOOMS. ULYSSE N. TREMBLEY, South Lawrence, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 14, 1921. Serial No. 444,675. 7 Claims. (Cl. 139—85.)

1. A loom temple provided with a thread parter, a detent operable to lock said thread parter in inoperative position, means tending normally to withhold said detent from locking position, means operable upon a predetermined number of movements of said thread parter to force and to hold said detent in locking position and means for releasing said detent.

1,394,653. MANUFACTURE OF LIQUID GLUE. DONALD K. TRESSLER, Pittsburgh, Pa., assignor to William A. Hamor, Pittsburgh, Pa. Filed Dec. 6, 1920. Serial No. 428,482. 6 Claims. (Cl. 87—17.)

1. A liquid glue, comprising glue compounded with an alkaline earth salicylate.



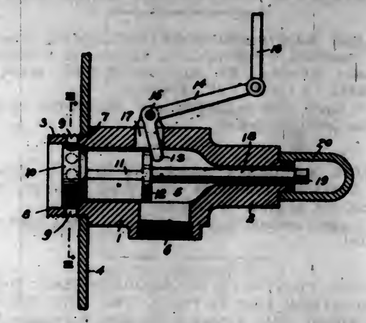
1,394,654. MANUFACTURE OF LIQUID GLUE. DONALD K. TRESSLER, Pittsburgh, Pa. Filed Dec. 27, 1920. Serial No. 433,504. 3 Claims. (Cl. 87—7.)

1. A glue composition comprising glue compounded with thiourea.

1,394,655. PROCESS OF MINERALIZING HAIR, WOOL, AND OTHER ANIMAL FIBER, AND THE PRODUCT SO PRODUCED. ALBERT O. TROSTEL, Milwaukee, Wis. Filed Dec. 1, 1919. Serial No. 341,695. 12 Claims. (Cl. 38—12.)

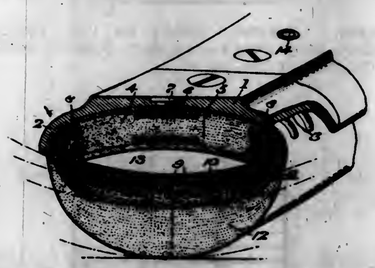
1. The process of rendering animal fiber shrinkable by the action of heat while resisting the destructive action of such heat, which comprises making the animal fiber porous by chemical reagents, removing the reagents and any byproducts formed thereby, and mineralizing the so-prepared fiber by treatment with solutions adapted to deliver relatively large amounts of mineral matter to such fiber.

1,394,656. SHUTTER. GEORGE IRA VAIL, Cleveland Heights, Ohio. Filed Aug. 16, 1920. Serial No. 403,830. 4 Claims. (Cl. 156—43.)



2. A shutter comprising, connected vertical and horizontal frame members; a plurality of horizontal overlapping blades pivotally connected at their inner edges to said vertical frame members; stampings formed with eyes and respectively secured to the outer edges of said blades; a vertically disposed chain whose links interlock with said eyes; and means for actuating said chain.

1,394,657. BLOW-OFF VALVE. PETER WERTZ, Pittsburgh, Pa. Filed Feb. 17, 1919. Serial No. 277,583. 1 Claim. (Cl. 251—133.)



A valve for the purpose described, comprising a casing provided with a continuous passage therethrough from end-to-end thereof, a valve seat formed in the casing adjacent to its inner end, a disk valve coöperating with said seat, a stem secured to said valve and extending beyond the outer end of said passage and provided with a laterally projecting shoulder, an operating lever pivotally connected to the casing and having an arm engaging said shoulder, a

portion of the casing projecting inwardly beyond the valve seat and surrounding the valve and provided with transverse inlet openings; the inner end of the casing being

open and placing the rear end of the valve in communication with the pressure fluid controlled by the valve, and a member closing the outer end of the casing.

1,394,658. DEMOUNTABLE WHEEL EQUIPMENT. JOSEPH S. WILLIAMS, Riverton, N. J. Original application filed Jan. 19, 1911, Serial No. 603,552. Divided and this application filed Dec. 15, 1917. Serial No. 207,232. 13 Claims. (Cl. 152—10.)

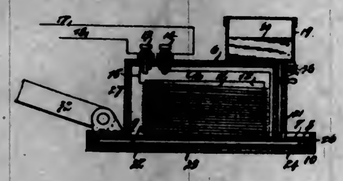
8. A demountable wheel equipment, comprising an endless, annular and transversely elongated body, having an outer resilient portion in flattened arch formation across its major width in close proximity to the major transverse axis of the body, and with side abutments projected from the curvatures of said arch, substantially on said axis within the width of the body, said arch being formed of flexible tension and resilient material extending to said abutments and a tread supported by said arch.

1,394,659. LATCH. ERNEST APPLEGATE, Rushville, Ind. Filed Sept. 7, 1920. Serial No. 408,604. 1 Claim. (Cl. 292—95.)

A latching member for two relatively movable members, each having an eye, said eyes being positioned substantially at right angles to each other, comprising an eye-supporting portion secured to one of said eyes to provide a swivel connection between the moving member and the latching member, a looped handle portion lying in substantially the same plane as the latching member eye portion, and a partially closed hook portion receivable by the other eye and connected to the handle portion and lying in a plane substantially at right angles to the eye-supporting portion, said latching member being revoluble about an axis substantially that including the swivel eye-forming axis to position the free end of the hook in the other transversely positioned eye when in a plane above that including said transversely positioned eye, and being returnable into a plane substantially that including the transverse axes of the movable member eyes, said partially closed hook portion being locked to the associated eye by the weight of the handle portion when released and being maintained in said locked position by the weight of the latching member.

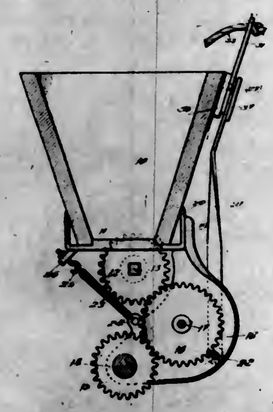
1,394,660. DIFFERENTIAL-GAGE. ABRAM T. BALDWIN, Detroit, Mich.; Catherine P. Baldwin executrix of said Abram T. Baldwin, deceased. Filed Sept. 24, 1917. Serial No. 193,046. 11 Claims. (Cl. 73—31.)

1. In a device of the character stated, the combination of a closed oscillatory annular member, having a liquid therein, a partition in the upper portion of said member, a liquid seal, connections from said seal to conduct pressures to said liquid at opposite sides of said partition, and means for conveying pressures to said seal.



1,394,661. DIFFERENTIAL-GAGE. ABRAM T. BALDWIN, Detroit, Mich.; Catherine P. Baldwin executrix of said Abram T. Baldwin, deceased. Filed Sept. 24, 1917. Serial No. 193,047. 13 Claims. (Cl. 73—31.)

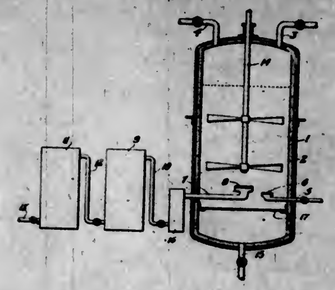
1. In a device of the character stated, an annular closed tube adapted to contain a liquid and having a partition



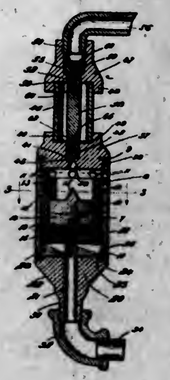
in the upper portion thereof, pivotal supports for said annular tube, a liquid seal having a movable top member, and pipes leading from said top member to said annular tube at either side of said partition, said top member, pipes and annular member being movable as a unit.

1,394,662. FLOOR WAXING AND POLISHING DEVICE. ERNEST O. E. BLOMQUIST, Woodside, N. Y. Filed Mar. 11, 1921. Serial No. 451,490. 5 Claims. (Cl. 91—30.)

5. In a wax applying device, a heating element, a reservoir for wax carried thereby and arranged to be heated by said element, a recessed plate carried by the heating element, a duct connecting the reservoir and recess in the plate, and a covering of absorbent material for said recess.



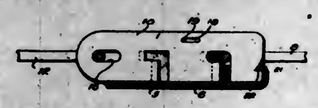
1,394,663. AUTOMATIC GEAR-THROW-OUT MECHANISM FOR GRAIN-DRILLS OR THE LIKE. THOMAS BRENNAN, Jr., Moline, Ill., assignor to Moline Plow Company, Moline, Ill., a Corporation of Illinois. Filed Sept. 22, 1919. Serial No. 325,435. 15 Claims. (Cl. 74—7.)



1. In an automatic gear throwout, the combination of a driven gear, a second gear adjustably mounted to be thrown into and out of mesh with the driven gear, a connection for adjusting the second gear to meshed or unmeshed position, controlling means for imparting movements to the adjusting connection and a guide for directing the path of said movements, said guide being configured to lock the adjusting connection out of normal on its first actuation by the controlling means, and to release the adjusting connection from locked position and allow it to return to normal position on the second operation of the controlling means, substantially as described.

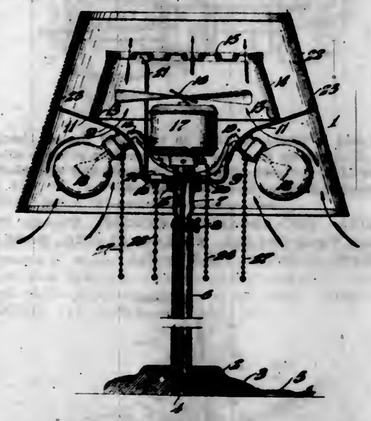
1,394,664. PROCESS OF MAKING CHLORHYDRINS. BENJAMIN T. BROOKS, Bayside, N. Y., assignor to Chadeloid Chemical Company, a Corporation of West Virginia. Filed Sept. 24, 1919. Serial No. 325,971. 2 Claims. (Cl. 23—24.)

1. The process of making chlorhydrins which comprises passing chlorin and petroleum still gases into an emulsion of a solvent immiscible in water and an aqueous saline extraction medium, the chlorin and still gas being introduced in approximately equivalent quantities to form chlorhydrins and hydrochloric acid, in removing the oil charged with chlorhydrins from the field of reaction prior to chlorination of such chlorhydrins and in separating the chlorhydrin material from the solvent vehicle.



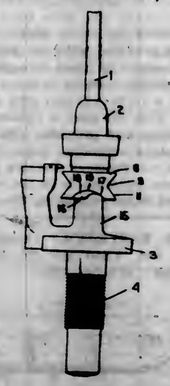
1,394,665. DECARBONIZING DEVICE. HUDSON BRUNEAU, Woonsocket, R. I. Filed Aug. 27, 1921. Serial No. 496,089. 2 Claims. (Cl. 277—42.)

1. In a decarbonizing device, a casing wall inclosing a piston chamber and provided with air holes near one end and with ports adjacent the holes extending to the other end of the wall, a closure member in the wall adjacent the holes provided with a valve seat and with a moisture opening communicating with the seat, a closure member in the other end of the casing wall provided with a suction opening, and with passages extending from the ports to the opening, a piston in the chamber movable across the ports, a valve on the piston registerable in the valve seat, and a spring on the second closure engaging the piston.



1,394,666. CHAIN-FASTENER. CLARENCE W. BURGE, Parkersburg, W. Va. Filed Apr. 27, 1921. Serial No. 464,943. 3 Claims. (Cl. 24—241.)

3. A terminal link comprising a casing, a pair of lock bars pivotally carried thereby and provided with bayonet



slots having longitudinal branches, one of said bars being slidable with relation to the other bar, and having its forward end formed with a notch, and a rearwardly directed bill carried by the casing and adapted to be received within said notch and means limiting the sliding movement of said sliding lock bar, said means consisting of a stop pin carried by one of the bars and a slot formed in the other bar and receiving the stop pin.

1,394,667. ELECTRIC LAMP AND HEATER. ELBERT A. CORBIN, Jr., Swarthmore, Pa. Filed May 25, 1921. Serial No. 472,505. 6 Claims. (Cl. 219—39.)

1. In a combined electric lamp and heater, a standard, a frame carried thereby and having arms adapted to support electric lights, an electric fan supported above said lights, an open-ended guard for said fan supported on said arms, an electric heater supported within said guard and in proximity to said fan, and a lamp shade surrounding said arms, heater and guard.

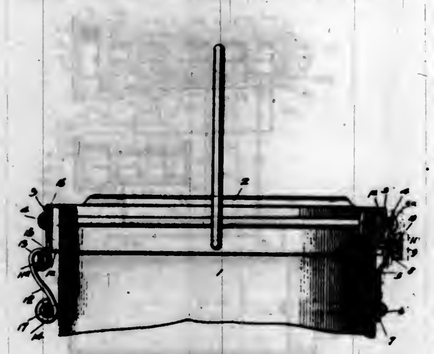
1,394,668. SPINDLE. EDWARD A. CUNNIFF, Fall River, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 4, 1920. Serial No. 363,153. 4 Claims. (Cl. 118—66.)

4. A whirl for vertical spindles having an annular V-shaped groove for a driving band, the lower wall of said groove being provided with a cam having its end extending in the direction of rotation of said whirl and adapted to engage a sagging driving band and ship the same from said whirl.

1,394,669. TOY. ARTHUR V. DA COSTA, Providence, R. I. Filed Feb. 18, 1921. Serial No. 446,128. 2 Claims. (Cl. 46—40.)

1. An animated toy comprising a bulbous body member having a head member mounted to roll about upon its upper surface, a balancing rod fixed in said head member and extending into said body to swing freely therein, said rod being weighted on its lower end to return said head member when moved from upright position, and a weight also in said body for returning it with its head member to upright position when moved therefrom.

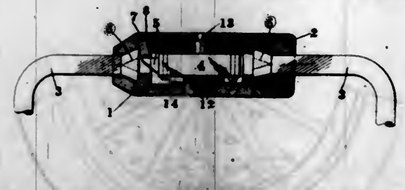
1,394,670. SWINGING FIGURE TOY. ARTHUR V. DA COSTA, Providence, R. I. Filed Feb. 25, 1921. Serial No. 447,632. 3 Claims. (Cl. 46—46.)



1. An animated toy comprising a bulbous transparent hollow body, a flexible stem having one end connected to one of the walls of said body and arranged to extend outward thereinto, and an object mounted on the free end of said stem within the body to vibrate and strike the inner walls of the body when the latter is agitated from side to side.

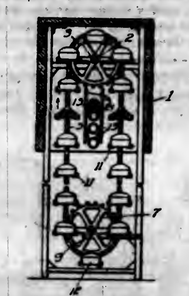
1,394,671. APPARATUS FOR THE AUTOMATIC MANIPULATION OF METAL INGOTS AT ROLLING-MILLS. EVAN WALTER DAVIES, Dowlais, Wales. Filed July 7, 1919. Serial No. 309,131. 5 Claims. (Cl. 80—48.)

5. An apparatus of the type described, including cross head and ingot turning and receiving elements, the turning element being slotted and pivotally mounted in position in its respective cross heads, said turning and receiving elements adapted to receive means for effecting cooperative action therebetween, whereby said turning element is adapted to have a plurality of separate turning movements successively about its pivots.



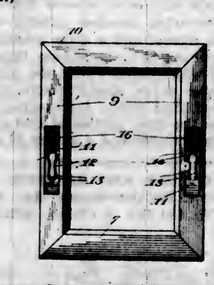
1,394,672. FASTENER FOR COVERS. CORTLAND W. DAVIS, Chicago, Ill., assignor to The Mantle Lamp Company of America, Chicago, Ill., a Corporation of Illinois. Filed Mar. 6, 1919. Serial No. 280,979. 14 Claims. (Cl. 220—55.)

1. An article of manufacture, comprising a clamping element having a pivot hole, a clamping end, and an opening for a securing device disposed between said hole and said end.



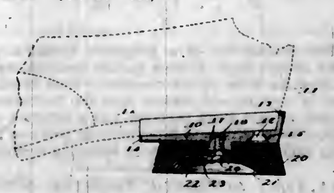
10. The combination with a vessel and a cover therefor, of a flexibly mounted clamp for said cover provided with means to interlock with said cover, and an adjustable securing device for said clamp.

1,394,673. CONNECTING DEVICE. MERRILL W. DOYLE, St. Louis, Mo. Filed Jan. 6, 1919. Serial No. 269,781. 7 Claims. (Cl. 70—90.)



6. A connecting device comprising two members each having one end attached to one of the parts to be connected, one of said members having a lateral socket into which the other member is adapted to be inserted and a lateral opening communicating with said socket to receive the part attached to the inserted connecting member, said socket being adapted to prevent longitudinal movement of the other member in either direction, and said members being provided with coöperating locking surfaces at one end to prevent separation of said ends by relative lateral movement, and locking means preventing relative lateral movement of the other ends of said members.

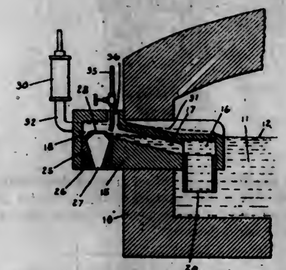
1,394,674. METHOD OF AND APPARATUS FOR BAKING. SAMUEL D. FLOOD, Kenilworth, Ill. Filed Sept. 5, 1919. Serial No. 321,841. 8 Claims. (Cl. 107—57.)



8. In an apparatus of the character described, an oven open at the bottom at opposite sides, a heater located in and supported by the oven between said sides and lying wholly above said bottom.

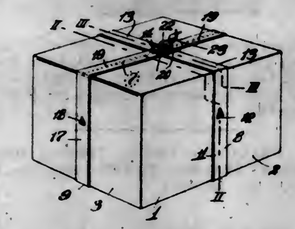
1,394,675. PICTURE-FRAME. JOSEPH EDOUARD FRECHETTE and LOUIS HACHEZ, Lowell, Mass. Filed May 14, 1921. Serial No. 469,622. 2 Claims. (Cl. 40—152.)

1. A picture frame comprising a pair of sections, one of which has grooves therein, fastening devices mounted in the grooves, and staples carried by the other section, for engagement with the fastening devices, for securing said sections together.



1,394,676. REVOLVING HEEL. TOWNSON HAND, New Haven, Conn. Filed Sept. 28, 1920. Serial No. 413,295. 3 Claims. (Cl. 36—39.)

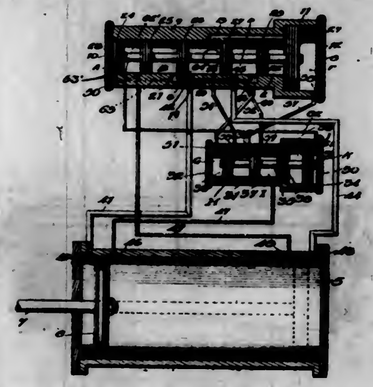
1. A revolving heel comprising a plate adapted to conform to the heel of the shoe and provided with a raised edge portion at the sides and back extending in a continuous unbroken line, said plate having a plurality of openings therethrough to receive securing means for securing the same against the bottom of the shoe, said plate having a central circular boss projecting therefrom provided with end depressions and a threaded aperture, a cushion heel tread of circular outline having a reinforcing plate and a central aperture in which said plate is



extended and bent into conical form to engage the bottom of the boss, a washer fitted into such conical portion and aperture and having projections engaging said depressions on the boss, and a screw having its head embedded in the washer and engaging the threaded aperture of the boss and plate to detachably secure the tread in position.

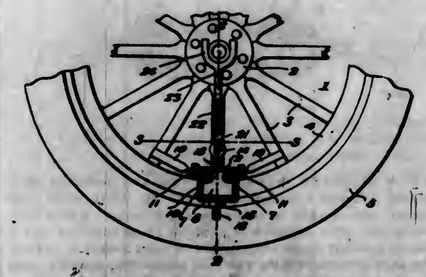
1,394,677. GLASS-DISCHARGING MECHANISM. EDWARD S. HUTTON, Lapel, Ind. Filed July 6, 1920. Serial No. 394,241. 6 Claims. (Cl. 49—55.)

1. The combination of a glass tank, a glass discharge member extending through the wall thereof with its end projecting beyond said wall, said member having a relatively large glass receiving chamber opening downward in the inner portion thereof and a glass conduit of relatively smaller dimensions in cross section than said receiving chamber and which extends from the upper end of said receiving chamber at an upward inclination to the discharge end thereof, and means for causing a sudden rising of the glass in the outer portion of said conduit for causing the discharge therefrom of a gather of glass.



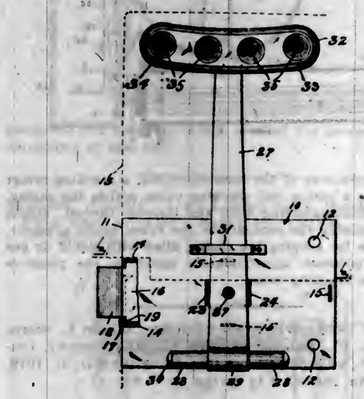
1,394,678. REINFORCING AND SEALING DEVICE. JOHN JANUCHOWSKY, Webster Groves, Mo. Filed Feb. 12, 1921. Serial No. 444,333. 9 Claims. (Cl. 229—47.)

7. The combination of a receptacle having a pair of foldable closure flaps, a strap portion extended upwardly from opposing walls of the receptacle, there being means carried by each of said closure flaps for interengagement with each of said strap portions, and a securing element for coöperation with said interengaging portions for preventing said strap portions from becoming separated.



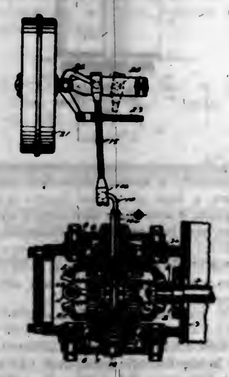
1,394,679. AUTOMATIC PRESSURE-OPERATED VALVE FOR ENGINES OR PUMPS. MORGAN JEFFERSON JOHNS, Miles City, Mont. Filed July 24, 1919. Serial No. 312,930. 1 Claim. (Cl. 121—158.)

An apparatus of the character described and comprising a main cylinder provided with main and auxiliary ports spaced apart, the auxiliary ports of less area than the main ports, a main piston mounted to reciprocate in said main cylinder, a pilot valve mechanism including a cylinder having an enlarged chamber at one end, a piston rod mounted to reciprocate in said cylinder and carrying a plurality of pistons of uniform diameter adapted to reciprocate in the body of said cylinder and a piston of greater diameter for the enlarged chamber, said pistons defining with the cylinder chambers of differential areas, conduits between one auxiliary port of the aforesaid main cylinder and the enlarged chamber of the pilot valve cylinder, conduits between the other auxiliary port of the main cylinder and the opposite end of the pilot valve, a main valve assembly comprising a cylinder having a body portion of uniform diameter and an enlarged chamber at one end, said main valve cylinder having an inlet chamber and a constant pressure port leading from the inlet chamber to the inner end of said enlarged chamber, an exhaust passage, a piston rod mounted to reciprocate in said main valve cylinder and carrying a plurality of uniform diame-



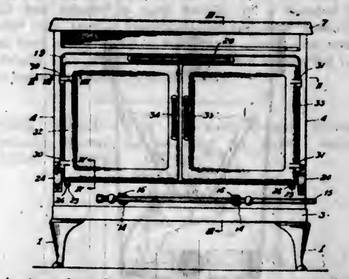
tered pistons to reciprocate in the body of the main valve cylinder and a piston of greater diameter within the enlarged chamber thereof, said differential areas pistons defining chambers including the before mentioned inlet chamber, ports leading from said chambers, conduits connecting the ports of the main valve with the ports of the pilot valve, conduits connecting the main ports of the main cylinder with the exhaust of the main valve, the inlet chamber of the main valve being in communication with the chamber at the inner side of the enlarged piston, valve means connected with the main valve piston to control the passage of fluid pressure to the main ports of the main cylinder, and means for balancing the pistons of the pilot valve with respect to the exhaust pressure.

1,394,680. WHEEL ATTACHMENT. GUSTAVE P. KNUDSON, Hurley, S. D. Filed Aug. 6, 1920. Serial No. 401,631. 4 Claims. (Cl. 301—44.)



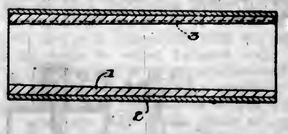
4. In combination with a vehicle wheel, of a mud hook therefor, including a block which is arranged against one side of the felly of a wheel, reinforcing means surrounding the ends of the block, a U-bolt passing therethrough and engaging one of the spokes of the wheel, nuts on the arms of the U-bolt contacting the outer end of the block, a clip surrounding the bottom of the block, a plate on the top of the block, a bolt passing through the plate and clip, a nut on the lower end thereof, an eye on the upper end thereof, brace members pivotally secured between the plate and clip, and extending from the opposite sides of the block, said brace members having hooked ends to engage spokes of the wheel, a yoke member engaging the hub cap of the wheel, and having a shank which is swiveled to the eye end of the bolt.

1,394,681. AUTOMOBILE-DOOR LATCH. DUFFA B. LAUSON, Grand Rapids, Minn. Filed June 9, 1920. Serial No. 387,659. 6 Claims. (Cl. 292—170.)



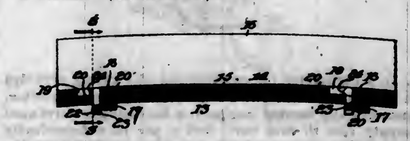
1. A door latch comprising a casing having an attaching plate, a bolt slidable in the casing, a spring normally projecting the bolt and adapted to permit retraction thereof, and an operating lever pivotally carried by the plate and movably engageable with the latch bolt to retract the same by movement in a plane at right angles to the bolt and door, said lever being pivoted at its lower end and being accommodated in the door.

1,394,682. POWER STEERING DEVICE FOR TRACTORS. OTTO LEROY LEWIS, Houston, Tex. Filed Nov. 12, 1920. Serial No. 423,621. 6 Claims. (Cl. 180—80.)



1. In a power steering device for power propelled vehicles having steering wheels and steering wheel connections, an axially shiftable shaft having universally movable members uniting the same at one end with the steering wheel connections, a pair of spaced gears, a driven shaft, a pinion carried by the driven shaft and engaging said gears, a sleeve rotatably mounted through the gears and held against lengthwise movement, through which the axially shiftable shaft is threaded, means to prevent rotation of said axially shiftable shaft, a clutch member splined on the sleeve and having manual means for shifting the same toward and in engagement with the said spaced gears, and means to limit axially shifting movements of the said shaft in relatively opposite directions.

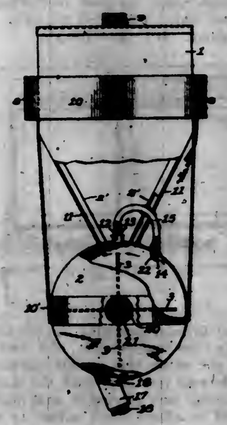
1,394,683. STOVE-DOOR FITTING. THOMAS J. MCWILLIAMS, Cleveland, Ohio, assignor to Herman J. Trenkamp, Cleveland, Ohio. Filed Feb. 24, 1920. Serial No. 361,037. 9 Claims. (Cl. 126—190.)



1. A stove door fitting comprising the combination with a stove having an oven compartment, of a door adapted to afford access to one entire side of said compartment and to have its inside wall rest level with the bottom of said compartment, another door carried by said first mentioned door and adapted to afford direct access to only a part of said compartment, a stationary part of said larger door resting level with the bottom of said oven compartment to form a continuous smooth surface when said smaller door is opened.

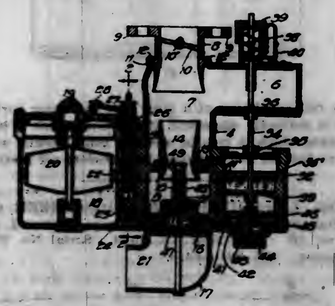
1,394,684. GLASS ROLL. KENJI MATSUO, Tokyo, Japan. Filed Sept. 22, 1920. Serial No. 411,976. 2 Claims. (Cl. 101—375.)

1. A roll consisting of a steel pipe the outer surface of which is perfectly smoothed and covered with a layer of milk glass which is rich in metallic constituents, substantially as and for the purposes hereinbefore set forth.



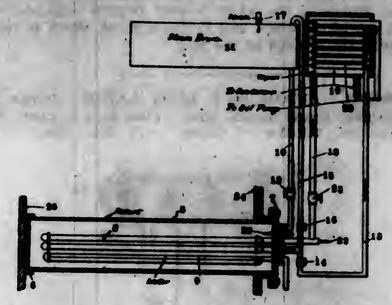
1,394,685. LUG-EQUIPPED TRACTION-WHEEL. GEORGE C. PLUMMER, Chicago, Ill., assignor to Thomas J. Hruby, Cicero, Ill. Filed Sept. 13, 1919. Serial No. 323,531. 2 Claims. (Cl. 301—44.)

1. The combination of a wheel rim containing apertures, a traction lug positioned on said rim and having ears



formed by deflecting the metal of said lug with the base of the lug apertured adjacent said cam, said cam being adapted to enter the apertures in said rim and interlock with the latter upon shifting said lug, and locking means extending into apertures in said lug and rim for holding the lug against shifting.

1,394,686. POWDER-BLOWER. CLAUDE F. REDMON, LILLARD K. REDMON, CLAUDE G. REDMON, and JOHN T. REDMON, Paris, Ky., assignors of one-fifth to Wade Hampton Whitley, Paris, Ky. Filed Jan. 7, 1921. Serial No. 435,711. 5 Claims. (Cl. 43—148.)



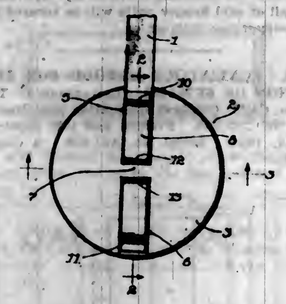
1. A powder blower comprising a container, a rotary blower in communication with said container, and means for diverting a portion of the blast from said blower into said container to force the contents thereof into the blower.

1,394,687. CARBURETER. WILLIAM REID, Chicago, Ill. Filed Sept. 2, 1919. Serial No. 321,137. 7 Claims. (Cl. 261—67.)

2. In a carbureter the combination of a casing provided with a mixing chamber, an air inlet valve for said chamber, a symmetrically located fuel port, a float chamber arranged to supply fuel to said port, and a pair of independently operating valves for controlling the flow of fuel from the fuel chamber to the port, one of said valves being controlled and operated by said air inlet valve.

1,394,688. APPARATUS FOR TREATING HYDROCARBON OILS. ROBERT BENNER, St. Louis, Mo., assignor to New Process Oil Company, a Corporation of Minnesota. Filed Sept. 18, 1917. Serial No. 191,536. 2 Claims. (Cl. 196—25.)

1. In apparatus of the class described, a cracking retort comprising a casing and cracking tubes within the casing, but not communicating with the interior thereof, means for maintaining the contents of the tubes under pressure, and means for keeping the casing filled with liquid or gas under a pressure approximately equal to the pressure within the cracking tubes.



1,394,689. SELF-WINDING CLOCK. ALFRED L. SOHM, Chicago, Ill., assignor to Sohm Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1919. Serial No. 286,533. 14 Claims. (Cl. 58—41.)

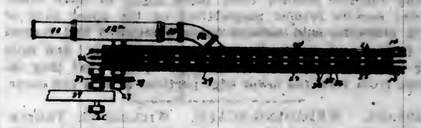
1. In combination, a spring controlled clock mechanism having a frame, a base plate, an electro-magnet mounted on said base plate, a relatively stationary contact mounted on said frame, moving contact mechanism controlled by said spring motor, and adapted for coöperation with said first contact for closing the circuit of said electro-magnet, said first contact being actuated by said electro-magnet to break said circuit.

1,394,690. PENDULUM. ALFRED L. SOHM, Chicago, Ill., assignor to Sohm Electric Company, Chicago, Ill., a Corporation of Illinois. Filed May 5, 1919. Serial No. 294,783. 3 Claims. (Cl. 58—135.)

1. In combination, a pendulum rod, a bob having a groove therein, adapted for the reception of said pendulum rod, a bridge member extending across said groove and a spring retaining member yieldingly engaged between the

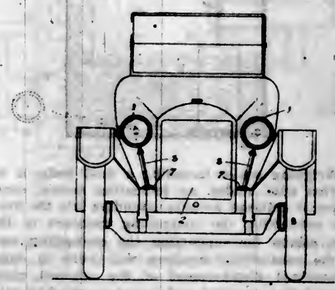
pendulum rod and said bridge member for preventing free movement of said bob.

1,394,691. CLAMP. JOHN L. SPENCE, Jr., Brooklyn, N. Y. Filed Mar. 19, 1921. Serial No. 453,835. 4 Claims. (Cl. 248—43.)



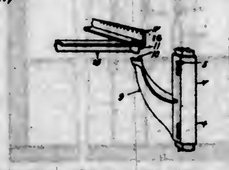
1. In combination, a pair of relatively movable members, a second pair of similar members, spaced from the first-mentioned pair, screw-threaded members one of which is secured to a member of one pair of relatively movable members and the other to the other pair of relatively movable members, a screw-threaded member received by the first-mentioned screw-threaded members for shortening the distance between the two pairs of relatively movable members, and a compensating rod for engaging a member of each pair when the space between the two pairs of relatively movable members is varied whereby the relatively movable members are clamped.

1,394,692. HEATING-TANK. JAMES M. STOCKER, Atlanta, Ga. Filed Aug. 2, 1919. Serial No. 314,990. 4 Claims. (Cl. 257—240.)



2. In combination, a tank, a plurality of steam coils in said tank extending longitudinally and arranged adjacent the sides and bottom thereof, each coil having independent means for controlling the supply of steam at one end and independent means for controlling the exhaust of steam at the other end, the lower coils being constructed to offer less resistance to the steam than the upper coils.

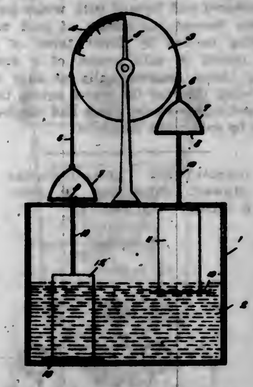
1,394,698. TRAVELING SCREEN FOR SUCTION-NOZZLES. MARTIN SWINTEK, Eddyville, Iowa. Filed Feb. 28, 1920. Serial No. 361,956. 2 Claims. (Cl. 37—9.)



1. The combination with a suction nozzle adapted to be raised and lowered and formed with wings having curved outer margins beyond the mouth of said nozzle, track members being carried by inner faces of said wings around the mouth of said nozzle, of a flexible screen mounted for travel longitudinally of said nozzle, said screen also being directed for travel across the mouth of said nozzle and between said wings and supported in such travel solely by said track members.

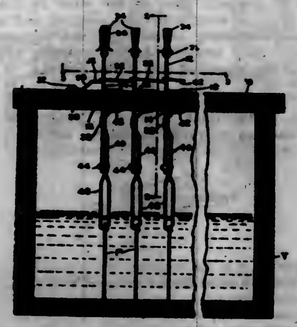
1,394,694. HEADLIGHT. EDWARD GOMES SYLVESTER, Honolulu, Hawaii. Filed Sept. 30, 1920. Serial No. 413,710. 6 Claims. (Cl. 240—7.)

1. In combination with the head light of a motor vehicle, of means for supporting said light for vertical adjustment with respect to the vehicle, means in connection with the said supporting means for permitting the lamp to be turned angularly to reflect the rays in any direction, means in connection with the support for permitting the lamp to swing outward away from the vehicle when the support is in a predetermined position, said first named means comprising a standard composed of telescoping sections, a foot for the standard of greater thickness at one edge than at the other to support the standard in an outwardly inclined position, and means for holding said sections in adjusted position extended or collapsed, said third named means comprising a hinge interposed in the length of one of the sections.



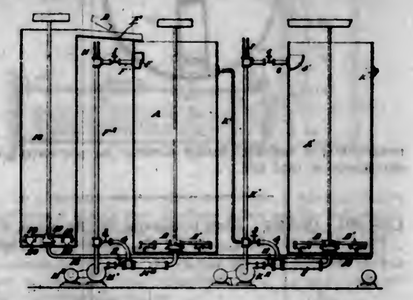
1,394,695. BEDSTEAD. HENRY H. TALBOT, St. Joseph, Mo. Filed Jan. 2, 1920. Serial No. 348,741. 1 Claim. (Cl. 5—4.)

The combination of bed posts for supporting a bed; brackets formed with said posts respectively, said brackets being extended inward and upward from said posts form-



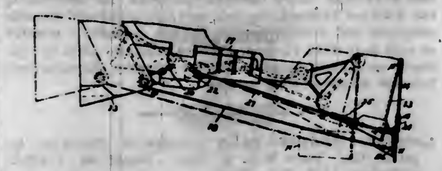
ing tucking spaces between said posts and the upper portions of said brackets for the reception of the lower edge portions of a bed cover; a spring frame; lugs secured on the respective corners of said spring frame said lugs being tapered smaller from their upper to their lower ends; sockets formed respectively on the upper ends of said brackets, said sockets being positioned and formed to receive and snugly fit said lugs respectively; and rails for said bed, said rails being so positioned that they obscure from view the lower edge portions of said bed cover.

1,394,696. WEIGHING-SCALE. WILLIAM G. TEMPLETON, Colorado Springs, Colo. Filed Sept. 24, 1919. Serial No. 325,880. 9 Claims. (Cl. 265—43.)



1. Weighing scales including a fluid body, a movably supported bulk holder, an indicating means, controlling members of different weights extending into the fluid body, means connecting the controlling members to the bulk holder, means for supporting the connecting means so that the controlling members will work in opposition, the combined displacement of the opposed controlling members being constant, and means operated by said members for actuating the indicating means, said members being normally balanced in the fluid to maintain the indicating means normally at a point of starting, said members being shiftable to readjust their balance within the fluid when a material is applied to the bulk holder.

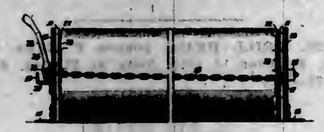
1,394,697. FILM-HANGING DEVICE. GUSTAF E. TORNSJO, St. Paul, Minn., assignor to Rao Manufacturing Company, Minneapolis, Minn. Filed Mar. 11, 1921. Serial No. 451,617. 9 Claims. (Cl. 95—100.)



1. A film hanging device comprising a supporting member, a plurality of hanger units adapted to be supported by said member, interengaging means on said hanger units for locking them together, and means on the last one of said units for securing it to said supporting member whereby all of said hanger units will be secured in position on said supporting member.

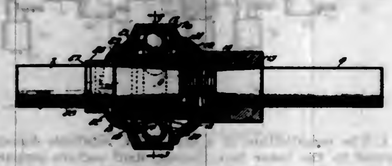
1,394,698. CONTINUOUS METHOD FOR THE PURIFICATION OF SEWAGE. LAMARTINE C. TRENT, Los Angeles, Calif. Original application filed Mar. 26, 1919, Serial No. 285,286. Divided and this application filed Feb. 14, 1921. Serial No. 444,628. 6 Claims. (Cl. 210—8.)

1. The method of purifying sewage which resides in causing a flow thereof through a plurality of connected oxidation vessels, maintaining the liquid within said vessels under agitation, withdrawing liquid from the upper portion of each vessel and discharging the same through the bottom portion thereof under circulation in excess of the normal flow of liquid into and out of the said vessels, admitting air into the liquid as withdrawn from said vessels and finally delivering the liquid from the last of said vessels into a sludge thickening vessel.



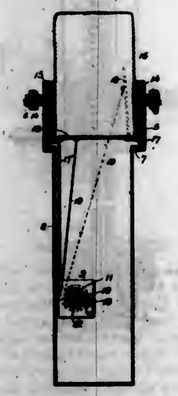
1,394,699. SCRAPER ATTACHMENT FOR UNLOADER-BUCKETS. CECIL E. VAN SICKLE, Lakewood, Ohio, assignor to The Wellman-Seaver-Morgan Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 17, 1920. Serial No. 381,844. 8 Claims. (Cl. 37—14.)

1. In combination with a bucket of a boat unloader, a scraper adapted to be applied to one of the jaws of the bucket for scraping into a pile the material at the bottom of a boat hatch by shifting the bucket with the scraper attached thereto, and means for attaching the scraper to one of the bucket jaws.



1,394,700. APPARATUS FOR HEADING ROLLS OF PAPER. JOHN B. WEST and LOUIS J. WALS, Brooklyn, N. Y., assignors to Tidewater Paper Mills Company, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 8, 1921. Serial No. 450,623. 4 Claims. (Cl. 216—9.)

1. An apparatus for heading rolls of paper, comprising a pair of upright abutments movable toward and from each other to receive a roll lengthwise between them, binding members extending from one abutment to the other at the sides thereof, means for suspending on the inner faces of the abutments the heads which are to be applied to the ends of the roll, and means coöperating

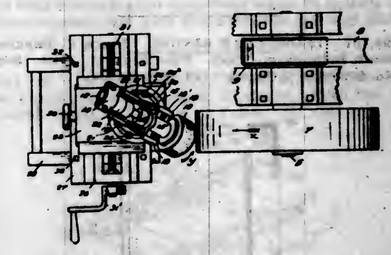


with the said binding members to draw the abutments toward each other and press the heads firmly upon the ends of the roll.

1,394,701. UNIVERSAL JOINT. WILLIAM A. WHITNEY, Rockford, Ill., assignor to Towner K. Webster, Evanston, Ill. Filed Oct. 9, 1919. Serial No. 329,434. 11 Claims. (Cl. 64—91.)

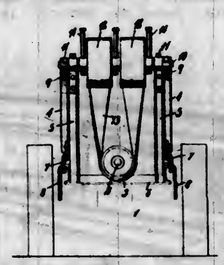
10. A universal joint comprising a ball member, an annular flange projecting outwardly from the ball member, said flange being provided with grooves extending transversely therethrough, the walls of the grooves forming planes and converging inwardly, a socket member provided with slots registering with said grooves, the walls of said slots forming planes converging outwardly, balls in said grooves and slots forming a driving connection between the ball and socket members and a ball retainer ring interposed between the ball and socket members.

1,394,702. SAFETY-VENT. MARIO WIGET, New York, N. Y. Filed May 24, 1919. Serial No. 299,643. 1 Claim. (Cl. 220—88.)



In safety vents the combination of a tank, a sleeve fitted in a wall thereof and providing a vent opening, a perforated cap above the sleeve, a valve beneath the outlet opening of the vent, a strainer below the valve, a spring carried by the sleeve and located within the tank, a connection between the spring and the valve, and means for adjusting the tension of the spring.

1,394,703. AUTOMOBILE-PULLER. JOSEPH H. WRIGHT, Henderson, Tex. Filed Jan. 27, 1920. Serial No. 354,276. 1 Claim. (Cl. 242—95.)



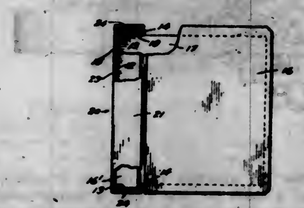
In combination with an automobile wheel having an exteriorly threaded hub, an interiorly threaded sleeve adapted to be received upon the hub, said sleeve having alining openings adjacent one end, a cable adapted to be wound upon the sleeve, a hook secured to one end of the cable and adapted to engage one of the wheel spokes, and a rod adapted to pass through the alining openings of the sleeve for rotating the same.

1,394,704. PULLEY-GRINDING MACHINE. WALTER C. BARNHART, Seattle, Wash. Filed Dec. 10, 1918. Serial No. 266,031. 1 Claim. (Cl. 51—35.)

In a machine for grinding the face of a pulley, an abrasive wheel, a shaft for said wheel, a holder provided with journal bearings for said shaft, a base plate provided with upwardly extending lugs and standard elements, having arcuate slots therein centering on said lugs, means provided adjacent the forward end of said holder for tiltably connecting the same to said lugs, means carried by the holder extending through said standard slots for securing the holder in adjusted angular positions, a carriage moveable parallel to the axis of the pulley, and means for connecting the base plate to the carriage for both rotary and rectilineal movements.

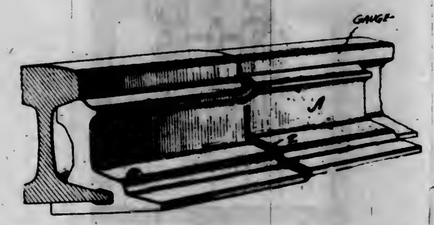
1,394,705. BELT PULLEY AND TIGHTENER. BEN D. BARTON, Lansing, Mich. Filed Jan. 24, 1920. Serial No. 353,843. 3 Claims. (Cl. 74—51.)

3. A belt guide attachment of the character specified comprising a plurality of members, a shaft carried by the outer ends of said members, pulleys loosely mounted upon



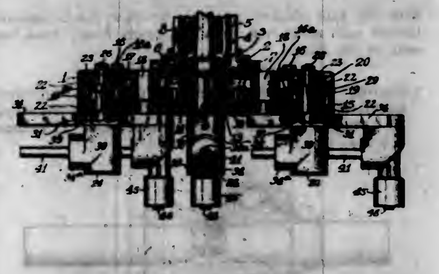
said shaft, vertically arranged rollers mounted upon said shaft between and to the side of said pulleys for facilitating the retaining of a belt upon said pulleys and means for detachably securing said members to a tractor or analogous motive power.

1,394,706. BAKING-OVEN. WARWICK HENRY BRANES, Peterborough, England. Filed Aug. 24, 1920. Serial No. 405,733. 1 Claim. (Cl. 107—37.)



In baking ovens, the combination with a continuous baking chamber and an endless conveyer extending through said chamber, of means for imparting differential heating effects in different zones of the said chamber, said means comprising a series of independent furnaces ranged along the chamber and tubular elements projecting into said furnaces and disposed in groups of varying heating capacities in the respective zones of the chamber, as set forth.

1,394,707. LOOSE-LEAF BINDER. DIRCK C. BENEDICT, South Bellingham, Wash. Filed Sept. 11, 1919. Serial No. 323,082. 2 Claims. (Cl. 129—18.)

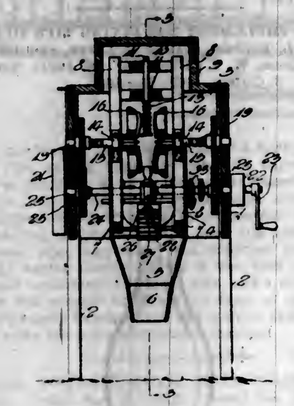


1. In devices of the class described, a binder comprising a hollow holding member open at the top and having an opening at the front of a length less than the width of the member, cover carrying strips adapted to be inserted within said member through the top opening thereof, and a casing member having an opening at its front side to receive the aforesaid holding member and afford a closure for the opening in the top thereof.

1,394,708. PROCESS FOR MAKING STEP-JOINTS. BANCROFT G. BRAINE, New York, N. Y., assignor to The Rail Joint Company, a Corporation of New York. Filed Nov. 5, 1919. Serial No. 335,872. 15 Claims. (Cl. 29—169.)

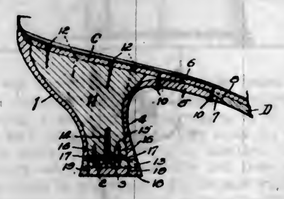
1. The process for making a stepped bar for rail joints which consists first in slotting a part of the bar producing along the line of the slot a bending easement, and subsequently pressing into stepped relation the portion of the bar at opposite sides of the slot.

1,394,709. DRILL-HEAD. JOSEPH F. BUHR, Detroit, Mich. Filed Jan. 11, 1919. Serial No. 270,846. 8 Claims. (Cl. 77—24.)



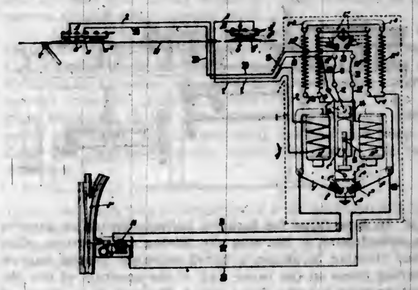
1. The combination of a drill head, rotatable housings carried by the lower face thereof, drill sockets supported from said housings and adjustable circumferentially and to and from said housings, and means including elements slidable through said housings adapted to transmit power through said head and housings for operating said drill sockets.

1,394,710. TEMPER-SCREW. JOSEPH BURNS, Okmulgee, Okla. Filed Jan. 9, 1919. Serial No. 270,322. 1 Claim. (Cl. 287—61.)



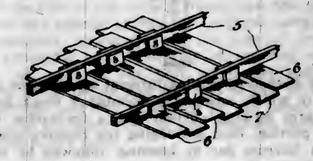
In an arrangement of the character described, a tubular temper screw, a swivel bar with which the lower end of the temper screw has a rotatable connection, and a rod extending through the temper screw and below the lower end thereof and having an integral cross piece at its lower extremity, said cross piece being secured to the swivel bar.

1,394,711. AUTOMATIC FISH-CLEANER. CHARLES H. CARTER, Farmers Fork, Va. Filed Apr. 11, 1921. Serial No. 460,299. 8 Claims. (Cl. 17—10.)



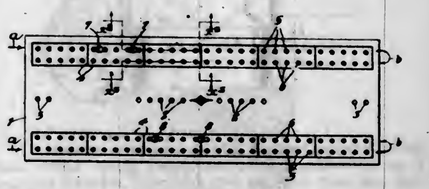
1. A fish scaling and cleaning machine comprising means for scaling a fish, a rotary shaft having radiating arms provided with blades adapted to slit the belly of the fish, and scrapers associated with said arms and blades for removing the offals as the fish is scraped.

1,394,712. SHOE-HEEL. ABRAHAM COHEN, St. Louis, Mo. Filed Nov. 10, 1919. Serial No. 336,830. 1 Claim. (Cl. 36—40.)



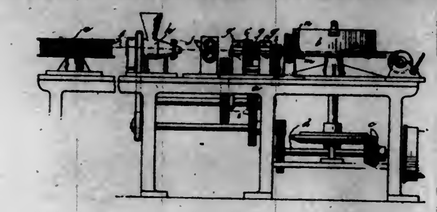
A heel for ladies' shoes comprising an aluminum shell having an open top and a closed tread end provided with a plurality of openings, a fibrous plug of the same contour as the shell cavity frictionally held within the cavity and filling the same with its lower face in contact with the inner face of the closed tread end of the shell, an inner lift in contact with the lower face of the closed tread end of the shell, a screw threaded fastener passing through the inner lift, one of the openings in the closed tread portion of the shell and embedded in the lower end of the fibrous plug, nails passing through the inner lift, the remaining openings in the closed tread end of the shell and embedded in the fibrous plug, an outer lift engaging the inner lift and nails driven through the outer and inner lifts and clenched against the lower face of the closed tread end of the shell.

1,394,713. SWITCH-OPERATING MECHANISM. ROY VINSON COLLINS, West Newton, Mass. Filed July 21, 1915. Serial No. 41,064. 51 Claims. (Cl. 246—242.)



4. In combination, a switch, a motor, connections between said switch and said motor, a main feed conductor, and means to control a circuit to operate said motor from said main feed conductor comprising means to regulate the voltage between said main feed conductor and said motor.

1,394,714. CONSTRUCTION OF CEILINGS. THOMAS CULSHAW, Malvern, Victoria, Australia. Filed Oct. 13, 1919. Serial No. 330,318. 1 Claim. (Cl. 20—6.)

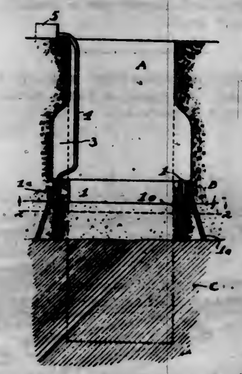


A ceiling structure comprising joists, hangers secured to the joists at spaced intervals and projecting below the joists, panels secured to the joists at points between the hangers, and panels secured to the lower ends of the hangers and thereby arranged between and in a plane below the first named panels and forming spaces therebetween, said second named panels slightly overlapping the first named panels.

1,394,715. SCORING DEVICE. JOHN F. CULVER, Los Angeles, Calif. Filed June 9, 1920. Serial No. 387,627. 2 Claims. (Cl. 235—90.)

1. A scoring device comprising a board having recesses angled in the direction of scoring, and a score indicating element adapted to be positioned in the recesses to tilt in the direction of scoring.

1,394,716. MACHINE FOR SPIRALLY THREADING OR GROOVING WIRE. JOSEPH BARTLETT DAVIES, Melbourne, Victoria, Australia. Filed Aug. 7, 1919. Serial No. 315,956. 5 Claims. (Cl. 29—33.)



2. In a machine for forming helical threads or grooves on round wire, a drawing die having an aperture other than circular in shape, a flared entrance to and narrow bearing faces on the inner wall of the aperture of the die, said narrow bearing faces being disposed in a plane at right angles to the axis of the die, gearing for imparting rotation to the die, and a rotatable drawing block operated synchronously with the die to draw the wire therethrough substantially as described.

1,394,717. METHOD FOR SWAGING NEEDLE-ARMS AND FULCRUM-BARS. FRED H. DOSER, Grand Rapids, Mich., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 29, 1919. Serial No. 334,254. 2 Claims. (Cl. 29—148.)

1. The method of making integral needle arms and fulcrum bars which consists in forming a blank having a narrow arm forming portion and a transverse fulcrum forming portion, then developing the relative relation of arm and fulcrum bar by bending, followed by swaging, then flattening the arm, then trimming said blank away to the required shape and size, and then bending the arm to the ultimate arrangement of form and parts desired.

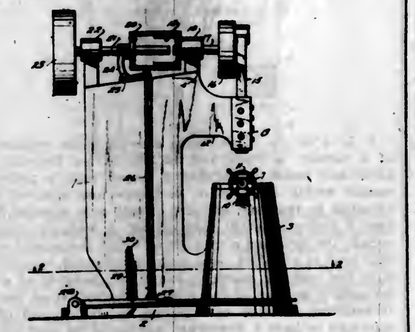
1,394,718. PROCESS FOR SEALING SHAFTS OR WELLS. WALTER E. EMERY, Peoria, Ill. Filed Sept. 19, 1918. Serial No. 254,714. 2 Claims. (Cl. 61—36.)

1. In the art of sinking wells, the process of sealing off a water bearing strata which consists in boring a series of holes which extend downwardly through the strata and are arranged in a series around the shaft, the upper ends of the holes being in communication with the shaft, filling the holes with a cement grout, and subjecting the grout to pressure whereby it is caused to percolate into the surrounding earth and to coöperate therewith to form a cement barrier around the periphery of the shaft.

1,394,719. IMPLEMENT FOR FIXING TIPS TO LACES. ALFRED L. EVENDEN, JAMES D. CASEY, and JOSEPH A. CASEY, Rome, N. Y. Filed Mar. 28, 1921. Serial No. 456,373. 3 Claims. (Cl. 81—15.)

1. A pair of pincers of the type described, one jaw of which being grooved in semi-circular fashion forming a die, the other jaw provided with a flange, forming a part thereof and bent in semicircular fashion forming a die, the space between said dies gradually decreasing from the end of the jaw to the rear, and in a direction toward the pivot, substantially as herein shown and described.

1,394,720. GARMENT-SUPPORTER. CHARLES L. FELTMAN, Brooklyn, N. Y. Filed Nov. 19, 1919. Serial No. 339,184. 2 Claims. (Cl. 241—6.)



1. A garment supporter comprising a member adapted to engage and hold the garment to be supported, said member being provided with a garter-receiving slot, a portion of said slot being provided with teeth for holding the garter in adjusted position, the remaining portion of the slot being free of teeth whereby the garter may be adjusted in either direction in said slot.

1,394,721. GAS-BURNER. JOHN FESTA, Brooklyn, N. Y. Filed Apr. 27, 1920. Serial No. 376,997. 1 Claim. (Cl. 158—104.)

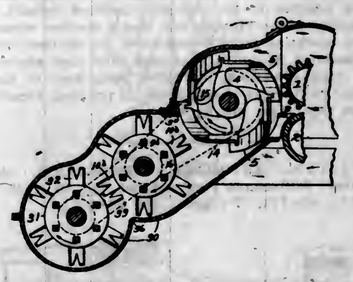
In a gas burner, the combination of a horisontal cylindrical pipe having openings along its upper side and closed at its ends, a mixing chamber integral with the said pipe, and having at its separate ends a communicating opening, a vapor supply pipe beneath the mixing chamber and parallel with the same and the horisontal cylindrical pipe, nipples for the openings in the latter pipe and having slotted orifices in line with and parallel with said horizontal cylindrical pipe, and a dividing plate in each slot adapted to divide the flame so that the nipples will supply two separate and distinct and continuous flames along the pipes and mixing chamber.

1,394,722. POWER-HAMMER. GUSTAV FOODE, Hoquiam, Wash. Filed Jan. 2, 1920. Serial No. 348,983. 1 Claim. (Cl. 78—17.)

In a power hammer, a frame, a guide bearing carried thereby, a reciprocating recessed head arranged in said guide bearing, a die removably arranged in the recessed portion of said head, a removable face block for said head adapted to cover said die when in position, means for actuating said head, a longitudinally and transversely recessed base block in alinement with the said guide bearing and beneath the same, the said recesses registering one with the other, clamping dies arranged in the transversely recessed portion of said base block, said dies being normally spaced apart in the plane of the said longitudinal recess, and manually operable means for operating said clamping dies.

1,394,723. TOLL-TELEPHONE SWITCHING APPARATUS. HERBERT M. FRIENDLY and ARCHIBALD E. BURNS, Portland, Oreg.; said Burns assignor to said Friendly. Filed June 7, 1915, Serial No. 32,767. Renewed Mar. 1, 1921. Serial No. 448,869. 47 Claims. (Cl. 179—43.)

4. In a telephone system, a first and a second line, a first station on the first line, a second station common to said lines, a polarized relay at the second station, means at the first station for controlling said polarized relay, a second relay under control of said polarized relay for interconnecting said lines, and a third relay operative over the first line having normally closed contacts in the control circuit of the second relay.



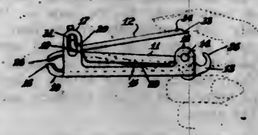
13. A telephone system comprising a telephone line, an operator's station on said line, a sending station on said line, a signal device at the operator's station, a relay at the operator's station responsive to code signaling ringing current from the sending station causing said lamp to glow according to the code signal and thereafter extinguish, and means for automatically causing said lamp to light and glow continuously upon cessation of the code signaling.

1,394,724. SPRING SUSPENSION FOR AUTOMOBILES. CHRISTIAN FREDRIKSEN, Croydon, near Sydney, New South Wales, Australia. Filed Oct. 14, 1919. Serial No. 330,554. 5 Claims. (Cl. 267—41.)

4. The combination with a vehicle frame and its axles, of an inverted longitudinally disposed suspension leaf spring rigidly fixed at its crown to an intermediate portion of the side of the vehicle frame, and two oscillating platform leaf springs having their central portions pivotally connected respectively to the side of the vehicle frame forwardly and rearwardly of the first mentioned spring, the ends of the first mentioned spring being pivotally connected to the rear end of one of said platform springs and the front end of the other platform spring, and the other ends of said platform springs being connected to the axles.

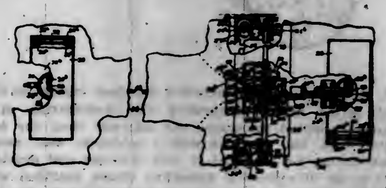
1,394,725. COMMINUTING ATTACHMENT FOR FEED-CUTTERS. ORLANDO C. FRICK, Manitowoc, Wis., assignor to Smalley Manufacturing Company, Manitowoc, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1918. Serial No. 251,105. 6 Claims. (Cl. 146—29.)

1. A comminuting attachment for feed cutters having feed cutter heads, comprising the combination of a chamber adapted to receive cut material from the feed cutter head, and provided with a perforate wall, and a comminuting head located in said chamber and provided with a set of segmental shredding blades provided with forked extremities adapted to engage and sweep the material in a succession of agitating movements along said perforate wall surfaces, together with an auxiliary com-



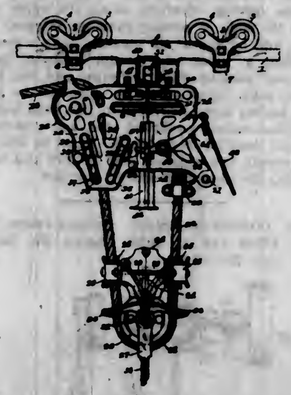
mounting head located in said chamber and provided with blades adapted to revolve in proximity to the blades of the first mentioned comminuting head, and co-acting therewith in the comminution of the material.

1,394,726. AIRPLANE-FUSELAGE. WILLIAM L. GILMORE, Port Washington, N. Y., assignor, by mesne assignments, to Curtiss Aeroplane and Motor Corporation, Buffalo, N. Y., a Corporation of New York. Original application filed June 11, 1919, Serial No. 303,501. Divided and this application filed Dec. 27, 1920. Serial No. 433,090. 8 Claims. (Cl. 244—30.)



1. The method of assembling airplane bodies of the monocoque type which consists in first providing a suitable jig or stand, next placing thereon a given section of the outer shell of the body, next inserting within the open side of the shell section a substantial portion of the interior equipment of the body and thereafter placing over and upon the exposed equipment of the body a second shell section, which, in conjunction with the first mentioned shell section completes the outer shell of the body.

1,394,727. NAIL-CLIP. CHRISTIAN E. A. GRONBECH, Keene, N. H. Filed May 17, 1921. Serial No. 470,226. 6 Claims. (Cl. 30—28.)

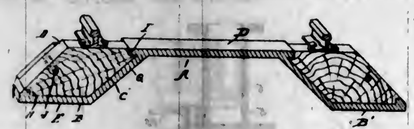


2. In a nail clip, the combination of upper and lower cutting members having coacting cutting edges at their forward ends, said lower member having upwardly extending front and rear lugs, said front lugs being slotted and said rear lugs having a pivot pin extending between the same, and said upper member having a curved bearing portion adapted to be removably inserted beneath said pin, spring means pressing said upper member upwardly, and an operating lever having pivot pin portions removably mounted in the slots of said front lugs above said upper cutting member, said lever being bent to form a shoulder to the rear of said pivot pin portions, adapted to bear on said upper cutting member.

1,394,728. AUTOMATIC GARAGE-DOOR. HARRY GROVES, Bellingham, Wash. Filed Nov. 15, 1920. Serial No. 424,174. 7 Claims. (Cl. 268—9.)

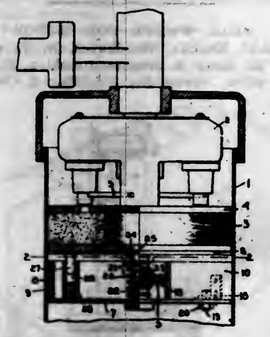
1. In an automatic, door-operating device in combination, a swingable door, two depressible platforms in the way closed by said door, one of said platforms on each side of said door, automatic means to raise said platforms after being depressed, and means adapted to swing said door a predetermined part of a rotation once forward and once backward for each four consecutive times either or alternately both of said platforms are depressed, said first depressing adapted to cause said door to swing open, said second and third depressings adapted to have no operable effect on said door, and said fourth depressing adapted to close said door.

1,394,729. HAY-CARRIER. WILLIAM GUTENKUNST, Milwaukee, Wis. Filed June 3, 1920. Serial No. 386,170. 6 Claims. (Cl. 212—112.)



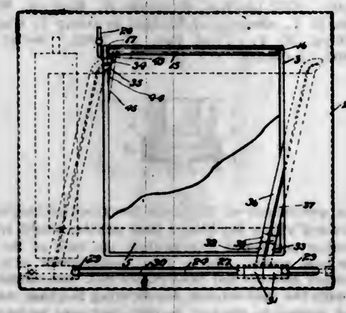
1. In a device of the class described, the combination of a carrier, a block and tackle carried thereby, said block and tackle comprising a looped rope, a pulley arranged within the loop of said rope and adapted to be attached to the load, one end of said rope passing freely over a pulley adjacent said carrier, a wedging clamp to engage the rope and a member to which the second end of said rope is attached, said member arranged to coöperate with the wedging clamp to cause the clamping of an intermediate portion of the rope by the weight of the load transmitted through said second mentioned end of the rope and to have a downward motion of its working portion during the clamping action.

1,394,730. JAM-NUT. WILBUR O. HATTER, Klamath Falls, Oreg., and GUST A. FRISK, Gridley, Calif. Filed Aug. 31, 1920. Serial No. 407,118. 1 Claim. (Cl. 151—30.)



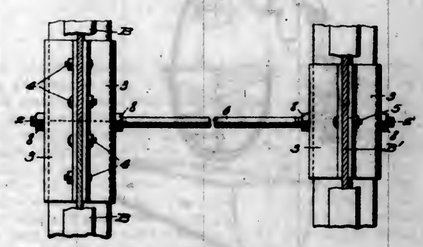
A locking nut comprising a flat polygonal body having a screw threaded opening extending therethrough, said nut having a slit extending in a plane diagonal to the axis of the opening to provide overlapping acute angled outer and under portions, the said portions being displaced longitudinally of the axis of the opening with respect to each other, the under portion having a recess extending from the side of the nut inward toward the opening whereby one jaw of a clamping tool may be inserted in said recess and the other jaw applied to the face of the outer overlapping portion to draw said portions toward each other.

1,394,731. RAILWAY-TIE. JOHN G. HOGAN, Detroit, Mich. Filed June 11, 1921. Serial No. 476,688. 5 Claims. (Cl. 238—30.)



1. A railway tie comprising a metallic member having recessed end portions open at the top and the outer end thereof, and a flat connecting tie portion between said end portions in the plane of the top and wooden inserts filling the recesses.

1,394,732. WINDING-MACHINE. CHARLES W. HUBBARD, Weston, Mass. Filed Sept. 25, 1919. Serial No. 326,177. 5 Claims. (Cl. 118—49.)

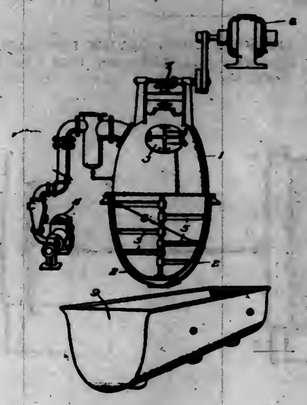


1. In a device of the class described, the combination with a yarn container, of means to wind a yarn mass therein in transverse layers, and a yarn support for the yarn mass, said yarn support comprising a plate on which the yarn rests, a friction member having frictional engagement with the yarn container, and a yielding connection between said plate and friction member.

1,394,733. RECORDING APPARATUS. HARRY H. HUBBARD, Grand Rapids, Mich. Filed Apr. 1, 1919. Serial No. 286,752. 22 Claims. (Cl. 282—1.)

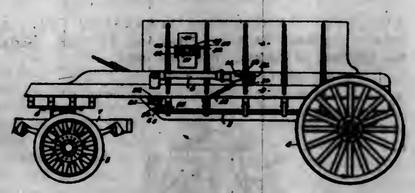
1. In a device of the character described, a supporting table for carrying flat sheets of paper, and means mounted to move across the table and draw carbon or like reproducing paper over the table and between the sheets, said means being also movable in the opposite direction to disassociate the carbon entirely from the paper substantially as described.

1,394,734. ANTISPREADING DEVICE FOR RAILWAY-RAILS. MATHEW JICHA, Bridgeport, Ohio. Filed June 21, 1921. Serial No. 479,364. 3 Claims. (Cl. 238—53.)



1. An anti-spreading device for railway rails, comprising a pair of oppositely arranged anchoring devices; each of said devices consisting of a pair of bars of angle-bar form for mounting in embracing relation to opposite sides of a rail, and apron-like anchor members formed integral with and depending vertically from said bars; each of said members having inturned vertically disposed wings adapted to have their upper edges disposed in underlying seated relation to a rail, and a transverse rod for connecting said anchoring devices and maintaining the latter in spaced relation.

1,394,735. VENTILATOR APPARATUS. PAUL R. JORDAN, Indianapolis, Ind. Filed Aug. 31, 1918. Serial No. 252,246. 3 Claims. (Cl. 236—45.)



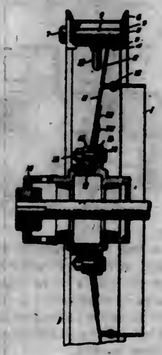
1. A ventilator apparatus including a vertical draft flue, two separate baffle plates horizontally arranged stationarily in the flue on one and the same plane at its opposite sides respectively, and two regulating valves spaced apart and pivotally supported in the flue at two other side portions thereof and below the plane of the baffle plates, the valves being adapted to automatically cooperate each with the other and with the baffle plates respectively to variably limit the draft area between the valves and also between the valves and the respective baffle plates.

1,394,730. PROCESS OF RENDERING FATS AND OILS. CHARLES FREDERICK KAMRATH, Omaha, Nebr. Filed Nov. 15, 1919. Serial No. 338,249. 2 Claims. (Cl. 87—13.)

1. The herein described process of rendering animal and vegetable fats to produce edible neutral products that consists in simultaneously heating the fats to a temperature of substantially 145°–170° F., agitating the fats, and subjecting the fats to a vacuum of from 12 to 20 inches.

1,394,737. TRAILER-SUPPORTING MEANS. CLYDE C. KESSLER, Canastota, N. Y., assignor to Watson Wagon Company, Canastota, N. Y., a Corporation of New York. Filed Dec. 22, 1916. Serial No. 138,352. 3 Claims. (Cl. 254—86.)

1. The combination with a semi-trailer having a fifth wheel section at its front end for engagement with the tractor, of a leg for supporting the front end of the body of the semi-trailer and a socket on the body of the semi-trailer alined with said joint for receiving a portion of the leg when in its upright position, substantially as and for the purpose specified.



1,394,738. SWITCHING-VALVE. CHARLES WILLIS KINTNER, Wellsburg, and GEORGE Z. SMITH, Follansbee, W. Va., assignors to Fuller-Lehigh Company, Fullerton, Pa., a Corporation of Pennsylvania. Filed Feb. 14, 1919. Serial No. 276,953. 4 Claims. (Cl. 251—13.)

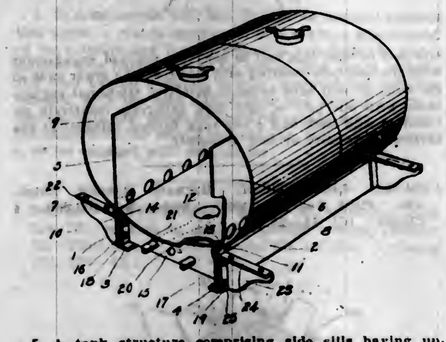
1. In a valve structure, a member provided with a valve seat and a plurality of outlets, a disk valve, a pivot pin carried by the disk valve and extending in a plane approximately parallel to the plane of the disk valve, an arm having an eye receiving the pin, the eye having its opposite ends flared outwardly to allow the pin and thereby the valve to have rocking movement relative to the arm, a shaft to support the arm to allow the latter to oscillate substantially parallel to the plane of the valve, means to operate the shaft to open or close a selected outlet, said valve having its periphery beveled to a knife edge so as to have a shearing action on the valve seat and to

cut through any matter adhering to the seat, and a set screw impinged against the shaft to adjustably hold the valve to its seat.

1,394,739. REAR WHEEL FOR MOTOR-VEHICLES. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor of one-half to Harry F. Hughes, Brooklyn, N. Y. Filed Feb. 2, 1920. Serial No. 355,729. 5 Claims. (Cl. 301—6.)

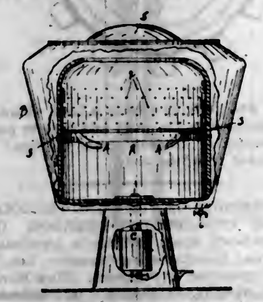
2. A disk wheel embodying a rim, a hub, a brake drum rigidly mounted on the rim, and a disk secured to the hub and extending to and secured to the brake drum.

1,394,740. NUT-LOCK. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor of one-half to Harry F. Hughes, Brooklyn, N. Y. Filed Feb. 27, 1920. Serial No. 361,802. 6 Claims. (Cl. 151—38.)



1. An assemblage of the class described embodying a nut provided with a flat base, a base washer, a split spring lock washer positioned intermediate the base of the nut and the base washer and in direct engagement with the base washer and the flat base of the nut, and means, integral with the base washer, for securing the base washer and lock washer to the nut, so that they may be handled as a unit, while permitting of manual rotation between the parts.

1,394,741. NUT-LOCK. WILLIAM H. KLOCKE, Woodhaven, N. Y., assignor of one-half to Harry F. Hughes, Brooklyn, N. Y. Filed June 8, 1920. Serial No. 387,297. 4 Claims. (Cl. 151—38.)

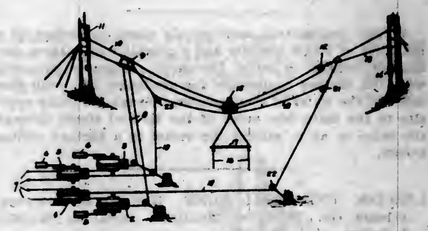


1. An assemblage of the class described embodying a nut provided on a plurality of its faces with grooves or channels, a spring lock washer positioned adjacent the base of the nut and a base washer positioned adjacent the distant face of the lock washer, in combination with a plurality of arms bent in the direction of the nut and flanged over the distant face thereof, said arms occupying the channels or grooves in the faces of the nut, and a plurality of fingers associated with the base washer and extending in a direction of the lock washer and overlying the outer circumference thereof, said fingers coöperating with the arms to maintain the lock washer and nut in associated alined relation.

1,394,742. VEHICLE-TANK STRUCTURE. ANDREW A. KRAMER, Kansas City, Mo. Filed Apr. 14, 1920. Serial No. 373,977. 5 Claims. (Cl. 280—5.)

5. A tank structure comprising side sills having upwardly extending integral surge sheets, and a tank secured to the side sills below the surge sheets.

1,394,743. CENTRIFUGAL BASKET. EMERY E. LA DUKE, Salt Lake City, Utah. Filed Aug. 2, 1921. Serial No. 489,242. 4 Claims. (Cl. 233—2.)



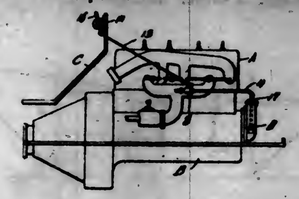
1. In a centrifugal basket the combination with a stationary casing of a cup-shaped metal basket having perforation in the upper portion of its side wall; and a flange member secured on the inner wall of said basket adjacent the lower of said perforations.

1,394,744. GRAVITY LABELING-MACHINE. ANTONIO LAPATA, Harbor City, Calif. Filed Aug. 23, 1920. Serial No. 405,831. 1 Claim. (Cl. 216—58.)

A labeling machine for cylindrical containers comprising an inclined way, a paste reservoir, spaced rollers in said reservoir with their surfaces tangential to said way, an impeller having arms disposed in the path of travel of said containers so that movement of the containers will rotate said impeller, said impeller being geared to said rollers so as to rotate the latter and carry paste to the surface of the container, a label holder disposed so that said containers will roll over and in contact with the top of a stack of labels therein, and pick up labels, and means on said holder to advance said stack, said means being actuated by the travel of said container.

1,394,745. LOGGING APPARATUS. DAVENPORT LAWSON, Elk, Calif., assignor to Goodyear Redwood Co., Elk, Calif., a Corporation of Maine. Filed Jan. 17, 1921. Serial No. 437,692. 10 Claims. (Cl. 212—90.)

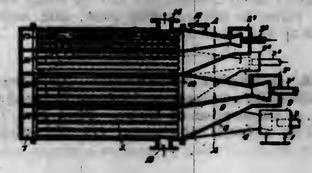
1. A logging apparatus comprising a pair of drums, means for operating the drums, a tail block removed from the drums, a lifting line passing around the tail block and with an end wound on each drum, and a traveler supported on both spans of the lifting line.



1,394,746. PROCESS OF MANUFACTURE OF A PLASTIC PRODUCT. CHARLES EMILE HENRI LEROY and FÉLIX MARIE JOSEPH ANTOINE CLAIRBEAUX, Versailles, France. Filed July 18, 1919. Serial No. 311,750. 2 Claims. (Cl. 18—48.)

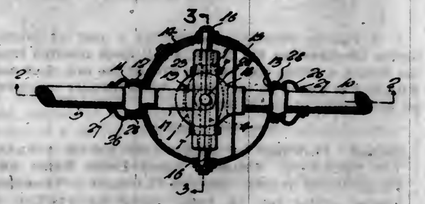
1. A process of manufacturing a plastic product comprising: melting gelatin or glue, mixing it during fusion, with glycerin or complementary product, casting the mass in plates or blocks which are cut in small pieces, drying these pieces, transforming the mass in plates, dipping it in formol and drying it thoroughly.

1,394,747. ATTACHMENT FOR INTERNAL-COMBUSTION ENGINES. BERT M. LITTLE, Hamilton, Ontario, Canada. Filed Dec. 2, 1920. Serial No. 427,900. 2 Claims. (Cl. 123—119.)



1. An attachment for internal combustion engines including an induction pipe, one end of which is extended into the breather pipe of the engine and equipped with a

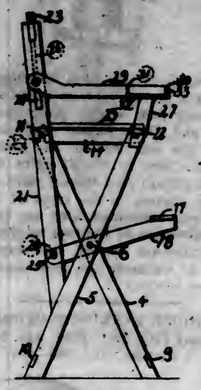
funnel-shaped head to direct the hydro-carbon fumes from said breather pipe into said induction pipe, the opposite



end of said induction pipe being extended into the intake manifold of the engine substantially as described.

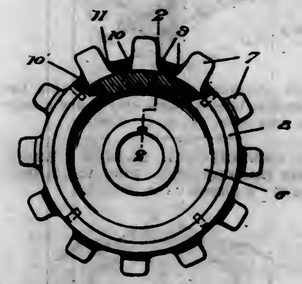
1,394,748. AIR-PUMP FOR CONDENSERS. FREDRIK LJUNGSTRÖM, Brevik, Lidingön, Sweden, assignor to Aktiebolaget Ljungströms Angturbin, Stockholm, Sweden, a Corporation. Filed May 28, 1919. Serial No. 300,295. 3 Claims. (Cl. 230—13.)

1. The combination with an air pump consisting of a plurality of steam ejectors and a plurality of surface condensers coupled in series therewith, of means connected with the surface condensers for rendering the main flow order of the water of condensation through the pump opposite to the main flow order of the air and steam through the same so as to subject the steam to a further cooling action.



1,394,749. UNIVERSAL JOINT. RICHARD H. LOWNDES, Atlanta, Ga. Filed Dec. 20, 1920. Serial No. 431,952. 6 Claims. (Cl. 64—95.)

6. A universal joint comprising a casing or guide having end sections positioned in overlapping relation and having neck extensions, a securing pin pivotally connecting said end sections, shaft sections extending through and fulcrumed in the neck extensions, a yoke bar rotatably and slidably mounted upon said yoke bar, and heads at the inner ends of the shaft sections having arms pivotally connected with the ring and yoke bar.

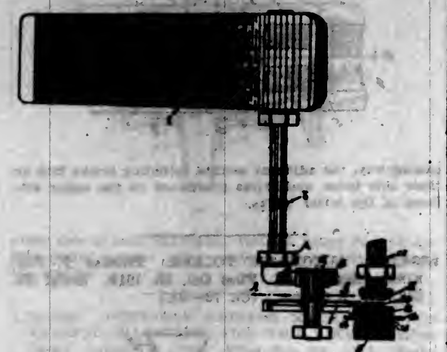


1,394,750. FURNITURE. ARTHUR H. LUEDDE, St. Louis, Mo. Filed May 16, 1921. Serial No. 470,171. 1 Claim. (Cl. 155—145.)

A chair having two pairs of legs, each pair rotatively secured to each other and to a rod which rod holds each pair of legs in constant spaced relationship, a seat rotatively secured to one pair of said legs and in selective notching engagement with the other pair of said legs, a foot-rest secured together by two members in rotative engagement on the rod, on which said pair of legs are rotatively secured, a back, said back rotatively secured to

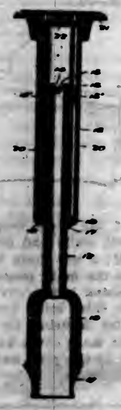
one pair of said legs and in selective notched engagement with the members securing said foot-rest, the lower ends of the rails of said back being in selective frictional engagement with one pair of said legs, arm-rests rotatively secured to said back and a toy rack formed integral at the external extremity of said arm-rests.

1,394,751. GEAR-WHEEL. RICHARD MARLOW, Ralph, Ala. Filed Aug. 10, 1920. Serial No. 402,659. 4 Claims. (Cl. 74—28.)



1. A gear wheel having a body, a band embracing same, and teeth anchored in the band and held in place by the body and removable inwardly from the band when the band is removed from the body.

1,394,752. METHOD OF TREATING CELLULOSE ACETATE AND THE PRODUCT THEREOF. GEORGE W. MILES, Sandwich, Mass., assignor to American Cellulose and Chemical Manufacturing Company, Ltd. New York, N. Y., a Corporation of Delaware. Filed Nov. 14, 1919. Serial No. 338,131. 4 Claims. (Cl. 106—40.)

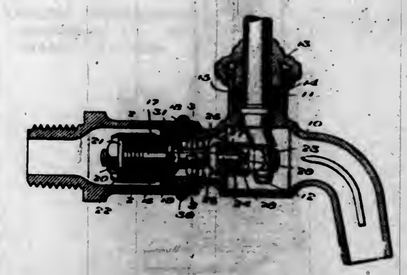


1. The method of rendering cellulose-acetate receptive to uniform distribution of glycerin in small quantities throughout the acetate, which consists in first heating cellulose acetate in admixture with an abundance of glycerin, then eliminating glycerin by washing with water.

1,394,753. MOTORCYCLE-ENGINE STARTER. ANTOINE DIDIER MOULIN, Paris, France. Filed Aug. 26, 1920. Serial No. 406,261. 2 Claims. (Cl. 74—54.)

1. In combination with the shaft of an internal combustion motor, a clutch member on said shaft, a gear mounted for rotation and for movement to and from the clutch member and having means to engage said clutch member and also having a flange, a gear mounted for rotation, engaged with the first named gear and having a cam to contact with the flange of the first named gear, a pinion revoluble with the second named gear, and a lever having a sector engaged with said pinion.

1,394,754. SERVICE-BOX. ROBERT H. MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed May 11, 1917. Serial No. 167,950. 2 Claims. (Cl. 137—13.)

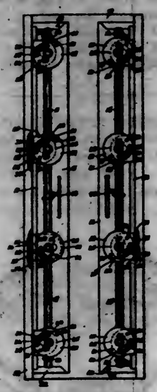


1. The combination, in a service box, of a lower member having an enlarged housing at its lower end and a reduced section extending therefrom, an upper member of larger diameter than said reduced section, which upper member has an unobstructed interior to permit free longitudinal adjustment of that member relative to said reduced section, an annularly grooved head at the lower end of said upper section closely embracing said reduced section to make a snug joint therewith, a friction ring seated in the annular groove of said head to grip said reduced section and maintain the parts in adjusted position, and a head carried at the upper end of said reduced section and interlocked with said upper section against rotation but free to move longitudinally therein.

1,394,755. COMBINED FOUNDATION-PLATE AND TEMPLET. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Aug. 27, 1919. Serial No. 320,187. 13 Claims. (Cl. 269—8.)

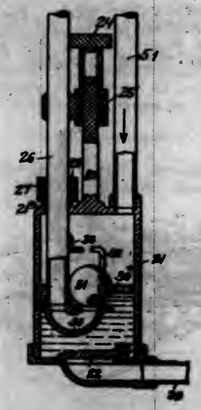
1. A combined foundation plate and templet comprising a body portion having the required gage opening therein and supporting lugs rising from said plate.

1,394,756. ELASTIC-VALVE STEM. PHILIP MUELLER and ANTON C. SCHUERMANN, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Aug. 27, 1919. Serial No. 320,256. 5 Claims. (Cl. 251—40.)



3. In a cock or faucet of the Fuller ball type, the combination of a cock body having a valve seat, an elastic ball valve, an eccentric valve operating stem, an eccentric strap on said stem, a telescope connection between said valve and strap, and a spring in said connection to permit said valve to be brought yieldingly against its seat.

1,394,757. EMERY-CLOTH HOLDER. HENRY MÜLLER, Waterbury, Conn. Filed Mar. 17, 1921. Serial No. 453,106. 4 Claims. (Cl. 51—187.)



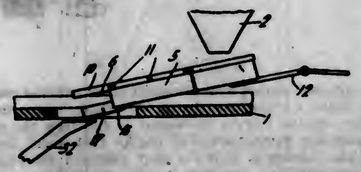
1. An emery-cloth holder, consisting of two uniform block-members, each formed with a centrally-arranged longitudinal groove, clamps mounted in each member and adapted to clamp the opposite edges of a strip of abrasive

material, eyes mounted on the respective members, a spindle adapted to pass through said eyes, whereby the two

block-members are connected together and a handle applied to said spindle.

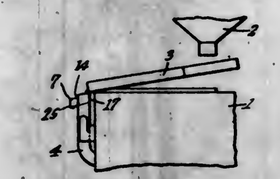
1,394,758. LIQUID-DISPENSING APPARATUS. EDWARD E. MURPHY, Winchester, Mass. Filed July 28, 1916. Serial No. 111,827. 11 Claims. (Cl. 225—21.)

1. In apparatus of the class described, a measuring chamber provided with an outlet arranged to be raised and lowered relatively to said chamber, a valve arranged to seat on said outlet, said valve being movable from its seat by the rise of liquid in said chamber, and guiding means for insuring the return of said valve to its seat when the valve is permitted to descend.



1,394,759. BRICK. JAMES ALEXANDER PAPOT, Tucson, Ariz. Filed Dec. 11, 1920. Serial No. 429,991. 2 Claims. (Cl. 72—102.)

1. In a wall construction, bricks arranged to provide opposed stretcher rows, alternate built-up sections disposed between the stretcher rows, one of said sections including bricks laid on their side faces and having their adjacent edges disposed in spaced relation to provide a

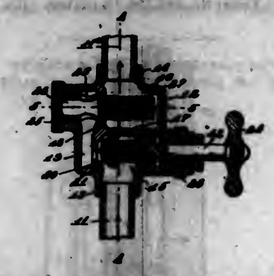


passageway, the adjacent section including bricks laid on their side faces, and bricks positioned on the upper side faces of the latter bricks.

1,394,760. AUTOMATIC TOLLER. THOMAS F. PERKINS, Atlanta, Tex. Filed Oct. 28, 1919. Serial No. 332,787. 3 Claims. (Cl. 73—21.)

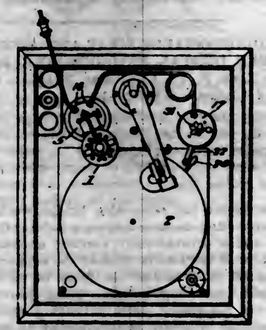
1. In a grinding mill, a main chute; a reduced toll chute receiving material from the main chute; means for regulating the amount of material received by the toll chute; and means independent of said regulating means, for closing the toll chute completely with respect to the main chute, at the will of an operator.

1,394,761. GRAIN-TOLLER. THOMAS F. PERKINS, Atlanta, Tex. Filed Nov. 1, 1919. Serial No. 335,055. 3 Claims. (Cl. 73—21.)



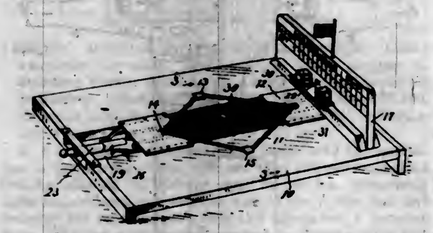
1. In a device of the class described, a main chute having front and rear walls and provided with an opening in the front wall; a toll chute located in the opening and extended across the main chute, the toll chute comprising members having sides, overlapped bottoms and overlapped ends, the sides being provided with outstanding wings; means for securing the wings adjustably to the front wall of the main chute and means for securing the ends adjustably to the rear wall to permit a change in the width of the chute.

1,394,762. COMBINED STOPCOCK AND STRAINER. ANTON C. SCHUMMANN, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed May 21, 1918. Serial No. 235,796. 10 Claims. (Cl. 210—166.)



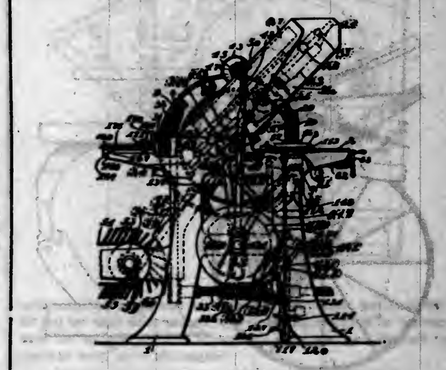
1. A fitting of the class described, comprised a casing having inlet and outlet ports, a diaphragm dividing said casing into inlet and outlet chambers, a valve controlling

flow through one of said chambers, a strainer on one side of said diaphragm, and a hollow ported member on the



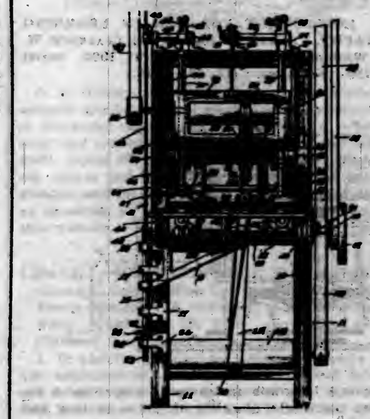
other side of said diaphragm, through which flow passes, said ported member being removable to permit access to the strainer.

1,394,763. PORTABLE DRIVING MECHANISM FOR TALKING-MACHINES AND THE LIKE. WALTER SCOTT, Lakewood, Ohio. Filed Feb. 19, 1921. Serial No. 446,232. 8 Claims. (Cl. 172—179.)



1. In an independent operating unit for talking machines and the like, the combination with a turntable and the usual hand lever for starting and stopping said turntable, of a portable motor adapted to be mounted to drive said turntable, and a portable switch mechanism for said motor, positioned adjacent to and adapted to be controlled by the aforesaid hand lever.

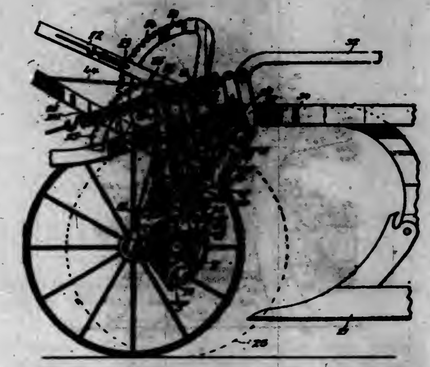
1,394,764. BASEBALL GAME. NICHOLAS I. SHEEHAN, Lakewood, Ohio. Filed Dec. 29, 1919. Serial No. 347,982. 16 Claims. (Cl. 46—61.)



1. A game comprising a playing board having a course for a projectile, impelling means for the projectile located adjacent one end of the course, a movable indicating device, and means for shifting the same comprising a movable element supported adjacent the other end of the course and having a part thereof in the plane of movement of the projectile so that it may be actuated thereby.

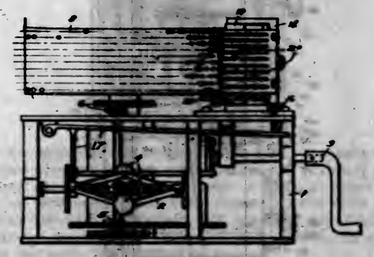
1,394,765. PRINTING-PLATE-TRIMMING MACHINE. JACOB SIMPSON, Washington, D. C. Filed Feb. 20, 1919. Serial No. 278,228. 69 Claims. (Cl. 29—21.)

1. A machine for trimming plates, including a carrier, means for centering a plate upon the carrier at one position of the carrier, and cutters for trimming the plate at another position of the carrier, said cutters being adjustably mounted and being operatively connected with the centering means so as to be automatically positioned in the proper manner for cutting when the plate is centered upon the carrier.



1,394,766. BORING-MACHINE. CHARLES ALVAH SMITH, Brattleboro, Vt. Filed July 15, 1919. Serial No. 310,923. 7 Claims. (Cl. 144—93.)

1. A boring machine comprising a tool supporting frame, a table swingingly connected at one end to said tool supporting frame for movement about a vertical axis to and from the same, a reciprocating platform mounted



on said table, and a platform counterbalancing device mounted in part on said table and in part on said frame and having means whereby the same is operative regardless of the position of said table.

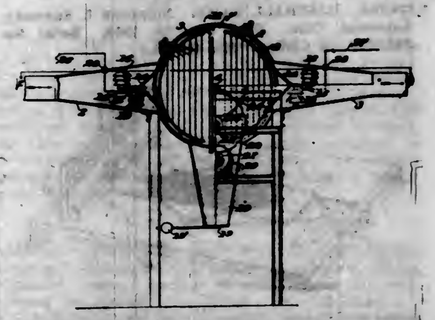
1,394,767. PLOW-LIFT. Henry S. Smith, Dixon, Ill., assignor, by mesne assignments, to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 14, 1918. Serial No. 266,690. 7 Claims. (Cl. 97—54.)

1. Power lift mechanism for agricultural implements, comprising a main frame, an earth-turning body mounted on said frame, a ground wheel for supporting said frame, an arm having one end pivotally mounted in said frame and having the other end provided with means rotatably securing said ground wheel, a link pivotally connected at one of its ends to said frame, a second link pivotally connected at one of its ends to said arm, the other ends of said links being pivotally connected together, and means actuated by said ground wheel for applying force to said links for rocking said arm in said frame to elevate the latter.

1,394,768. INSTRUMENT FOR USE IN LEARNING TELEGRAPHY. James B. Smith and Clarence W. Burgess, Washington, D. C. Filed May 21, 1920. Serial No. 383,189. 8 Claims. (Cl. 178—115.)

1. A learner's telegraph instrument, comprising a rotatable drum carrying a plurality of circles of long and short contacts, an equal number of contact arms arranged to bear on said contacts, means engaging all of said arms and shaped to allow only one of them to occupy operative position at any one time, and connections between said drum and means whereby the latter is moved from time to time to bring another arm into operative position.

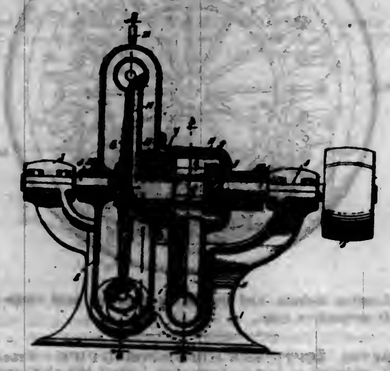
1,394,769. DRILL-HEAD FOR OIL-WELLS. Geo Stevenson, Houston, Tex., assignor to C. B. Reed. Filed May 18, 1920. Serial No. 382,256. 6 Claims. (Cl. 255—61.)



1. A deep well rotary drilling apparatus comprising a head, roller cutting means mounted thereon, and a cutter pivotingly mounted on the head and normally cutting at a point beyond the roller cutting means and receding to bring said roller cutting means into action on encountering hard material, substantially as described.

1,394,770. HORIZONTALLY-SPLIT ATTACHMENT FOR REMOVABLE DENTAL BRIDGEWORK. John Yerkian, New York, N. Y. Filed Mar. 2, 1921. Serial No. 449,026. 4 Claims. (Cl. 32—12.)

1. An attachment for removable bridge work comprising a solid supporting member having a substantially vertical portion, and a substantially vertical anchoring member secured to said vertical portion of the supporting member and adapted to fit within an inlay of an anchoring abutment, said anchoring member being provided with a substantially horizontal split extending through said anchoring member whereby it is adapted to engage the inlay in which it is adapted to fit with an adjustable frictional engagement.



1,394,771. APPARATUS FOR THE ELECTRICAL TREATMENT OF GASES. Harold J. Ehrhard, Easton, Pa., assignor to Research Corporation, New York, N. Y., a Corporation of New York. Filed May 7, 1918. Serial No. 233,101. 10 Claims. (Cl. 183—7.)

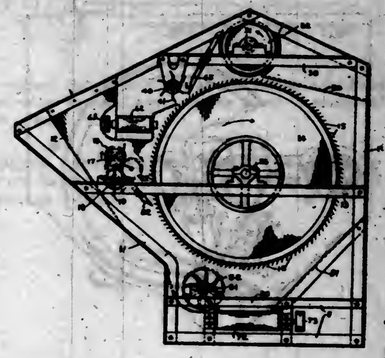
1. Apparatus for the electrical treatment of gases, comprising a movably mounted disk-shaped electrode, a

stationary filamentary electrode substantially parallel to the side of the disk and means for passing the gas to be treated through the space intermediate the said electrodes.

1,394,772. TURBINE. Frederick Ernest Kuhn, Clinton, Iowa. Filed June 28, 1920. Serial No. 392,157. 2 Claims. (Cl. 253—53.)

1. A turbine, comprising a stator, a rotor in the stator having a circumferential passage discharging into the stator and having an axial inlet passage and a radial passage connecting the axial inlet with the inlet end of the circumferential passage, abutments in the circumferential passage, valves in the circumferential passage adapted when in closed position to but partially close the passage, and governor arms connected to said valves and operated b ythe rotary motion of the rotor.

1,394,773. ANTIDIMMING COMPOSITION. Harry A. Kuhn, Edgewood, Md. Filed Jan. 24, 1921. Serial No. 439,665. 11 Claims. (Cl. 134—27.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)



5. An anti-dimming composition comprising the reaction products of a salt of sulfonated rape oil, an alkali, a mineral oil and a binder.

1,394,774. ANTIDIMMING COMPOSITION. Harry A. Kuhn, Edgewood, Md. Original application filed Jan. 24, 1921, Serial No. 439,665. Divided and this application filed May 13, 1921. Serial No. 469,394. 4 Claims. (Cl. 134—27.) (Filed under the act of Mar. 3, 1883, 22 Stat. L., 625.)

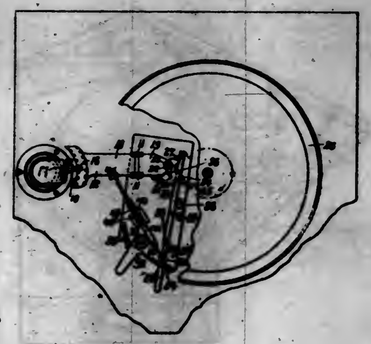
1. An anti-dimming composition comprising the reaction products of a salt of sulfonated cotton seed oil, an alkali, a mineral oil and a binder.

1,394,775. MACHINE FOR TREATING COTTON. James Franklin Leverino, Atlantic City, N. J., assignor to Standard Cotton Company of America, a Corporation of Delaware. Filed Nov. 12, 1919, Serial No. 337,390. Renewed July 22, 1921. Serial No. 486,805. 3 Claims. (Cl. 19—0.)

3. A machine for treating cotton comprising in combination a supporting frame and movable devices supported thereby adapted to operate upon the cotton, comprising agitators adapted to break the hull of the cotton boll and transfer the same onward into the apparatus, a rotating drum provided with fingers adapted to receive same and carry same onward, a knife adapted to scrape the fragments of hull and trash from the cotton as the same is carried onward by said rotating drum, rotating fingers adapted to take up said trash, a traveling apron adapted to receive said trash and convey the same out of the apparatus, a doffer brush adapted to remove said cotton from said rotating drum, a second knife adapted to remove from

said rotating drum any trash which may have not been removed by said first named knife, means adapted to convey said cotton out of the apparatus, and means adapted to operate said movable parts.

1,394,776. AUTOMATIC STOP MECHANISM FOR PHONOGRAPHS. Frank D. Lewis, West Orange, N. J., assignor to Pathe Freres Phonograph Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 30, 1919. Serial No. 348,880. 10 Claims. (Cl. 192—116.)

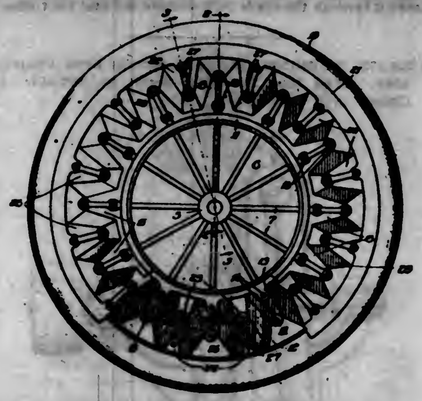


6. In automatic stop mechanism for phonographs, a movable member, control means therefor actuated by travel of the sound reproducing means across a record, a brake lever and retaining means therefor, a motor actuated element, means for releasing said brake lever from its retaining means interposable by movement of said movable member into the path of said motor actuated element, and an extension on said brake lever for operating said movable member.

1,394,777. AUTOMATIC STOP FOR PHONOGRAPHS. Frank D. Lewis, West Orange, N. J., assignor to Pathe Freres Phonograph Company, a Corporation of Delaware. Filed Apr. 26, 1919. Serial No. 293,013. 11 Claims. (Cl. 192—116.)

1. In phonograph stop mechanism, a gravity arm pivotally supported so as to turn in a vertical direction, one end of said arm being adjacent to the base of the tone arm, a member frictionally attached to and turning with the tone arm and having a portion projecting beneath the adjacent end of said gravity arm, said gravity arm having a notch therein for reception of the projecting portion of said member, a bell-crank on the opposite end of said gravity arm, a pin projecting downwardly from the turntable and adapted to turn said bell-crank on its pivot when

that end of the gravity arm is raised bringing the bell-crank into the path of movement of said pin, a notched lever adapted to be operated by the bell-crank when the



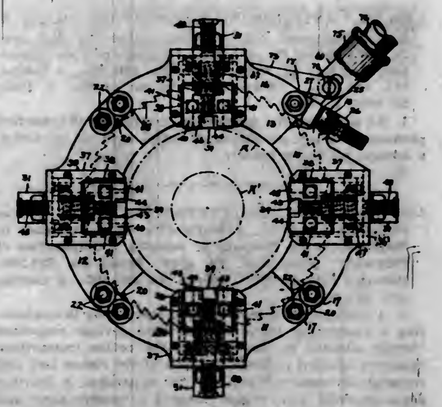
same is turned and a spring actuated brake having means adapted to enter and be releasably held by the notch of said lever.

1,394,778. NUT-LOCK. Joseph Menchen and Axel G. Bergman, New York, N. Y., assignors, by direct and mesne assignments, to Thomas Gordon Hoagland, Rockaway, N. J. Filed Aug. 14, 1920. Serial No. 403,470. 4 Claims. (Cl. 151—25.)

1. A nut-lock comprising a nut having a longitudinal notch in the side of its threaded bolt-opening, and a locking device of resilient strip material substantially loose in said notch canted edgewise to the bolt and prebent to bear against one side of the notch and the threads of the bolt, and acting bodily transversely to itself as a tilting strut between the threads of the bolt and the back or apex of the notch to block relative turning movement in one direction.

1,394,779. CUSHION-WHEEL. John Nelson, Chicago, Ill. Filed May 27, 1920. Serial No. 384,523. 4 Claims. (Cl. 152—36.)

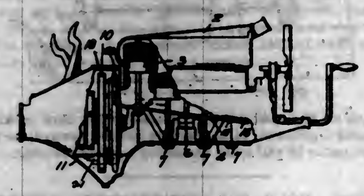
8. A cushion wheel comprising inner and outer rims provided with overlapping sockets arranged in alternation and in spaced relation around the wheel, each of said sockets being open at one side, a zig-zag shaped resilient member seated in said sockets and connecting the rims together, an inner ring having outward projections for closing the open sides of said inner sockets, an outer ring having inward projections for closing the open sides of



said outer sockets, and means for securing said rings to their respective rims.

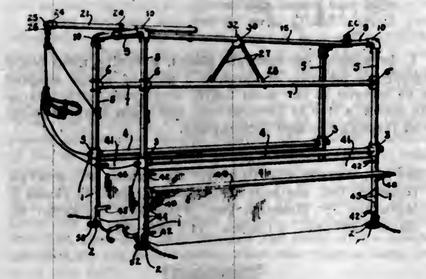
1,394,780. SEPTIC-SEWAGE-DISPOSAL PIPE. Wilbur H. Nicholas, Indianapolis, Ind. Filed Feb. 16, 1921. Serial No. 445,306. 3 Claims. (Cl. 210—6.)

1. A baffle plate for pipe lines having a marginal channel to receive a cementitious agent and being perforate between the channel and center of the plate in one semi-circular area only.



1,394,781. PIPE-CUTTER. Ira W. Nonneman, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Dec. 2, 1918. Serial No. 264,917. 7 Claims. (Cl. 81—190.)

1. The combination of a set of arcuate sections all of them except the extreme sections hinged together to make



an openable frame, means for removably securing the extreme sections together to make the frame continuously annular, radial guideways carried by the sections, housings having ribs occupying the guideways, ratchet teeth on said ribs, pawls therefor carried by the sections, slidable blocks in the housings, knives carried by said blocks, and springs pressing the blocks inwardly.

1,394,782. OILING SYSTEM FOR ENGINES. George F. Nutting, San Francisco, Calif. Filed Apr. 29, 1920. Serial No. 377,494. 5 Claims. (Cl. 184—11.)

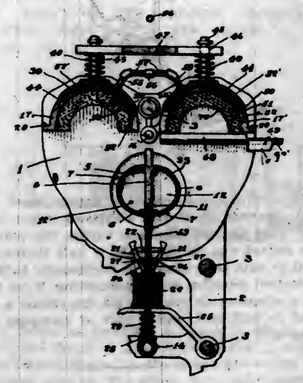
3. An oiling system for internal combustion engines in which oil is centrifugally thrown by a rotary part, including a distributer having an intake disposed adjacent to the said rotary part, and a barrier longitudinally arranged obliquely to the line of movement of and to intercept the moving oil and project it into the said intake.

1,394,783. ANIMAL-STOCK. Thomas Olinger, Holland, Mich., assignor to Holland Lighting and Specialty Co., Holland, Mich., a Corporation of Michigan. Filed Nov. 13, 1918. Serial No. 262,381. 9 Claims. (Cl. 119—106.)

1. A construction of the character described, including a frame having spaced sides and a connecting top portion and provided at the top with a central, longitudinal frame member, and a longitudinally adjustable rod extending along the central frame member and provided with means for adjustably securing it to the same, said rod being adjustable inwardly and outwardly and being extended beyond the frame and provided with means for holding a halter to maintain the head of the animal in a projecting position beyond the frame.

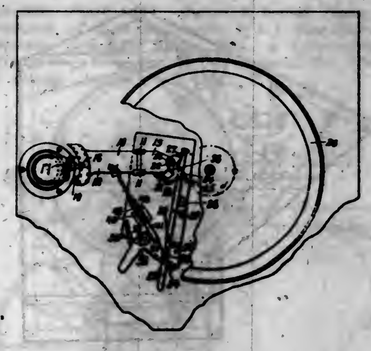
1,394,784. PITMAN CONNECTION. Charles Pearson, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Feb. 27, 1919. Serial No. 279,629. 2 Claims. (Cl. 74—17.)

1. A pitman connection including a body member, a bearing box, and a flexible connection therebetween, said bearing box positioned in close proximity to said body member, said connection formed of a flat steel strip having its sides gradually increasing in width and terminating in a wide straight portion thereby distributing the resiliency



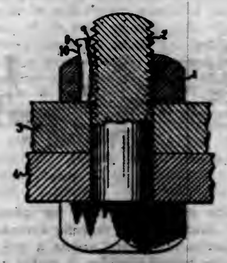
throughout the entire length of said flexible connection in a direction at right angles to the plane of movement of said pitman.

1,394,785. AUTOGRAPHIC REGISTER. Albert P. F. Pico, Kansas City, Mo. Filed June 24, 1918. Serial No. 241,538. 1 Claim. (Cl. 242—68.)



In an autographic register, a housing comprising side walls, having openings at oppositely disposed points therein, a winding shaft revolubly supported at its opposite ends in said openings and having a longitudinally extending slot therein opening at one end of the shaft, and an annular channel adjacent the open end of the shaft and a notched surface adjacent the channel, the said shaft being movable to and from said housing through said openings, a crank fixed at the end of the shaft opposite the annular channel, an arm pivotally mounted to the housing wall and having a latch head adapted to fit about the channel portion to retain the shaft in functional position, and an arm pivotally mounted on the housing wall having a tooth adapted to engage the notched surface of the shaft to prevent unwinding of the same.

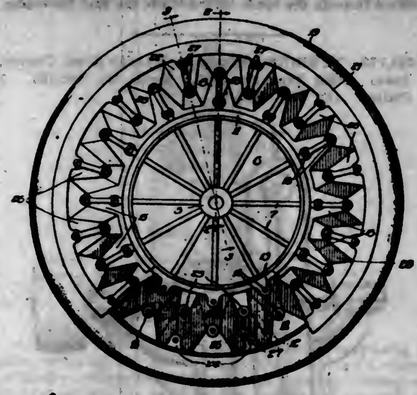
1,394,786. APPARATUS FOR MOLDING ARTICLES FROM PLASTIC MATERIALS. Robert D. Pike, San Francisco, Calif. Filed Mar. 8, 1920. Serial No. 364,125. 19 Claims. (Cl. 92—54.)



1. A molding apparatus comprising a horizontal support, a core associated therewith, a mold plate associated with the core and between which and the core is formed a molding chamber, a horizontal fulcrum for said molding plate, means for swinging the molding plate on its ful-

that end of the gravity arm is raised bringing the bell-crank into the path of movement of said pin, a notched lever adapted to be operated by the bell-crank when the

same is turned and a spring actuated brake having means adapted to enter and be releasably held by the notch of said lever.

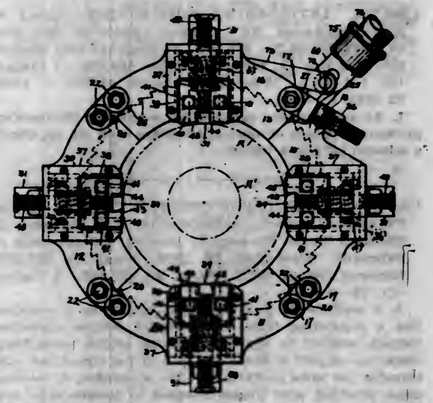


1,394,778. NUT-LOCK. JOSEPH MENCHEN and AXEL G. BERGMAN, New York, N. Y., assignors, by direct and mesne assignments, to Thomas Gordon Hoagland, Rockaway, N. J. Filed Aug. 14, 1920. Serial No. 403,470. 4 Claims. (Cl. 151—25.)

1. A nut-lock comprising a nut having a longitudinal notch in the side of its threaded bolt-opening, and a locking device of resilient strip material substantially loose in said notch canted edgewise to the bolt and prebent to bear against one side of the notch and the threads of the bolt, and acting bodily transversely to itself as a tilting strut between the threads of the bolt and the back or apex of the notch to block relative turning movement in one direction.

1,394,779. CUSHION-WHEEL. JOHN NELSON, Chicago, Ill. Filed May 27, 1920. Serial No. 384,523. 4 Claims. (Cl. 152—36.)

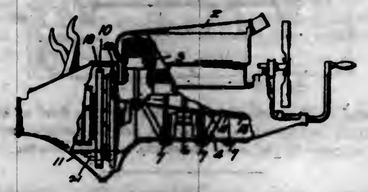
3. A cushion wheel comprising inner and outer rims provided with overlapping sockets arranged in alternation and in spaced relation around the wheel, each of said sockets being open at one side, a zig-zag shaped resilient member seated in said sockets and connecting the rims together, an inner ring having outward projections for closing the open sides of said inner sockets, an outer ring having inward projections for closing the open sides of



said outer sockets, and means for securing said rings to their respective rims.

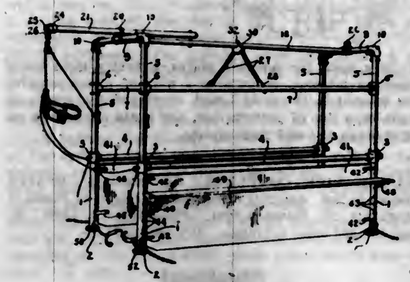
1,394,780. SEPTIC-SEWAGE-DISPOSAL PIPE. WILBUR H. NICHOLAS, Indianapolis, Ind. Filed Feb. 16, 1921. Serial No. 445,306. 3 Claims. (Cl. 210—6.)

1. A baffle plate for pipe lines having a marginal channel to receive a cementitious agent and being perforate between the channel and center of the plate in one semi-circular area only.



1,394,781. PIPE-CUTTER. IRA W. NONNEMAN, Warren, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Filed Dec. 2, 1918. Serial No. 264,917. 7 Claims. (Cl. 81—190.)

1. The combination of a set of arcuate sections all of them except the extreme sections hinged together to make



an openable frame, means for removably securing the extreme sections together to make the frame continuously annular, radial guideways carried by the sections, housings having ribs occupying the guideways, ratchet teeth on said ribs, pawls therefor carried by the sections, slidable blocks in the housings, knives carried by said blocks, and springs pressing the blocks inwardly.

1,394,782. OILING SYSTEM FOR ENGINES. GEORGE F. NUTTING, San Francisco, Calif. Filed Apr. 29, 1920. Serial No. 377,494. 5 Claims. (Cl. 184—11.)

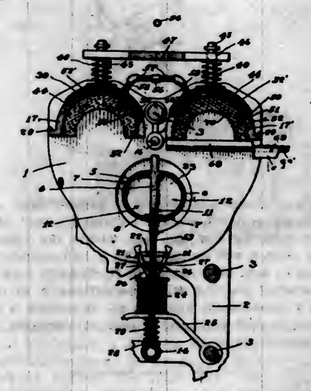
3. An oiling system for internal combustion engines in which oil is centrifugally thrown by a rotary part, including a distributer having an intake disposed adjacent to the said rotary part, and a barrier longitudinally arranged obliquely to the line of movement of and to intercept the moving oil and project it into the said intake.

1,394,783. ANIMAL-STOCK. THOMAS OLINDER, Holland, Mich., assignor to Holland Lighting and Specialty Co., Holland, Mich., a Corporation of Michigan. Filed Nov. 18, 1918. Serial No. 262,881. 9 Claims. (Cl. 119—106.)

1. A construction of the character described, including a frame having spaced sides and a connecting top portion and provided at the top with a central, longitudinal frame member, and a longitudinally adjustable rod extending along the central frame member and provided with means for adjustably securing it to the same, said rod being adjustable inwardly and outwardly and being extended beyond the frame and provided with means for holding a halter to maintain the head of the animal in a projecting position beyond the frame.

1,394,784. PITMAN CONNECTION. CHARLES PEARSON, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Feb. 27, 1919. Serial No. 279,629. 2 Claims. (Cl. 74—17.)

1. A pitman connection including a body member, a bearing box, and a flexible connection therebetween, said bearing box positioned in close proximity to said body member, said connection formed of a flat steel strip having its sides gradually increasing in width and terminating in a wide straight portion thereby distributing the resiliency



throughout the entire length of said flexible connection in a direction at right angles to the plane of movement of said pitman.

1,394,785. AUTOGRAPHIC REGISTER. ALBERT P. F. PICO, Kansas City, Mo. Filed June 24, 1918. Serial No. 241,538. 1 Claim. (Cl. 242—68.)

In an autographic register, a housing comprising side walls, having openings at oppositely disposed points therein, a winding shaft revolubly supported at its opposite ends in said openings and having a longitudinally extending slot therein opening at one end of the shaft, and an annular channel adjacent the open end of the shaft and a notched surface adjacent the channel, the said shaft being movable to and from said housing through said openings, a crank fixed at the end of the shaft opposite the annular channel, an arm pivotally mounted to the housing wall and having a latch head adapted to fit about the channel portion to retain the shaft in functional position, and an arm pivotally mounted on the housing wall having a tooth adapted to engage the notched surface of the shaft to prevent unwinding of the same.

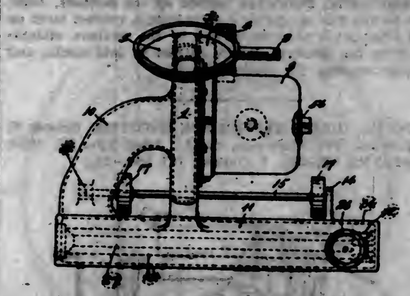
1,394,786. APPARATUS FOR MOLDING ARTICLES FROM PLASTIC MATERIALS. ROBERT D. PIKE, San Francisco, Calif. Filed Mar. 8, 1920. Serial No. 364,125. 19 Claims. (Cl. 92—54.)

1. A molding apparatus comprising a horizontal support, a core associated therewith, a mold plate associated with the core and between which and the core is formed a molding chamber, a horizontal fulcrum for said molding plate, means for swinging the molding plate on its ful-

other to open and close the mold, means for retaining the mold plate in closed position, means for supplying flowing material under pressure to the molding chamber to fill the same to its capacity under said filling pressure, a second chamber communicating with the molding chamber and for receiving material overflowing from said molding chamber, and means within said latter chamber for forcing the material contained therein into the molding chamber, and for compressing the flowing material contained within the molding chamber to express the fluid therefrom and to compress the material within the molding chamber.

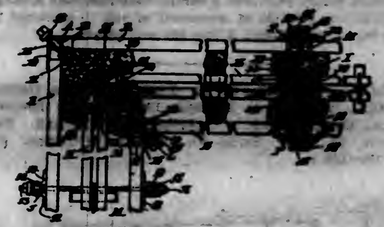
1,394,787. PNEUMATIC TIRE. WINFIELD P. PORTER, New York, N. Y. Filed Sept. 25, 1919. Serial No. 326,180. 12 Claims. (Cl. 152—15.)

1. In a pneumatic tire, a tube having an elastic wall and a series of separate strips of relatively inelastic material, an intermediate portion of each strip lying in the belly portion of the tube and with the terminal portion inclined diagonally of the tube in the same direction on opposite sides thereof.



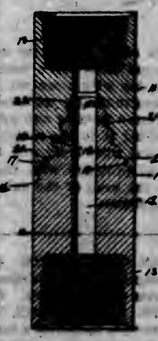
1,394,788. DISPLAY-CLAMP. GEORGE POTSTADA, Oakland, Calif. Filed Nov. 22, 1919. Serial No. 339,788. 1 Claim. (Cl. 248—20.)

An object holder comprising a flanged base, a spring clamp for securing the base to a suitable object, the clamp normally lying against the base within the plane of the flange, a slotted nut on said base, a ball therein, an arm connected to said ball, means to frictionally hold the ball in any desired position while permitting it to be moved through a considerable angle in all directions, a standard connected to said ball, and a pair of clamping members carried by said standard.



1,394,789. CLEANER. HENRY PRELL, Cleveland, Ohio. Filed Nov. 4, 1916. Serial No. 129,512. 5 Claims. (Cl. 15—60.)

3. A vacuum cleaner, comprising a casing having a suction chamber and an elongated nozzle portion having a mouth and communicating at one point in its length with said chamber, said nozzle portion being also provided at another point in its length and above said mouth with an



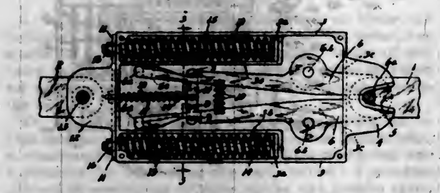
opening to the atmosphere, whereby a free flow of air is produced lengthwise in said nozzle portion toward the suction chamber in the space above the suction covering.

1,394,790. MOLD FOR CONSTRUCTING CONCRETE HOUSES AND OTHER BUILDINGS. WILLIAM HENRY ROSENMEYER, Ottawa, Canada. Filed June 2, 1920. Serial No. 386,913. 3 Claims. (Cl. 25—131.)

1. In a mold for concrete plates, a cavity mold board supporting member, comprising a pair of plates adapted to be secured to the mold board, overlapping brackets on the plates, a line of perforations, and a pin adapted to extend through the said perforations.

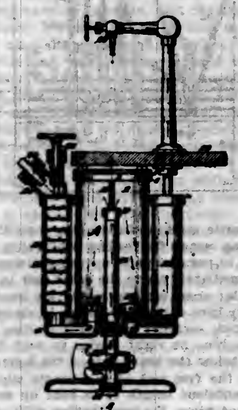
1,394,791. PIPE-COUPLING. BENJAMIN F. BUNYAN, Houston, Tex., assignor of fifty-one per cent. to James P. Markham, Jr., Houston, Tex. Filed July 21, 1920. Serial No. 397,935. 2 Claims. (Cl. 285—151.)

2. A coupling for interconnecting implements comprising two sections, one of said sections being tubular and being



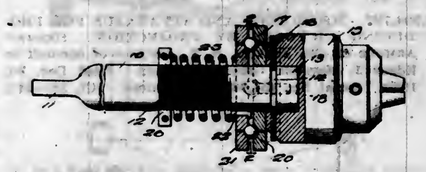
formed with a substantially conical socket, said socket adjacent its outer end being formed with a centrally and longitudinally inclined, annular seat, and then being formed with a plurality of relatively coarse screw-threads, the socket terminating at its inner end in an annular, beveled seat, extending to and intersecting the bore of the tubular section, the other section having a substantially conoidal prolongation adapted to be inserted in the socket, said prolongation at its base being formed with a longitudinally and axially inclined seat to confront the first named seat on the other section and longer than the said first named seat, and beyond this seat being formed with a plurality of relatively coarse threads engaging the screw-threads of the other section and at its extremity being formed with an annular, beveled seat to confront the second named seat on the first named section and extending to the extremity of the second named section, said screw-threads being rounded in cross section.

1,394,792. COMBINATION-LOCK. WILLIAM J. H. RUSCHMEYER, Toledo, Ohio. Filed Apr. 12, 1920. Serial No. 373,068. 1 Claim. (Cl. 70—53.)



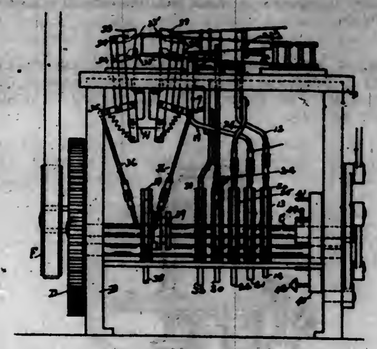
In a combination lock, a cylindrical shell having a slot, a plurality of cylinders having corrugated inner surfaces formed by substantially convex semi-cylindrical surfaces forming corners between adjoining convex surfaces and having designated indicia located around the outside of the cylinders and so that one or the other of the indicia may register with the slot of the shell, a plurality of disks; each disk having a thickness less than the height of a cylinder, the disks located at the ends of the cylinders and so that the disks of adjoining cylinders will be located in spaced relation, one end of each cylinder being provided with projecting flanges located between adjoining convex surfaces of the cylinder, each disk having a corrugated surface corresponding to the corrugated surface of the cylinders and formed by a plurality of adjoining semicylindrical concave surfaces, the points formed between the adjoining concave surfaces at one end thereof placed against the flanges between the concave surfaces of the cylinder, each disk being provided with an axial opening and a slot extending therefrom, the cylinders being rabbeted at their ends so as to fit adjoining cylinders, a key member located in the axial openings of the disks and having projecting tongues adapted to register with the slots and pass through the slots, and a means operated by the key member when the tongues have entered the slots.

1,394,793. AUTOMATIC SAFETY ADJUSTABLE TRACTOR-COUPLING. FRANK M. RUTTEN, Grand Forks, N. D., assignor to Albert R. Hilsabeck, Grand Forks, N. D. Filed Mar. 24, 1921. Serial No. 454,966. 6 Claims. (Cl. 213—67.)



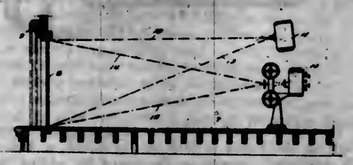
1. A tractor hitch having in combination two pivoted members having their front ends held in engagement and recessed to provide an opening for receiving a draft pin, a casing member carrying said pivoted members, a member yieldingly connected to said casing member and cam means connected to said last mentioned member and adapted to move the rear ends of the pivoted members together to separate the front ends thereof and release the draft pin.

1,394,794. COMBINATION CARBONATOR AND FILLER. ELI E. SAGER and OSCAR L. KING, San Francisco, Calif. Filed Mar. 20, 1919. Serial No. 283,883. 2 Claims. (Cl. 261—19.)



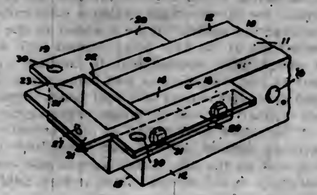
2. In a device of the character described, a tank having a base, a pair of pipes supported on the base on opposite sides of the tank and extending alongside the latter, conduits connecting the lower ends of the pipes to the tanks, means within the pipes for mixing the liquid and gas passing therethrough, and dispensing means connected to the upper ends of the pipes.

1,394,795. DRILL OR TAP HOLDER. PATRICK SAUVE, Flint, Mich. Filed Oct. 2, 1919. Serial No. 327,902. 2 Claims. (Cl. 10—135.)



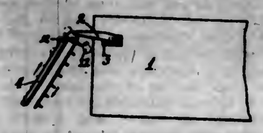
2. In a device as specified, a shank, a chuck mounted to turn on the shank, a disk on the chuck, a disk on the shank, adjustable means on the shank for urging the disk on the shank against the other disk, said disks having corresponding ball seats formed in their adjacent faces and one disk having cam faces leading from the ball seats, and balls interposed between the disks adapted to normally rest in said seats to interlock the disks for turning as a unit and adapted to ride over said cam faces when undue resistance to turning is offered one of the disks.

1,394,796. AUTOMATIC MACHINE FOR MAKING METALLIC FRAMES FOR WREATHS. CHARLES SMITH, Providence, R. I. Filed Sept. 2, 1920. Serial No. 407,731. 5 Claims. (Cl. 140—71.)



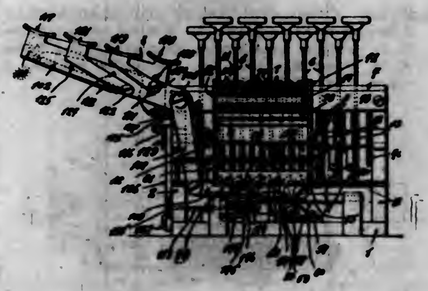
1. In an automatic machine for making metallic frames for wreaths having means for feeding a plurality of wires into the machine in parallel pairs spaced a distance apart with one pair immediately above the other pair in skeleton form of rectangular cross section, means for bending said wires concurrently into concentric circles in skeleton form of rectangular cross section; means for feeding a single wire into the machine at right angles to said first mentioned wires and below the lower pair of the latter; means for cutting from the free end of said single wire successively pieces of sufficient length to be bent up around all said first mentioned wires, the combination with said parts of a vertically reciprocating arbor arranged and adapted on its upward movement to bend said cut off pieces into inverted V-shape midway of their length; oppositely disposed pliers alined with each other and each having a straight jaw and a curved jaw, each jaw separately operatively connected to a common shaft whereby said jaws are actuated in unison to restore said cut off pieces to their normal straight form, bend said pieces around the lower pair of the first mentioned wires and turn the ends of said pieces up against the upper pair of said first mentioned wires; means for bending the upturned ends of said pieces around the upper pair of said first mentioned wires, means for cutting all said first mentioned wires simultaneously at a common point, means for actuating the whole from a common shaft, and supporting means for the whole.

1,394,797. METHOD OF AND APPARATUS FOR PRODUCING PICTURES BY PROJECTION. HERMAN ARMOUR SMITH, Yonkers, N. Y., assignor of one-half to Edgar J. Marston, Greenwich, Conn. Filed Dec. 30, 1920. Serial No. 434,037. 23 Claims. (Cl. 88—24.)



1. The method of producing the appearance of solidity or relief in projected pictures, wherein the images of a plurality of sharply focused photographs, each representing subject-matter unlike to that of the other disposed in a distinct zone and having a different focal distance, are superposed upon a screen.

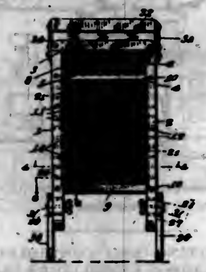
1,394,798. WAGON-BODY. JOHN STRAW, New York, N. Y., assignor of one-third to James McDermott and one-third to Walter Roberts, Richmond Hill, N. Y. Filed Aug. 14, 1919. Serial No. 317,497. 3 Claims. (Cl. 296—48.)



1. In a wagon body construction, a sill having a flat upper surface, a U-shaped stake socket member comprising side legs embracing the sides of the sill and an end piece integral with one another, the legs and end piece comprising horizontal flange members flush with the top surface of the sill, said end piece being spaced from the end of the sill forming a stake socket, and means passing through said legs to lock the socket member to the end of the sill.

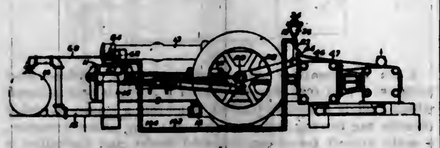
1,394,799. SAFETY CAN-FEED CHUTE. ALBERT R. THOMPSON, San Jose, Calif., assignor to Anderson-Barngrover Mfg. Co., San Jose, Calif., a Corporation of California. Filed Apr. 3, 1920. Serial No. 370,936. 3 Claims. (Cl. 193—29.)

1. A can-feed chute having in one section of its length an opening in its floor of a width greater than the diameter and but little less than the length of the cans to be fed and said chute having an approach section to said open-floor section adapted to direct a can rolling true therein to bridge said floor opening, the floor of said approach section rising to a plane above that of the open-floor section and terminating in a drop to said open-floor section.



1,394,800. CALCULATING-MACHINE. FERDINAND J. TILLMAN, St. Louis, Mo. Filed May 15, 1916. Serial No. 97,641. 27 Claims. (Cl. 235—63.)

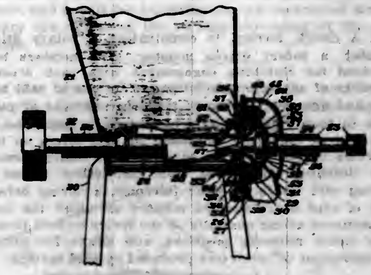
2. In a calculating machine, an accumulator having total wheels, a traveling carriage movable step by step



to provide for the transmission of movement to the different total wheels, keys, key controlled devices for operating said total wheels, an escapement device adapted to move said carriage one step in response to each key movement, a latch device for locking said escapement device in an inoperative condition during several key operations to provide for the consecutive addition of said several numbers of the same order, and means for retaining said latch device in an inoperative position to allow said carriage to advance one step in response to each key operation.

1,394,801. WASHBOARD. GEORGE BERNARD WHEELER, New York, N. Y. Filed Sept. 11, 1920. Serial No. 409,704. 3 Claims. (Cl. 68—29.)

2. In a washboard of the character described, a frame provided with grooves, and having apertures therethrough, metallic strips provided with apertures acting as bearings fixed in said grooves, grooved rollers, each having a metallic pin rigidly fixed to one end, said rollers provided at the opposite end with a movable bearing pin having a flat head at one end, said pin loosely positioned by means of a sleeve through which said pin may extend so as to engage a corresponding aperture in the bearing strip to allow a revolving movement of the roller, the flat head of said bearing pin engaging and acting upon a spiral spring loosely fixed in a socket in the end of the roller.

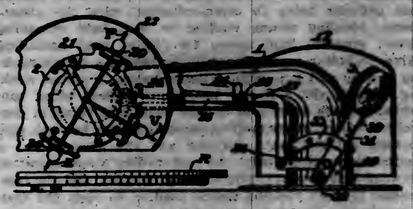


1,394,802. UNLOADING APPARATUS FOR COMPRESSORS. WADE H. WINEMAN, Chicago, Ill., assignor to Sullivan Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1915. Serial No. 1,875. 64 Claims. (Cl. 230—24.)

1. In combination, a compressor having an intake, an unloading valve therein, a compressor driving motor, and means for utilizing a vacuum formed upon closure of said valve to control said motor, said means having provision for relieving said motor of said vacuum control prior to the opening of said valve.

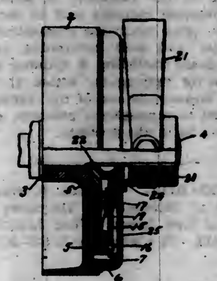
44. The combination with a compressor having an intake and an unloading valve for controlling said intake; a compressor-driving engine having valve mechanism and a governor for controlling the valve cut-off; a governor and cut-off controlling cylinder having two pistons therein, one connected to the governor to modify its action and the other connected to the valve-mechanism to change its cut-off, said pistons having a space therebetween communicating with said intake, one end of said cylinder being closed to form a chamber between the closed end and the first-mentioned piston, and the other end of said cylinder being in communication with the atmosphere; yielding means tending to open said unloading valve; pressure fluid means for closing said unloading valve, including a pressure cylinder having a piston working therein and a vacuum cylinder having a piston working therein, the last two mentioned pistons being connected to each other and to said unloading valve; a controlling valve for controlling communication between said vacuum cylinder, said chamber and the atmosphere; a second controlling valve for controlling communication between said vacuum cylinder, said chamber and the compressor intake; yielding means tending to open the first-mentioned controlling valve and to close the second-mentioned controlling valve; pressure fluid means including a controlling cylinder and piston working therein for closing the first-mentioned controlling valve and opening the second-mentioned controlling valve; a valve for controlling the admission of fluid at terminal pressure to said pressure cylinder and to said controlling cylinder; a valve for placing said pressure cylinder and said controlling cylinder in communication with the atmosphere, the last two mentioned valves being connected whereby when one is opened the other is closed; yielding means tending to hold the last two mentioned valves in position, the one cutting off the admission of terminal pressure fluid to said pressure cylinder and to said controlling cylinder and the other admitting atmospheric air to said pressure cylinder and said controlling cylinder; and pressure fluid means including a cylinder and a piston working therein for varying the action of the last-mentioned yeilding means, one end of the last-mentioned piston being subject to atmospheric pressure, and the other end being subject to intake pressure.

1,394,803. FEED-MILL. WILLIAM L. BRALL, Chicago, Ill., assignor to International Harvester Company, a Corporation of New Jersey. Filed Jan. 27, 1919. Serial No. 273,411. 21 Claims. (Cl. 83—8.)



1. In a feed grinding machine, a plate holder, an auger plate having ribs thereon, a grinding plate having ribs thereon, and means for so positioninng the auger plate and the grinding plate on said plate holder that said ribs are disposed in alinement with each other.

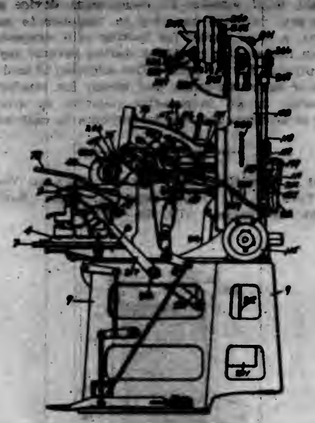
1,394,804. AUTOMATIC UNIVERSAL REPRODUCER AND TONE-ARM. CHRISTIAN C. BENDER, Seattle, Wash. Filed Feb. 9, 1920. Serial No. 357,433. 11 Claims. (Cl. 274—23.)



1. In a phonograph, a reproducer having a single diaphragm and adapted to receive simultaneously three inde-

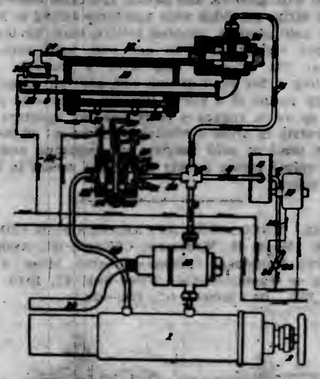
pendent needles therein, said reproducer being movable to bring any one of said needles into operable position, and

means operable through the movement of said reproducer when the latter is connected thereto for changing the pressure of said needles upon the record.



1,394,805. CLUTCH. CHARLES C. BLAKE, Brookline, Mass. Filed Sept. 1, 1917. Serial No. 189,353. 2 Claims. (Cl. 192—70.)

2. A clutch, having, in combination, a rotary driving member, a rotary driven member, said members being mounted for clutching engagement with each other, a plurality of spring levers fulcrumed on one of said members and arranged to engage the other member at points close to their fulcrums, said parts being constructed and arranged to cause the movement of said levers on their fulcrums in one direction to force said rotary members into clutching engagement with each other, means for moving said levers on their fulcrums, a spring between each of said levers and the member on which the levers are mounted acting normally on the levers to hold them in their clutch releasing positions, and means for limiting the movement of the levers produced by said springs.

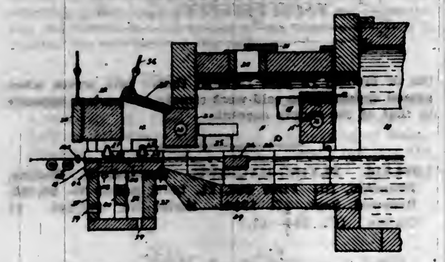


1,394,806. MACHINE FOR INSERTING FASTENINGS. CHARLES C. BLAKE, Brookline, Mass. Original application filed Mar. 27, 1916, Serial No. 86,958. Divided and this application filed Sept. 27, 1917. Serial No. 193,442. 35 Claims. (Cl. 1—18.)

23. A shoe machine, having, in combination, means for inserting fastenings, means for feeding the inserting means, a main driving shaft, a shaft driven therefrom for driving the inserting means, a shaft driven from the driving shaft for driving the feeding means, a clutch for clutching the inserting means shaft to the driving shaft, a pair of clutches for clutching the feeding means shaft to the driving shaft, mechanism for operating one of the pairs of clutches at a time to throw in the feeding means and automatically from said mechanism as the fastening obtain for inserting in the fastening means when either

of the pairs of clutches is operated to drive the feeding means, substantially as described.

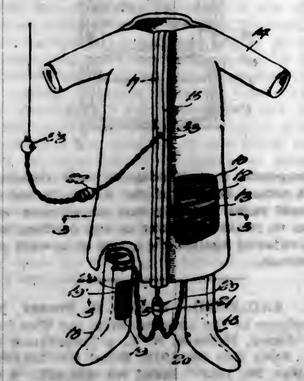
1,394,807. IGNITING AND CONTROLLING DEVICE FOR HYDROCARBON GENERATORS AND BURNERS. GEORGE N. BLANCHARD, San Francisco, Calif. Filed Dec. 4, 1920. Serial No. 428,276. 19 Claims. (Cl. 158—81.)



1. In combination with a generator for hydrocarbon burners, a fuel feed line connected therewith and through which fuel is supplied thereto, a motor, a pump operated thereby for forcing fuel through said line under pressure, a main circuit for operating said motor and including a main switch, a thermostatic valve for controlling the admission of fuel from the line to the generator dependent on the temperature of the generator, a pilot burner associated with the generator for initially heating the same and connected with said fuel feed line, a thermostatic valve for controlling the fuel feed to the pilot burner, a secondary circuit connected with said main circuit, an electric heater associated with the pilot burner and its thermostatic valve, an electric igniter associated with said pilot burner, said heater and igniter being connected in series in said secondary circuit, a switch in said secondary circuit, and means connected with said switch and operated by the fuel feed pressure for opening and closing the switch.

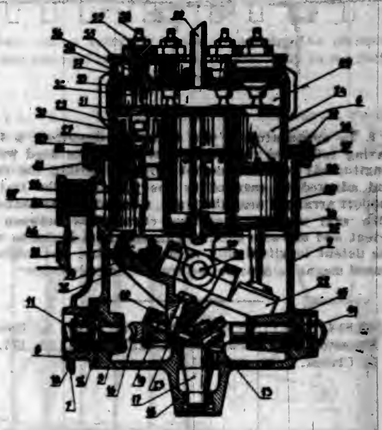
1,394,809. COMPOSITION FOR REFINISHING BLEMISHED VARNISHED WOOD SURFACES. BOB BAY BARNES, Cameron, W. Va. Filed Apr. 12, 1920. Serial No. 373,093. 2 Claims. (Cl. 134—24.)

1. The herein-described composition for refinishing blemished varnished wood surfaces, consisting of burnt umber, turpentine drier and crude petroleum, combined in substantially the proportions set forth.



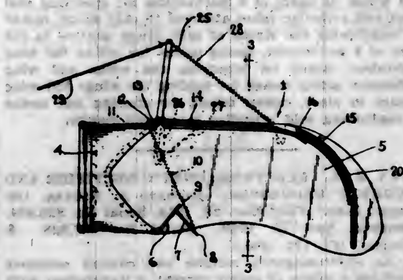
1,394,809. PROCESS AND APPARATUS FOR DRAWING SHEET-GLASS. IRVING W. COLBURN, Toledo, Ohio, assignor, by mesne assignments, to The Libbey-Owens Sheet Glass Company. Filed Oct. 8, 1915. Serial No. 54,714. 22 Claims. (Cl. 49—17.)

11. The method of forming sheet glass, consisting in providing a slab within a heated chamber and projecting the discharge end thereof into a temperature which is less than that of the chamber, and causing molten glass to flow onto the slab within the chamber and to be drawn from the discharge end thereof.



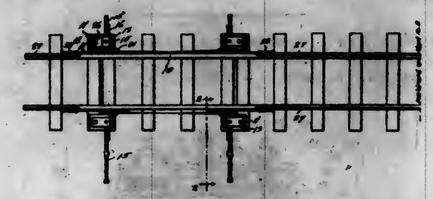
18. In an apparatus of the class described, a heated chamber having an opening therein, a slab within the chamber and onto which the molten material may flow and be drawn therefrom in a continuous sheet form through said opening, and means for varying the size of the opening to regulate the temperature in the chamber.

1,394,810. ELECTROTHERMAL GARMENT. JOEL E. CRADDICK, Denver, Colo. Filed Apr. 3, 1919. Serial No. 287,184. 3 Claims. (Cl. 219—38.)



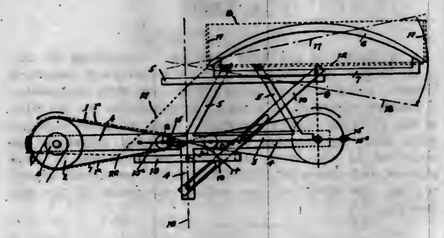
1. In a device of the character described, a body garment having inner and outer fabrics, said outer fabric having edge portions that are secured along two lines up and down the front part of the garment to form a conduit, and an electric circuit comprising a series of turns of conducting wire secured between said inner and outer fabrics, said series extending from the upper part of the garment to the lower part thereof and having upper and lower terminals meeting within said conduit and extending outward laterally of the conduit and terminating in an attaching plug.

1,394,811. COMPRESSOR. GASTON JULES DARCH, Courbevoie, France. Filed Dec. 27, 1919. Serial No. 347,851. 3 Claims. (Cl. 230—27.)



1. A device of the type described comprising an annular group of cylinders, pistons reciprocally mounted therein, a cap member mounted for universal movement, a member rotatable in a plane perpendicular to the axis of the cylinder, means connecting said rotatable member with said cap member whereby rocking movement is imparted to the latter to effect reciprocation of said pistons, and means for adjusting the last mentioned means to vary the extent of the rocking movement of the cap member.

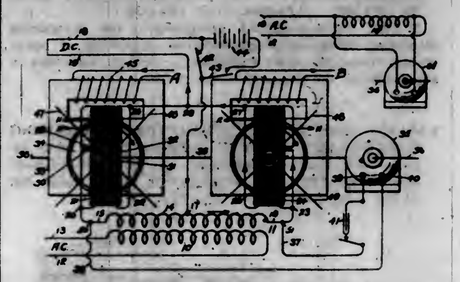
1,394,812. PNEUMATIC-STACKER HOOD. AUGUST P. DETERMANN, Lyons, Iowa. Filed Jan. 26, 1920. Serial No. 354,091. 5 Claims. (Cl. 302—10.)



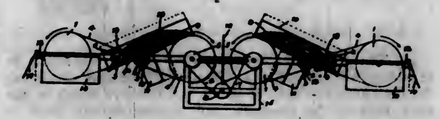
1. A stacker hood having side plates, a throat plate arranged between said side plates, hook members secured to said throat-plate and extending outwardly of the side plates, and springs fixed to said side plates and to said hook members.

1,394,813. AUTOMATIC SAFETY-GATE FOR RAILWAY-CROSSINGS. COCIU ENACHE, Dallas, Tex., assignor of one-tenth to George P. Risa, Dallas, Tex. Filed Nov. 26, 1920. Serial No. 426,346. 7 Claims. (Cl. 246—298.)

1. In appparatus of the character described, a track having rails, one rail being provided in its head with a longitudinal recess, a detent arranged within the recess and adapted to engaged by the wheels of the train, a support arranged near the track, a movable gate connected with said support, operative connections between the detent and movable gate, a train operated device to move the detent longitudinally in one direction, and train operated means to depress the train operated device.



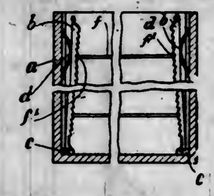
1,394,814. FLYING-MACHINE. RICHARD A. ENGLER, Evanston, Ill. Filed June 29, 1917. Serial No. 177,660. 12 Claims. (Cl. 244—11.)



1. In a flying machine, the combination with a central body and wing arms extending from the same and provided with wings, of figure of 8 mechanisms for operating said wings and propeller vanes attached to said wings, means for lengthening the stroke of said wings relative to the figure of 8 mechanism, spring means for aiding the wing mechanism, means for steadying the wings and wing mechanism, safety means for holding the wings and wing carriage in place, rudder means for steering and means for controlling said propeller vanes and rudder.

1,394,815. ELECTROMAGNETIC RECTIFIER AND CURRENT REDRESSER. RICHARD A. ENGLER, Dubuque, Iowa. Filed Mar. 23, 1914, Serial No. 826,484. Renewed Nov. 12, 1919. Serial No. 337,628. 6 Claims. (Cl. 175—363.)

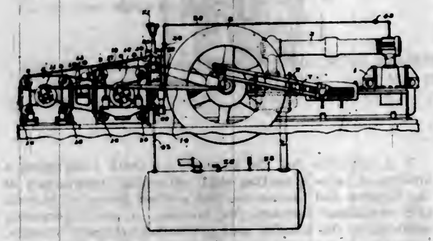
1. An electromagnetic rectifier and current redresser comprising a source of supply current, a transformer with a split secondary, two current throttling units, and a work circuit; said units provided with means for causing said throttling action and providing two paths of flow for said supply current, each of said units consisting of a magnetic path and two coils, one of said coils being wound or placed over the other and both surrounding said magnetic path; said throttling means of said units operating in synchronism with the waves of current passing or tending to pass through them; said waves when passed appearing on said work circuit of a nature opposite to that of the supply current.



1,394,816. FLYING-MACHINE. RICHARD A. ENGLER, Evanston, Ill. Filed Oct. 11, 1915, Serial No. 55,355. Renewed Sept. 27, 1920. Serial No. 413,249. 11 Claims. (Cl. 244—11.)

7. For aerial locomotion, a system of mechanism partaking of the form of a figure of 8, said mechanism carrying means for attaching the air, said means consisting of horizontal and vertical wings, said wings elevating, sustaining, propelling and stabilizing.

1,394,817. RECEPTACLE. WINIFRED MABEL FAUSSET, Newtownards, Ireland. Filed June 18, 1920. Serial No. 390,051. 2 Claims. (Cl. 217—64.)



1. A receptacle, a shelf adapted to fit therein, racks pivoted at bottom corners of the receptacle and springs pressing said racks inwardly into engagement with the shelf so as to retain the latter in any position to which it may be adjusted against the action of upward pressure exerted thereon.

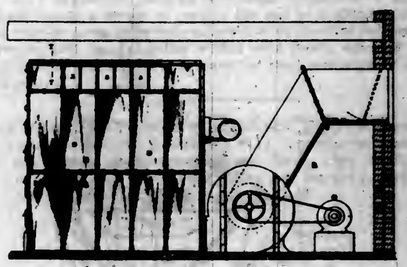
1,394,818. RAIL-BOND. HAROLD H. FREBEY, Newark, N. J., assignor to The American Steel and Wire Company of New Jersey, Hoboken, N. J., a Corporation of New Jersey. Filed May 28, 1918, Serial No. 237,006. Renewed Mar. 24, 1921. Serial No. 455,323. 8 Claims. (Cl. 173—278.)

1. A rail bond adapted for welding to the side surfaces of the rails and comprising a flexible conductor, having terminals on the ends thereof extending lengthwise parallel with the length of the conductor, said terminals having opposite lugs on one side arranged to bend into holding engagement with the conductor ends, to thereby mechanically connect the terminals to said conductor, and having a transverse notch in one side forming a metal receiving pocket arranged to permit the rail, the conductor and the terminals to be united by the fused metal used in welding the rail bond to the rail.

1,394,819. COMPRESSOR-CONTROLLING MECHANISM. ALEXANDER D. FERGUSON, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 1, 1917. Serial No. 172,816. 37 Claims. (Cl. 230—24.)

1. In combination, a compressor, and driving means therefor of the expansible chamber type, comprising motive fluid distributing mechanism and a plurality of means sequentially controlling said distributing mechanism and controlled by compressor discharge pressure at different intensities thereof to vary the speed of said compressor.

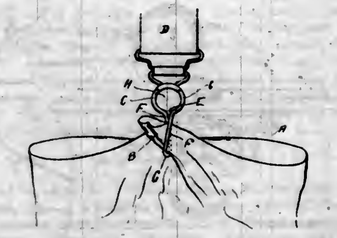
18. In an apparatus of the character described, the combination comprising a compressor having an intake, an intake controlling valve, controlling means for said valve, a compressor driving engine, cut-off mechanism therefor, and a plurality of means responsive respectively to the pressure developed by said compressor, and to changes in pressure conditions therein after closure of said valve each controlling the operation of said cut-off mechanism.



32. In an apparatus of the character described, the combination comprising a multistage compressor having an intercooler and an intake, an intake controlling valve, a compressor driving engine, and means connected to said intercooler responsive to changes in pressure conditions in said compressor upon closure of said intake controlling valve for effecting a delayed controlling of the speed of said engine.

1,394,820. MIXING DEVICE FOR EXPLOSIVE-ENGINES. JOHN H. FRITS, Kansas City, Mo., assignor to J. R. Green, Jasper county, Mo. Filed July 23, 1920. Serial No. 398,853. 1 Claim. (Cl. 123—141.)

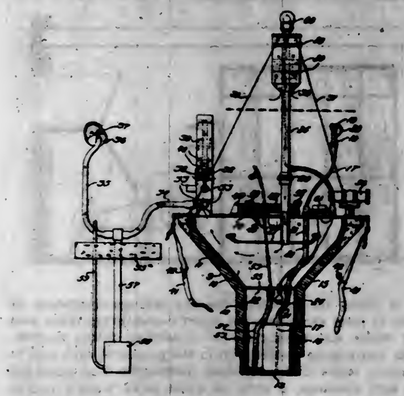
In a mixing device for explosive engines, a ring member having a bridge portion, three screens superposed one on the other, extending across said ring member, the intermediate screen being relatively fine, and the other screens being relatively coarse, a perforated clamping member bearing against the center and edges of the screens, and a securing device connecting the clamping member and said bridge portion, substantially as set forth.



1,394,821. FURNACE-CASING. NATHANIEL FROST, Bloomington, Ill., assignor to American Foundry & Furnace Company, Bloomington, Ill. Filed Dec. 16, 1920. Serial No. 431,190. 2 Claims. (Cl. 126—114.)

1. A panel for sectional furnace casings consisting of a pair of steel sheets spaced apart constituting inner and outer walls, and having a heat insulating filling therebetween, angle irons welded within the panels at each end to the outer walls and projecting outwardly and provided with bolt openings, a strip of sheet steel welded to the outer face of the inner wall of each panel extending across the space between the inner and outer walls of the panels at each end, said strips crimped or corrugated to form complementary V-tongues and grooves at opposite ends, said strips welded to the aforesaid angle irons and coextensive therewith.

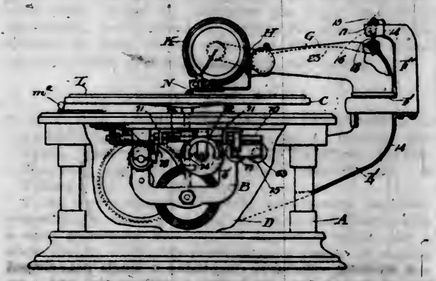
1,394,822. STOCKING-SUSPENDER. EMILY ANN GOVER, Epping, near Sydney, New South Wales, Australia. Filed May 14, 1920. Serial No. 381,236. 1 Claim. (Cl. 24—264.)



A stocking suspender, comprising a single pear-shaped loop of steel spring wire having a stalk portion and a resilient bow portion, the arms of the stalk portion being twisted vertically slightly more than a quarter turn with

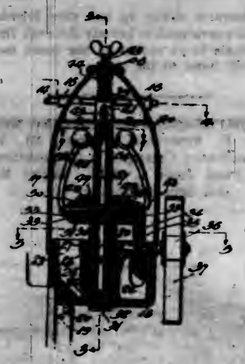
relation to the bow portion, whereby said resilient bow portion is brought into a plane approximately at right-angles to the plane of the larger portion of the loop.

1,394,823. GREEN ACID DYESTUFFS CONTAINING CHROMIUM AND PROCESS OF MAKING SAME. ARMIN GROB, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Aug. 17, 1918. Serial No. 250,373. 4 Claims. (Cl. 8—1.)



1. The herein described process for the manufacture of green acid dyestuffs containing chromium, consisting in treating with chromating agents the orthooxyazo-dyestuffs derived from aromatic mononitro-orthooxydiazo-compounds and 2-amino-naphthalene-compounds which are not substituted in their 1-position and are capable of combining with a diazo-group in an acid medium at their said non-substituted 1-position chroming agents which are Cr_2O_3 compounds.

1,394,824. LIFE-SUSTAINING APPARATUS. PETAR HABRICH, Philadelphia, Pa. Filed Nov. 1, 1920. Serial No. 421,011. 8 Claims. (Cl. 9—14.)

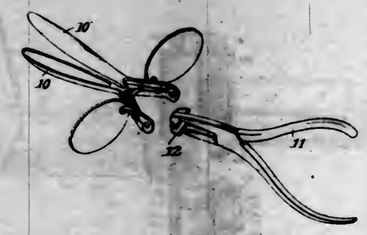


1. Apparatus of the character described including means providing an air reservoir; a breathing tube leading from said reservoir an upright pipe leading upwardly from said reservoir; and a housing surrounding said pipe and open at its bottom, said pipe being in open communication with the interior of said housing above said open bottom; substantially as described.

1,394,825. AUXILIARY DEVICE FOR TALKING-MACHINES. FRANCIS C. HANN, Newton, Mass. Filed May 6, 1918. Serial No. 232,862. 20 Claims. (Cl. 192—116.)

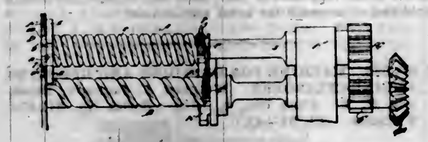
1. A stop-motion for motor-driven talking machines having therein a detector mounted in predetermined relation to the reproducing needle and comprising a part adapted to bear frictionally on the sound record, said detector being displaceable in respect to the record and its mounting by the energy of relative motion of the record and detector whenever the detector is encountered by a part of the record of different character from the sound record proper, in combination with means for stopping the motion as a consequence of the displacement of the detector.

1,394,826. GOVERNOR FOR GAS-ENGINES. CHARLES P. HALL, near Highland Springs, Va. Filed Sept. 13, 1920. Serial No. 410,080. 6 Claims. (Cl. 264—8.)



1. A governor for the purpose set forth comprising a housing, a valve actuating shaft extending transversely of the housing and having one end portion journaled therein and extending through the housing, a shaft rotatably mounted in the housing and positioned vertically therein, a gear carried by the vertical shaft, a drive shaft having a gear meshing with the gear of the vertical shaft, a sleeve slidably mounted upon the vertical shaft, a disk slidably mounted upon the vertical shaft between the gear thereof and the lower end of said sleeve and held against rotation upon the vertical shaft, a head carried by the sleeve and having a slot formed therein, an arm extending from the first mentioned shaft and extending into the slot of said head, a shaft carried by the head and extending through a slot in said arm, bell crank levers pivotally connected with the gear of the vertical shaft and having lower arms extending between the gear and disk mounted upon the vertical shaft, the bell crank levers having weighted upper arms swung outwardly to raise the lower arms by centrifugal force, and resilient means yieldably holding the upper arms against outward movement.

1,394,827. SAFETY-RAZOR. RUSSELL P. HARRINGTON, Chicago, Ill. Filed Jan. 22, 1917. Serial No. 143,816. 7 Claims. (Cl. 30—12.)



1. In a safety razor a casing, a blade slidably mounted outside of said casing, a member journaled in the wall of said casing and having an eccentric portion operatively connected with said blade, and means in said casing for rocking said member.

1,394,828. CLAMP FOR ADJUSTING SPECTACLE-FRAMES. CHARLES M. HAYNES, Chillicothe, Ohio. Filed Feb. 11, 1920. Serial No. 357,795. 4 Claims. (Cl. 81—3.)

1. A clamp for the purpose described, comprising a pair of manually actuated members each having at an end a forked clamping jaw composed of laterally thin prongs rigid in the line of pressure, said members being pivoted together with the thin edges of the forks coöperating in the same planes, to grip and hold rigidly between such thin edges a spectacle frame at points between the bridge and the lenses, leaving the bridge itself exposed for bending or other adjustment.

1,394,829. TOP SCREW FOR GILL-DRAWING FRAMES. WILLIE HOLDSWORTH, Providence, R. I. Filed May 23, 1921. Serial No. 471,677. 2 Claims. (Cl. 19—6.)

2. In a gill-drawing frame, the combination with the end-bearing member thereof, of a top-screw having screw-threads on its exterior and a stud projecting from its end, a faller-cam mounted on said stud to adapt it to turn with the screw, and an enlarged collar screwed onto the end of the stud to secure the cam against the end of the screw, said collar adapted to be received within a bore in the bearing-member to adapt the screw to turn therein.

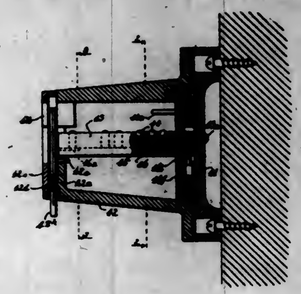
1,394,830. INTAKE-MANIFOLD-HEATING DEVICE. HALBERT H. HOLLOWAY, San Francisco, Calif. Filed Feb. 25, 1920. Serial No. 361,286. 7 Claims. (Cl. 263—5.)

1. In combination with the intake and exhaust manifolds of an internal combustion engine, a metal heat conductor arranged between and in contact with each manifold, said exhaust manifold having depending portions and said conductor having pockets therein for reception of said depending portions.

1,394,831. KEY DEVICE FOR REGISTERS. RICHARD M. HOPKINS, Rutherford, N. J., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 12, 1919. Serial No. 303,633. 6 Claims. (Cl. 234—37.)

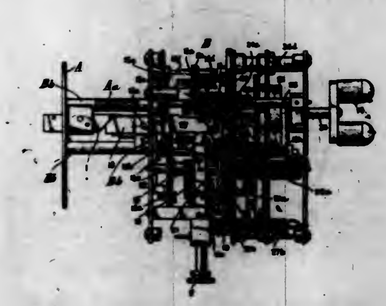
2. A key-device such as described, comprising a fixed base having a recess to receive the end of a spindle, and a tumbler-carrying spindle adapted to be inserted into said recess, and spring means within said recess adapted to grip said spindle when so inserted and permanently retain it.

1,394,832. WATCHMAN'S REGISTRY SYSTEM. RICHARD M. HOPKINS, Rutherford, N. J., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed Oct. 10, 1919. Serial No. 329,729. 21 Claims. (Cl. 234—39.)



5. A registry system comprising a plurality of stations at one of which is a transmitter provided with driving means, and at others of which are register-actuating means, and a portable register having means, normally concealed, for operating the driving mechanism of said transmittter, together with controlling means for said register-actuating means, said controlling means arranged to be conditioned by application to the various register-actuating means to expose said transmitter-actuating means only when the register has been properly actuated at previous stations.

1,394,833. KEY DEVICE. RICHARD M. HOPKINS, Rutherford, N. J., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 22, 1920. Serial No. 353,458. 6 Claims. (Cl. 234—37.)

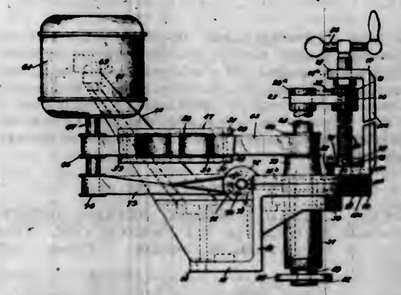


4. A key device such as described comprising in combination a base, a tumbler-stem secured to said base and projecting therefrom, and provided with a plurality of

tumbler-pockets open at both ends, a shell surrounding and serving to protect the said stem, and a tumbler re-

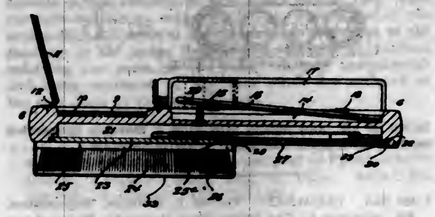
tainer closing the rear ends of said tumbler-pockets and arranged to be separated from said stem by short longitudinal motion of the shell with respect to said stem.

1,394,834. REGISTRY SYSTEM AND REGISTER THEREFOR. RICHARD M. HOPKINS, Rutherford, N. J., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 12, 1919, Serial No. 303,632. Renewed Apr. 28, 1921. Serial No. 465,249. 26 Claims. (Cl. 234—39.)



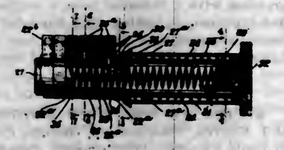
14. A watchman's box comprising registering means adapted to be advanced progressively together with locking means therefor and control means adapted to be applied to one or another of a series of external conditioning devices and thereby conditioned for operation of said registering means, said locking means comprising a plurality of differentiating means adapted to correspond to means differentiating the several conditioning devices of a group of such devices, one from the other, and comprising further group differentiating means, whereby there may be a plurality of groups of such conditioning devices, wherein individual conditioning devices of one group correspond to individual conditioning devices of another group except for group differentiation and whereby after a complete round of operation of the registering means of the box at the several conditioning devices of one group such registering means may be restored, except as to the group differentiation, and operated again at the several conditioning devices of another group.

1,394,835. FLUID-COMPRESSOR FOR MOTOR-VEHICLES. OSMOND B. HUNT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 30, 1918. Serial No. 256,265. 6 Claims. (Cl. 230—27.)



1. In a machine of the character described, in combination, a hollow cylinder, a piston fitted to reciprocate therein, a head closing one end of the cylinder having a sleeve projecting toward the piston and a partition within said sleeve mounted for axial adjustment.

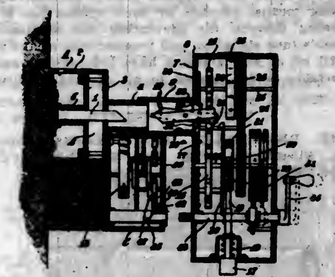
1,394,836. MACHINE FOR GRINDING AND REBORING ENGINE-CYLINDERS. WILLIAM J. JACKSON, Brooklyn, N. Y. Filed Dec. 1, 1919. Serial No. 341,671. 6 Claims. (Cl. 51—43.)



1. The combination, in a machine of the class described, of a hollow stationary head with registered openings leading from its interior, an annular guide element rotatable in the head, a shaft for being disposed interiorly of an engine cylinder and the shaft being eccentrically journaled within the guide as well as being also adjustable and slidable in the guide, mechanism for driving the shaft, mechanism operable in unison with the operation of the driving mechanism whereby the guide element will be revolved for moving the shaft in the radius of a circle while being rotated, and an adjusting device operable with the driving of the shaft for causing the shaft to move lengthwise of the engine cylinder at intervals during their rotation.

1,394,837. COMBINATION TOILET-BOX. CHARLES A. JAMES, Philadelphia, Pa. Filed Nov. 18, 1920. Serial No. 423,865. 2 Claims. (Cl. 132—87.)

1. A toilet device of the character described including a body portion providing a cavity and having a bottom plate forming a partial closure for said cavity, said body portion having a part extended beyond said plate and providing a handle; a brush having a head secured to said plate, a part of the head of the brush projecting beyond one end of the plate, said end of the plate being beveled inwardly, said cavity having an opening extending from said end of the plate to a position stopping short of the outer end of the handle, said end of the plate being undercut; and a strip for closing said opening and having a part adapted to be projected in between the head of the brush and said end of the plate; substantially as described.

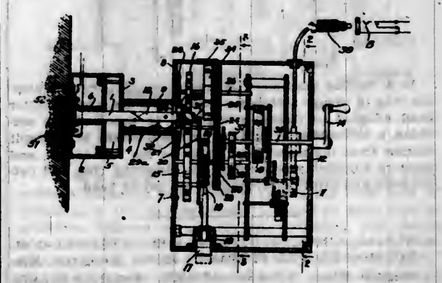


1,394,838. REGISTRY SYSTEM AND REGISTER THEREFOR. CLARENCE C. JOHNSON, Mount Vernon, N. Y., and RICHARD M. HOPKINS, Rutherford, N. J., assignors to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed June 12, 1919. Serial No. 303,593. 32 Claims. (Cl. 234—37.5.)

1. In a registry system, the combination of a register comprising registering means and tumbler-carrying means and tumblers carried thereby and arranged to coact with said registering means, a plurality of said tumblers normally rendering the registering means inoperative, and one or more key-devices each adapted to coact with said register and each comprising a plurality of tumblers each adapted to coact with a corresponding tumbler of the register when a proper key-device is in engagement with the register and when the latter is set for engagement with that key-device, the engagement of proper tumblers of the register and key-device rendering the registering means operative.

1,394,839. REGISTRY SYSTEM. CLARENCE C. JOHNSON, Mount Vernon, N. Y., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Dec. 28, 1917. Serial No. 209,279. Divided and this application filed June 12, 1919. Serial No. 303,594. 14 Claims. (Cl. 234—39.)

1. A registry system comprising a plurality of stations each provided with a register conditioning device, a signal transmitter at one or more of said stations, and a portable register adapted to coact with each such conditioning device and arranged to be conditioned by actuation at one conditioning device, for coaction with and actuation at



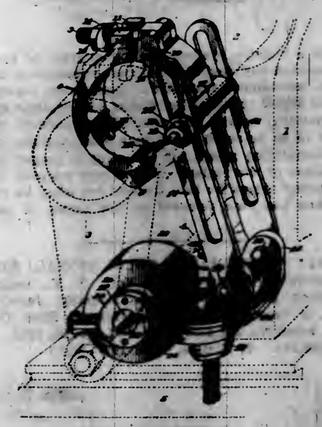
another conditioning device of the series, said register comprising means controlling the transmission of signals by said transmitter or transmitters.

1,394,840. REGISTRY APPARATUS. CLARENCE C. JOHNSON, Metuchen, and RICHARD M. HOPKINS, Rutherford, N. J., assignors to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 23, 1920. Serial No. 353,601. 26 Claims. (Cl. 234—37.5.)

15. In a registry system, the combination of a register and combined key device and signal transmitter for that register, said signal transmitter comprising key-operated windable signal transmitting means, the register comprising registering means and controlling tumblers therefor adapted to be actuated in various combinations, the key device comprising means for actuating a proper tumbler-combination of the register, the register adapted to serve as a winding means for said transmitter when its registering means has been released by the action of said key device.

1,394,841. WATCHMAN'S TOUR SIGNAL SYSTEM. CLARENCE C. JOHNSON, New York, N. Y., assignor to American District Telegraph Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 28, 1917, Serial No. 209,279. Renewed Apr. 28, 1921. Serial No. 465,248. 27 Claims. (Cl. 177—360.)

1. A watchman's signal system comprising a plurality of stations each having a conditioning device, signal trans-



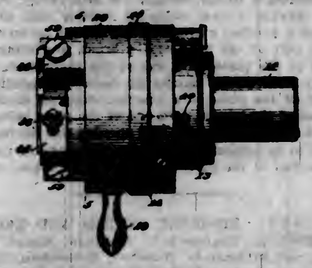
mitting means adapted to send a watchman's tour signal, and a portable device separate from said conditioning devices but adapted to be applied thereto successively and comprising means, affected by such application to said conditioning devices, for preventing the sending of a watchman's tour signal by said transmitting means unless and until all of said stations have been visited and the said portable device applied to all of said conditioning devices.

1,394,842. REAR AXLE. JOHN V. KAMMERER, Sprague, Wash. Filed Mar. 4, 1920. Serial No. 363,267. 1 Claim. (Cl. 64—27.)

The combination with an automobile rear axle tubular housing including the differential casing, of a sectional hollow shaft journaled in the tubular housing, each section of the shaft fashioned with an integral spiral rib extending throughout its length and on the exterior thereof for returning interesting material toward the differential casing.

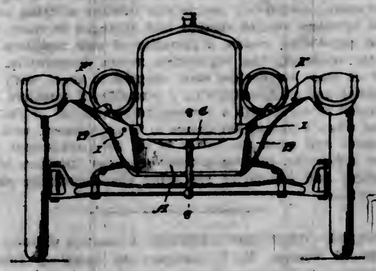
1,394,843. VERTICAL-MILLING-MACHINE ATTACHMENT. HENRY H. KEYES, Philadelphia, Pa. Filed Mar. 3, 1919. Serial No. 280,260. 6 Claims. (Cl. 90—17.)

1. A milling machine attachment, comprising a clamping ring to engage a steady rest bar of a machine, a cutter head adapted to engage a mandrel or arbor of the machine, a tool socket in said cutter head, means to transmit motion from the mandrel or arbor to the tool socket, and hangers adjustably connecting the clamping ring and cutter head and pivotally applied to the cutter head.



1,394,844. COOLING SYSTEM FOR INTERNAL-COMBUSTION-ENGINE PISTONS. EDWIN KJOELSEN, Minneapolis, Minn. Filed Jan. 16, 1920. Serial No. 351,872. 2 Claims. (Cl. 123—171.)

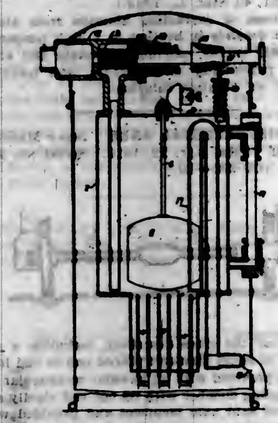
1. In an internal combustion engine, a piston having an air chamber therein, ports opening from said chamber on a side away from the combustion face of the piston, means adapted to circulate air, means for controlling the circu-



lation of air, and means providing a movable connection between said ports and said circulating means.

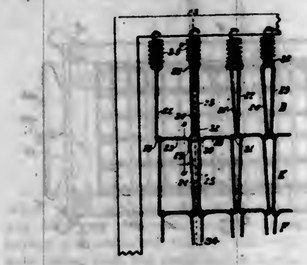
1,394,845. DIE-HEAD. VICTOR R. KOONTZ, Waynesboro, Pa., assignor to The Victor Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1919. Serial No. 338,260. 11 Claims. (Cl. 10—100.)

11. In mechanism of the character set forth, the combination with relatively rotatable members of a cutter holder having a pintle rotatably mounted in one of the members, said pintle having a split externally threaded terminal provided with a threaded bore, a holding nut on the threaded terminal, a locking plug threaded into the bore, and means engaged with the other member and with the holder to effect the pivotal movement of the latter.



1,394,846. ACCESSORY FOR FORD AUTOMOBILES. WILLIAM J. KOSTER, Peterborough, Ontario, Canada, assignor to Louis Florence, Peterborough, Canada. Filed Mar. 10, 1919. Serial No. 281,898. 1 Claim. (Cl. 280—158.)

In combination with the front of an automobile, having a starting crank, headlights, a radiator, a channeled member on the front of the frame below the radiator to which the front springs are bolted; of a protective device for the pan of the engine including a plate having its upper edge flanged forwardly to underlie and to rest against the radiator and the said channeled member, said plate having a central slot to receive therein the starting crank, an

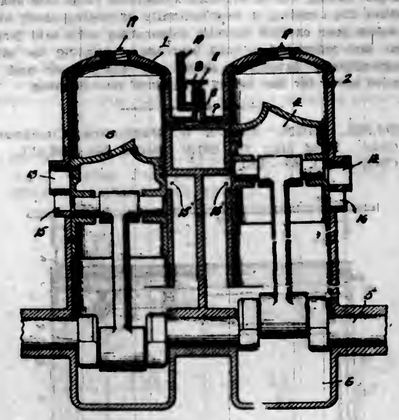


angle slotted tongue on the lower edge of the plate receiving the bolt that connects the spring to the channeled member and contacted by a nut which engages the bolt, outwardly rounded upwardly projecting wings on the ends of the plate underlying and secured to the front fenders of the automobile, said wings having their front portions serving as reflectors for the headlamps of the automobile, and twisted links secured to the plate at the junctures of the wings therewith having slotted portions receiving the posts of the lamp brackets therethrough and being contacted by the nuts which are screwed on the said posts of the said brackets.

1,394,847. ELECTRIC WATER-HEATER. CHARLES ABATT, Nottingham, England, assignor to Fluar Electric Heater, Limited. Filed Jan. 4, 1921. Serial No. 435,005. 3 Claims. (Cl. 219—38.)

1. An electric heater for heating and causing the delivery of a hot liquid including a tank connected with a supply pipe for the said liquid, a valve adapted to control the supply of the said liquid, an electric heating means associated with the said tank, a float within the said tank, means associated with the said float and adapted to switch on and off the current to the said electric heating means when the said float is moved, and means associated with the said controlling valve for enabling the outlet of air from the tank when the said controlling valve is opened.

1,394,848. WIRE MATTRESS FABRIC. JACOB LIBOW, Springfield, Mass., assignor to Frida Libow, Hampden county, Mass. Filed Oct. 26, 1920. Serial No. 419,709. 5 Claims. (Cl. 245—5.)

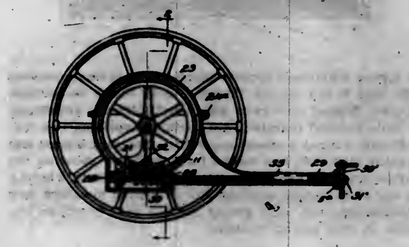


3. A wire fabric comprising a plurality of individual unit members having offsets therein, end portions extending from the offsets and formed with hooks at their ends, longest portions intermediate said portions and having only a single bend at their intermediate portions, said hooks and looped portions serving to connect the unit members together, the line of connection being in substantially straight lines from end to end of the fabric to prevent sagging.

1,394,849. SPRING-MATTRESS SUPPORT. HARRY LITVAK, New York, N. Y. Filed July 22, 1920. Serial No. 398,676. 1 Claim. (Cl. 5—65.)

A spring mattress support comprising a spring receiving frame and a bed spring therefor, said frame comprising two part hinged end rails and longitudinally adjustable side rails secured thereto; said spring comprising two longitudinally hinged sections secured to two part hinged end attaching members, and means for detachably securing the latter to said end rails in parallel relation thereto whereby said end rails, spring sections and attaching members may be folded together, said means serving also to adjust the tension in said spring sections.

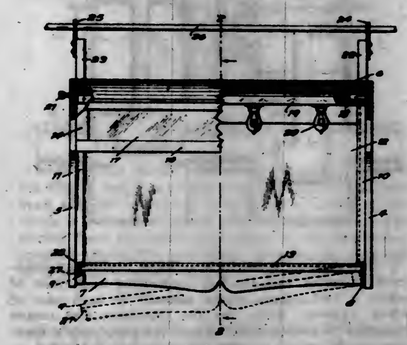
1,394,850. INTERNAL-COMBUSTION ENGINE. ALBERT R. LONG, Ballston, Va. Filed Sept. 24, 1919. Serial No. 325,977. 6 Claims. (Cl. 123—59.)



1. In a two cycle multiple cylinder engine, an unobstructed valveless fuel conduit connecting each pair of cylinders, a fuel supply means common to each pair of cylinders, exhaust means for the cylinders, and means in proximity to said exhaust means for supplying a scavenging current of air to said cylinders and partially exhausting the same therefrom, the fuel supply means and fuel conduit being so arranged and the pistons so timed in their cycle of operation that the pressure created by

the explosion in one cylinder will act as the injection means for the fuel through said conduit into the other cylinder, when the pressure within the latter is near its minimum.

1,394,851. MANUFACTURE OF ANTHRAQUINONE DERIVATIVES AND NEW PRODUCTS RESULTING THEREFROM. ARTHUR LÖTTRINGHAUS, Mannheim, and LUDWIG NIEFFLANDER, Ludwigshafen-on-the-Rhine, Germany, assignors to Adolf Kuttroff, New York, N. Y. Filed Nov. 3, 1920. Serial No. 421,540. 9 Claims. (Cl. 23—24.)

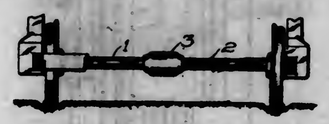


1. The process of manufacturing anthraquinone derivatives substituted by at least one aryl-amino group which consists in treating an amino-anthraquinone compound with a metal aryild in the presence of a primary aromatic amino compound.

1,394,852. WORM-GEAR. CLAUDE H. MCCLURE, Oaktown, Ind. Filed Feb. 9, 1921. Serial No. 443,690. 2 Claims. (Cl. 74—96.)

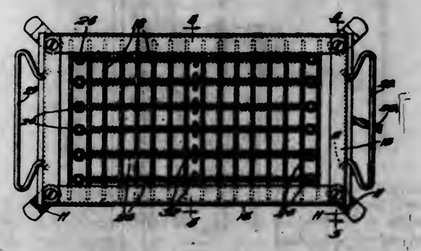
1. The combination of a drive shaft and supporting wheels therefor, a large toothed gear positioned in proximity to one of said wheels and rotatable by said shaft, an integral housing for said shaft and toothed gear, a hanger having alined bearings suspended from said shaft within the housing, a longitudinally extending shaft and a worm gear carried thereby coöperating with said large gear and journaled in said bearings, a housing for said longitudinally extending shaft and worm gear and a hinged cover for the top of said large gear housing.

1,394,853. SIGN. ADOLPH W. MARGILETH, Cincinnati, Ohio. Filed May 10, 1919. Serial No. 296,111. 1 Claim. (Cl. 40—130.)



In a display sign the combination of sides, a roof connecting the sides at their upper ends, coöperating guide stripe mounted on each side, each guide strip having a longitudinal slot parallel with the sides, a bottom strip pivotally mounted on one of the sides and having a groove in alinement with the slots in the guide strips and registering therewith, a catch on the free end of the bottom strip adapted to engage the guide strip on the other side, a sign board engaging in the slots in the guide strips and bottom strips, a frame depending from the roof on each side of the guide strips and secured upon the sides, transparencies mounted on the frames, a lamp holder mounted between the frames and the guide strips, and lamps mounted on the lamp holders adapted to illuminate the sign board and the transparencies.

1,394,854. PROCESS OF MANUFACTURE OF PURE ALUMINA. BENNET MARTIN, Marseille, France. Filed Aug. 19, 1919. Serial No. 318,003. 4 Claims. (Cl. 23—13.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



2. The process of extracting alumina from aluminous earths, which consists in heating to a high temperature a mixture of said earths, calcium carbonate and an alkali metal salts, pulverizing said mixture, and leaching the mixture with an alkaline solution.

1,394,855. DIFFERENTIAL AXLE. ISAAC MARTIN, San Diego, Calif. Filed Apr. 22, 1919. Serial No. 291,832. 3 Claims. (Cl. 295—39.)

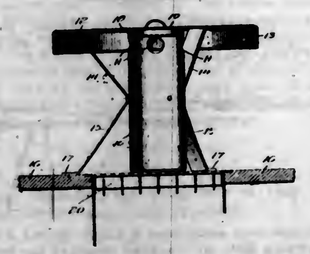
1. An axle of the class described, including a pair of axle members of equal diameter placed end to end in alinement, the one provided with an annular rectangular groove therein, a coupling member with its one end rigidly secured to the other of said axle members and provided with an annular rectangular groove registering with the annular rectangular groove in said axle member and with a rectangularly shaped inwardly converging walled aperture therein extending from the outside to said groove for admitting a key in sections and an annular rectangular key formed of a plurality of sections so shaped as to completely fill the space formed by the annular rectangular grooves in said axle and said coupling for preventing longitudinal movement of said axle members relatively to each other but permitting revoluble movement, each section provided with a threaded hole therein to facilitate its removal.

1,394,856. ELECTRIC TOASTER. IRWIN J. MENDELS, Chicago, Ill., assignor to Empire Transformer Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 31, 1920. Serial No. 355,476. 9 Claims. (Cl. 219—19.)

1. An electric toaster heating unit comprising elements constituting fractional lengths of the unit having means

to connect them to a source of electrical energy, and means at each end of each length to permit separate removal of said length from and its replacement in said unit.

1,394,857. RADIATOR-CORE. JACOB W. MILLER, Hanover, Pa. Filed Aug. 18, 1920. Serial No. 403,244. 5 Claims. (Cl. 257—128.)



1. A radiator core including horisontal triangular cells connected at their ends and having their body portions spaced apart to form intervening circulating spaces, said triangular cells each having one of their sides arranged vertically and their other sides at an inclination to form only vertical and inclined intervening water circulating spaces to produce a positive gravity flow of the water from the top to the bottom of the radiator throughut the entire water spaces.

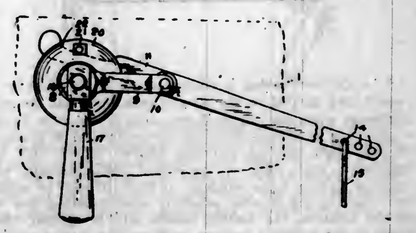
1,394,858. DRAFT APPLIANCE. JOHN R. MOORE, Plains, Kans. Filed Feb. 24, 1921. Serial No. 447,473. 3 Claims. (Cl. 278—98.)

2. A draft-tree comprising a main bar, longitudinally adjustable end sections carried thereby, means for locking the end sections to the main bar, and a truss having adjustable connections at its ends with the end sections.

1,394,859. AIR MOISTENING AND DISTRIBUTING DEVICE. CHARLES W. MOSHER, Cattaraugus, N. Y. Filed Dec. 18, 1920. Serial No. 431,689. 2 Claims. (Cl. 98—51.)

2. A device of the class described comprising a container for a moisture disseminating fluid, a distributing and deflecting member extending over the container and having a downturned margin, and with an opening communicating with the container, a closure for the opening, braces between said container and distributing and deflecting member, and supports carried by said container to engage the floor upon which the container rests.

1,394,860. GASOLENE-FLOW-LINE LOCK. CHESS S. NEVILLE, Kansas City, Mo., assignor of one-half to Clarence D. Armstrong, Los Angeles, Calif. Filed Mar. 10, 1921. Serial No. 451,840. 3 Claims. (Cl. 251—6.)



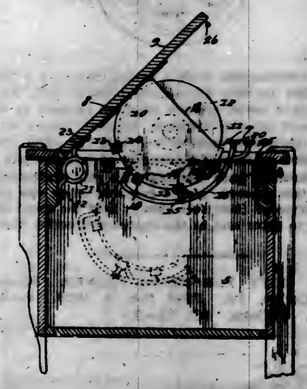
1. A device of the character described, comprising a casing provided with inlet and outlet ports, a rotary valve in said casing, adapted to control said ports, a stem for said valve, friction means for opposing movement of the valve on its seat, a cam mounted on the stem of said valve, a manually operable lever adapted to contact with said cam for moving the valve in one direction, and key operable mechanism for moving said valve in the opposite direction through contact with said cam.

1,394,861. PUMP OR MOTOR. FRANK REAUGH, Oakcliff, Tex. Filed Aug. 26, 1919. Serial No. 320,005. 8 Claims. (Cl. 103—44.)

1. The combination with a casing having a stationary core together forming an angular passage with inlet and outlet ports, a rotor, pistons mounted thereon to revolve through said annular passage, separate gears for said pistons, a stationary gear of one half the pitch diameter of said piston gears, and a plurality of intermediate gears, each intermediate gear meshing with said stationary gear and with two separate piston gears to effect the rotation of said pistons on their own axes at half the speed of revolution of the rotor and in the opposite direction thereto.

1,394,862. LIFT FOR FLUSH-VALVES. MILTON C. RENO, Corliss, Pa. Filed Feb. 3, 1920. Serial No. 355,911. 1 Claim. (Cl. 74—5.)

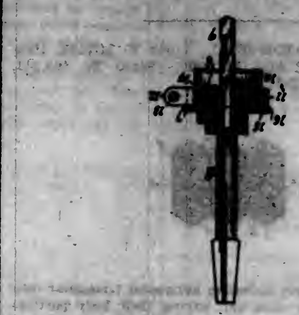
A lift for the purpose set forth comprising a sleeve adapted to be extended through the wall of a flushing tank and provided on its inner end with a shoulder and its outer portion with peripheral threads and a squared portion between the threads and the shoulder, a shaft extending through the sleeve, a nut on the shaft, a nut inclosing the threaded portion of the sleeve and co-acting with the nut on the shaft to secure the sleeve to the wall, a pin carrying member on the inner end of the shaft, an elongated pin



extended from said member, a bracket integral with said shoulder and extended inwardly, a shaft secured to the bracket, a lift lever extending in the same plane throughout and pivoted on the shaft secured to the bracket and having its top edge depressed to provide a recess in which said pin operates to tilt the lever, and a weighted handle on the outer end of said shaft.

1,394,863. REVERSIBLE TEMPLE MEMBER FOR SPECTACLES. EDWIN REYNOLDS, Vineland, N. J. Filed June 4, 1921. Serial No. 475,125. 7 Claims. (Cl. 88—53.)

1. In combination with a spectacle frame including an angularly directed stop ledge, a reversible temple eccentrically fulcrumed on said frame.



1,394,864. RECORD-RACK CABINET. GEORGE G. ROSS, South Greensburg, Pa. Filed Sept. 27, 1920. Serial No. 412,921. 3 Claims. (Cl. 211—16.)

1. A cabinet having a compartment, a lid therefor, a record rack carried by the lid and extending into the compartment when the lid is closed, said record rack having a plurality of record receiving compartments, a plurality of individual ejectors pivotally carried by the rack and concentric with each of the record compartments, said ejectors having arms tangent to and adapted to engage the edges of the records, whereby upon pressing any one of the ejectors, the desired record may be ejected, abutment to act as stops for the ejectors, and spring tensioning means for holding the ejectors in contact with the abutments.

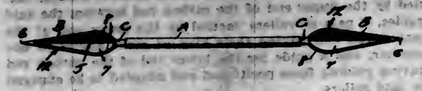
1,394,865. METAL-DRILL. HERMAN SAUCKE, New York, N. Y. Filed Sept. 26, 1919. Serial No. 326,507. 3 Claims. (Cl. 77—69.)

2. A metal drill comprising a cylindrical holder having a rim surrounding the top, a segmental saw arranged about the holder to abut against the rim, an adjustable band embracing the saw, and a ledge formed on the holder coacting with the ends of the saw for eliminating circumferential shift of the saw.

1,394,866. BICYCLE. CURT E. G. SCHOENKNECHT, Newark, N. J. Filed Jan. 11, 1921. Serial No. 436,412. 3 Claims. (Cl. 208—95.)

1. A bicycle comprising a rear frame member including a main post, a top tube, a lower tube, said tubes being parallel their entire length, the lower tube having its rear end free, a brace connecting the tubes adjacent their front ends, a truss connecting the bottom part of the main post with the bottom tube beneath the brace, a front frame member including a steering head, and rods rigidly secured to the steering head and alined with said tubes, and means for adjustably securing the rods in the tubes.

1,394,867. TONSILOTOME. JOHN SKLAR, Brooklyn, N. Y. Filed Aug. 5, 1920. Serial No. 401,295. 5 Claims. (Cl. 128—320.)

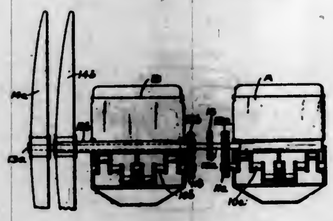


1. A tonsilotome comprising a holder having a rack, a cutter carrying slide with a pawl engaging the rack, and means connected to the slide for moving the pawl out of action to actuate the slide.

1,394,868. SCRAPER. ALBERT SMITH, Leetonia, Ohio. Filed May 8, 1920. Serial No. 380,015. 1 Claim. (Cl. 145—47.)

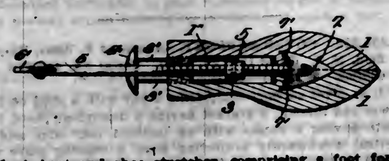
A scraper having a blade with angularly disposed leaves, said leaves tapering to a point, the lower or free edges

of said leaves having a substantially straight portion, a curved portion leading therefrom to the point, a second



curved portion leading from the straight portion, a handle, and a reduced connecting means between the blade and handle to reduce chattering.

1,394,869. ART OF RUG-WEAVING AND THE PRODUCT RESULTING THEREFROM. DAVID H. STROUD, Jr., Philadelphia, Pa. Filed Jan. 25, 1919. Serial No. 273,019. 7 Claims. (Cl. 139—71.)



1. A rug having a woven body portion comprising interwoven series of wefts and binder warps with stuffer warps inlaid therein coextensively with said binder warps, and a woven edging comprising wefts interwoven with one class of the aforesaid warps to the exclusion of the rest.

1,394,870. DRIVING CONNECTIONS FOR AIRPLANE-ENGINES. BENJAMIN DOUGLAS THOMAS, Ithaca, N. Y., assignor of one-tenth to Thomas-Morse Aircraft Corporation, Ithaca, N. Y., a Corporation of New York. Filed Feb. 28, 1920. Serial No. 361,947. 4 Claims. (Cl. 244—25.)

1. In an airplane, the combination of a plurality of engines, a hollow shaft mounted on the engine frame and having a driving gear at the rear thereof, a propeller fixed on the front end of said shaft, another shaft rotatably mounted within and extending through said hollow shaft, another propeller fixed on the front end of the inner shaft, a driving gear at the rear end of said inner shaft, and driving connections from the respective engines to said gears on the outer and inner shafts.

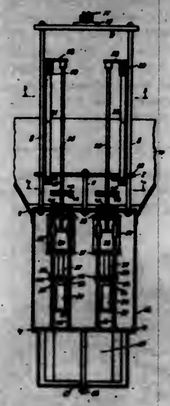
1,394,871. BOOT AND SHOE STRETCHER. LEWIS WALKER, Richmond, Va. Filed July 29, 1920. Serial No. 399,755. 4 Claims. (Cl. 12—128.3.)

1. A boot and shoe stretcher, comprising a foot form composed of two side parts and a heel part, each of said side parts having two longitudinally extending recesses, one forward of the other, the rear wall of the forward recess being provided with an opening which registers with a similar opening extending through the rear wall of the other recess, a wedge substantially arrow-shaped, adapted to engage the forward recess, a screw threaded lug mounted in the other recess, a longitudinally extending rod, screw threaded at a portion of its length, mounted in the openings in the rear walls of said recesses, said rod engaging the screw threaded lug and being swiveled to the wedge, and means for manually rotating said rod.

1,394,872. LOCKING DEVICE FOR AUTOMOBILES. JESSEE MERCER WHITE, Philadelphia, Pa. Filed June 17, 1920. Serial No. 389,562. 11 Claims. (Cl. 70—9.0.)

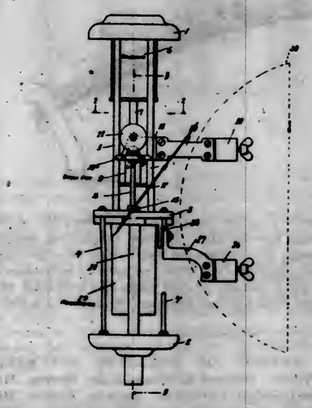
1. In a device of the character described, the combination of a member normally rotatable in either direction; a selective lock; and means having portions optionally operative and controlled through the medium of said lock to effect the locking of said member against movement in either direction or the locking of said member against movement in one direction only; substantially as described.

1,394,873. ARCH AND ARCH-BRICK. ALFRED H. WILLETT, West New York, N. J., assignor to American Arch Company, New York, N. Y., a Corporation of New York. Filed July 10, 1916. Serial No. 108,806. 9 Claims. (Cl. 110—37.)



9. A locomotive arch composed of a plurality of baffle units spanning the distance between supporting members, said units being so constructed that when they are all arranged in one position they form an arch of unbroken continuity but when certain of said units are arranged in another position openings are afforded through the arch.

1,394,874. METHOD OF TREATING BITUMINOUS SUBSTANCES. GEORGE A. WILSON, Jr., Boston, Mass., assignor to Carolina Pavement Company, Boston, Mass., a Corporation of Massachusetts. Filed Jan. 21, 1920. Serial No. 353,096. 4 Claims. (Cl. 106—31.)



2. A bituminous cement comprising bitumen and substantially less than one per cent. of anhydrous borax.

1,394,875. ARC-LAMP. MAURICE J. WOHL, Brooklyn, N. Y. Filed Jan. 14, 1918. Serial No. 211,786. 2 Claims. (Cl. 176—59.)

1. An arc lamp having a frame consisting of a pair of horizontally disposed and vertically spaced disks, a solenoid located under and secured to the lower disk and having its core extending upward through the latter, a clutch disposed above and adjacent the lower disk, an operative connection between said clutch and the said core, a pair of rods extending rigidly downward from the lower disk, a crosshead slidable on said rods, a dummy carbon fixed at its lower end to said crosshead and extending upward through the said disks and being guided by the upper disk, said dummy carbon being in engagement with the said clutch, and a pair of carbon sockets carried respectively by the upper end of said dummy carbon and by one of said disks.

1,394,876. ARC-LAMP. MAURICE J. WOHL and HARRY HERTZBERG, New York, N. Y., assignors to M. J. Wohl and Company, Inc., a Corporation of New York. Filed June 14, 1918. Serial No. 239,947. 3 Claims. (Cl. 176—51.)

2. In an arc lamp, the combination with control mechanism including a clutch, of a carbon rod engaged by said clutch, a pair of guide members for the upper end of said carbon rod disposed on opposite sides thereof, a roller carried by the upper end of the carbon rod between the said guides, a pair of rollers carried by the lower end of the carbon rod and having their axes at right angles to one another, and a guide for the lower end of the carbon rod having guiding faces positioned and adapted to be engaged by said rollers.

1,394,877. BRACELET AND THE LIKE. WALTER C. WOOD, Cranston, R. I. Filed Jan. 15, 1921. Serial No. 437,546. 2 Claims. (Cl. 59—80.)

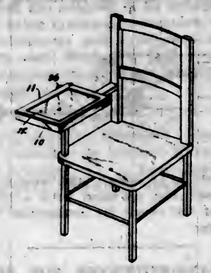
1. An article of the character described comprising a plurality of links, each having a shallow concaved body constructed of a sheet metal plate with oppositely projecting extensions integral with the outer edge of said body both of said extensions being offset inwardly and one of the extensions being folded to loosely engage the opposite extension of the next adjacent link to hingedly connect the links together.

1,394,878. SHUTTLE. CHARLES S. WRIGHT, West Stoughton, Mass. Filed Dec. 18, 1920. Serial No. 431,734. 2 Claims. (Cl. 139—27.)

1. A shuttle having a bobbin-receiving recess and a forked bobbin-holding spring, the arms of the spring having relatively wide ends, the upper edges whereof are only slightly below the top of the shuttle, said arms being provided with notches to receive the rings on the bobbin heel and being curved inwardly from the notches to the upper edges, each arm having a beveled top edge which forms with the inward curvature a ridge or shoulder closely adjacent the top edge of the arm whereby when a bobbin has been carried into a shuttle sufficiently so that the horizontal diameter of the heel is below the shoulder or ridge, the resiliency of the spring arms together with the curvature thereof will force the bobbin heel into the notches.

1,394,879. COVER-SUPPORT. ANTHONY F. ZEGA, Bloomfield, N. J. Filed Oct. 27, 1920. Serial No. 419,816. 3 Claims. (Cl. 217—69.)

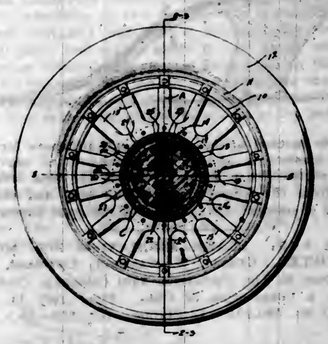
1. A cover support comprising a bar with a stud on the lower end thereof, a bracket having a dependent plate, the plate having a recess with an inclined rear edge and a central downwardly projecting nose, a bearing plate secured to said plate and formed into a channeled part adjacent to said rear edge of the recess and then extending upwardly to form a wing substantially in line with the plate and recessed on its top edge to receive the stud, and



a pawl pivoted to said wing with its end resting by gravity on the bottom part of the rear edge of the recess.

1,394,880. LOCK-SCREW. LOUIS BADOIS and DOLPHY KAHN, Paris, France. Filed Jan. 29, 1921. Serial No. 440,830. 2 Claims. (Cl. 151—18.)

1. An arrangement of lock screw including a cylindrical bearing provided on those parts of the nut and of the threaded piece receiving the screw to be locked in position which are opposite to each other, said bearings being intended to act together with a metallic ring or washer arranged between the said nut and the said threaded piece and having a slightly smaller diameter, in such a manner that the combined action of the said two bearings shall subject it to an embossing altering slightly its shape, whereby a very strong connection between the nut and the threaded piece receiving the screw to be locked in position is insured, the height of the said washer being determined preferably in such a manner as not to hamper the normal action exerted by a check-nut upon a nut.



1,394,881. ADVERTISING DEVICE. JOSE MARTINEZ BARDERA, New York, N. Y. Filed June 5, 1920. Serial No. 386,749. 1 Claim. (Cl. 40—96.)

In combination with the arm of a chair or the like support, a casing adapted to be secured to said arm having a display opening in the top face thereof, another casing mounted on the interior of said first mentioned casing, guide rollers journaled in the sides of said inner casing, sprocket wheels, a tape bearing advertising matter hav-

ing openings adapted to engage with said sprocket wheels, said inner casing having one of said sides split as and for the purpose described and specified.

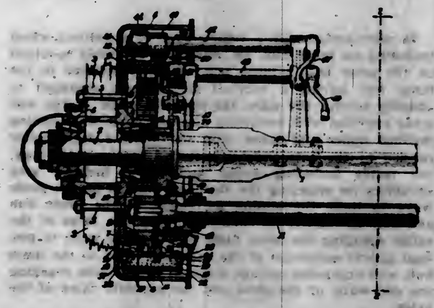
1,394,882. VEHICLE-WHEEL. EDWARD D. BEAUMONT, Phoenix, Ariz., assignor of one-half to Jeang Ying Hung, Phoenix, Ariz. Filed Feb. 12, 1920. Serial No. 358,280. 1 Claim. (Cl. 301—136.)

In combination with a vehicle axle, of a resilient wheel including an inner hub, an outer hub rotatably mounted on the inner hub, a block non-rotatably mounted in the inner hub having a vertical slot therein arranged to slidably receive the axle, the opposite walls of the slot being provided with vertically disposed guide ways having inclined upper and lower stop shoulders, a rigid collar carried by the axle slidably mounted in the guide way, the collar including upper and lower inclined stop shoulders for engaging the shoulders formed on the guide ways to limit the sliding movement of the inner hub and axle in relation to each other, the side faces of the collar engaging the inner faces of the guide ways to prevent lateral movement of the axle in relation to the inner hub, and expansion springs disposed in the slots engaging the end walls of the slots and the opposite faces of the axles.

1,394,883. TRACTOR-PLATFORM. WILLY JOHN BERNARD, New Iberia, La., assignor to A. M. Bernard Wagon Works, New Iberia, La., a Corporation of Louisiana. Filed July 30, 1920. Serial No. 400,144. 2 Claims. (Cl. 280—165.)

1. A device of the character specified, comprising a plate having its side edges upturned to form guards, said plate having at opposite ends of its front edge an upwardly and forwardly offset extension provided with attaching

cilge for connecting said extensions to the rear axle housing of a tractor, said plate having intermediate the ends of its rear edge a tongue for connection with the draw

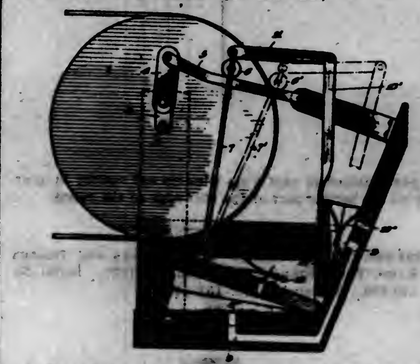


bar of the article to be drawn, and having its front edge centrally recessed and provided with a hitching tongue at the center of the recess for connection with the draw bar of the tractor.

1,394,884. SHANK-STIFFENER FOR SHOES. MARK CANOMS, Brooklyn, N. Y. Filed Jan. 26, 1919. Serial No. 273,550. 2 Claims. (Cl. 12—146.)

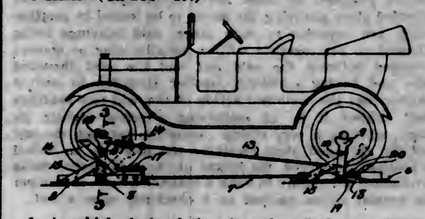
1. The method of preparing shank stiffeners for shoes which consists in skiving the inner-sole to convex its under surface, then partly splitting the sole longitudinally from the forward end to the heel, and then arranging a resilient shank between the split portions.

1,394,885. BRAKE MECHANISM FOR MOTOR-VEHICLES. GUSTAV W. CARLSON, Cleveland, Ohio, assignor to The Torbensen Axle Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 14, 1920. Serial No. 396,221. 13 Claims. (Cl. 188—79.)



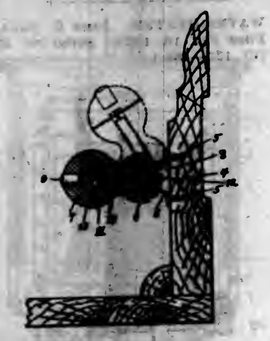
13. In apparatus of the character described, the combination of a rotatable wheel and its axle, a brake drum secured to the wheel, a stationary spider, two separate and independent brakes arranged adjacent each other side by side within the drum to operate thereon, each brake comprising two sections pivotally supported on the spider at adjacent points, and means on the spider slidingly engaging the sections of the brakes at points remote from their pivot ends, to keep adjacent sections of the two brakes properly spaced one from the other.

1,394,886. SAFETY-RAZOR. JOHN J. CARSON, Bonham, Tex. Filed Apr. 12, 1920. Serial No. 373,681. 5 Claims. (Cl. 30—12.)



1. In a razor, a support, a blade carriage reciprocating on the support and removable therefrom, a blade mounted in the carriage and movable therewith, means on the support and blade to retain the carriage on the support, a handle carrying the support, and an operating member carried by the handle and having connection with the carriage for reciprocating the same.

1,394,887. PUMP GOVERNOR MECHANISM. WILLIAM F. COORPS, Norwalk, Ohio. Filed May 24, 1917. Serial No. 170,579. 5 Claims. (Cl. 230—24.)

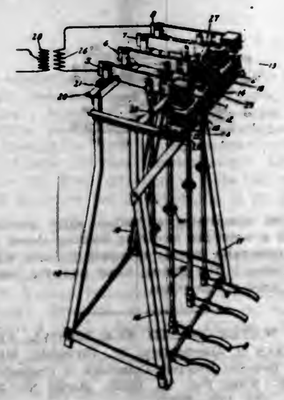


1. In a player piano, the combination of a suction pump for producing a suction in said player piano, an electric motor for driving said suction pump, said suction pump comprising a feeder bellows and a driving wheel therefor, said driving wheel being connected to said electric motor, a system of links connecting said driving wheel with said feeder bellows, and a regulating bellows having connection with said system of links to govern the stroke of said feeder bellows.

1,394,888. AUTOMOBILE-JACK. RICHARD F. DOWNEY, Milwaukee, Wis., assignor to Automatic Auto Jack Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 19, 1920. Serial No. 404,553. 5 Claims. (Cl. 254—89.)

1. A vehicle jack of the class described comprising a front frame, a rear frame, said frames being adapted to lie flat on a supporting surface, substantially nonflexible connecting links extending from the rear frame and pivotally connected with a front frame, front axle support members pivoted to and upstanding from the front frame, rear axle support members pivoted to and upstanding from the rear frame and means for holding said members in raised position.

1,394,889. DOOR-STOP. CHARLES O. FOUNTOCK and ROY J. FOUNTOCK, Chicago, Ill. Filed Aug. 16, 1920. Serial No. 403,807. 2 Claims. (Cl. 16—84.)

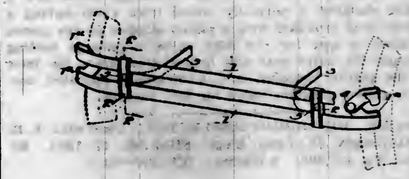


1. In a door stop, the combination with a base adapted to be attached to woodwork, a stop member having a rigid body and an elastic member secured therein, a spring disposed in said body and connected thereto and to the base, the base and body being provided with bearing surfaces which permit the body to be swung relatively to the base while preventing longitudinal movement of the stop member when it is struck by a door.

1,394,890. PROCESS OF APPLYING COATED FABRICS TO OBJECTS. HENRY GAULT, Strassburg, France, assignor of one-half to Philip Drinker, Bethlehem, Pa. Filed Mar. 13, 1920. Serial No. 365,622. 11 Claims. (Cl. 91—68.)

1. The process which comprises applying a coating of a cellulose ester to a fabric, drying it, then moistening the fabric, attaching it to an object, drying it, and applying a solvent wash.

1,394,891. ELECTRIC HEATING APPARATUS. HENRY GRISSINGER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 21, 1920. Serial No. 390,506. 8 Claims. (Cl. 219—11.)

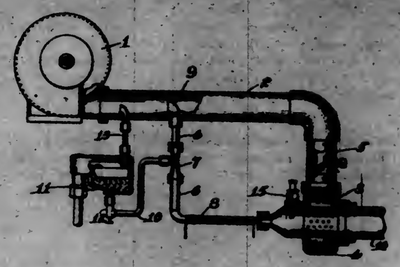


1. An electric heating apparatus of the class described comprising a plurality of independently movable conducting bars, electrodes mounted on said bars and conducting means between which and the movable electrodes the articles to be heated are adapted to be interposed, said conducting means being arranged to complete a series circuit through said electrodes and articles to be heated, and means whereby said electrodes and conducting means coöperate to complete the circuit whenever an interposed article is removed.

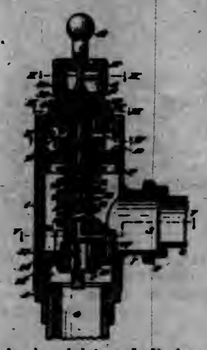
1,394,892. AUTOMOBILE-BUMPER. OSCAR H. GOETZ, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 6, 1921. Serial No. 490,298. 3 Claims. (Cl. 293—55.)

1. An automobile bumper comprising a duplex impact member consisting of two transversely extending spring bars set vertically edgewise in substantially the same vertical plane and spaced apart in that plane, both said bars being reflexed rearward at both ends to form end loops for guarding the vehicle wheel, the two bars being integral throughout said loops, being flexed vertically to merge with each other at the inner ends of the loops.

1,394,893. AUTOMOBILE-BUMPER. OSCAR H. GOETZ, Chicago, Ill., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill., a Corporation of Virginia. Filed Aug. 6, 1921. Serial No. 490,299. 3 Claims. (Cl. 293—55.)



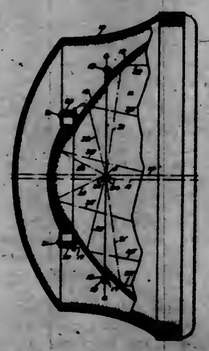
1. An automobile bumper comprising an impact member having two horizontal transversely extending bars, set vertically edgewise in substantially the same vertical plane, both being similarly reflexed rearward at both ends, and having the reflexed parts at each end flexed vertically toward each other and united, whereby there are formed double-barred hooks for guarding the wheels; and supporting arms secured to both said impact bars at points inward from the end loops respectively.



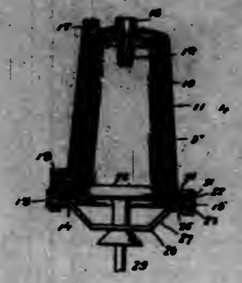
1,394,894. INCLOSED VAPOR-BURNER. JOHN GOOD, Brooklyn, N. Y., assignor to Good Inventions Co., Brooklyn, N. Y., a Corporation of New York. Filed Aug. 18, 1917. Serial No. 186,881. 24 Claims. (Cl. 158—28.)

1. Electrically-ignited vapor burner apparatus comprising an ignition space containing an electric igniter, electrically heated means for supplying a rich mixture of vaporous fuel and air, an entrance for conducting such mixture into igniting relation to the igniter in said space,

means for admitting air to sustain the flame resulting from the ignition of said mixture and means for coincidently causing said mixture and air to flow into said ignition space.



1,394,895. VALVE. BARTH J. GRIFFIN, Springfield, Mass. Filed Feb. 24, 1920. Serial No. 360,677. 11 Claims. (Cl. 137—93.)



1. A casing having inlet and discharge ports and a piston chamber, a normally closed inlet valve having a hollow stem provided with a piston slidable in the piston chamber, a seat for the inlet valve, a passage leading through the valve seat and hollow stem from the inlet to the piston chamber, and a manually operated normally closed auxiliary valve for said passage.

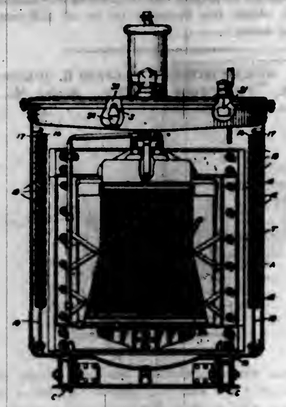
1,394,896. HEADLIGHT-REFLECTOR. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass. Filed Jan. 17, 1921. Serial No. 437,696. 6 Claims. (Cl. 240—41.)

2. A reflector comprising two transversely truncated reflecting surfaces of revolution secured together with their axes displaced but parallel, and with their focal planes coincident, in combination with a source of light in the focus of the surface forming the front part of the reflector.

1,394,897. WATER-HEATER. JOHN G. HAUS, Weirton, W. Va. Filed Feb. 16, 1920. Serial No. 359,119. 2 Claims. (Cl. 122—156.)

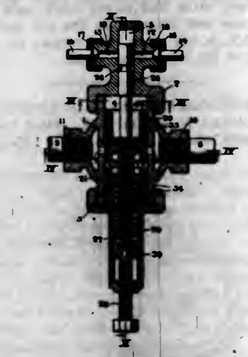
1. A water heater comprising an outer shell provided in its upper portion at one side with an outlet nipple for connection of an outlet pipe, said outer shell being formed at one side in its lower portion with a nipple for connection of an inlet pipe, an inner shell disposed within and spaced from said outer shell whereby to provide an annular water chamber, a transverse bracket secured beneath said superposed shell, a burner carried by said bracket, said outer shell being formed centrally of its top with a tubular upward extension and the inner shell being provided with a tubular downward extension registering with the first named extension, and means cutting off communication between said chamber and the bores of said extensions.

1,394,898. PISTON. GEORGE V. HARRIMAN, New York, N. Y. Filed May 23, 1918. Serial No. 236,109. 16 Claims. (Cl. 74—108.)



1. A piston comprising a hollow skirt provided interiorly with a wrist-pin receiving bearing closed at both ends; and removable means disposed in said skirt and removable through the piston head and for removably holding the wrist-pin in place.

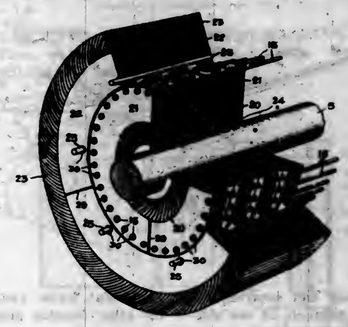
1,394,899. WATER-COOLED ELECTRICAL APPARATUS. ALLAN B. HENDRICKS, Jr., Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 24, 1920. Serial No. 360,912. 8 Claims. (Cl. 175—361.)



1. In inclosed electrical apparatus having main and auxiliary cooling mediums, the combination with cooling

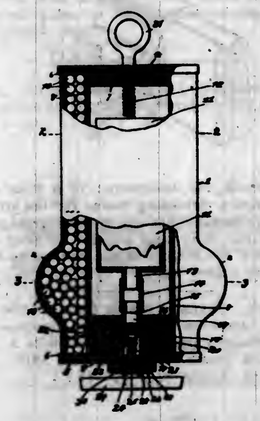
coils, of a winding arranged in close proximity thereto having means arranged to deflect laterally the vertically

rising streams of the main medium against said coils in a plurality of parallel streams.



1,394,900. VALVE. PHILIP D. HIBNER, Seattle, Wash. Filed Jan. 18, 1919. Serial No. 271,857. 1 Claim. (Cl. 158—36.)

A valve comprising alined larger and smaller cylinders having their respective inlet and outlet ports, a piston valve having a member working in the larger cylinder and a member working in the smaller cylinder, spring means for moving the valve in one direction to open the ports, and a separate fluid pressure source for moving the valve in the other direction to close the ports, the valve being moved by the overbalancing of the two pressures.

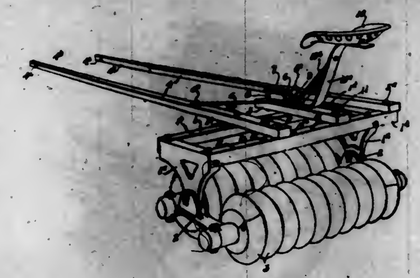


1,394,901. ELECTRICITY TRANSFORMER AND TRANSFORMING AND CONVERTING APPARATUS. HENRY M. HOBART, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 4, 1917. Serial No. 189,504. 6 Claims. (Cl. 175—356.)

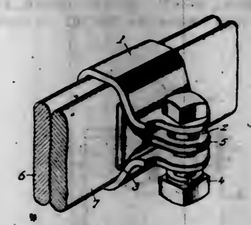
4. A transformer comprising in combination, a magnetic core made up of a plurality of annular laminations spaced apart in groups to divide circumferential winding windows and forming an annular core member having inner and outer cylindrical surfaces, two solid annular core members made up of a plurality of laminations bent in the form of involutes arranged in contact with the inner and outer cylindrical surfaces of the annular core

member made up of said annular laminations and adapted to complete the magnetic circuit at the outer and inner surfaces thereof, and windings assembled in said winding windows.

1,394,902. AERIAL BOMB. SAMUEL HOUGH, Atco, N. J. Filed July 9, 1919. Serial No. 309,761. 5 Claims. (Cl. 102—2.)



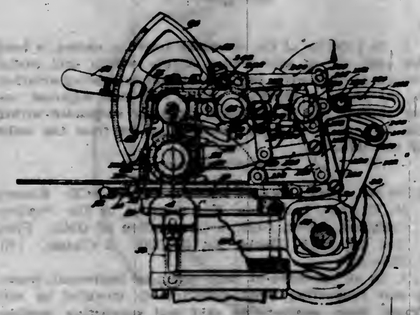
5. In a device of the character stated, a casing, a head for each end of said casing, a tube within said casing concentric therewith, the ends of said tube being attached to the heads, a partition within said tube adjacent one end thereof, and an explosive container suspended within the tube with its walls normally spaced from the walls of the tube.



1,394,903. IMPLEMENT DRAFT APPLIANCE. ROBERT M. HUNTER, Lexington, Ky., assignor to The Dunham Company, Berea, Ohio, a Corporation of Ohio. Filed Nov. 10, 1919. Serial No. 336,783. 2 Claims. (Cl. 278—33.)

1. In an agricultural implement, an implement frame, a seat supporting member detachably mounted on said frame, brace members on said seat supporting member, draft pole members detachably secured in predetermined forwardly converging relation to each other in a centrally

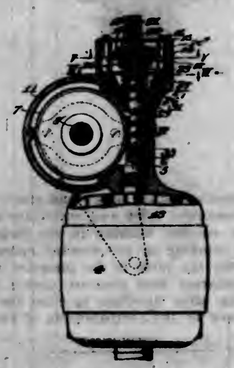
arranged abutting position forming a two-pole tongue on opposite sides of said seat supporting member, and means whereby either pole member may be shifted to its respective side and secured to the implement frame and said brace members at one side or the other forming properly spaced off-set shaft members.



1,394,904. CLAMP. WALTER V. ISGRIG, Milwaukee, Wis., assignor to Badger Manufacturing Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed July 9, 1920. Serial No. 395,096. 8 Claims. (Cl. 293—55.)

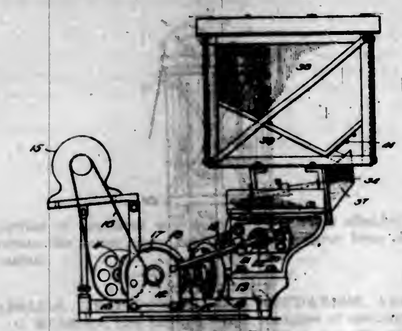
5. In a clamp, the combination of a strap adapted to receive an object, tightening means for the strap, and an independently movable spacing member arranged between the ends of the strap, and adapted to exert a gripping action between the strap and the member as the ends of the strap are drawn together.

1,394,905. MACHINE FOR PREPARING INSOLES. ALBERT E. JOHNSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1918. Serial No. 259,570. 26 Claims. (Cl. 12—17.)



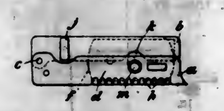
1. A machine for preparing soles having, in combination, a sole support, cutters to form oppositely disposed recesses in a sole placed on the support, mechanism for actuating the support to cause the cutters to act on the sole, and means to adjust the actuating mechanism for the support to cause the recesses to be of different lengths in different soles.

1,394,906. STRAP-HOLDER. ALFRED R. JOHNSON, Reedsville, Pa. Filed June 1, 1921. Serial No. 474,126. 2 Claims. (Cl. 139—48.)



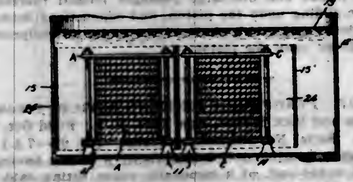
1. In combination with a picker stick and sweep stick operating the same, a power stick having a head formed at one end thereof and having a cut out portion disposed adjacent to the head, a connecting strap positioned between the power stick and picker stick, said connecting strap having one end disposed in the cut out portion of the power stick, a lug strap, and means for connecting the lug strap to the connecting strap.

1,394,907. WINDING DEVICE FOR SPRING-MOTORS. JOSEPH W. JONES, New York, N. Y. Filed Apr. 12, 1919. Serial No. 289,705. 11 Claims. (Cl. 185—40.)



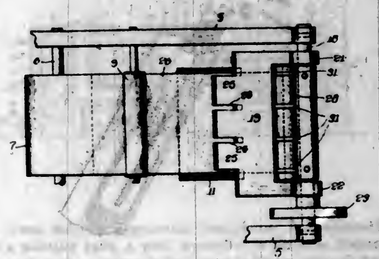
1. In a winding device for spring motors, a winding motor, and means for controlling the stopping and starting of the winding motor including two separable elements, the first element being movable in one direction by an increased resistance of the spring motor spring for moving the second element to stop the winding motor, the first element being movable away from the second element by a decreased resistance of the spring motor spring, whereby the second element may be manually moved only, to start the winding motor.

1,394,908. FEEDING MECHANISM. GUSTAVE C. KELLING, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 442,977. 8 Claims. (Cl. 146—14.)



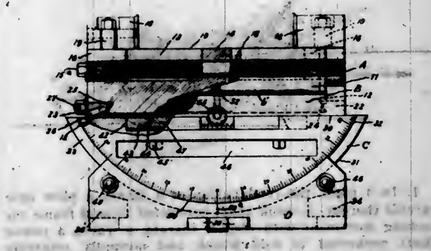
1. In mechanism for feeding peanuts and the like, a hopper, a tubular member, means for rotating said member, a chute connecting the hopper and rear end of the tubular member, and means for regulating the feed of peanuts from the hopper to the tubular member, whereby the peanuts will be fed therefrom one at a time.

1,394,909. RAZOR-BLADE HOLDER. ERNEST NORBERT KENNEDY, Birchwood, Sunningdale, England. Filed Jan. 26, 1920. Serial No. 354,049. 4 Claims. (Cl. 30—12.)



1. A device for enabling safety razor blades to be used for various other purposes besides shaving, comprising in combination, a handle portion formed of two flat strips of material connected together at their ends so as to leave a space between them, a blade holder connected to one end of said handle portion and formed of two flat strips of metal arranged side by side and connected together at their ends so as to form a wedge shaped slot between them, a safety razor blade in said slot, and means for clamping the sides of the blade holder to grip said blade in any adjusted position therein.

1,394,910. REACTOR IN TANKS. FRIEND H. KIERSTEAD, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 3, 1920. Serial No. 356,081. 3 Claims. (Cl. 175—360.)



1. In air core type reactors and the like, the combination with windings, of a container adapted to hold a cooling and insulating medium in contact with said windings, and continuous conducting non-magnetic means disposed about the walls of said container and arranged to confine the main flux emanating from said windings within predetermined limits.

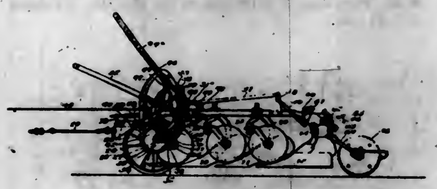
1,394,911. SHINGLE-CUTTING MACHINE. ROY D. KING, Chicago, Ill. Filed Nov. 1, 1920. Serial No. 420,936. 6 Claims. (Cl. 164—66.)

1. A shingle cutting machine, comprising a stationary block having alternately disposed recesses and projections over which the sheet of material to be cut is fed, a movable cutter having complemental recesses and projections cooperating with said block to sever the lower edge of a shingle strip from said sheet, and means for subsequently removing the waste projecting from the upper edge of said severed shingle strip.

1,394,912. VISE. STANISLAW J. KORKOSZ, Schenectady, N. Y. Filed July 1, 1919. Serial No. 307,940. 6 Claims. (Cl. 81—41.)

1. A vise comprising upper and lower halves which are fastened to each other and arranged for adjustment in a horizontal plane, and clamping elements carried by the upper half which are adjustable toward and away from each other, said upper half comprising two members having curved engaging surfaces which are adapted to stand in one plane and said lower half comprising two members having curved engaging surfaces which are adapted to stand in a plane at an angle to the first named plane whereby said clamping elements can be adjusted in a horizontal plane and in either of two vertical planes.

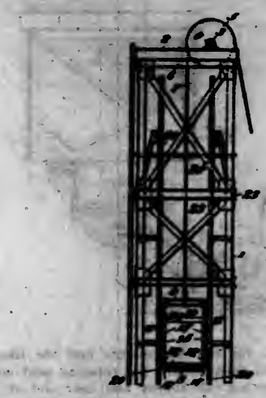
1,394,913. HEADREST FOR BARBER OR LIKE CHAIRS. GIUSEPPE CARMELO LABALA, New York, N. Y. Filed June 28, 1918. Serial No. 242,406. 19 Claims. (Cl. 155—176.)



1. A barber or like chair head rest, comprising a paper roll, and a paper clamp, and a plate bearing upon said roll and forming a friction clamp and shield for com-

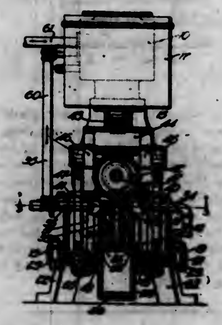
pletely covering one side of said paper roll, and means for removably holding said roll, said plate having means

adapted to strike against a stop to limit the inward movement when the roll is removed.



1,894,914. POWER-LIFT PLOW. ALEXUS C. LINDGREN and ROY B. JOHNSTON, Hamilton, Ontario, Canada, assignors, by mesne assignments, to Fred Gerisch and Arnold B. Keller, trustees, Chicago, Ill. Filed Nov. 19, 1917. Serial No. 202,782. 4 Claims. (Cl. 97—55.)

1. In a plow, the combination of a frame, a plow base carried thereby, a crank shaft connected to said frame for rocking movement with respect thereto, a wheel, a power shaft connected to said wheel, and normally rotatable therewith, a bearing for the power shaft mounted on said crank shaft, a rotatable clutch member secured to said power shaft and a normally stationary clutch member coöperating with said rotatable clutch member and operatively connected to the frame and control means for said clutch whereby the frame may be raised.



1,894,915. HOISTING APPARATUS. MICHAEL EARL LOEB, Westmont borough, Pa. Filed Nov. 6, 1920. Serial No. 422,131. 5 Claims. (Cl. 214—120.)

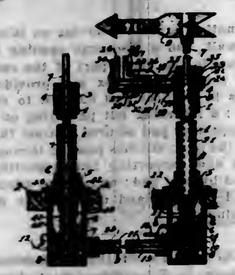
1. A hoisting apparatus comprising a dumping bucket provided with upper and lower guide wheels rotatably secured thereto, upright guideways coöperating with the lower guide wheels and extending above the upper limit of travel of said bucket, guideways coöperating with the upper guide wheels and provided with curved portions adapted to over-turn said bucket, the lower curved portions of the last mentioned guideways being connected with upwardly extending curved portions which merge into a further upright extension of same, a guide roller mounted on the frame-work, and a contact finger secured to the

bucket and adapted to coöperate with said guide roller, whereby the guide wheels of the bucket are constrained to move within their respective guides.

1,894,916. PUMPING UNIT. GEORGE D. LOUD, Boston, Mass. Filed Aug. 8, 1917. Serial No. 185,162. 4 Claims. (Cl. 103—67.)

1. A pumping unit comprising a motor having a crank case and crank shaft journaled therein, a pump piston rigidly secured to the under side of the crank case and having intake and discharge passages formed therein, a cylinder sliding upon the piston, and connections between the cylinder and crank shaft of the motor to reciprocate the cylinder upon the piston.

1,894,917. PYROPHORIC IGNITING DEVICE. SOLOMON LUMEN and MAX EISNER, New York, N. Y. Filed Oct. 25, 1919. Serial No. 333,264. 1 Claim. (Cl. 67—7.1.)

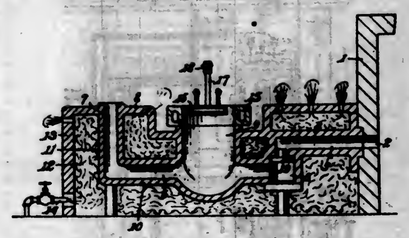


A pocket igniting device comprising a casing having a reduced upper end, of a removable cover fitting said reduced end, a wick tube in said casing adapted to expose a wick at its upper end, a friction disk mounted to rotate in a plane passing longitudinally through the wick tube and located adjacent the end of the wick tube, a sparking

element held in engagement with said friction disk, and a spring attached to said cover having a roughened surface

portion in abutment with said friction wheel adapted to rotate the latter upon removal of said cover from said casing.

1,894,918. TRAFFIC-SIGNALING MECHANISM. LEWIS C. MCADAMS, Los Angeles, Calif., assignor of one-half to J. M. Benedict, Glendale, Calif. Filed Jan. 26, 1920. Serial No. 354,268. 2 Claims. (Cl. 116—63.)

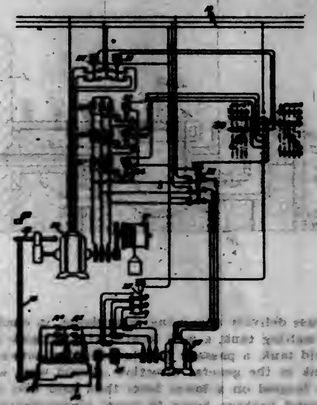


1. A traffic signaling system, comprising standards at the corner of the intersection, vertically disposed shafts in said standards, signal vanes on the upper ends of said shafts, pulleys on the lower ends of said shafts, a hollow shaft in one of said standards, surrounding the signal shaft therein, a pulley on the lower end of said shaft, cables connecting said shafts together for operation, and means connected with said hollow shaft and with the signal shaft therein, on one of said standards for operating all of said signals together at will.

1,894,919. PRAYER-RAIL. JOHN JAMES MCCANN, Toronto, Ontario, Canada. Filed Jan. 28, 1920. Serial No. 354,548. 2 Claims. (Cl. 155—166.)

1. A prayer rail, comprising, a pair of end brackets adapted to rest upon the floor and each having a vertical socket, a rail having vertical posts adapted to be inserted in said sockets and to form a rigid connection between the brackets, and a bench resting upon and extending between said end brackets.

1,894,920. GLASS-DELIVERY APPARATUS. RICHARD T. MCGEE, Wheeling, W. Va. Filed May 22, 1919. Serial No. 298,008. 4 Claims. (Cl. 49—55.)



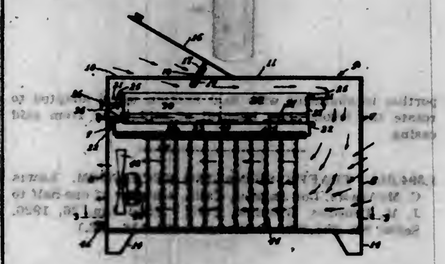
3. Glass delivery apparatus, comprising, in combination with a melting tank, a well located at a suitable distance from said tank, a passage for glass leading outward from said tank in the general direction of said well, a second passage located on a lower level than said first passage, said second passage being in open communication with said well and being adapted to receive glass by gravitation from said first passage, and means for producing glass displacement within said second passage for ejecting glass from the mouth of said well.

1,894,921. PRIMING DEVICE. EDWARD C. MCKENZIE-MARTIN and FRANK A. HOWARD, Elizabeth, N. J., assignors to Standard Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Oct. 22, 1920. Serial No. 418,831. 15 Claims. (Cl. 123—180.)

1. The combination with an internal combustion engine, intake manifold, carbureter and throttle, of a priming device comprising an auxiliary fuel reservoir containing fuel, a mixture passage connected at one end to the manifold and having its other end provided with an air inlet and a fuel jet receiving fuel from the reservoir, and manually operated means for completely closing off flow through the mixture passage below the fuel jet.

1,394,912. MOTOR-CONTROL SYSTEM. Bowen H. McLaren, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 14, 1921. Serial No. 469,592. 6 Claims. (Cl. 172—179.)

1. The combination with a main electric motor, of means for controlling the same comprising a normally applied brake, a motor for relieving the brake, and means whereby the said motor is energized to deliver a torque which decreases as the main motor speeds up.

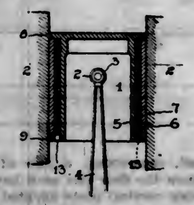


1,394,923. SHEET-METAL BARREL. James W. McNeil, Newark, N. J. Filed June 4, 1920. Serial No. 386,564. 9 Claims. (Cl. 220—72.)

1. A sheet metal barrel comprising a bilged body having smooth non-ribbed chimes split longitudinally of the barrel at intervals and longitudinally extending double-walled ribs between the chimes projecting radially into the interior of the body and terminating at the inner ends of the lines of division in the split chimes, the walls of each rib being of uniform width from end to end and being divided along their inner edges at each end of the rib and integral with each other along the inner edge of the central portion of the rib, the inner edges of the abutting divided portions of the walls of each rib being provided with relatively staggered tongues and the tongues on each wall being bent laterally around the abutting wall.

9. A sheet-metal barrel comprising a bilged body having chimes split longitudinally of the body at intervals, portions of the body being folded to provide longitudinally-extending double-walled ribs between the chimes projecting radially inwardly from the body-wall, the inner edges of the walls of said ribs being substantially parallel with the bilged body from end to end, and said inner edges of the walls of each rib being in equal along the central portion of the rib and divided from each other throughout the remaining end-portions of the rib, means being provided for clamping together the aforesaid divided walls of the ribs.

1,394,924. PORTABLE AIR COOLER, MOISTENER, AND PURIFIER. Bernard Macfadden, New York, N. Y. Filed Dec. 2, 1919. Serial No. 341,998. 2 Claims. (Cl. 62—138.)



2. In combination, a cabinet having an inlet opening in its rear end wall, and a discharge opening in the front wall; an ice box in the upper part of the cabinet; a distributing pan beneath said box and provided with distributing holes in its floor and adapted to receive water from said box; a retarding felt pad lying on the floor of the pan; a supporting pad secured against the lower face of the floor of the pan; stitches passing through said holes and said pads and supporting the supporting pad; curtains supported by said pad; and means adapted to draw air across said curtains and discharge it through said discharge opening.

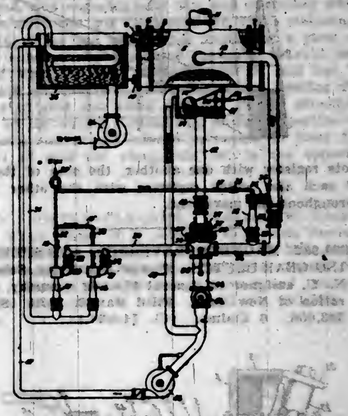
1,394,925. EXPANSION-SHIELD. Ernest W. Marshall, Yonkers, N. Y., assignor to J. Edward Ogden, Mountainville, N. Y. Filed Aug. 15, 1919. Serial No. 317,726. 15 Claims. (Cl. 85—2.4.)

1. An expansion shield comprising a tubular member having between its ends a plurality of spaced straight parallel strips inclined to the axis of the tube.

1,394,926. PISTON. Alfred N. Martin, New Dorp, N. Y. Filed Aug. 22, 1919. Serial No. 319,171. 2 Claims. (Cl. 74—108.)

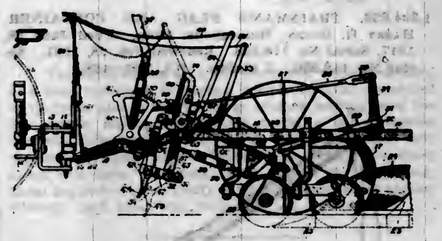
1. The combination, with a trunk piston, of annular flanges extending respectively from its upper and lower ends, and packing comprising a number of spring-like divided metallic sleeves, in engagement relation around the piston to exert inherent radial tension therefrom, said sleeves including substantially the entire length of said piston, and being restrained by said flanges from vertical movement relatively to said piston, the lower flange having vertical apertures therethrough for the passage of lubricant to said sleeves.

1,394,927. STEEL FOR SHARPENING CUTLERY. Ernest C. Martin, Antrim, N. H. Filed Mar. 2, 1920. Serial No. 362,768. 1 Claim. (Cl. 76—84.)



A steel for sharpening cutlery having a knurled sharpening surface provided with grooves which extend longitudinally thereof and are separated to provide knurled surfaces of substantial width between the grooves on which a knife may be sharpened, the edges of the grooves constituting sharpening edges which have a greater abrasive action than said knurled surfaces between the grooves.

1,394,928. TREATMENT OF RUBBER ARTICLES. Thomas Midgley, Hampden, and Ralph B. Naylor, Springfield, Mass., assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 21, 1920. Serial No. 418,520. 12 Claims. (Cl. 18—53.)

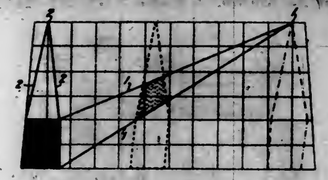


1. The method of treating a tire casing comprising assembling the carcass and tread portions thereof, applying heat regionally to the assembled casing in such a manner as to augment the difference between the resistances to flow of the tread and the carcass whereby the tread is enabled to conform to a molding pressure when applied without displacing the carcass, and then applying molding pressure to the casing and vulcanizing it.

1,394,929. CONDENSER APPARATUS. Samuel A. Moss, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Oct. 8, 1919. Serial No. 329,379. 7 Claims. (Cl. 257—24.)

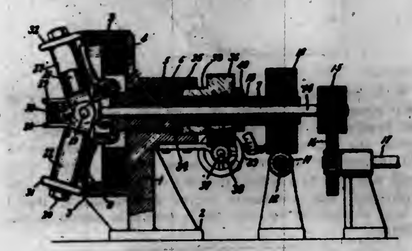
1. In combination, a condenser, a multi-stage ejector pump connected therewith, an intercooler for said pump, said intercooler being located below said condenser, a conduit for conveying condensate from said condenser to said intercooler, said conduit being of such length that liquid will flow by gravity from the condenser through the intercooler, and automatic means for supplying liquid to said intercooler in case the condensate supply is insufficient.

1,394,930. POWER-OPERATED PLOW. Carl W. Mott, Chicago, Ill., assignor, by mesne assignments, to International Harvester Company, a Corporation of New Jersey. Filed Nov. 6, 1916. Serial No. 129,810. 15 Claims. (Cl. 97—59.)



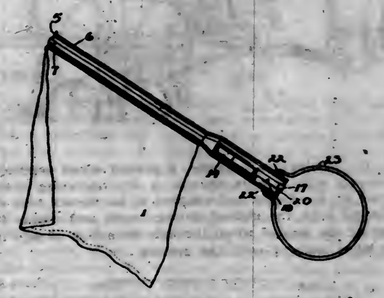
1. In combination, a frame, a ground wheel vertically adjustable with respect thereto, a lift operating device carried by the frame and adapted to be thrown into engagement with the ground during travel and means for lowering the ground wheel through the action of said device when engaged with the ground.

1,394,931. VALVE. William Edgar Muntz, London, England. Filed May 8, 1919. Serial No. 296,743. 6 Claims. (Cl. 251—92.)



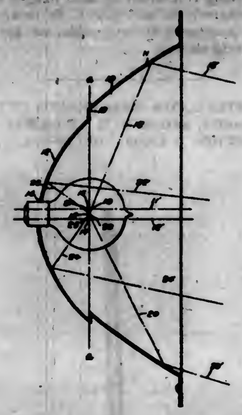
1. In a device of the character described, the combination of two members, means for holding the two members in fluid tight contact, and means for moving one member relatively to the other, each member having in it a slot that tapers to a point, the center lines of the two slots

being inclined to one another and the slots being so arranged that, as the one member is moved relatively to the other from the position in which the points of the two



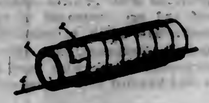
slots register with one another, the area of the portion of each slot which registers with the other increases throughout the movement.

1,394,932. MAGNETIC REVERSING AND SPEED-VARYING GEAR CLUTCH. EDWIN J. MURPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 3, 1920. Serial No. 363,056. 6 Claims. (Cl. 74—34.)



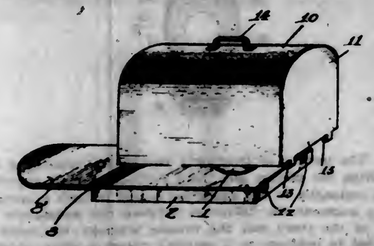
1. The combination of a magnetic annular toroid and a driven shaft connected therewith, of a driving shaft and a system of magnetic rollers carried by the same, and an electromagnet coil in position to magnetically clutch the rollers to the toroid.

1,394,933. TRAINMAN'S FLAG AND CONTAINER. HARRY H. OLSEN, Minneapolis, Minn. Filed June 18, 1917, Serial No. 176,638. Renewed Feb. 28, 1921. Serial No. 448,336. 3 Claims. (Cl. 246—488.)



1. A container having a compartment for fusees, a compartment for signal torpedoes concentric therewith and carried thereby, a closure for the inner end of said fuse compartment closing also said signal torpedo compartment, forming on one side of said closure an annular space for matches and on the other side a chamber for signal torpedoes.

1,394,934. HEADLIGHT-REFLECTOR. JAMES A. O'NEIL, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Dec. 30, 1920. Serial No. 434,101. 4 Claims. (Cl. 240—41.)



1. A reflector comprising a parabolic reflecting surface cut into two parts on a line perpendicular to its axis through its focus, and the cut parts relatively displaced with their axes parallel, in combination with a source of light located substantially in the focal plane and between the axes of said parts.

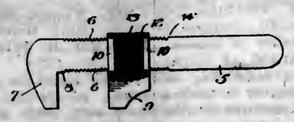
1,394,935. METHOD OF MAKING TUBES. ROBERT PALMER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Jan. 5, 1920. Serial No. 349,605. 2 Claims. (Cl. 113—112.)

1. The process of making tubes of ferrous metal which consists in shaping sheet metal into tubular form with the edges thereof making a butt contact, holding said metal in this form by a refractory bonding material not wetted by molten copper, and uniting the abutting edges by molten copper in a reducing atmosphere.

1,394,936. HAND PORTABLE SEWING-MACHINE. MAUD PRATT, Chicago, Ill. Filed Dec. 17, 1920. Serial No. 431,254. 8 Claims. (Cl. 45—120.)

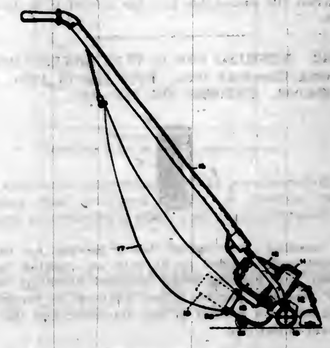
5. In the herein described improvements in hand portable sewing machines embodying therein a base having a sewing machine head thereon, a two part cover for said head and connecting parts, one part being a combined drop leaf and cover end being hinged to the base and being swingable to a horizontal position to form an extension of the base and being swingable to a vertical position to coact and form an end closure wall for the other cover part, and means for detachably connecting said other cover part to the base and detachable coupling means between said other cover part and the drop leaf.

1,394,937. RESISTANCE UNIT. LUDWIG EMCHOLD, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Mar. 28, 1919. Serial No. 285,743. 13 Claims. (Cl. 219—66.)



1. The method of making electric heating units which consists in mounting a helical resistance conductor on a support, inclosing the same in a metallic tube, filling the tube with powdered insulating material and then compacting the insulating material by reducing the diameter of the tube.

1,394,938. METHOD OF MANUFACTURING SHOES AND A SHOE MADE BY SUCH METHOD. IGNAS RICKEY, Rochester, N. Y. Filed Nov. 13, 1920. Serial No. 423,959. 5 Claims. (Cl. 36—17.)



2. A shoe comprising an upper having an inturned edge the extremity of which is projected in a plane substantially parallel with the plane of the inner sole, a welt stitched to the under side of the inturned edge with its inner edge projecting in a plane substantially parallel with the inturned edge and the inner sole, an inner sole having its entire under face arranged above and unsecured to the inturned edge, securing means for the inner sole projecting from said inner sole, extending around the adjacent edges of the upper and welt and adhesively secured to the under face of the welt, and an outer sole secured to the welt against such securing means on the inner sole.

1,394,939. WRENCH. HENRY T. ROBERTS, New York, N. Y. Original application filed May 21, 1919, Serial No. 298,612. Divided and this application filed Feb. 7, 1920. Serial No. 357,050. 1 Claim. (Cl. 81—161.)

A wrench formed of a flat bar of metal with a thread cut on one end at opposite edges, the end thereof opposite that containing said threads forming a handle-portion presenting a stop-surface at the end of said thread, a jaw surrounding said bar and shiftable thereon lengthwise of the latter and held against rotation thereon by engagement with said bar, a nut surrounding said bar and engaging said thread, and engaging said jaw and operating when rotated to shift said jaw along said bar, and a stationary jaw on the other end of said bar formed of a piece of metal of substantially the same thickness as said bar, connected with the outer threaded end of said bar to oppose said movable jaw, said stop-surface limiting the movement of said nut along said bar in one direction, the part of the wrench beyond said threaded portion at the opposite end of the wrench operating to limit the movement of said nut along said bar in the opposite direction.

1,394,940. SUCTION-CLEANER. WILLIAM W. ROSENFIELD, White Plains, N. Y., assignor to Electric Vacuum Cleaner Company, Inc., a Corporation of New York. Original application filed May 24, 1915, Serial No. 29,968. Patent No. 1,348,582. Divided and this application filed June 25, 1920. Serial No. 391,778. 4 Claims. (Cl. 183—36.)

1. The combination in a self-contained suction cleaner, of a dust receptacle of porous, flexible material connected at its lower end to the discharge conduit leading from the fan casing, and a flexible and normally non-collapsing discharge tube extending from the discharge conduit into the dust receptacle so as to leave a space for dirt to collect about said tube, said tube being formed of flexible material supported by an easily flexible metallic spring means, whereby said tube will bend without collapsing.

1,394,941. FARE-COLLECTING BOX. ALBERT RUEBSAMEN and WALTER L. DENNIS, Decatur, Ill., assignors to Albert Ruebsamen, Walter L. Dennis, and Moses W. Randolph, a Copartnership doing business under the name of The R. D. R. Manufacturing Co., Decatur, Ill. Filed Mar. 13, 1919. Serial No. 282,807. 15 Claims. (Cl. 232—15.)

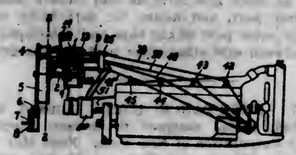
1. A mechanism of the character described, including in combination, a main casing or body having a hopper and provided with an opening leading into an interemdiate part, a tilting lid or tray for opening and closing said opening, an article-receiving till adapted to be inserted in said main body or casing below said intermediate portion thereof, said till having a sliding cover and means for locking said cover in its closed position when the till is outside of the casing; a key insertible in the casing

to slide the lid or cover to open position, after the slit is within the casing, and means to automatically lock the

cover when the removable key has moved it to full open position.

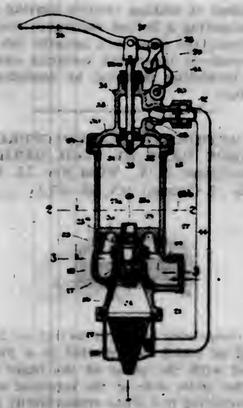
1,394,942. BUSHING FOR OUTLET-BOXES. PETER E. C. SATER, Cleveland, Ohio. Filed Aug. 16, 1920. Serial No. 404,006. 3 Claims. (Cl. 247—25.)

1. A bushing for outlet boxes having an exterior shouldered end adapted to fit into an opening in said outlet box, said bushing being threaded internally, said internally threaded portion being adapted to receive the threaded end of a conduit of less diameter than the opening in said outlet box.



1,394,943. HAIR-DRESSING APPLIANCE. RUTH S. M. SCHROEDER, Chicago, Ill. Filed May 31, 1921. Serial No. 473,579. 3 Claims. (Cl. 132—33.)

1. In a device of the class described, the combination with an expansible and contractible spring loop, of a pair of arms or levers normally in angular relation to each other which when brought together expand said loop, and means for holding together said arms or levers.

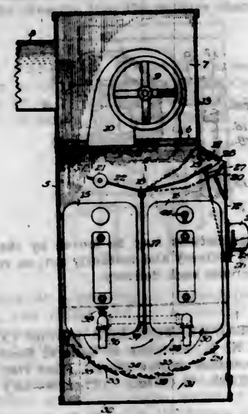


1,394,944. AUXILIARY IGNITION SYSTEM FOR GAS-ENGINES. RICHARD R. SHAW, Fresno, Calif. Filed Dec. 1, 1919. Serial No. 341,836. 2 Claims. (Cl. 123—148.)

1. An auxiliary ignition system for gas engines including a shaft, a spring for rotating said shaft, a plurality of gears on said shaft, a second shaft, a plurality of gears on said second shaft, means for causing the gears

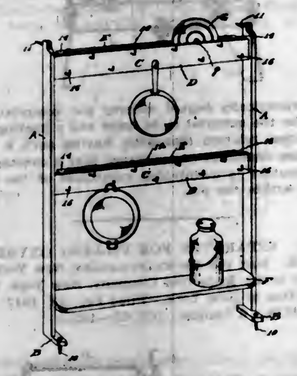
on the second shaft to mesh respectively with companion gears on said first shaft and a distributer on said second shaft.

1,394,945. FLUSH-VALVE. GEORGE DOUGHMAN SHOWERS, Altoona, Pa. Filed July 6, 1920. Serial No. 394,147. 8 Claims. (Cl. 137—93.)



2. A flush valve comprising, a cylinder having an inlet port and two communicating outlet ports, a manually operable valve controlling one of the outlet ports, a piston within the cylinder having a port therein, a gravity valve having a port therein, said gravity valve being within the piston and controlling the piston port, a valve carried by the first valve and controlling said gravity valve port, and an outlet valve carried by the piston and controlling the other of said outlet ports.

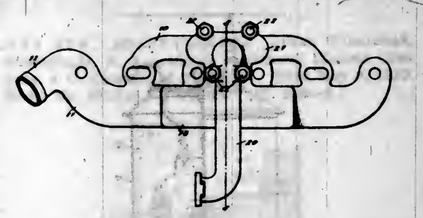
1,394,946. VENTILATING UNIT. WILFRED SHURTLEFF, Moline, Ill., assignor to Moline Heat, Moline, Ill., a Corporation of Illinois. Filed Mar. 10, 1919. Serial No. 281,800. 3 Claims. (Cl. 257—137.)



2. In a ventilating unit of the class described the combination of a housing having an air inlet and an outlet, a partition dividing the housing below said outlet into rear and front passageways connected at their lower ends, a radiator structure in each passageway, said radiator structures being connected serially for the flow of

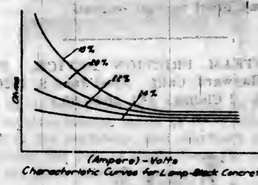
steam therethrough, a damper hinged at the upper end of said partition and adapted to swing in said outlet to

control the connection of said outlet with said front passageway and with said air inlet.



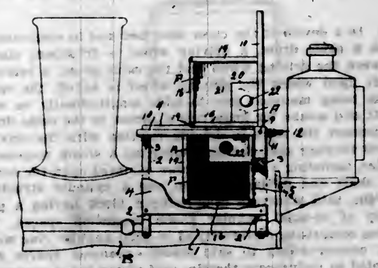
1,394,947. PAN-RACK. JULIUS SINGER, New York, N. Y. Filed Nov. 24, 1919. Serial No. 340,300. 2 Claims. (Cl. 65—65.)

1. A rack comprising a pair of uprights, and a plurality of transverse slats for spacing the uprights apart; each transverse slat consisting of a face portion and a rear portion, the ends of the face portion being separably secured to the inner sides of the uprights; the rear portion of each slat having forwardly projecting ends located between the uprights and bearing against and secured to the rear surface of the face portion for providing space between the rear surface of the face portion and the front surface of the rear portion for supporting non-suspendible utensils therein.



1,394,948. CARBURETED-FUEL SEPARATOR AND FUEL-VAPORIZER. CARLISLE FORREST SMITH, Kokomo, Ind. Filed Nov. 20, 1919. Serial No. 339,382. 4 Claims. (Cl. 123—122.)

1. A manifold having an intake opening, a baffle opposite the intake opening, means forming a vaporizing well below and into which the baffle drains, provided with an exhaust heated wall, a fuel feed pipe attached to the manifold and a fuel intake tube extending from

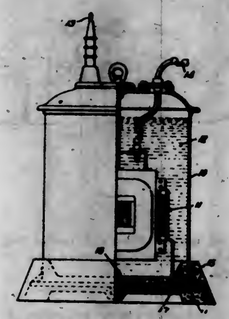


the adjacent end of the pipe and projecting into the intake opening of the manifold toward and at right angles to the said baffle.

1,394,949. RESISTANCE MATERIAL. RALPH W. STEARNS, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 19, 1920. Serial No. 359,953. 4 Claims. (Cl. 219—76.)

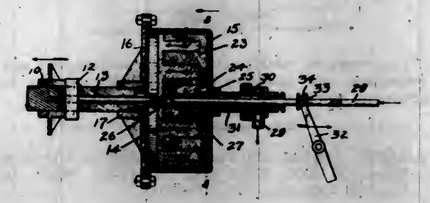
1. A resistance material comprising a substantially non-conducting base composed mainly of concrete and an admixture of a relatively small amount of lampblack.

1,394,950. SIGNAL APPARATUS. ROBERT P. STEPHENS, Raton, N. Mex. Filed Mar. 26, 1921. Serial No. 455,799. 5 Claims. (Cl. 116—30).



1. A signal apparatus of the class described comprising a member provided with a socket, a staff supported by said member for both swinging and endwise movement, said staff having an extension seating within the socket when the staff is in one position, a flag carried by the staff, and an illuminated signal carried by the staff and exposed through the flag.

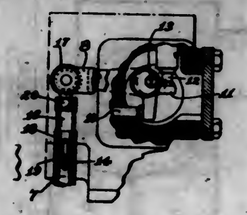
1,394,951. ELECTRICAL APPARATUS. NOBUCHIKA SUGIMURA, Tokyo, Japan, assignor to General Electric Company, a Corporation of New York. Filed June 5, 1919. Serial No. 301,959. 2 Claims. (Cl. 72—14.)



2. In a casing for liquid submerged electrical apparatus, the combination with a trunk constructed of sheet metal,

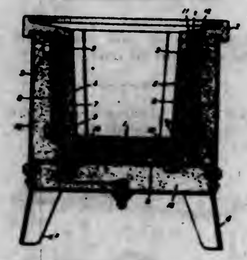
of a plastic base formed to engage with a rim of said trunk, reinforcing material embodied in said base, and a

liquid tight surface material intimately associated with said plastic for making its interior surface and the rim about said tank proof against osmosis.



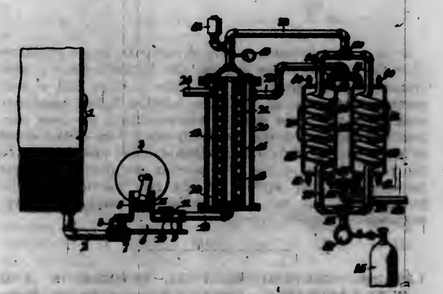
1,394,952. STEAM FRICTION DEVICE. FRANK T. SWANSON, Hayward, Calif. Filed June 8, 1920. Serial No. 387,498. 2 Claims. (Cl. 192—85.)

1. In a device of the class described and in combination with a cable drum, a driving wheel, a frictional clutch between the driving wheel and the cable drum, a rotating shaft upon which the driving wheel is keyed, the cable drum being mounted free to slide longitudinally on said shaft and means for imparting a thrust to the cable drum to connect the same in driving relation with the driving wheel through said clutch, comprising a steam responsive device, including a steam chamber mounted upon the rotating shaft and having a piston and a cylinder structure therein, said structure comprising a block having a plurality of co-axial annular steam expansion spaces, the piston comprising a plurality of co-axial annular ring members corresponding to said steam expansion spaces and adapted to reciprocate therein, said piston being connected to said cable drum, and means for progressively introducing steam to said steam expansion spaces to actuate said piston.



1,394,953. GOVERNOR-CONTROLLED COMBUSTION-ENGINE. ADOLF TACCHELLA, St. Louis, Mo., assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 5, 1917. Serial No. 194,910. 1 Claim. (Cl. 123—140.)

In a governor controlled internal combustion engine of the fuel-injected class, means connecting the governor to the fuel injecting means to vary the fuel delivery, comprising two relatively movable telescopic parts, and a spring housed therein and normally holding said parts in a non-changing relation for positively transmitting the governor motion to said means, said spring being arranged to urge said parts in the direction to decrease the fuel delivery,

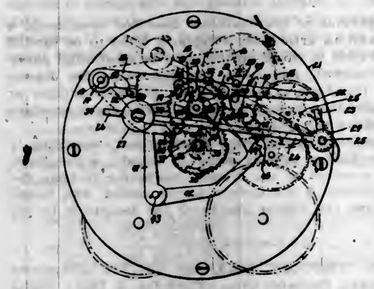


whereby said connections may be moved by the hand to increase the fuel delivery and instantly act, on removal of the hand, to decrease such delivery.

1,394,954. METAL-MELTING POT. TYCHO VAN ALLEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 4, 1919. Serial No. 342,825. 5 Claims. (Cl. 219—43.)

1. An electrically heated melting pot, comprising a receptacle for the material to be fused and a heating unit in good thermal relation therewith, having such a positive temperature coefficient of resistance that a constant working temperature is maintained regardless of the working condition within the pot.

1,394,955. APPARATUS FOR FILLING OXYGEN-CYLINDERS. MAX VON RECKLINGHAUSEN, New York, N. Y., assignor to Air Reduction Company, New York, N. Y., a Corporation of New York. Filed Feb. 23, 1917. Serial No. 150,319. 6 Claims. (Cl. 62—122.)

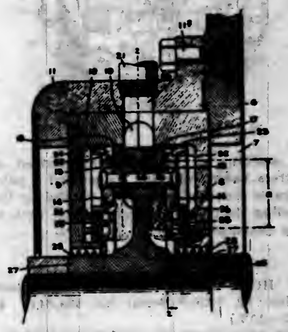


1. In an apparatus of the character described, the combination of heat interchanging means having separate passages for liquefied gases and the evaporation products thereof and for the circulation of the heating agent, controllable means for restricting the discharge of said evaporation products whereby pressure developed by evaporation is maintained, and means for positively forcing liquefied gases under pressure into the passage therefor.

1,394,956. TANK-CAR. ROBERT R. WEAVER, Chicago, Ill., assignor to General American Tank Car Corporation, Chicago, Ill., a Corporation of West Virginia. Filed July 1, 1921. Serial No. 481,744. 6 Claims. (Cl. 105—362.)

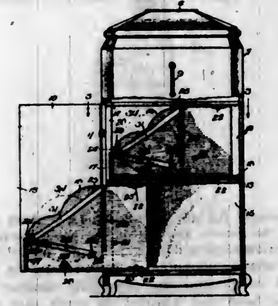
1. A tank-car comprising an under-frame, a tank surmounting said frame, and an anchorage for preventing lengthwise movement of said tank and under-frame relative to each other at one portion of the tank formed of a seating member having depending flanges at the opposite sides of the center of the tank, the lower edges of said flanges being spaced from the structure beneath them, flanged members on the tank the flanges of which extend downwardly at the outer sides of the flanges on said seating member and means connecting adjacent ones of said flanges together, said tank bearing directly on said seating member between said flanged member.

1,394,957. SHIP'S-BELLS CLOCK. FRANK X. WEHRLE, Thomaston, Conn., assignor to The Seth Thomas Clock Co., Thomaston, Conn., a Corporation. Filed May 4, 1921. Serial No. 466,777. 3 Claims. (Cl. 58—8.)



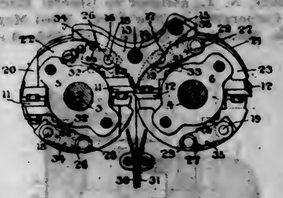
1. A rack-and-snail ship's bells clock in which the bells are struck in pairs, having a rack-lever, a substantially horizontal ship's bells-lever pivotally mounted between its ends thereupon in line therewith, a hammer controlled by the ship's bells-lever, and a ship's bells-cam timed and arranged to nullify one stroke of the hammer at the half hours.

1,394,958. CONCENTRATION OF ORES AND THE LIKE. ALFRED SCHWARZ, Joplin, Mo., assignor to Metals Recovery Company, New York, N. Y., a Corporation of Maine. Filed Mar. 6, 1917, Serial No. 152,585. Renewed May 6, 1921. Serial No. 467,318. 8 Claims. (Cl. 82—85.)



1. The method of concentrating ores by the action of selective agents and by flotation which comprises disintegrating by extraction selective agent substances containing soluble and insoluble constituents, separating such soluble constituents from the insoluble constituents, adding predetermined proportions, differing from the original of such soluble constituents and the insoluble constituents to the ore to be concentrated, and then subjecting the ore to a flotation operation; substantially as described.

1,394,959. SHAFT-PACKING. JAMES WILKINSON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 9, 1919. Serial No. 295,980. 6 Claims. (Cl. 286—9.)



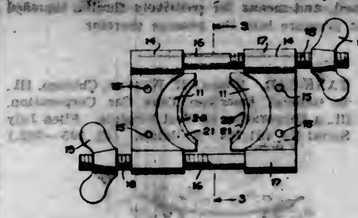
5. In a liquid seal packing, a housing, an impeller therein which receives sealing liquid at its central portion and delivers it at the periphery, and labyrinth packing means which impedes the flow of liquid from the exit of the impeller to the inlet thereof.

1,394,960. PHONOGRAPH-CABINET. JOHN BACHAR, Chicago, Ill. Filed Apr. 10, 1920, Serial No. 372,852. Renewed June 23, 1921. Serial No. 479,963. 2 Claims. (Cl. 211—16.)

1. A cabinet comprising a casing, said casing having a chamber for phonographic records, and a drawer slidably disposed within the chamber, said drawer consisting of parallel side walls and a front wall, said front wall having a height less than that of the side walls, a cross bar disposed between the top edges of said side walls intermediate their length, a depending panel secured at its upper edge to said cross bar and disposed parallel with the front wall, and a plurality of diagonal strip partitions disposed between said cross bar and the front wall of said drawer to provide individual compartments adapted to receive disk records.

1,394,961. WEB-GUIDE FOR ROTARY CUTTERS. Howard M. Hanna, Stockton, Conn., assignor to C. H. Cottrell & Sons Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 22, 1919. Serial No. 291,938. 9 Claims. (Cl. 164—61.)

1. In a machine of the character described, a pair of rotary cutters having coacting knives and a pair of relatively movable coacting web guides carried by the cutters for controlling the leading end of the web, each web guide comprising slitted sections.



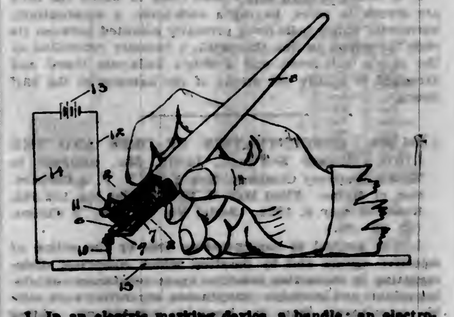
1,394,962. HOOD-CLAMP. John W. Barr, Racine, Wis. Filed Mar. 10, 1920. Serial No. 364,641. 4 Claims. (Cl. 292—113.)

2. In a clamp for automobile hoods, a fixed clamping element on the chassis and within the hood, having an angular projection sloping downwardly and toward the hood, a reversely sloping clamping element carried by the hood and means comprising an operating member passing through the hood and adapted to lower said reversely sloping clamping element so as to place it under the fixed clamping element when the hood is lowered and to raise said reversely sloping clamping element to lock said hood.

1,394,963. GEAR-PULLER ATTACHMENT. Charles P. Beach, Littleton, N. H. Filed Aug. 21, 1919. Serial No. 318,900. 2 Claims. (Cl. 29—96.)

1. A gear puller attachment comprising a pair of opposed plates each having a concave front edge and each provided at said front edge with a bevel on the upper side thereof, a pair of blocks each provided with a recess on the lower face thereof to receive one of said plates, means holding each plate to the corresponding block, a screw threaded rod projecting from one end of each block through the plate block, said rods carried by said rods and

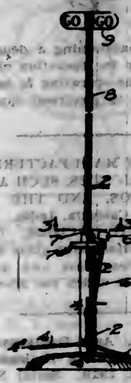
coöperating therewith to cause relative approachment of said blocks.



1,394,964. CABINET FOR TALKING-MACHINE RECORDS. Edward Blaise, Brooklyn, N. Y. Filed Sept. 18, 1919. Serial No. 324,422. 11 Claims. (Cl. 48—96.)

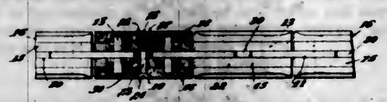
1. Apparatus of the character described comprising, a drawer and an articulated receptacle fitted to be carried by the drawer in closed position and in substantial parallelism therewith, and to be also carried by the drawer pendant therefrom in open position and substantially at right angles thereto, said receptacle having its upper edges connected to the drawer.

7. Apparatus of the character described comprising, a casing, a drawer slidably mounted therein, a receptacle slidably mounted in the drawer, means for limiting the sliding motion of the drawer in the casing, and means for limiting the sliding motion of the receptacle in the drawer.



1,394,965. ELECTRIC MARKING DEVICE. Clifford A. Bourne, Portland, Oreg. Filed Jan. 5, 1921. Serial No. 435,056. 3 Claims. (Cl. 175—265.)

1. In an electric marking device, a handle; an electromagnet mounted within said handle and having a core



projecting from one end of said handle, the projecting end of said core being beveled; a vibrating member mounted to said handle, a portion thereof being disposed adjacent said magnet core and parallel to the bevel surface thereof; and a contact point secured to said vibrating member.

1,394,966. STREET-TRAFFIC-DIRECTION-SIGNALING DEVICE. Joseph W. Bernkrer, San Diego, Calif. Filed Mar. 27, 1920. Serial No. 369,218. 3 Claims. (Cl. 116—63.)

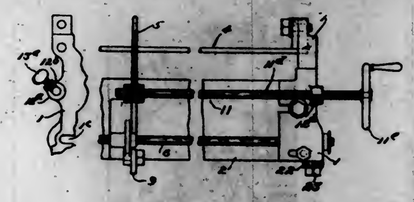
1. A street crossing traffic direction signal, including a base member, a staff revolubly mounted thereon, provided with a laterally extending side portion, an over center weighted arm pivotally mounted on said base member adapted to engage said side portion, operated by the traffic officer for revolving said staff, means for stopping its revolution at a certain pre-determined point and a traffic signal member secured on the upper end of said staff.

1,394,967. DRIVING-BELT. Ralph P. Champney, Worcester, Mass., assignor to Mitchell and Smith, Incorporated, Boston, Mass., a Corporation of Massachusetts. Filed Sept. 2, 1920. Serial No. 407,735. 3 Claims. (Cl. 74—64.)

1. A link belt comprising a series of metal connector links each having metal pivot pins at its opposite ends, friction links alternately connected therewith, and each having oppositely disposed plates faced with friction material, and apertures lined with non-metallic bushings adapted to receive the pivot pins, spacer members located between the ends of the metal connector links, and a fastener member extending through the spacer and metal plates and adapted to retain the friction links and the metal connector links in assembled position.

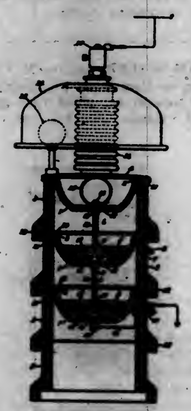
1,394,968. DISCONNECTING-SWITCH. Christen Christensen, Chicago, Ill., assignor to Electrical Engineers Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed June 4, 1919. Serial No. 301,718. 28 Claims. (Cl. 200—48.)

12. In combination, a movable switch member, a contact terminal for said member, a pivoted operating lever for actuating said switch member, said operating lever being movable into or over its dead center positions for automatically locking said lever and said switch member against accidental opening or closing of said switch member.



24. In an electrical switch, the combination of a contact terminal, a movable switch element coöperating therewith, and switch operating mechanism comprising means exerting a relatively large force upon said movable switch element during the initial part of this motion, and a relatively large velocity during the remaining part of its motion, said switch operating mechanism imparting a high velocity motion to said movable switch element through a radius arm of increasing radius.

1,394,969. STEAM-BOILER. James M. Colvin, Yonkers, N. Y., assignor to New York Engineering Company, a Corporation of New York. Filed June 26, 1918. Serial No. 241,918. 3 Claims. (Cl. 110—98.)



2. In combination with a boiler having upper and lower drums and having a bank of tubes connecting said drums, baffling means extending from the upper toward the lower drum comprising a plurality of baffles adjacent a row of tubes and independently slidable transversely of the tubes, said baffles having rows of perforations spaced so as to register with the tubes when the respective baffles are in one position and to register with the spaces between the tubes when the respective baffles are in another position.

1,394,970. WARP STOP-MOTION FOR LOOMS. ARTHUR S. COWAN, Boston, Mass., assignor, by mesne assignments, to The Stafford Company, Readville, Boston, Mass., a Corporation of Massachusetts. Filed July 16, 1921. Serial No. 485,179. 9 Claims. (Cl. 139—62.)

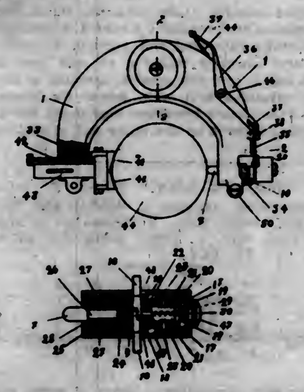
1. In a warp-stop-motion mechanism for looms, the combination with one or more reciprocating feeler-rods, the back-stop-bars, and transversely-extending elements above said bars, of an intermediate bridge or brace comprising an upper section engaging and supported by the latter elements, and a lower section supported by said upper section, having recessed seats receiving the back-stop-bars, and having adjacent such seat surfaces which conjointly with the tops of the back-stop-bars constitute a race or guideway for the feeler-rod or rods.

1,394,971. PROTECTIVE DEVICE. ELMER E. F. CREIGHTON and FREDERICK R. SHAVER, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Jan. 10, 1918. Serial No. 211,113. 24 Claims. (Cl. 175—30.)

1. In a device of the class described, a container, a conducting fluid within the container, an electrode in series circuit relation with said fluid and means operative upon a discharge through said circuit and the occurrence of an arc between said electrode and fluid for directing said fluid away from said electrode.

1,394,972. ELECTRIC REGULATION. JOHN L. CHEVALIER, Auburn, N. Y. Filed Oct. 24, 1914. Serial No. 868,404. 10 Claims. (Cl. 171—229.)

1. Means for regulating an electric circuit comprehending in combination therewith, a regulating element the effect of which depends upon pressure applied thereto, means for applying said pressure at varying rates comprehending a toggle-joint, and electromagnetic means co-operating therewith for moving the knuckle of said joint com-

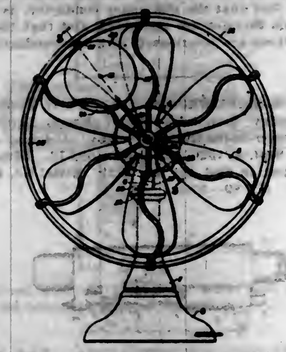


prehending means for maintaining a dense and confined magnetic field affected by the operation of the regulating means and movable means operating in said field and responding to fluctuations in electrical conditions of said circuit.

1,394,973. PROCESS OF MANUFACTURE OF A GLASS USING NATURAL SILICATES, SUCH AS MICACEOUS MINERALS, ASBESTOS, AND THE LIKE. PERCY BROADBENT CROSSLEY, Calcutta, India. Filed Sept. 27, 1919. Serial No. 326,917. 7 Claims. (Cl. 106—38.1.)

7. The method of manufacturing glass which comprises dissolving mica in molten glass and maintaining the temperature below that at which the mica effloresces.

1,394,974. LIMIT-GAGE. AXEL DANIELSSON, Gottenborg, Sweden, assignor to Nordiska Kullager Aktiebolaget, Sweden. Filed Dec. 5, 1919. Serial No. 342,798. 4 Claims. (Cl. 33—143.)



1. In a limit gage of the class specified, a body, an object contacting and supporting element on one end of the body, a longitudinally movable stud on the opposite end of the body for contacting with the object and two indicators pivotally and yieldably mounted rearwardly and centrally of the stud for coacting with the stud for indicating the size of the object to the gage.

1,394,975. OSCILLATING FAN. PHILIPPE DE CLAMECY, Boston, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed Mar. 9, 1920. Serial No. 364,422. 11 Claims. (Cl. 230—2.)

1. An oscillating fan having, in combination, a motor, a fan wheel, a support upon which the motor and fan wheel are arranged to oscillate, a current obstructing device adapted to be rotated about the axis of the fan wheel to cause the fan to oscillate alternately in opposite

directions as it rotates, a guard frame carried by the motor and inclosing the fan wheel, a track supported by the

guard frame, and a bearing member carried by the current obstructing device for engaging with the track as said device rotates.

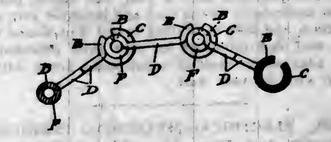
1,394,976. ELECTRIC SWITCH. FRANK C. DE RAMER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 18, 1918. Serial No. 245,478. 4 Claims. (Cl. 200—67.)

1. A switch comprising, a base, stationary contacts thereon, a trough-shaped frame of sheet metal having apertures formed in its side members, an actuating rocker comprising a flat metal bar provided with side projections pivoted in said frame apertures, a U-shaped member pivoted to the exterior of the sides of said frame and below the rocker pivots, and a spring connection between said rocker and said U-shaped member.

1,394,977. BADGE. CHARLES J. DIEGES, New York, N. Y., assignor to Dieges & Clust, New York, N. Y., a Corporation. Filed Aug. 1, 1921. Serial No. 488,998. 2 Claims. (Cl. 40—1.5.)

1. In combination of a badge, formed with a cross bar having overlapping flanges integral therewith, said cross bar, two serrated plates independent of each other and formed on one edge with saw teeth, said saw teeth being slightly bent and opposed to each other, said serrated plates held upon said cross bar and between the flanges formed thereon, the teeth formed on the edges of said serrated plates penetrating a ribbon held between them, for the purpose described.

1,394,978. PROCESS FOR RECOVERING POTASSIUM COMPOUNDS FROM BRINES CONTAINING THE SAME IN ASSOCIATION WITH OTHER CHEMICAL COMPOUNDS. CLINTON B. DOLBEAR, Los Angeles, Calif., assignor, by direct and mesne assignments, of three-fourths to David C. Norcross and one-fourth to John H. Miller and George J. Henry, San Francisco, Calif. Filed Mar. 10, 1919. Serial No. 281,650. 9 Claims. (Cl. 23—22.)



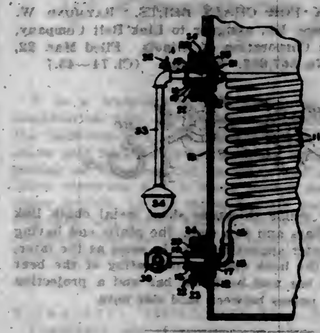
4. The process of recovering potassium salts from an alkaline solution containing potassium salts and carbonates or borates, or both by adding calcium sulfate.

1,394,979. LINK FOR CHAIN BELTS. RAYMOND W. DULL, La Grange, Ill., assignor to Link Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1920. Serial No. 367,653. 9 Claims. (Cl. 74—43.)

7. An integral single thickness sheet metal chain link having two side bars and two ends, the pintle end having an external diameter approximately the same as the internal diameter of the hook end and consisting of the bent ends of the side bar and bent end bar and a projection therefrom which passes between said side bars.

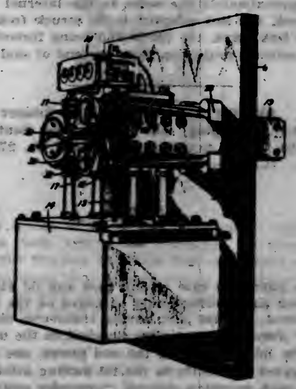
1,394,980. LINK FOR CHAIN BELTS. RAYMOND W. DULL, La Grange, Ill., assignor to Link Belt Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 22, 1920. Serial No. 367,654. 12 Claims. (Cl. 74—43.)

10. An integral single thickness sheet metal chain link comprising two side and two end bars and two substantially tubular ends, the pintle end having an external diameter approximately the same as the internal diameter of the hook, the link adapted to be struck from an imperforate link blank, the pintle end being formed in part from an outward projection from one end of said blank.



1,394,981. SECURITY BOX OR CASE. ROBERT HENDERSON DUNCAN, Epping, near Sydney, New South Wales, Australia. Filed Jan. 29, 1919. Serial No. 273,848. 3 Claims. (Cl. 217—56.)

1. In a guarantee case or box, case and lid attachment interlocking parts, coincidently arranged on the separable parts thereof; the lid part having transverse end pieces, angularly disposed corner clips clenched on the under surface of the lid for securing the end pieces, one such end piece—located adjacently to the lid locking attachment—having a cord secreting channel thereunder and which is continued downwardly to the sealing formation, a bolt, the lid having a channel for bolt stem to slide in, the end piece being cut away for said stem, a spindle, a gapped

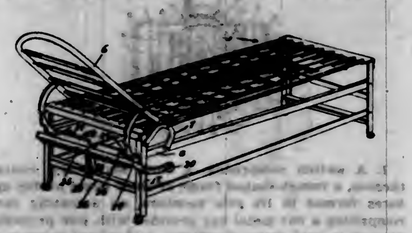


lever attached centrally to the spindle, the spindle located downwardly in the lid, a hook shaped contacting plate secured to underside of lid, a combined barrel and catch attached to spindle and operated by the said lever, grooved companion plates attached to underside of lid, and securing angle plates attached to the box parts contiguous thereto, and engaged by the companion plates.

1,394,982. CASING FOR ELECTRICAL APPARATUS. MATTHEW L. ELDER, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed Aug. 25, 1919. Serial No. 319,694. 7 Claims. (Cl. 257—205.)

5. In casings for transformers and the like, the combination with a wall, of a cooling coil provided with end couplings adapted to protrude through said wall, an exterior portion of said coil being made the highest part thereof and provided with a vent, the lowest part also being on the exterior of the tank and provided with a combined drain and flow regulating device, and means for securing said end couplings to said tank provided with sleeves adapted for making independent joints with said coil and with the tank wall.

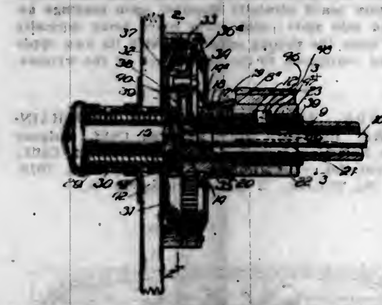
1,394,983. ELECTRICAL MEASURING INSTRUMENT. ALEXANDER J. R. FIGGO, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed Nov. 24, 1920. Serial No. 426,144. 4 Claims. (Cl. 171—295.)



1. An electrical watthour meter of the commutator type, comprising a rotatably mounted potential coil, a stationary conductor disposed to carry a current proportional to that being metered, arranged to influence said rotatably mounted coil, and terminals for said conductor characterized by the fact that the stationary conductor, as well as the terminals therefor are laminated, and that the terminal laminations are interleaved with the conductor laminations.

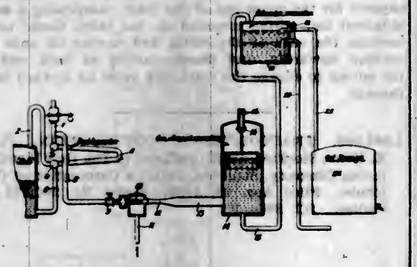
1,394,984. BARREL-RECOIL GUN. FRITZ FINCKH, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Original application filed Sept. 4, 1920, Serial No. 408,876. Divided and this application filed Apr. 20, 1921. Serial No. 464,683. 2 Claims. (Cl. 89—37.)

1. A barrel recoil gun which comprises a gun barrel, a cradle therefor, a pair of trunnions carried by said cradle, said cradle being reversible to vary the distance between the trunnions and the breech end of the gun barrel.



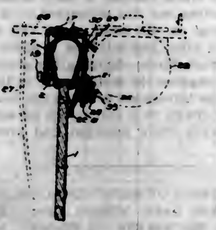
1,394,985. DAY-BED WITH ADJUSTABLE FOLDING HEADPIECE. JOSEPH R. FISCHER, Brooklyn, N. Y., assignor to Eureka Bedding Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Dec. 22, 1920. Serial No. 432,496. 7 Claims. (Cl. 155—118.)

1. In combination, a bed frame comprising legs; a head piece pivotally movable on the frame; means pivotally attached to the head piece and movable by increments for changing the inclination of the head piece; a stop member attached to the legs at one end of the frame transversely of the frame and engageable with said means for retaining the head piece at a desired incline; and means pivotally attached to said legs adjacent to the stop member having ends for receiving pressure thereon; the last mentioned means being normally inoperative and being movable by pressure on the ends thereof for engagement with the first mentioned means for releasing the same from engagement with the stop member to permit said means to move for an increment, and upon relief of pressure on said ends permitting further movement of the first mentioned means for engagement thereof with the stop member for changing the inclination of the head piece.



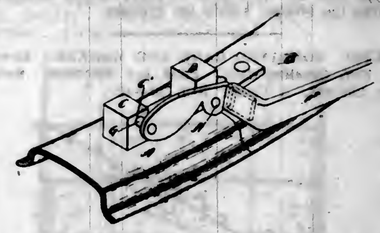
1,394,986. DRIVING MECHANISM. HARVEY L. FISHER, Chicago, Ill., assignor to The Donaldson & Fisher Company, Chicago, Ill., a Corporation of Arizona. Filed July 22, 1918. Serial No. 246,080. 5 Claims. (Cl. 74—7.)

1. In a device of the class described, an axle forging comprising a reduced wheel bearing, at one end, a tubular portion at the other end, a drive shaft and pinion within the tubular portion, a wheel journaled on the forging,



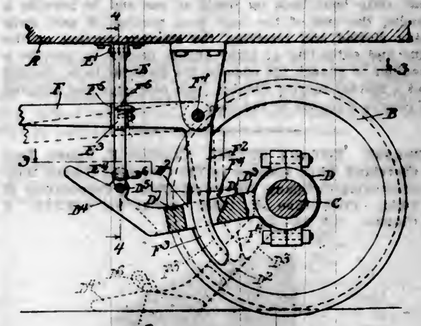
an internal gear carried by the wheel and an idler between the internal gear and the pinion.

1,394,987. APPARATUS FOR CONDENSING AND TREATING DISTILLATES. RICHARD FLEMING, Westfield, N. J., assignor to The Richard Fleming Company, a Corporation of Delaware. Original application filed Mar. 23, 1918, Serial No. 224,433. Divided and this application filed Dec. 6, 1919. Serial No. 343,051. 21 Claims. (Cl. 196—25.)



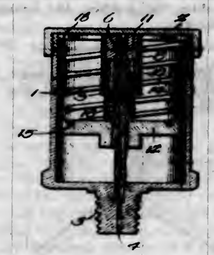
1. The combination with a pressure oil cracking still, of a vapor line for conducting the vapors away from the still, means in said line for discharging vapors at high velocity while maintaining the still pressure, and means for supplying condensing liquid in sufficient volume to envelop and condense the discharging expanding vapors.

1,394,988. BRACKET. WILLIAM MITCHEL FOLBERTH, Cleveland, Ohio. Filed Jan. 15, 1921. Serial No. 437,507. 6 Claims. (Cl. 248—20.)



2. A bracket for windshield cleaners comprising a pair of angular plates, one portion of each of said plates being arranged upon the other and adjustably secured thereto, the other portions of the plates being spaced from each other and adapted to be arranged on opposite sides of a windshield frame, and means for securing a windshield cleaner to one of said members.

1,394,989. DEMOUNTABLE-RIM-OPERATING LEVER. EMORY M. FOSTER, Cleveland, Ohio, assignor to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 15, 1918. Serial No. 244,951. 3 Claims. (Cl. 157—1.)



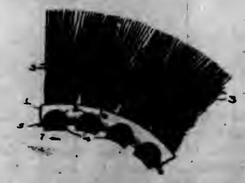
1. A device of the kind described comprising a head portion having a notch in one side thereof, and provided with spaced laterally projecting studs, and a handle detachably connected to said head portion.

1,394,990. CAR-BRAKE. FRELING C. FOSTER, Chicago, Ill. Filed Sept. 2, 1919. Serial No. 321,067. 3 Claims. (Cl. 188—41.)

1. A railroad vehicle brake comprising a brake member pivoted on the axle of a vehicle and adapted when in operative position to bear upon the rail beneath said vehicle, and additional pneumatic means for increasing the pressure of said brake member upon said road surface.

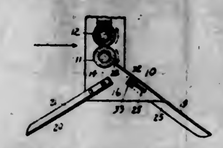
1,394,991. OILER. ROBERT FRICK, Chicago, Ill. Filed Jan. 3, 1921. Serial No. 434,600. 5 Claims. (Cl. 184—70.)

1. In an oiler for the bearings of variable speed objects, a reservoir having a head at the outer end, a dis-



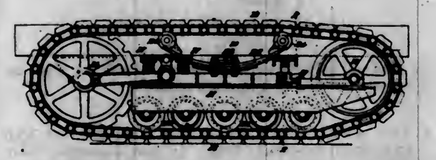
charge tube having an inlet slightly spaced from the head of the reservoir, a movable, open ended cylinder within the reservoir adapted to engage the head of the reservoir, for closing the open end of the cylinder, the inlet of the tube being within the cylinder, a plunger slidable within the cylinder for pumping oil into the tube when the cylinder is in contact with the head of the reservoir, and means subject to centrifugal action for moving the cylinder into contact with the reservoir head and reciprocating the plunger within the cylinder.

1,394,992. COMBINED GAGE AND MARKER. EDWIN B. FRY, Oroville, Calif. Filed Apr. 26, 1919. Serial No. 292,888. 1 Claim. (Cl. 33—42.)



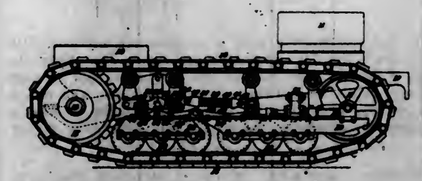
A device of the character described comprising a straight gage strip bent back on itself at one end to provide a handle, the end of the bent back portion of said strip being slotted and receiving the straight portion of the gage and extending at right angles thereto to provide a shoulder to engage the edge of the material to be marked and a marker carrier slidable upon said gage and adapted to receive a crayon or the like.

1,394,993. ROTARY BRUSH. CLINTON E. FROST, East Cleveland, Ohio, assignor to The Cleveland Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 22, 1918. Serial No. 241,372. 3 Claims. (Cl. 15—37.)



1. A circular brush unit, comprising an annular base ring, a series of sections of brush material looped over said ring, a clamping member comprising an apertured base for holding said loops firmly upon said ring and spaced parallel sides for holding the brush sections in radial relation thereto.

1,394,994. DRAIN-BOARD. HANS HANSEN, Kansas City, Mo. Filed May 19, 1921. Serial No. 470,897. 2 Claims. (Cl. 68—32.)



1. In a wringer, side housing members and wringer rolls in operative arrangement therein, each side housing member having an extended base portion provided with a slot therein and a downwardly sloping upper edge thereon; a drain board pivotally mounted upon bearings arranged in said slots; said drain board being normally disposed upon the sloping edges and with its own upper edge lying contiguous to the bottom roll of the wringer.

1,394,995. UPPER-RUN SUPPORT FOR CHAIN-TRACKS. BENJAMIN HOLT, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 16, 1919. Serial No. 324,152. 2 Claims. (Cl. 305—9.)

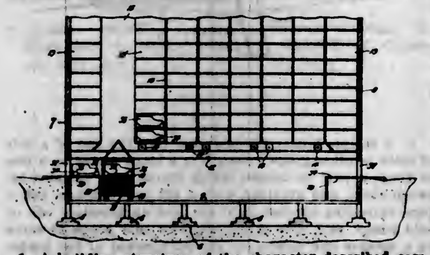
1. In a tractor truck mechanism of the self-laying track type, a truck frame, a pair of sprocket wheels, an endless chain track carried by the sprocket wheels, and a support for the upper run of the track, comprising a semi-elliptical leaf spring mounted on the truck frame intermediate the ends of the latter and having its ends extending upwardly, and means carried at each end of the spring to engage the track and exert an upward force thereon.

1,394,996. TRACTOR-TRUCK CONSTRUCTION. PLINY E. HOLT, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Apr. 16, 1919. Serial No. 290,431. 7 Claims. (Cl. 305—9.)

3. In a chain track tractor, a main frame, an endless flexible track having one end supported on a track driving sprocket journaled on the main frame and the other end supported on an idler journaled on a roller truck frame, rollers on the truck frame engaging the ground run of the track, means to support the main frame on the roller truck frame, and means interposed between the main frame and the roller truck frame in a manner to permit the idler to approach the track drive sprocket and produce slack in the track.

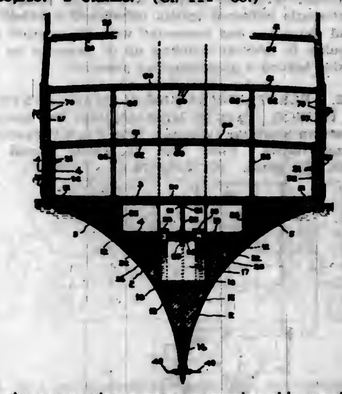
1,394,997. METHOD OF ERECTING CONCRETE STRUCTURES. SIMON LAKE, Milford, Conn. Filed July 15, 1918. Serial No. 244,978. 4 Claims. (Cl. 25—131.)

1. The method of erecting a concrete structure without the intervention of molds, which consists in providing a metallic framework of suitable form and dimensions to produce the whole or a definite part of the structure, then arranging within the framework a core composed of a fusible compound, then surrounding the framework and core with plastic concrete, and then applying a melting



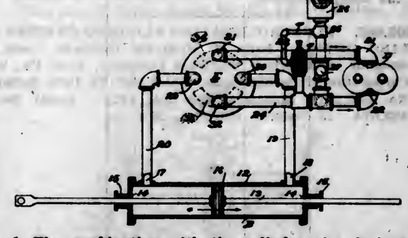
heat to the core and allowing its fusible constituents to be absorbed in and by the concrete.

1,394,998. SADIRON-HOLDER. IRA LEE, Seattle, Wash., assignor to William J. Lee, Seattle, Wash. Filed Feb. 2, 1921. Serial No. 441,794. 4 Claims. (Cl. 68—27.)



1. A sad-iron holder comprising a hollow body portion, wing devices extending therefrom and coöperating with said body to support a sad-iron in either an upright or horizontal position, and resilient means provided interiorly of said body and serving to connect said wing devices with each other for relative movements with respect to each other and laterally of said body portion.

1,394,999. OVERHEAD AND UNDERGROUND STORAGE FOR AUTOMOBILES. FRANK Y. MCKINSTRY, Chicago Ill. Filed Jan. 17, 1921. Serial No. 437,811. 6 Claims. (Cl. 20—1.13.)

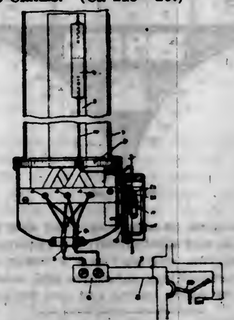


1. A building structure of the character described comprising a plurality of sections, each of said sections comprising a plurality of structural units arranged in a row, the end ones of said units being fixed and the intermediate ones of said units being movable to provide a space between adjacent units, each of said units comprising a vertical tier of individual storage compartments, and means for moving vehicles to any one of said compartments.

1,395,000. OCEAN-GOING VESSEL. FINLAY A. MCRAE, Montreal, Quebec, Canada. Filed Nov. 25, 1918, Serial No. 264,119. Renewed Apr. 28, 1921. Serial No. 465,245. 2 Claims. (Cl. 114—65.)

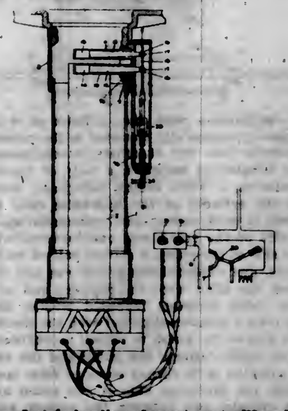
1. An ocean-going passenger-carrying ship consisting of a relatively wide and substantially flat passenger-, baggage- and freight-carrying portion; and a lower hull portion filled with a cementitious substance and containing a reinforced hold for boiler, engine and coal bunkers.

1,395,001. HYDRAULIC-RAM CONTROL. WILLIAM W. MACDONALD, San Francisco, Calif. Filed Sept. 3, 1919. Serial No. 321,493. 12 Claims. (Cl. 60—52.)



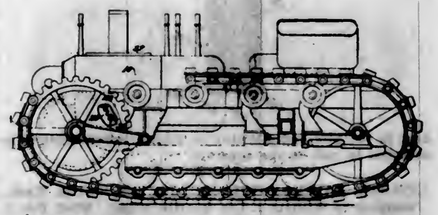
1. The combination with the cylinder of a hydraulic ram, of a piston reciprocally mounted in the cylinder dividing the cylinder into two chambers, a continuously operated pump adapted to maintain a body of liquid in constant circulation, a valve casing interposed between the pump and the cylinder of the hydraulic ram, a pair of ports formed in said casing, one communicating with the discharge side of the pump, and one communicating with the suction side of the pump, a second pair of ports formed in the casing, one communicating with one end of the ram cylinder and the other with the opposite end of the ram cylinder, a valve turnably mounted within the casing adapted to form communication between the discharge and the suction side of the pump to permit a continuous circulation of the liquid through the pump and the valve, said valve also adapted to be turned so as to form communication between the discharge side of the pump and either end of the cylinder and between the suction side of the pump and either end of the cylinder, means permitting the building up of pressure on the discharge side of the pump,

and means interposed between the valve and the pump for automatically unloading said pressure.



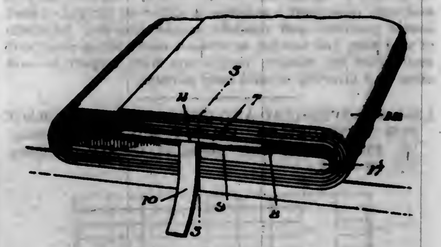
12. The combination with a double ended ram and a pump for delivering liquid under pressure thereto, of a valve interposed between the ram and the pump, said valve adapted to form a circulating connection between the discharge and the suction side of the pump, and also adapted to direct the liquid under pressure to either end of the ram and to return the liquid to the suction of the pump from either end of the ram, an automatic priming tank interposed between the valve and the pump and in constant communication with the suction side of the pump, and other automatic actuated means interposed between the valve and the pump and connected with the suction side of the pump to prevent building up of pressure on the suction side beyond a predetermined pressure.

1,395,002. ELECTRIC-HEATING-ELEMENT-CONTROLLING DEVICE. PAUL M. MUELLER, Erie, Pa., assignor to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1920. Serial No. 368,248. 5 Claims. (Cl. 219—20.)



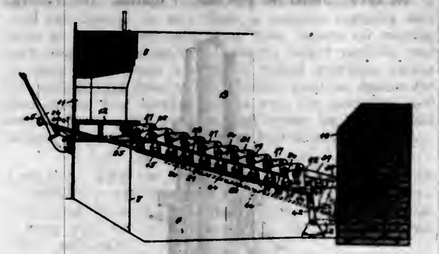
1. In an electric heating element controlling device, the combination of a heating element; a pressure generator in contact with the heating element; and devices actuated by the pressure from the generator controlling the current of the heating element.

1,395,003. ELECTRIC-HEATING-ELEMENT-CONTROLLING DEVICE. PAUL M. MUELLER, Hartford, Conn., assignor to American Sterilizer Company, Erie, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1920, Serial No. 368,247. Renewed Apr. 22, 1921. Serial No. 463,574. 15 Claims. (Cl. 219—20.)



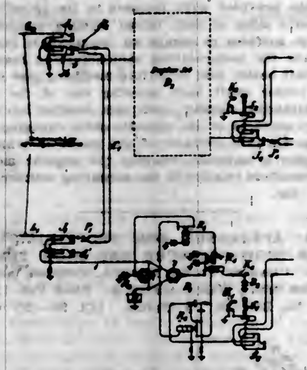
1. In an electric heating element controlling device, the combination of a heating element; two thermally sensitive elements positioned relatively to the heating element to receive different degrees of heat therefrom and producing different responses under certain conditions; and a device controlled by the difference in response of the thermally sensitive elements controlling the current of the heating element.

1,395,004. TRACTOR TRANSMISSION. EMIL F. NORELIUS, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 17, 1918. Serial No. 254,443. 15 Claims. (Cl. 180—9.2.)



1. The combination of a pair of driven members, a drive member, planetary gearing between the drive member and each driven member, rotatable means interposed between opposite planetary gear sets and connected to a speed changing element in each of the latter for controlling the same, and power operated means for actuating said last mentioned control means in either direction whereby to produce a differential rotation of said planetary gear sets.

1,395,005. SAMPLE-HOLDER. THEODORE H. OLLESHEIMER, Rockford, Ill. Filed Sept. 30, 1920. Serial No. 413,815. 2 Claims. (Cl. 206—50.)

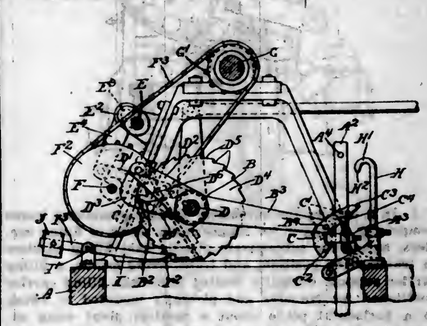


1. A sample holder for insertion into the end of a bolt of cloth or other goods, comprising a blank folded on a line to form a pair of hinged wings for holding samples between them, and provided with a slit at the hinge, and a tape extending through said slit and anchored to one of said wings, said tape extending from said hinge to serve as a marker and means for the withdrawal of the holder from a bolt of cloth in which it is inserted and leaving said wings free to swing apart.

1,395,006. STOKER-GRATE. GEORGE F. PATTERSON, Baltimore, Md. Filed Aug. 13, 1918. Serial No. 249,617. 4 Claims. (Cl. 110—39.)

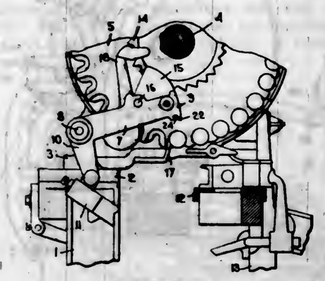
2. A stoker-bar section for grates comprising a plurality of short bars with slots between the latter and said section having a concave bearing recess extending continuously in a direction crosswise of the bars and at the under side thereof.

1,395,007. TELEGRAPH SYSTEM. ARTHUR W. POST, Westbury, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 20, 1920. Serial No. 367,572. 5 Claims. (Cl. 178—75.)



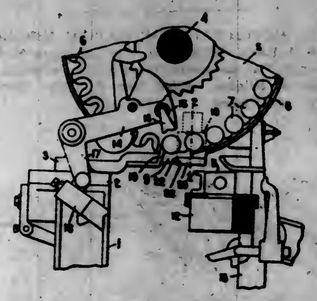
1. In a telegraph signaling system the combination of a duplex set having signaling apparatus associated therewith, a Morse line terminal having a relay associated therewith, a subscriber's loop circuit, and means associated with the said loop circuit to effect the operation of the said relay and thereby to cause the operation of the said signaling apparatus associated with the duplex set.

1,395,008. BANK. ARTHUR C. PRINCE, Chicago, Ill. Filed Oct. 4, 1920. Serial No. 414,401. 5 Claims. (Cl. 232—6.)



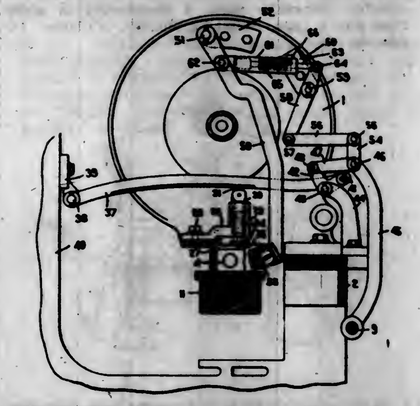
1. A bank comprising a bank body, a bar extending longitudinally through the interior of the body, a lid adapted to close the end of the body, said lid apertured to receive the end of said rod, a screw in said lid, adapted to engage and secure said rod, said screw lying entirely within the bank body, but adapted to be rotated from without said body, the bank body being apertured opposite said screw.

1,395,009. HUTCH-VALVE-OPERATING MECHANISM. AXEL G. J. RAPP, Chicago, Ill., and LAURENCE M. EWELL, Pittsburgh, Pa., assignors to Link-Belt Company, a Corporation of Illinois. Filed Mar. 8, 1919. Serial No. 281,418. 16 Claims. (Cl. 137—145.)



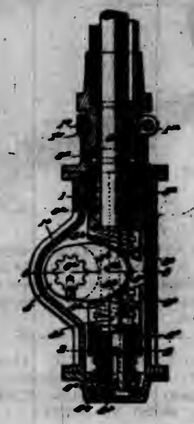
1. In a valve operating mechanism, the combination of a driving part, a power transmitting part, means for intermittently connecting them, a valve, a connection between it and said power transmitting part, and means for terminating said connection after a predetermined travel of said valve.

1,395,010. TRANSFERRING MECHANISM FOR AUTOMATIC FILLING-REPLENISHING LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 5, 1920. Serial No. 401,490. 8 Claims. (Cl. 139—85.)



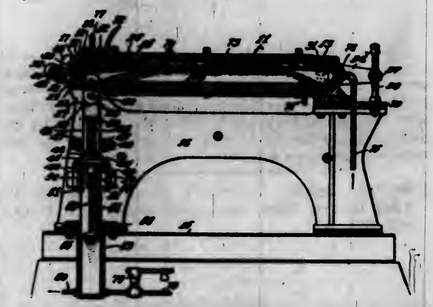
1. In an automatic filling replenishing loom comprising a hopper to support a supply of filling carriers, a transferrer for forcing a filling carrier from the hopper into the active shuttle, and means for positioning said filling carriers successively in the path of said transferrer, filling carrier engaging means partaking the movement of said transferrer automatically operable upon actuation of the transferrer selectively to force a properly positioned filling carrier from the hopper into the shuttle and to remove an improperly positioned filling carrier from transferring position.

1,395,011. BATTERY MECHANISM FOR AUTOMATIC FILLING-REPLENISHING LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 5, 1920. Serial No. 401,491. 3 Claims. (Cl. 139—85.)



1. In a battery for automatic filling replenishing looms comprising a hopper for supporting a series of filling carriers, means for successively placing said filling carriers in transferring position, and transferring means, a filling carrier support normally located below the filling carrier positioned for transfer and pivotally mounted to swing in a horisontal plane about a vertical pivot when engaged by the filling carrier during its transfer from the hopper to the shuttle, and resilient means for restoring said filling carrier support to normal position.

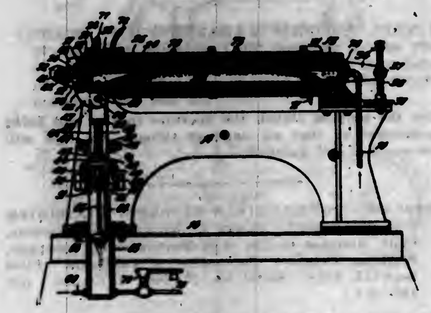
1,395,012. FILLING-SEVERING MEANS FOR AUTOMATIC FILLING-REPLENISHING LOOMS. ALONZO E. RHOADES, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Aug. 5, 1920. Serial No. 401,493. 13 Claims. (Cl. 139—85.)



1. An automatic filling replenishing loom comprising a lay and a shuttle reciprocable thereon, means for replenishing the shuttle with a fresh filling carrier and discharging from the shuttle the exhausted filling carried upon the occurrence of substantial exhaustion of the running filling, a filling cutter mounted in the shuttle, and means operated by the movement of the shuttle and controlled by the replenishing means for actuating the cutter to sever the filling in the shuttle.

1,395,012. STEERING-GEAR. DAVID H. ROSS, La Fayette, Ind., assignor to Ross Gear and Tool Company, La Fayette, Ind., a Corporation of Indiana. Filed Feb. 20, 1919. Serial No. 278,250. 7 Claims. (Cl. 74—79.)

1. In combination a casing; a sliding actuating member therein provided with recesses in its opposite sides, the opposite sides of each recess forming oppositely inclined cam surfaces to engage an intermediate cam member; means for reciprocating said actuating member; a rocker shaft beside said actuating member; cam members on said rocker shaft each entering one of the recesses in said actuating member, each cam member having gear tooth cam surfaces on its opposite sides engaging the related opposite cam surfaces of the recess in which each cam member is entered; whereby the angular motion of the cam members relative to the actuating member is compensated for.

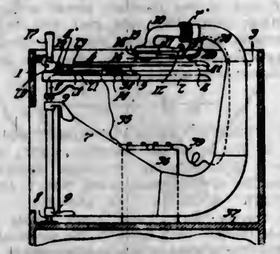


1,395,014. APPARATUS FOR PROCESSING GRAIN UNDER HIGH PRESSURE AND HIGH TEMPERATURE. CHARLES VICTOR ROWELL, Croydon, near Sydney, New South Wales, Australia. Filed Feb. 12, 1920. Serial No. 358,136. 5 Claims. (Cl. 99—2.)

1. Apparatus for the processing of grain under high temperature and high pressure consisting of a barrel-like chamber open at one end, a closure disk coacting with a soft metal ring to seal the open end of said chamber, a hinged ramp-back carrier holding said disk in an accommodating, seating, a pair of links hung at one end on eccentric sleeves rotatably fitted on fixed trunnions, a yoke

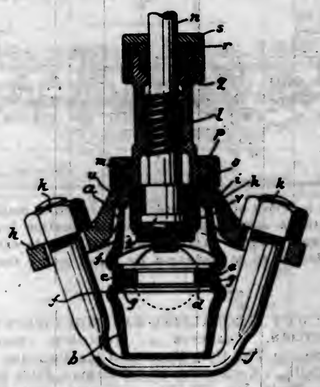
connecting the outer ends of said links and adapted to take against the carrier ramp thereby to press the closure disk home on the chamber mouth, lever arms on said eccentric sleeves with means for moving said levers to vary the tension on said links, a member carrying said links at points near said ramp yoke, means for moving said member to bring said links to locked position and to force the closure carrier to locked position, means for holding said links in such locked position, means for disengaging said locking means and for releasing said member from locked position, and means for heating said chamber and for supplying superheated steam thereto.

1,395,015. ART OF TREATING WHEAT-GRAINS AND PRODUCT THEREFROM. CHARLES VICTOR ROWELL, Croydon, near Sydney, New South Wales, Australia. Filed Feb. 12, 1920. Serial No. 358,137. 8 Claims. (Cl. 99—10.)



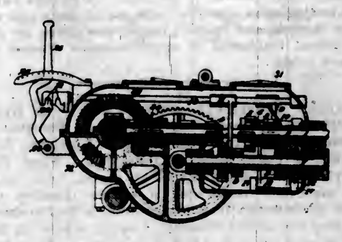
1. A completely cooked food product substantially dry but liquescent in water and free from light polarising characteristics, consisting of unmilled wheat grains, expanded to irregular shapeless masses and having the cells burst and the cell structure shattered.

1,395,016. OILPROOF IMPREGNATING AGENT OR COATING AND PROCESS. ANDREW J. ROWLAND, Cincinnati, Ohio, assignor to The Federal Products Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 10, 1920. Serial No. 395,348. 6 Claims. (Cl. 134—16.)



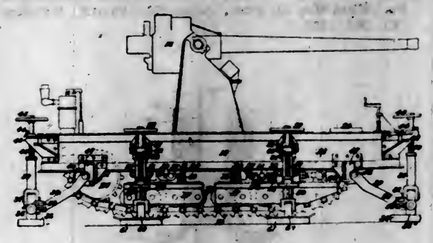
1. A composition of matter consisting of one part of metallic salts of alginic acid to about one and one-half parts of concentrated ammonium hydroxid of a specific gravity of about .898 or 26° Baumé, or its equivalent.

1,395,017. STOP MECHANISM FOR PHONOGRAPHS. SAMUEL SHELLY, Philadelphia, Pa., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed Apr. 5, 1916. Serial No. 89,009. 8 Claims. (Cl. 192—116.)



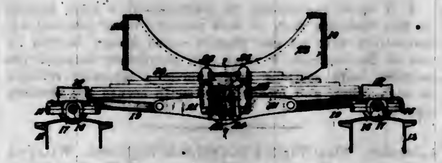
1. In a device of the class described, a movable member, a brake therefor, means for engaging and holding said brake in inoperative position, and unitary means separate from said holding means for moving said brake to inoperative position to be engaged by said holding means and for releasing said holding means, substantially as described.

1,395,018. VALVE. KARL A. SODERSTROM, Philadelphia, Pa. Filed May 11, 1920. Serial No. 380,512. 8 Claims. (Cl. 251—157.)



1. A valve comprising, in combination, a body formed in two sections, each of said sections being adapted for connection with an end pipe, a valve proper carried by one of the sections, a valve seat positioned between the sections, said sections being movable laterally relative to each other, and means adapted to secure the sections together.

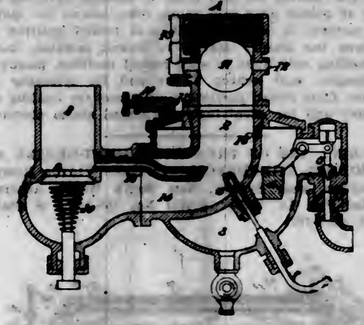
1,395,019. TRACTION-ENGINE MECHANISM. WILLIAM TURNBULL, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Original application filed Feb. 10, 1916, Serial No. 77,382. Divided and this application filed Jan. 15, 1917. Serial No. 142,535. 7 Claims. (Cl. 74—58.)



7. In a power transmission mechanism, a shiftable driving member, a shiftable step gear, a reversing gear adapted to be swung into and out of operative position, operating members for each of said gears and a single control lever adapted to selectively operate said gears to shift the driving gear and the step gear in alternate directions or to swing the reversing gear.

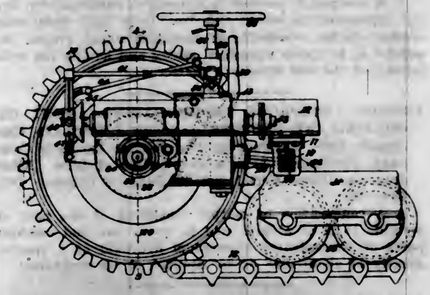
1,395,020. ANTI-AIRCRAFT-GUN MOUNT. WILLIAM TURNBULL and EMIL F. NORELIUS, Peoria, Ill., assignors to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 1, 1917. Serial No. 189,371. 9 Claims. (Cl. 89—40.)

2. In a device of the character described, a main frame comprising a casting having a central portion for a gun mount and integral parallel fore and aft side extensions each adapted to be embraced by a self-laying track.



1,395,021. EQUALIZER-BAR FOR CHAIN-TRACK TRACTORS. CLARENCE A. WHITNALL, Peoria, Ill., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 16, 1919. Serial No. 324,194. 4 Claims. (Cl. 305—9.)

1. In a vehicle, a main frame, a truck mechanism of the endless self-laying track type at each side of the main frame for supporting the latter and load-supporting connections for the main frame, one of said connections comprising a transversely extending leaf spring connected pivotally at its center to the main frame, and having its ends resting upon opposite truck mechanisms and movable freely thereon, and means adjacent the spring for preventing lateral movement of opposite truck frames relative to each other.

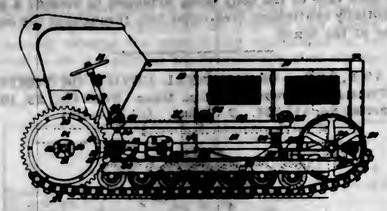


1,395,022. AUTOMATIC FUEL FEED AND MIXTURE CONTROL. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Feb. 12, 1917. Serial No. 148,085. 1 Claim. (Cl. 261—73.)

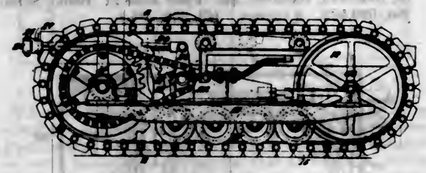
A carbureter comprising a mixing chamber through which air is drawn from the exterior, a float chamber surrounding the mixing chamber, a spray nozzle for the mixing chamber through which fuel is drawn from the float chamber, a valve controlled orifice opening into the float chamber from the exterior for supplying air thereto above the normal level of the fuel, the wall between the float and mixing chambers being provided with an aperture positioned above the normal level of the fuel in the float chamber for applying suction to the latter to assist in drawing fuel into the same, a spring pressed valve for maintaining the entrance to the mixing chamber closed under periods of low suction, and an open tube extending from the exterior of the mixing chamber to a point adjacent the spray nozzle for supplying air to the latter

for the purpose stated, the aperture in the wall being positioned so that air entering through the tube will sweep past said aperture.

1,395,023. POWER-DRIVEN STEERING MECHANISM FOR TRACTORS. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 18, 1918. Serial No. 254,600. 6 Claims. (Cl. 180—9.2.)



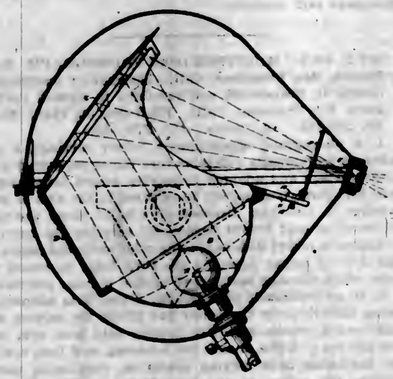
1. A transmission mechanism for tractors comprising a driving shaft, a pair of driven members operatively connected thereto, a planetary gear set between the driving shaft and each driven member, power actuated means for separately controlling said gear sets to vary their effective speeds and to reverse their direction of travel, and a single control element to effect the operation of said power actuated means.



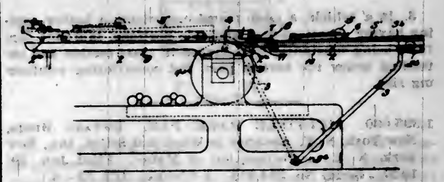
1,395,024. CONSTRUCTION FOR TRACTION-ENGINES. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Nov. 5, 1918. Serial No. 261,176. 8 Claims. (Cl. 180—9.1.)

1. In a tractor, main frame, track laying mechanism at each side thereof, each track laying mechanism including a roller truck frame, a stabiliser shaft connecting the rear ends of opposite truck frames together for relative pivotal movement in parallel vertical planes, a sprocket

driving wheel for each truck mechanism journaled on the main frame, thrust links extending forwardly and downwardly from journal bearings of the sprocket wheels to said stabilizer shaft and a draw bar connected to said thrust links for the purpose stated.

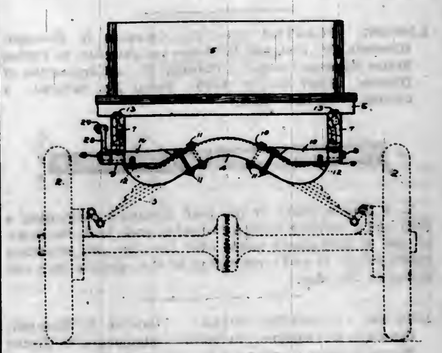


1,395,025. TRACTOR-FRAME SUSPENSION. ELMER E. WICKERSHAM, Stockton, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Sept. 29, 1919. Serial No. 327,285. 5 Claims. (Cl. 305—9.)



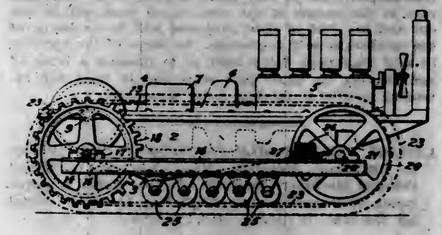
1. In a tractor, a main frame, a chain track truck mechanism at each side thereof, a driving axle for the chain track, a housing for the axle serving to support the entire weight of the main frame on the truck mechanisms, said truck mechanisms being free to rock about their connection with the main frame and resilient means to stabilise the main frame.

1,395,026. HEADLIGHT. WILLIAM G. WOOD, San Francisco, Calif., assignor to Berkeley Light Corporation, San Francisco, Calif., a Corporation of Nevada. Filed Dec. 24, 1919. Serial No. 347,180. 3 Claims. (Cl. 240—41.)



1. In a headlight, a lamp housing having a reduced light emitting aperture, a source of light in said housing, means coöperating with the source of light for forming a cone-shaped beam, an objective lens positioned in the light emitting aperture where the rays of the beam cross, and a diaphragm positioned at the principal focal point of the objective lens, said diaphragm having an aperture whose greatest dimension is less than the diameter of the cone-shaped beam at that point, whereby stray and faint rays at the margin of the cone-shaped beam will be cut out and the field of light projected will be an image of the aperture in said diaphragm, the shape of the aperture in said diaphragm being such as to produce a beam of light having its upper part segmental in form and extending parallel to the field to be illuminated.

1,395,027. ADJUSTABLE FEEDING-TABLE. FRANK R. BELLUCHE, Mansfield, Mass., assignor to United Printing Machinery Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 13, 1920. Serial No. 358,348. 15 Claims. (Cl. 271—8.)

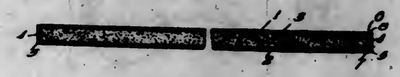


4. In a printing press having an impression cylinder; a movable feed board, means for normally supporting said board in operative position at the feed side of the cylinder; and means for supporting said feed board in out of the way position at the delivery side of the cylinder.

1,395,028. BODY FOR DUMPING-TRUCKS. JOHN P. BEAG and JAMES M. GLEASON, Omaha, Nebr.; said Gleason assignor of all his right to Great Western Commercial Body Company, Omaha, Nebr., a Corporation of Nebraska. Filed June 21, 1920. Serial No. 390,323. 2 Claims. (Cl. 298—23.)

1. In a self-propelled dumping truck having a rear cross member secured on the rear spring of the truck, a tiltable box having a pivoted endgate; a catch provided with a hand-lever and pivoted to the box to engage the endgate; a pair of aligned shafts carried by the cross member and journaled in bearings affixed to the box; a radial arm adjustable rotarily on one of the transverse shafts; and a coupling rod connecting the radial arm with the hand lever.

1,395,029. TRACK-LAYING TRACTOR. CLARENCE LEO BEST, Oakland, Calif., assignor to The Holt Manufacturing Company, Stockton, Calif., a Corporation of California. Filed Oct. 8, 1917. Serial No. 195,440. 8 Claims. (Cl. 180—9.1.)

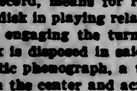


3. In a vehicle, a main frame comprising a hollow casting having a bottom part and side portions, said side portions being substantially U-shaped in cross section and extending below the bottom part and constituting reinforcing ribs.

1,395,030. MULTIPLE BAKE-PAN. EDWARD BIGGS, New York, N. Y., assignor to Wood and Selick, Inc., New York, N. Y., a Corporation of Maine. Filed Jan. 29, 1920. Serial No. 354,918. 8 Claims. (Cl. 53—6.)

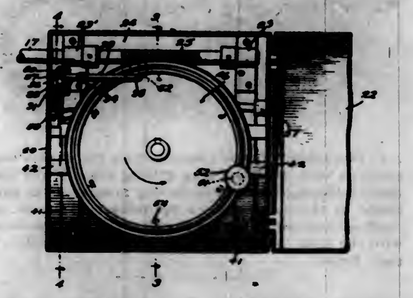
1. A multiple bake pan comprising a plurality of individual pans and a connecting bar extending across the latter, the pans being formed with take up folds and a part of each of said folds being raised to embrace the body of the bar to form an attachment therewith.

1,395,031. PLASTER-BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1920. Serial No. 348,940. 4 Claims. (Cl. 154—45.9.)



1. A plaster board of the kind described comprising a body and a covering sheet arranged at each face side thereof, one of said sheets folded over the edge and extending substantially to and terminating at the opposite face and inclosing the edge.

1,395,032. PLASTER-BOARD. CHARLES R. BIRDSEY, Hinsdale, Ill., assignor, by mesne assignments, to United States Gypsum Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1920. Serial No. 348,942. 3 Claims. (Cl. 154—45.9.)

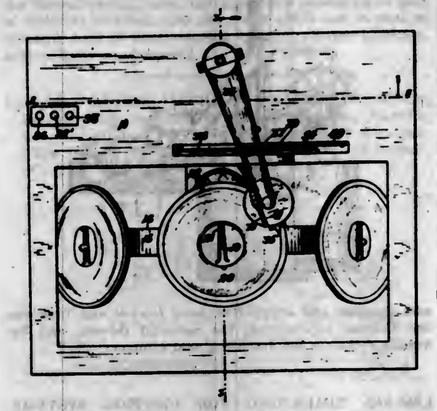


1. A plaster board comprising a suitable body, a cover sheet arranged on each face thereof, and an edge binder strip at one edge of the body folded to overlie the body at each face thereof, the cover sheet and edge binder portion on each face of the body being arranged to present a substantially continuous even outer face throughout the outer face of the board.

1,395,033. ORNAMENTAL DEVICE OR POMPON. THOMAS A. BOWERS, Boston, Mass. Filed Oct. 22, 1920. Serial No. 418,757. 2 Claims. (Cl. 41—10.)

1. An ornamental device of the class described comprising a bundle of parallel silk strands secured together intermediate of their ends by a metallic binder compressed thereupon with sufficient force to cause the gummy constituent of the silk fibers to exude, thereby causing said strands to adhere to one another.

1,395,034. TIMER FOR WASHING-MACHINES. JOSEPH A. BRENNER, Hanover, Pa. Filed June 21, 1920. Serial No. 390,522. 6 Claims. (Cl. 200—35.)

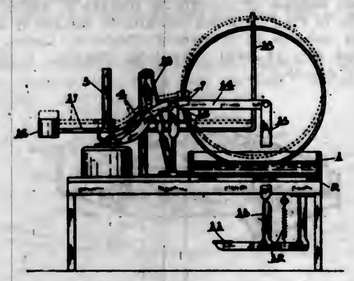


5. In a device of the character described, a wheel provided with a circumferential slot, means for rotating said wheel, a stationary contact, a movable contact, a bolt slidably mounted in said slot, and identical means for clamping said bolt and engaging said movable contact to disengage said contacts.

1,395,035. MULTIPLE-DISK PHONOGRAPH. JOHN BRIGGS, San Francisco, Calif., assignor of one-third to George C. Bornemann and one-third to Russell Berkenkamp, San Francisco, Calif. Filed Dec. 30, 1918. Serial No. 268,883. 40 Claims. (Cl. 274—10.)

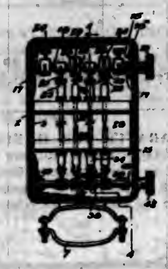
1. A phonograph comprising a rotary carriage, a plurality of individually rotatable turn-tables supported upon such carriage and adapted to receive record disks and to hold said disks tangentially in relation to the axis of such carriage, a tone arm disposed at a point along the path of travel of said record, means for rotating the carriage to dispose a record disk in playing relation to the tone-arm, and driving means engaging the turn table to rotate the same when the disk is disposed in said playing position.

9. In an automatic phonograph, a tone arm adapted to swing radially from the center and across the surface of a disk record, means normally holding said tone arm in a non-playing position, means for releasing said tone arm at the beginning of a playing operation, cushioning means against the action of the reproducing needle when the tone arm is lowered onto the record, and means for automatically locking the tone arm control mechanism at the completion of said operation.



11. In a phonograph, a reproducing mechanism adapted to move across the face of a disk record, means normally holding said reproducer in a non-playing position, means for releasing said reproducer for playing and means for optionally causing the reproducing mechanism to be restored to its non-playing position at any time during the playing operation.

18. In a phonograph, a driving spindle adapted to be vertically disposed and to horisontally support a phonographic disk, a tone arm carrying a reproducer mounted to swing horisontally across the face of said disk, motor driven means for driving the spindle, a main motor circuit, a switch controlling the same, locking means for normally holding the switch in its open position, an auxiliary electrical circuit for the lock means, an operating switch controlling said auxiliary circuit and whereby the closing of said operating switch will act to release the main switch and allow it to automatically close the motor circuit.



21. In an automatic phonograph, a tone arm adapted to swing across the playing surface of a disk record, a freely pivoted supporting arm extending beneath said tone arm and normally holding it in a non-playing position, a secondary arm normally holding said supporting lever as described, and electric means for moving said secondary arm from its supporting position and thereafter causing the supporting arm to lower the tone arm to its playing position.

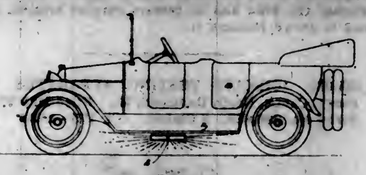
1,395,036. APPARATUS FOR SOLUTIONING TIRE-BEADS. THOMAS A. BURNS and DAVID J. HUETHER, Toronto, Ontario, Canada, assignors to Dunlop Tire and Rubber Goods Company, Limited, Toronto, Ontario, Canada. Filed Nov. 29, 1920. Serial No. 426,998. 7 Claims. (Cl. 91—32.)

1. Apparatus for solutioning tire beads comprising a solution tank; a supporting frame for an annular bead mounted so that it may be moved vertically to dip a bead into the solution tank or lift it therefrom; and a suitably supported divided die adapted to be opened to receive and embrace the bead and to remove surplus solution as the bead is drawn through it.

1,395,037. CIRCUIT-TESTING APPARATUS. LEON PERCY CARLE, North Raymond, Me. Filed May 27, 1918. Serial No. 236,889. 8 Claims. (Cl. 175—183.)

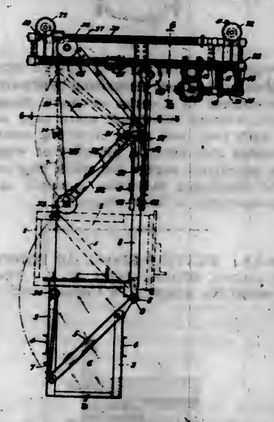
8. A device for testing electric ignition circuits of internal combustion engines, comprising relatively adjustable contacts connected to a series of spark plugs and coils respectively, whereby individual spark gaps may be produced for each plug, and short circuiting means comprising a grounded rock shaft, a plurality of wipers thereon adapted to selectively engage the spark plug contacts and ground the same, and indicators mounted on said rock shaft corresponding to said wipers.

1,395,038. TEXTILE SPOOL OR BOBBIN. HARRY DAVIS CLINTON, Whitney Point, N. Y. Filed Mar. 24, 1921. Serial No. 454,979. 4 Claims. (Cl. 242—118.)



4. In a spool or bobbin, a tubular wooden body having a reduced end portion or tenon with an annular exterior groove therein, a resilient split ring seated in said groove, a head of hard fiber or metal having a tapered hole therethrough in which said tenon is inserted and having an annular groove in the wall surrounding said hole adapted to register with the groove in said tenon, a wooden plug dipped in glue having a tapered end and driven into the end of said tenon and into the end of said tube, whereby said ring is forced into the grooves of both the head and tenon and the several parts immovably secured together.

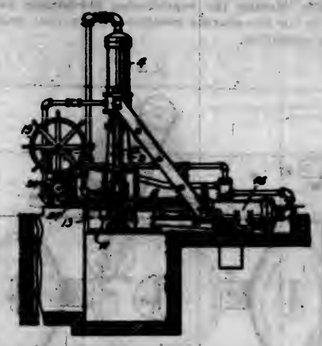
1,395,039. AUTOMOBILE LIGHTING DEVICE. ANTON J. CHMURSKI, Milwaukee, Wis.; assignor to Frank Rigas, Milwaukee, Wis. Filed Aug. 30, 1920. Serial No. 406,977. 1 Claim. (Cl. 240—7.)



The combination with a vehicle having a running board on the side thereof of a light casing mounted beneath the running board, means in the casing for throwing the major portion of its rays of light laterally of the direction of travel of the vehicle for illuminating the road at the side

thereof when passed by a second vehicle, said running board forming a guard to prevent rays of light being

thrown in the air and also acting as an additional reflecting surface to direct the rays of light in the direction of the road surface.

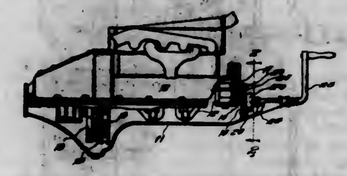


1,395,040. APPARATUS FOR HANDLING CONTAINERS OF LIQUID. JAMES ROBERT COE, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Aug. 13, 1920. Serial No. 403,268. 9 Claims. (Cl. 212—130.)

1. In an apparatus for lifting and tilting a container having a pouring lip, the combination of means for holding said pouring lip in a definite vertical plane while said container is being tilted, lifting cables connected to the front and rear portions of said container respectively, a frame located above said container and having one end pivotally supported adjacent to said vertical plane and having guides thereon adjacent to its rear end over which said rear cables pass, guides adjacent to said vertical plane beneath which said rear cables pass, said front and rear cables at points above said second guides being adjacent and approximately parallel, a common means located above said frame for drawing both said front and rear cables upward simultaneously, and means for raising and lowering the rear end of said frame.

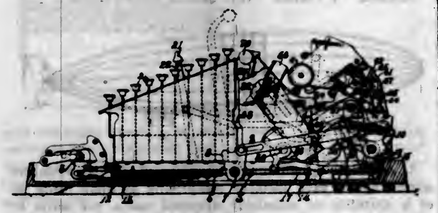
1,395,041. SCRAP-BUNDLING MACHINE. JAMES ROBERT COE, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a Corporation of Connecticut. Filed Mar. 29, 1920. Serial No. 369,534. 5 Claims. (Cl. 76—42.)

1. In a bundling machine, the combination of a base having a stationary open-topped compression chamber, a plurality of angularly displaced bottomless containers revolvable about a vertical axis into and out of alinement with said chamber, a vertical plunger adapted to enter any one of said containers when it is in alinement therewith and with said chamber, and force the contents out of the movable container and into the stationary compression chamber, and a horizontal plunger having its axis in line with



said chamber and adapted to move toward and from one end thereon to compress the material therein, and hydraulic cylinders for actuating said plungers.

1,395,042. TIMER-RING FOR IGNITION SYSTEMS. GOTTLOB HUBBEL and HERMAN SCHMIDT, Brooklyn, N. Y., assignors, by mesne assignments, to Apollo Magneto Corporation, Brooklyn, N. Y., a Corporation of Delaware. Filed Aug. 30, 1919. Serial No. 320,916. 4 Claims. (Cl. 200—19.)



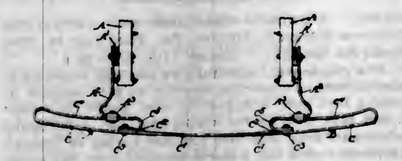
2. A support having a slanting interior shoulder to receive a cam element to be disposed adjacent said shoulder, and a member for mounting said support, said member having a passage leading to the interior of said support to supply a lubricant to said shoulder.

1,395,043. THRUST-BEARING FOR INTERNAL-COMBUSTION ENGINES. CLARENCE C. FULLER, Loxley, Ala., assignor of one-fifth to Howard E. Fuller, one-fifth to Fred C. Griffin, one-fifth to Edward L. Hiles, and one-fifth to William J. Frederick, Loxley, Ala. Filed July 14, 1920. Serial No. 396,224. 3 Claims. (Cl. 64—49.)

3. In a device of the class described, the combination of an engine casing, a crank shaft having its forward end protruding through the engine casing, a fan pulley mounted upon the protruding end of the crank shaft, a thrust bearing plate interposed between the fan pulley and the contiguous forward end of the engine casing, said plate being secured by a lower bolt and an upper cap screw in a manner adapted to permit variations in the positioning of the bearing plate with respect to the engine casing, ball bearing members interposed between the fan pulley and the thrust bearing plate, and a magneto consisting in part of elements rotating with the crank shaft and in part of elements held in fixed relation to said rotating elements, substantially as described.

1,395,044. ADDING-MACHINE. CLAIBORNE W. GOOCH, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 6, 1916. Serial No. 135,454. 18 Claims. (Cl. 235—60.)

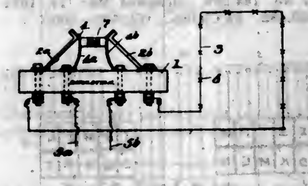
1. The combination with driving means, registering mechanism and a dashpot cylinder and piston; of a piston-reciprocating member movable into and out of connection with said driving means, and a key and connections for shifting said piston-reciprocating member.



3. The combination with registering mechanism, and driving means therefor including a plurality of springs; of a separable coupling between one such spring and the driving means, and manipulative means for controlling the coupling.

4. The combination with registering mechanism, and driving means therefor including a plurality of springs and a rock shaft; of a pair of crank arms on the latter one fixed thereto and the other loose thereon and connected to one of said springs, a latch connecting the two arms, and manipulative means for operating the latch.

6. The combination with registering mechanism and driving means; of a series of levers connected to the registering mechanism, a series of type-carriers normally latched to said levers respectively, and a key and connections for collectively unlatching said type-carriers.



8. The combination with registering mechanism, driving means including a plurality of springs, and a governor imposing restraint upon the driving means; of a separable coupling between one spring and the driving means, a separable coupling between the driving means and the governor, and manipulative means common to said two couplings for simultaneously disabling both of them.

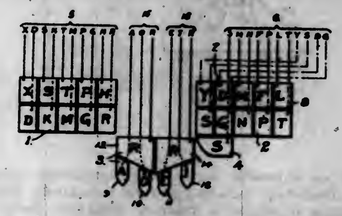
1,395,045. DOUBLE BUMPER-BAR. LEWIS P. HALLADAY, Decatur, Ill. Filed Aug. 18, 1921. Serial No. 493,307. 20 Claims. (Cl. 293—55.)

20. In an automobile bumper a spring impact member having a vertically disposed flat impact face bent at one end to form a spring loop having curved ends, the free end of the loop being located behind the impact surface and being inwardly extended toward the loop, the other end of the spring member being offset from the plane of the loop, extending laterally away from the loop, and having an end inwardly inclined to and terminating in the plane of the loop, the bumper bar made up of two such elements interlocking and arranged so that the free end of each impact member is located between the loop end and the body of the other member, said free ends being riveted together.

1,395,046. AUTOMATIC CIRCUIT-CONTROLLING APPARATUS. LAURENCE M. KLAUBER, San Diego, Calif., assignor of one-half to San Diego Consolidated Gas & Electric Company, San Diego, Calif., a Corporation of California. Filed Mar. 4, 1920. Serial No. 363,308. 13 Claims. (Cl. 175—374.)

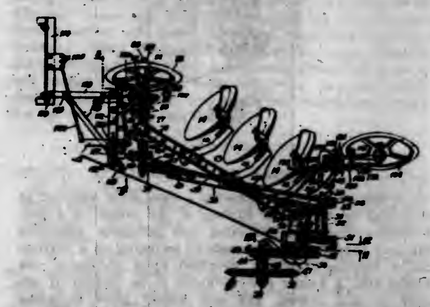
1. In an automatic series circuit-controlling apparatus a circuit-loop including electric translating devices and having terminals, a dielectric resistance device located between said terminals and constructed to sustain the normal potential existing between said terminals, and means for holding the circuit closed through the circuit-loop controlled by said dielectric resistance device, said means having a movable part operating to break the connection to the circuit-loop adjacent the terminals when said dielectric resistance device is destroyed.

1,395,047. WINDOW-SASH FASTENER. ROBERT P. LITTLE, Columbus, Ohio. Filed Dec. 22, 1920. Serial No. 432,651. 9 Claims. (Cl. 292—209.)



1. A sash fastener comprising a base plate adapted to be carried by the upper surface of the lower, of a pair of window sashes, a fastening arm pivotally connected with said base plate and capable of swinging on a vertical arm, a locking extremity provided upon the outer end of said arm, a keeper plate adapted to be carried by the upper of said sashes, and said keeper plate including an open sided recess capable of receiving and retaining the locking extremity of said arm.

1,395,048. DIPPER-TOOTH. WALTER S. MCKIM, Chicago, Ill., assignor to American Manganese Steel Company, Augusta, Me., a Corporation of Maine. Filed Feb. 18, 1920. Serial No. 359,656. 4 Claims. (Cl. 37—56.)



1. A dipper tooth comprising a wedge shaped body with the upper and lower surfaces thereof provided with panels or recesses adapted to cause the tooth to remain sharp during the useful wearing life thereof.

1,395,049. TYPEWRITING-MACHINE. CHARLES E. MCNAMARA, Minneapolis, Minn. Filed Jan. 24, 1917, Serial No. 144,209. Renewed Mar. 18, 1921. Serial No. 453,482. 34 Claims. (Cl. 197—100.)

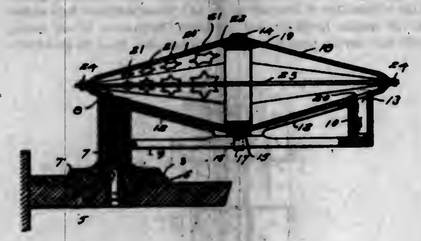
1. In a typewriting machine of the character described, printing units adapted for printing simultaneously and selectively different combinations of characters in an invariable sequence which approximates the order in which the sounds represented by said characters most frequently occur in speech, said printing units comprising keys for manipulation by one hand having an arrangement different from the printed sequence, in which the keys are disposed so that those which are most frequently operated in making said combinations are in position to be manipulated by a digit which is more dexterous than other digits of the hand, and in which keys which are less frequently used are disposed so as to be manipulated by less dexterous digits.

1,395,050. DISK PLOW. CLEMENT W. MICHAEL, Racine, Wis., assignor to J. I. Case Plow Works, Racine, Wis., a Corporation of Wisconsin. Filed June 17, 1916. Serial No. 104,198. 15 Claims. (Cl. 97—55.)

1. In a device of the class described and in combination with the frame and ground working means carried thereby, furrow wheels mounted at the front and rear end respectively of the frame, a casting mounted at the front and rear end respectively of the frame, a casting mounted at the rear end of the frame, a shaft journaled in the casting, an arm on the shaft, a land wheel journaled at the free end of said arm, a clutch mounted on the shaft, gearing connecting one side of the clutch to the land wheel, a second shaft mounted in the casting, gearing connecting the other side of the clutch and the second said shaft, an arm on the latter, a shaft mounted at the front end of the main beam, means connected to said shaft for raising and lowering the front furrow wheel, an arm on said shaft and connections from said arm to the respective arms on the shafts in said casting.

1,395,051. DIRIGIBLE. ALEXANDER C. MIKANOVICH, Cleveland, Ohio. Filed Nov. 22, 1920. Serial No. 425,992. 4 Claims. (Cl. 244—3.)

1. A dirigible including a plurality of rim-like members spaced apart, each member comprising sections made up of a plurality of angularly disposed units, the units of one section intersecting the corresponding units of the other section and secured thereto, parallel elements connecting the adjacent extremities of the units of each section, a hub, adjustable elements radiating from the hub and connected with the sections of each member, and a flexible covering for said structure, and a passenger carrier supported by said members.



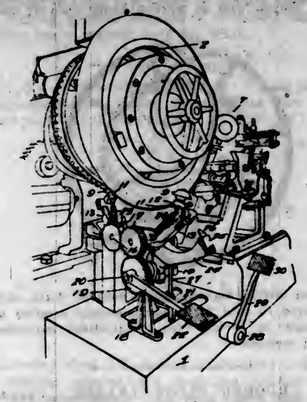
1,395,052. WRENCH. WALTER F. MILLER, Dayton, Ohio. Filed Feb. 1, 1921. Serial No. 441,578. 8 Claims. (Cl. 81—99.)

1. A wrench comprising a handle having a short cam face at one of its ends and located wholly to one side of its longitudinal axis, an open sided jaw pivoted to said end of the handle at the opposite side of said axis, and a tension means for positioning the jaw forwardly beyond its active position when disengaged from a nut, said cam adapted to always engage the nut at one side of the plane transversely bisecting the nut and extending perpendicular to that active face of the jaw that engages the opposite flat of the nut.

1,395,053. COMBINED TONE-ARM AND AMPLIFIER. VINCENZO MINNELLI, Pittston, Pa. Filed July 14, 1920. Serial No. 396,131. 7 Claims. (Cl. 274—16.)

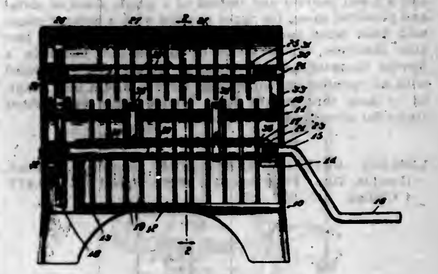
1. In a graphophone structure, an amplifier including an elongated body, a supporting member for said amplifier including a turn post, a supporting base, means for mounting said turn post on the supporting base, a horizontal arm extended from said turn post and having an upstanding forward hollow end, a sleeve extended from said hollow upstanding end and combining therewith to form a sound wave duct to support a reproducer carrying tone arm, angular rest arms extended from the central of said horizontal arm to the turn post and the upstanding end of said horizontal arm, said elongated body of the amplifier resting upon said angular arm and the upper end of said turn post and the upstanding end of said horizontal arm,

said amplifier having a sound wave entrance opening communicating with said duct, said amplifier having sound wave escape openings spaced from the sound wave entrance opening, and means for securing said amplifier upon said support.



1,395,054. COTTON CLEANING AND SEPARATING MACHINE. JOHN E. MITCHELL, St. Louis, Mo. Filed Jan. 17, 1921. Serial No. 437,651. 4 Claims. (Cl. 19—9.)

3. In a machine of the class described in combination with a saw cylinder, an upper and a lower hull board coöperating therewith and the lower edge of each of which defines the size of an opening past the saw cylinder, and means operating to lower the upper hull board away from the saw cylinder to discharge accumulated products upon the lower hull board while the latter hull board is maintained in a normal operative position, and then to return the upper hull board to normal position and to move the lower hull board to a discharge position, said means operating continuously to effect the alternate movements of the hull boards.

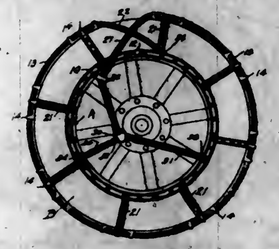


1,395,055. TIRE-MAKING MACHINE. WILLIAM B. HARSEL, Akron, Ohio, and EDWARD NALL, deceased, by Edith Alice Nall, executrix, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed Nov. 3, 1917, Serial No. 200,185. Divided and this application filed Sept. 25, 1918. Serial No. 255,651. 18 Claims. (Cl. 154—10.)

11. A tire-building machine including a support, a stitcher device associated therewith and including supporting-arms, levers pivoted thereto, axles on which the levers are mounted, gearing associated with the levers, a

foot-lever for operating the gearing, and trimming mechanism associated with the stitcher-device.

1,395,056. DEVICE FOR APPLYING PASTE TO LABELS. ARTHUR F. NELSON, Rogers Park, Ill. Filed Dec. 27, 1919. Serial No. 347,655. 12 Claims. (Cl. 91—51.)



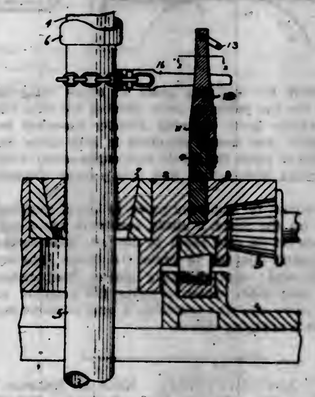
1. A device for applying paste to labels comprising a receptacle for the paste, a cover member for said receptacle, a revoluble paste carrying member mounted in said cover member, and means mounted in said cover member and adapted to press the labels into engagement with said paste carrying member as they are passed through the device.

9. In a device for applying paste to labels comprising a receptacle for the paste, a shaft, revoluble paste applying means mounted on said shaft to dip into said receptacle, pressure means adapted to press the labels into engagement with said paste applying means, and means for mounting said shaft which permits the removal of the shaft and paste applying means as a unit without disturbing the paste applying means.

1,395,057. ANTISKID-CHAIN. NELS H. NELSON, Willmar, Minn. Filed Jan. 22, 1920. Serial No. 353,179. 3 Claims. (Cl. 152—14.)

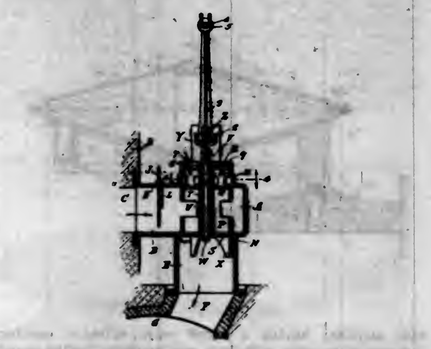
2. A chain grip for elastic tires, comprising, a pair of separable inner annular chains adapted to be disposed on opposite sides of a tire, a central annular chain adapted to

substantially encircle the outermost portion circumferentially of the tire to reduce side skidding, a plurality of lateral flights at intervals around the tire and attached to said side chains, and an anti-skidding shoe at the junc-



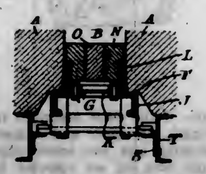
tion of each lateral flight and said central chain; said shoe being secured to said flight and movably coupled to said central chain to permit free longitudinal movement between said members.

1,395,058. RUBBER FLOOR-CLEANER. FRAZIER W. NEVIUS, St. Louis, Mo. Filed Sept. 29, 1920. Serial No. 413,482. 3 Claims. (Cl. 15—13.)



1. A floor cleaner comprising a head having an upper and a lower portion and formed of a single sheet of metal and provided along its upper portion with a scraper edge; said head being provided in its lower portion with parallel channels, rubber strips located in said channels, a ferrule mounted in said head, a ferrule brace provided with an opening carried by said ferrule, and a bolt adapted to pass through the head ferrule brace and rubber strips for securing the same together.

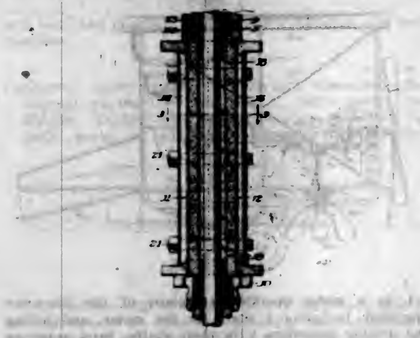
1,395,059. DRILLING APPARATUS. GEORGE G. REEVES, Humble, Tex. Filed Apr. 11, 1921. Serial No. 460,477. 4 Claims. (Cl. 255—35.)



1. A break-out pin formed of two sections, one of which tapers from its lower to its upper end and whose lower end is formed with a socket, and the other of which has its upper end formed to fit into said socket.

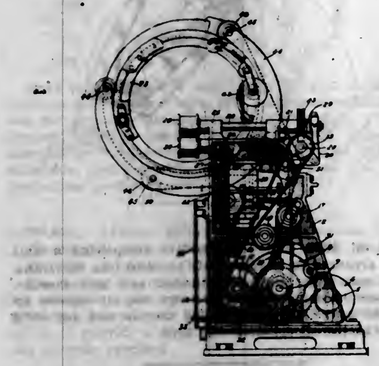
1,395,060. AIR-VALVE FOR COKE-OVENS OR THE LIKE. WILLIAM E. ROBERTS, New York, N. Y., assignor, by mesne assignments, to Foundation Oven Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 7, 1919. Serial No. 275,632. 8 Claims. (Cl. 251—76.)

1. An air valve for coke ovens or the like comprising a casing with branches communicating with a regenerator port and an exhaust flue respectively and having a valve chamber with cylindrical bearings or seats at opposite sides and a hollow cylindrical valve body sliding in said bearings, having an end open to the atmosphere and having lateral openings and adapted in one position to admit air from the atmosphere past one of said bearings to the regenerator and in another position to admit gases of combustion from the regenerator past the other bearing to the exhaust flue.



1,395,061. COKE-OVEN DOOR. WILLIAM E. ROBERTS, New York, N. Y., assignor, by mesne assignments, to Foundation Oven Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 28, 1919. Serial No. 320,346. 3 Claims. (Cl. 202—6.)

1. A coke oven door comprising an inner cast frame having inwardly converging flanges, a refractory lining comprising side bricks formed to engage said converging flanges and key bricks to hold said side bricks in engagement with said flanges, an intermediate plate, an outer cast frame and means for permanently securing the several parts together and yet permit independent expansion and contraction of the separate parts.

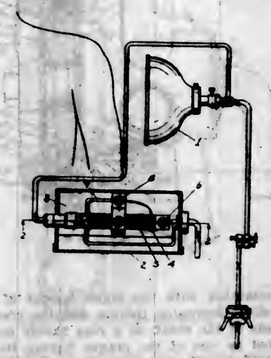


1,395,062. WATER-GAGE. GEORGE H. SARGENT, Chicago, Ill., assignor to Sargent Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 4, 1917. Serial No. 194,663. 1 Claim. (Cl. 73—54.)

A water gage, comprising a metallic member of substantial thickness having an elongated slot disposed therethrough intermediate of its ends, the ends being provided with central openings communicating with the slot and having threaded sockets, the opposite sides of said member, intermediate of its ends, being formed with smooth bearing surfaces, a pair of corresponding metallic side members, slotted intermediate of their ends to an extent corresponding with a slot in the first member, adapted to extend flush with opposite sides and have bearing on the bearing surfaces of said first member intermediate of the ends thereof, the inner sides of said pair of members being each formed with longitudinal channels on opposite sides and lengthwise of the slots therein, a relatively thick glass panel arranged with its longitudinal edges in the channels of each side member and disposed across the slots

of said members, fibrous lining in said channels arranged on opposite sides of the glass panel, regulable means extending through all of said members whereby said side members are forced into abutting relation with the sides of the first member and the fibrous lining with the glass panels clamped therebetween in steam-tight relation to both sides of each glass panel, a water-glass extending lengthwise of the first member through the central openings in the ends thereof, and means whereby the water-glass is maintained in place in fluid-tight relation with the first member.

1,395,063. WRAPPING AND UNWRAPPING MACHINE. WILLIAM C. STEVENS, Summit county, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 19, 1917. Serial No. 202,765. 2 Claims. (Cl. 242—6.)

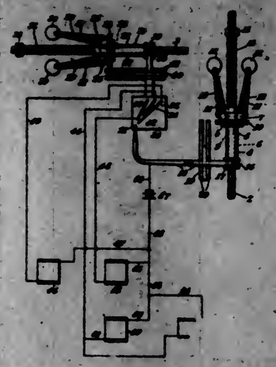


1. In a machine of the character described, the combination of a carrier for an object to be wrapped or unwrapped, means to rotate the object, a shuttle rotating in a plane at right angles to the plane of the object, a bearing plate for said shuttle having a circular track, a pivoted support on the shuttle, a spool holder on said support, a pulley connected with said spool holder, means adapted to rock said support to bring said pulley in contact with the track, and a locking member adapted to hold said support with the pulley out of contact with the track.

1,395,064. VALVE-SILENCER. CHARLES DELBERT STROMGREN, Los Angeles, Calif. Filed Jan. 26, 1921. Serial No. 440,124. 6 Claims. (Cl. 123—90.)

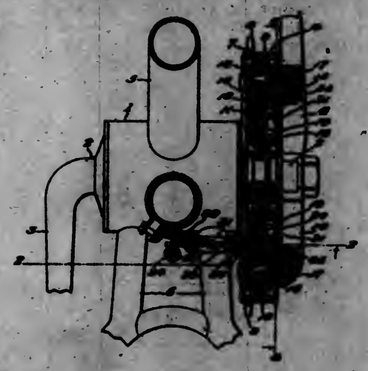
1. A valve stem attachment comprising a flat spring-steel member substantially S-shaped having an upper, lower and intermediate leaf, said upper leaf having an opening therein through which the lower end of the valve stem extends against the intermediate leaf, and a layer of sound deadening material secured to the upper face of the lower leaf.

1,395,065. METHOD OF ADMINISTERING THERAPEUTIC LIGHT TREATMENTS. ROY X. TUTTLE, Battle Creek, Mich. Filed Feb. 14, 1921. Serial No. 444,893. 5 Claims. (Cl. 174—177.)



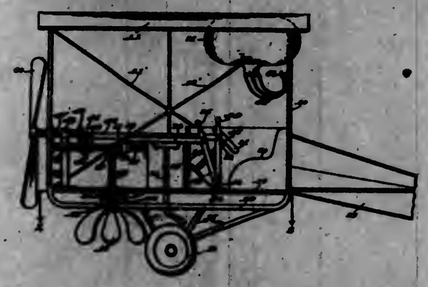
1. The method of administering treatments consisting of directing a lamp against the part to be treated, such lamp being of a heating capacity greater than can be endured on a continuous exposure and automatically interrupting the light at substantially regular intervals and for substantially uniform periods, thereby alternately exposing the part to the light and heat and permitting it to cool, the cooling periods being relatively short.

1,395,066. CONTROLLING MECHANISM. CHARLES B. UNDERHILL, New Haven, Conn. Filed Jan. 18, 1917. Serial No. 142,192. 18 Claims. (Cl. 175—183.)



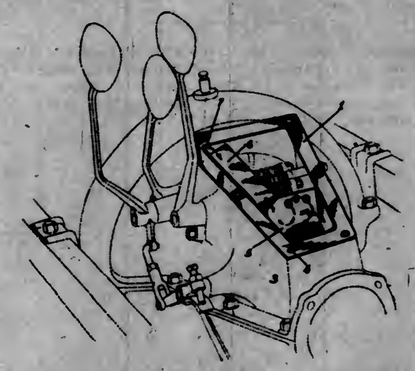
1. Controlling mechanism embodying the combination with two members moving at variable relative speeds, of

mechanism connected therewith which includes two elements movable transversely to each other, effective for



controlling a device to be operated on the attainment of predetermined speed ratios between said moving members.

1,395,067. CHANGEABLE-SPEED GEAR. HERBERT W. WARREN, Osseo, Mich. Filed Dec. 18, 1918. Serial No. 267,262. 1 Claim. (Cl. 74—34.)



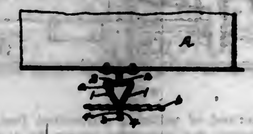
The combination with the crank hanger of a bicycle, the crank shaft journaled therein and the cranks at the opposite ends of the shaft, of a ring fixedly connected to and actuated by one of the cranks having its inner periphery provided with spaced pockets whose longitudinal walls are rounded, a circular series of satellite gears carried by said ring, and said ring having concentrically arranged laterally projecting teeth on the face thereof carrying the satellite gears, a ring gear extending around said series of satellite gears and having an internal gear face to mesh with said satellite gears and an outer sprocket face for the driving sprocket chain of the bicycle, a center gear journaled on the crank shaft provided with a hub portion formed with peripheral pockets whose longitudinal walls are rounded and which are disposed opposite the pockets in the ring or annulus, anti-frictional rollers between the pockets of the said hub and ring, said center gear having a peripheral gear face meshing with the satellite gears and having a pocket on the inner face thereof, a spring influenced dog pivoted in the pocket for engagement with the teeth of the ring, said dog having a lateral extension projecting through the pocket and extending beyond the outer face thereof, a spring influenced bell crank lever pivotally supported on the crank hanger disposed for contacting engagement with the outer end of the projection on the dog with the upper edge of the said projection, and a pull cord for operating the bell crank lever.

1,395,068. AEROPLANE. GEORGE WELSH, Hamilton, Ontario, Canada, assignor of one-half to Maria Kaminska, Hamilton, Ontario, Canada. Filed July 31, 1920. Serial No. 400,388. 2 Claims. (Cl. 244—25.)

1. In a motor operated aeroplane of the character described, including a shaft for the motor, and lifting and driving propellers with their shafts, bevel gears on said shafts, and means for shifting the bevel gears on the motor shaft into and out of engagement with the bevel gears on the shafts for the lifting and driving propellers respectively, substantially as described.

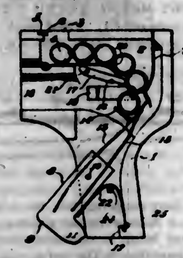
1,395,069. OIL-FILTER FOR GAS-ENGINES. ELMER B. WELLS, Stockton, Calif. Filed July 31, 1920. Serial No. 400,558. 5 Claims. (Cl. 184—11.)

1. An oil filter for vehicle-motors comprising a unit member arranged to be removably inserted into the transmission case under the cover thereof and held thereby, and means in said member whereby the oil thrown up by the fly wheel will be deposited therein and any solid particles in the oil collected and held.



1,395,070. CHANNEL-IRON AND ANCHOR. LEWIS P. WENTZELL, Greensburg, Pa. Filed May 7, 1920. Serial No. 379,626. 4 Claims. (Cl. 72—118.)

1. In a device of the character described, a bar including a body having lateral downwardly converging elements provided at their upper ends with shoulders projecting laterally of the body, and a clip fitting about



said body and provided with elements engaging over said shoulders.

1,395,071. CLIP. LEWIS P. WENTZELL, Greensburg, Pa. Original application filed May 7, 1920, Serial No. 379,626. Divided and this application filed Dec. 11, 1920. Serial No. 429,983. 3 Claims. (Cl. 72—120.)

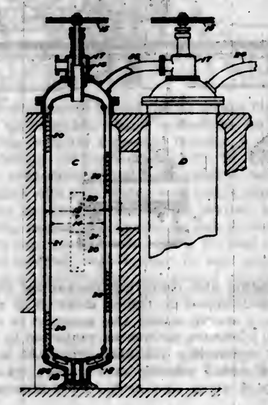
1. A resilient clip of substantially V-shape provided at the free ends of its arms with inwardly directed elements and having its arms connected at their lower ends by an enlarged element forming an eye to facilitate manipulation of the clip and twisting together of the lower portion of said arms.

1,395,072. TOY PISTOL. GEORGE A. WILBUR, Lansing, Mich. Filed Feb. 5, 1921. Serial No. 442,729. 6 Claims. (Cl. 124—13.)

1. In a toy pistol, a body provided with a magazine chamber and a barrel bore, said magazine chamber opening out through the upper edge of the body, a pivoted trigger, projector springs carried by said trigger and adapted to receive projectiles, one at a time, from said magazine, and projectile carrying means on one of said projecting springs.

1,395,073. LUBRICANT. CHARLES STILLMAN WILLEY, Washington, Ind. Filed Oct. 18, 1919. Serial No. 331,689. 1 Claim. (Cl. 87—9.)

The herein described lubricant having fire extinguishing qualities consisting of 75% powdered graphite, 20% powdered talcum and 5% powdered borax, thoroughly mixed to provide a fireproofing powder substantially for the purpose specified.

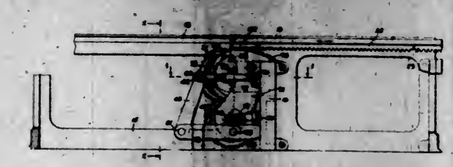


1,395,074. WINDOW. CHARLES BENNETT WING, Cedar Rapids, Iowa. Filed Mar. 24, 1921. Serial No. 454,998. 2 Claims. (Cl. 20—52.)

1. In combination, a window frame or casing, a pair of vertically slidable sashes therein, a pulley mounted in the top of the frame, a cord passing over the pulley and having an end attached to each of the sashes, a plurality of projections extending from the window jamb, the uppermost projection occurring adjacent the upper end of the jamb and the remainder therebelow whereby

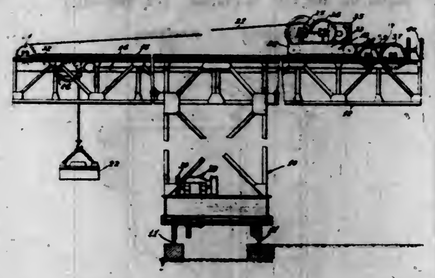
with the overlapping of the sashes the surplus cord so made possible may be utilized for holding the sashes in their overlapping positions by passing the cord over the uppermost projection and then securing the same to a projection therebelow.

1,395,075. PROCESS AND APPARATUS FOR TREATING PETROLEUM OILS TO PRODUCE GASOLENE. ROBERT YATES, Passaic, N. J. Filed Aug. 14, 1920. Serial No. 403,459. 4 Claims. (Cl. 196—31.)



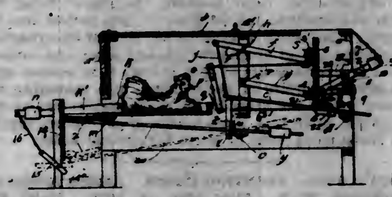
1. In a process for reducing high boiling petroleum oils to lower boiling oils: decomposing the oil by passing it through vertical cylinders having a rotating drum within each cylinder, in which drums the oil and vapors are introduced under vapor pressure, the vapors filling the drum and expelling the oil from an open bottom into an annular space between the drum and shell of the cylinders, circulating the oil around the annular space and subjecting it to a temperature of 650° to 850° F. in contact with the heating surface of the cylinder, also subjecting the vapors within the drum to the same temperature as the oil, while protecting these vapors from overheating by the surrounding sheet of oil in the annular space.

1,395,076. PRINTING-PRESS. ANDERS ANDERSON, Dunellen, N. J. Filed May 14, 1920. Serial No. 381,368. 2 Claims. (Cl. 74—98.)



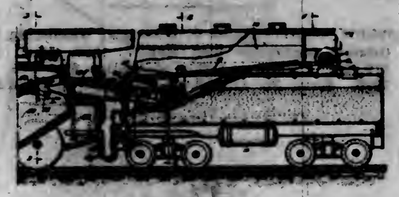
1. A device of the character described comprising a frame, a bed movable longitudinally of said frame, a pair

of racks arranged on the under face of said bed, said racks being parallel one to the other and having their adjacent ends offset, a pair of short racks mounted in alinement one with the other and offset with respect to the first mentioned racks, a power shaft arranged transversely of the frame, a driving pinion carried upon the power shaft, a second shaft mounted in the frame and parallel to the power shaft, a sleeve surrounding the



second mentioned shaft and eccentric with respect thereto, a gear carried by said sleeve, an idle pinion engaging said gear and the pinion of the power shaft to reverse the drive of said gear, a gear carried by the second mentioned shaft and meshing with the pinion of the power shaft and with one of the racks on the under face of said bed and the gear carried by the sleeve adapted to mesh with the other of said racks, and means for alternately engaging said gears with their respective racks.

1,395,077. HOISTING AND CONVEYING MACHINERY. CHRISTIAN W. AVELING, Elgin, Ill. Filed Nov. 3, 1919. Serial No. 335,431. 12 Claims. (Cl. 212—15.)



1. A hoisting and conveying mechanism comprising a bridge, a load-supporting trolley mounted to travel along said bridge, a second trolley also mounted to travel along said bridge, a hoisting mechanism supported by said second trolley for controlling the load supported by said first trolley, and means whereby said trolleys travel in opposite directions along said bridge to counterbalance each other.

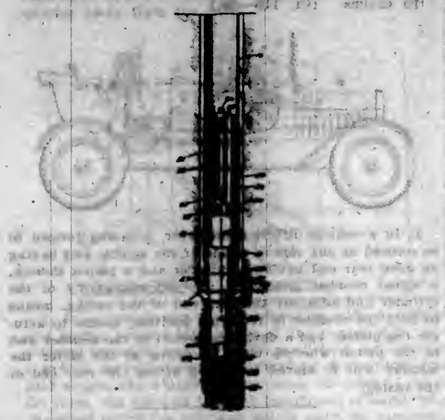
1,395,078. SEGREGATING-NEST. NATHANIEL M. BAIN, Oak Grove, Oreg. Filed Nov. 9, 1920. Serial No. 422,948. 13 Claims. (Cl. 119—47.)

1. In a segregating nest, a housing, marking means located in the housing, a pigment carrying impinging member and operating means therefor, including a circuit controlling member arranged to be operated by the fowl brushing thereagainst on walking out of said housing.

1,395,079. BURNING PULVERIZED FUEL IN LOCOMOTIVES. HENRY R. BARNHURST, deceased, Catasauqua, Pa., by Henry G. Barnhurst, administrator, Catasauqua, Pa., and Henry R. Collins, Allentown, and Henry G. Barnhurst, Catasauqua, Pa., assignors to Fuller Engineering Company, Allentown, Pa., a Corporation of Pennsylvania. Original application filed Mar. 25, 1914, Serial No. 827,201. Divided and this application filed Sept. 22, 1920. Serial No. 411,481. 5 Claims. (Cl. 110—28.)

1. The method of utilizing pulverized fuel in the furnace of a boiler for supplying steam to a prime mover which consists in delivering the pulverized fuel to the furnace, supplying air to the furnace for combustion with the pulverized fuel in combustion, exhausting the products of combustion from the furnace by utilizing for that purpose the exhaust steam from the prime mover and controlling the rate of feed of the fuel to the furnace, the rate of feed of air to the furnace and the rate at which the products of combustion are exhausted from the furnace, each independently of the other two.

1,395,080. SHEET-METAL PLUSH CAR-DOOR. ALLAN S. BARROWS, Chicago, Ill. Filed Sept. 10, 1917. Serial No. 190,500. 1 Claim. (Cl. 189—46.)



In a flush car door construction, the combination with a car wall having a door opening therein defined by wood framing, the latter being provided with shallow rabbeting around the door opening on the outer side of the car wall; of a sheet metal door composed of relatively thin sheet metal of a single thickness except around the marginal portions which consist of flat multiple-plies of sheet metal of a total thickness corresponding to the depth of said rabbeting, the sheet metal of the door, within said marginal portions, being provided with strengthening indentations to resist transverse thrusts, said indentations producing a door of an effective over-all thickness greater than the thickness of said flat marginal portions, said indented portions of the door being disposed inwardly of the outside plane of said flat marginal portions and extending within the door opening when said flat marginal portions are seated within said shallow rabbeting, whereby the depth of the rabbeting required in the wood framing is less than said effective over-all thickness of the door.

1,395,081. DRILL. CLINTON R. BARRY and MARSHALL L. MCCLELLAND, Fort Smith, Ark., assignors of one-half to The Crowley and Smith Patents Company, Oklahoma, Okla., a Corporation of Delaware. Filed Dec. 1, 1917. Serial No. 204,964. 36 Claims. (Cl. 255—74.)

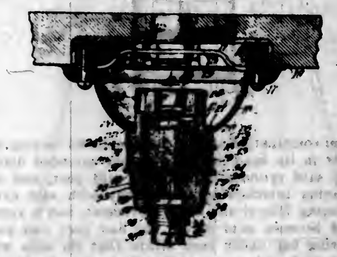
1. In combination with a stem, a bit, means arranged between the bit and stem whereby the bit may be operated

by the stem or detached therefrom from a point above the well, an under reamer associated with said means and

means independent of the stem for varying the pressure of said bit.

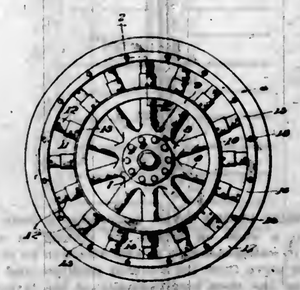
1,395,082. FLUID-ACTUATED MOTOR. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 21, 1920. Serial No. 360,309. 3 Claims. (Cl. 121—29.)

1. A fluid actuated reciprocating motor comprising a cylinder and piston operating therein, said cylinder being provided with admission ports communicating with the cylinder near the limits of the piston travel and exhaust ports leading from the cylinder nearer the central portion of the cylinder, separate plate valves for controlling the admission and exhaust ports for each end of the cylinder, a valve casing consisting of a flat plate of substantially the same thickness as the valves and having two rectangular openings extending through it from face to face, the valves fitting said openings in one direction but the openings being of sufficient length in the other direction to permit longitudinal movement of said valves, a flat cover plate over the valve casing to close the top of said rectangular openings, and means extending through an opening in a central section of the valve casing between the rectangular openings for keeping the valves separated by the length of said spacing means.



1,395,083. STEERING-WHEEL LOCK. ALFRED E. BRADLEY, Toronto, Ontario, Canada, assignor of one-half to Frank R. Leonard, Los Angeles, Calif. Filed Nov. 3, 1920. Serial No. 421,498. 2 Claims. (Cl. 70—129.)

1. In a device of the character described, the combination of a steering wheel assembly, a divided casting having a projecting stud adapted to enter an opening in the sleeve of the steering wheel column, whereby it may be secured thereto, pins extending through the divided casting whereby the divided portions of the casting may be connected together upon the sleeve of the steering column as a single unit, said pins terminating short of the top



of the casting and thrust plates concealed within the casting and engaged by the upper ends of the pins, and a locking mechanism carried by the divided casting adapted to secure the steering wheel against rotation.

1,395,084. OUTLET-FITTING. REUBEN B. BENJAMIN, Chicago, Ill., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed June 28, 1915. Serial No. 36,819. 10 Claims. (Cl. 173—330.)

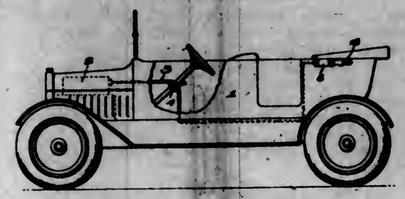
2. A connector device provided with means for mounting it adjacent an electrical outlet comprising an insulating base, a wiring terminal supported thereby, a contact also supported thereby for engagement with the contact of a coöperating connector device, said contact being electrically connected with said wiring terminal, a cover for said outlet having an annular connecting portion, and a supporting device having an annular portion for making connection with said first portion, and a portion for holding said base in position with respect to said outlet, a cup-shaped member supported by said second annular portion, and a lamp fixture supported by said cup-shaped member.

1,395,085. RESILIENT WHEEL. ROBERT P. BIBB, Van Buren, Ark. Filed Oct. 23, 1919. Serial No. 332,671. 2 Claims. (Cl. 152—8.)

1. In a resilient wheel, the combination, of a hub structure, spokes, an inner rim rigidly connected to said spokes, an annular band mounted about the periphery of

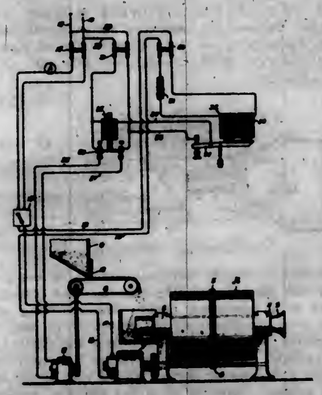
said inner rim, a plurality of radially extending substantially cylindrical sleeve extensions integrally carried by said annular band, a flexible outer rim structure, comprising a plurality of pivotally connected links, each of said links integrally provided with a plurality of cylindrical sleeve extensions centrally thereof adapted to co-act within said sleeve extensions of said annular band, expansion coil springs maintained within said sleeve extensions and adapted to yieldably maintain said outer and inner rim structures in spaced relation, said links of the outer rim having their longitudinal edges bent outwardly, and pivotally connected to provide a recess circumferentially about said outer rim, and a tire disposed within said recess.

1,395,086. AIR-CHARGING PUMP FOR SPRAYERS. HENRY E. BRANDT, North St. Paul, Minn., assignor to Dobbins Manufacturing Company, North St. Paul, Minn., a Corporation of South Dakota. Filed Aug. 23, 1920. Serial No. 405,338. 5 Claims. (Cl. 230—27.)



1. The combination with a pump cylinder having a central port in its head, of a spring bar extended diametrically of said cylinder adjacent to said port, and at its ends having interlocking engagement with said cylinder by springing lateral and axial movement, and a valve interposed between said spring bar and port and putting said spring bar under such strain that its ends will be held interlocked between said cylinder, and said spring bar will normally hold said valve in a port closing position.

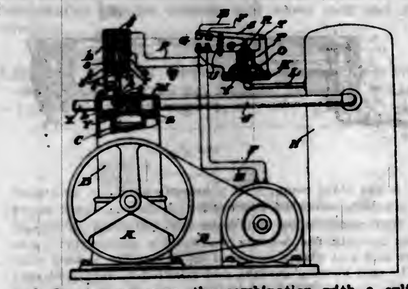
1,395,087. CENTER-TESTING DEVICE. HARRY O. BARON, Rochester, N. Y., assignor to Alfred G. Cash, Rochester, N. Y. Filed Apr. 12, 1920. Serial No. 373,103. 8 Claims. (Cl. 33—181.)



1. A center testing device comprising a body portion, a pointer, a stem on which the pointer is arranged, mounted to swing sidewise in any direction to permit the pointer to move from its centered position, and a device movable on the stem longitudinally of the latter and to one side of the point about which the stem swings, said device coöperating with the body for maintaining the pointer in its centered position.

1,395,088. DIRECTION-INDICATOR. NEWMAN T. BROWN, Seattle, Wash., assignor to Charles A. Spirk, Seattle, Wash. Filed May 4, 1920. Serial No. 378,928. 10 Claims. (Cl. 116—28.)

1. In a vehicle direction indicator, a casing formed to be secured at one side to a side of the vehicle and having an open rear end having a cylinder and a piston therein, a signal member pivoted at one end rearwardly of the cylinder and adjacent the rear end of the casing, means to hold the member in retracted position, means to actuate the piston, and a device connected to the member and to the piston whereby upon operation of the latter the member will be moved to extend across the rear end of the casing.



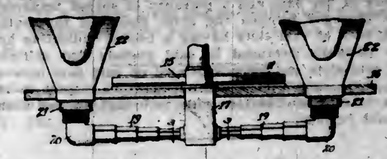
1,395,089. AUTOMATIC BALL-MILL FEEDER. HARRY H. BURHANS, Newark, N. J. Filed May 29, 1920. Serial No. 385,272. 6 Claims. (Cl. 83—44.)

2. The combination with a rotary crushing or grinding device and a motor for driving the same, of a feeder connected with the device adapted to deliver the material to be ground or crushed, a second motor adapted to drive the feeder, circuits for both of said motors, and means in the circuit of the driving motor adapted to control the circuit of the feed motor, said means actuated by the current consumed in the first motor independent of the speed of the first motor for automatically opening or closing the circuit through the second motor.

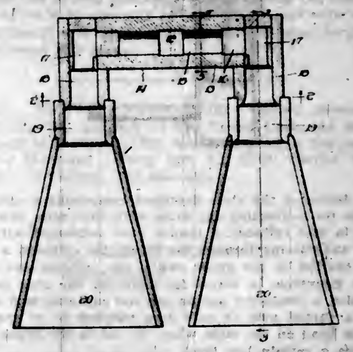
1,395,090. COMPRESSOR-UNLOADER. ALLAN O. CARPENTER, Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 6, 1921. Serial No. 435,478. 5 Claims. (Cl. 230—24.)

1. In a compressor, the combination with a cylinder and an inlet valve, of an electro-responsive device having a movable member operatively arranged to control said valve, the said electro-responsive device when energized having insufficient strength to move said member and permit the valve to close until the compressor is at a predetermined speed, whereby the pressure in the compressor cylinder assists the valve to close and enables the electro-responsive device to retract and hold the said movable member away from the valve.

3. In a compressor, the combination with a cylinder and spring pressed inlet valve of the puppet type, of a solenoid mounted over the valve, a solenoid core carrying a weight, an adjustable stud extending downwardly from said weight and adapted to bear upon the stem of the inlet valve, the solenoid being of insufficient strength when energized to lift the core and weight until the compressor has been accelerated to approximately its normal operating speed, whereby the pressure of the fluid in the compressor cylinder gives sufficient lifting impulse to the inlet valve to enable the solenoid to pick up and hold the core and weight and permit the valve to close.



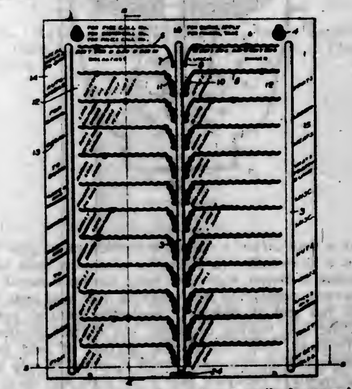
1,395,091. DRILL. RALPH CAVERLY, Chicago, Ill. Filed Nov. 6, 1920. Serial No. 422,289. 5 Claims. (Cl. 255—4.)



1. In a drilling apparatus, a casing, a rotary drill bit carried by said casing, a prime mover carried by said casing for rotating said drill bit, a plurality of suction pipes in said casing and opening out through the lower end of the drill casing, the upper ends of said suction pipes merging.

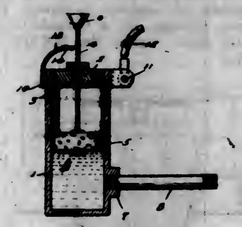
1,395,092. SOUND-REPRODUCING MACHINE. FORREST CHENEY, Chicago, Ill., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1917. Serial No. 185,659. 4 Claims. (Cl. 181—27.)

1. In a talking machine, the combination with a sound producing device, of a tone arm, a sound distributing chamber having an inlet opening and a plurality of outlet openings each of less cross-section than the inlet opening, a sound conduit leading from the tone arm to the inlet of said distributing chamber, and a plurality of sound amplifiers, one communicating with each of said outlet openings.



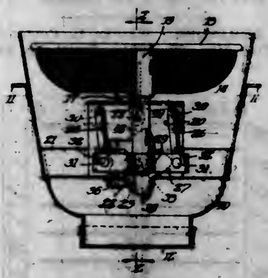
1,395,093. SOUND-REPRODUCING MACHINE. FORREST CHENEY, Chicago, Ill., assignor to Cheney Talking Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1919. Serial No. 276,712. 6 Claims. (Cl. 181—27.)

1. In a sound reproducing machine, in combination, a substantially cubical distributing chamber, a sound conduit leading to said chamber, a plurality of conduits each connected with said distributing chamber, each conduit having an opening therethrough of a plurality of shapes symmetrically arranged with respect to a transverse plane through the middle of the conduit, and resonators in communication with the ends of the conduits.



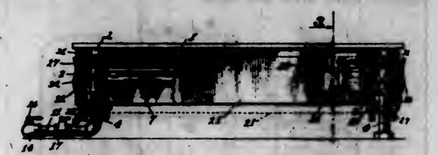
1,395,094. REMINDER. WALTER H. COLLINS, Summit, N. J. Filed Mar. 28, 1921. Serial No. 454,685. 5 Claims. (Cl. 116—135.)

1. A reminder of the character described comprising a metallic base provided with a central pressed up bead, a



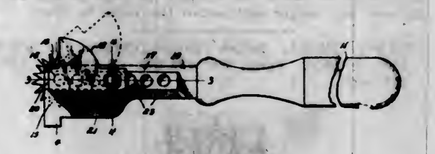
pair of side pressed up beads spaced a short distance from the edges of the base, all of said beads extending longitudinally of the base and a plurality of spaced transverse slots arranged between the outer bead and the central bead, each of said slots having a pocket, indicating buttons normally arranged in said pockets and shiftable into said slots and legends printed on said base between said slots, said legends being located in respect to the slots so that said buttons may be brought opposite any of said legends.

1,395,095. AUTOMATIC-STOP OIL-GAGE. DAVID D. CURETON, Jr., Tallahasse, Fla. Filed May 11, 1920. Serial No. 380,686. 1 Claim. (Cl. 200—84.)



A device of the class described comprising a cylinder, means for connecting the same with the crank casing, a float in said cylinder, a headed stem connected with the float and passing through the top of the cylinder, a split ring carried by the upper end of the cylinder and insulated therefrom, a screw for clamping the ring on the cylinder, a conductor having one end engaging said screw and a curved arm on said ring adapted to be engaged by the head on the stem when the oil in the crank case reaches a certain low level.

1,395,096. FLOUR-SIFTER. JAMES H. BEAN, Chicago, Ill. Filed May 23, 1921. Serial No. 471,690. 15 Claims. (Cl. 83—69.)



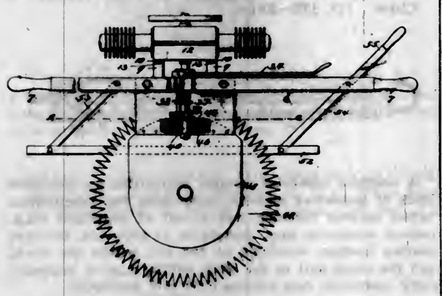
1. In a flour sifter, a casing, a vertical pivot stud fixed therein, a sieve-basket in the upper portion of said casing comprising a dished wire-cloth body having a metal rim, a transverse supporting frame having upturned ends fixed to said rim and an upwardly projecting central portion supporting and bowing upwardly the central portion of the wire-cloth body, the central portion of said frame comprising spaced upper and lower members having axial bearing openings engaging said pivot stud, and means in said casing engaging said supporting frame for oscillating the basket.

1,395,097. GAS-PLATE. LEONCIO DE MENEZES, San Francisco, Calif. Filed July 21, 1920, Serial No. 397,962. Renewed Aug. 20, 1921. Serial No. 496,752. 6 Claims. (Cl. 126—40.)

1. A gas plate comprising a heating surface; apertured fuel conduits mounted thereunder; baffles mounted above said fuel conduits to distribute fuel delivered therefrom evenly beneath the heating surface for combustion; side plates and end plates mounted in adjustable spaced relation to said heating surface and adapted to surround said conduits and baffles for admitting air thereto above; and means for adjusting each of said side and end plates independently, to provide greater or less space between said plates and said heating surface.

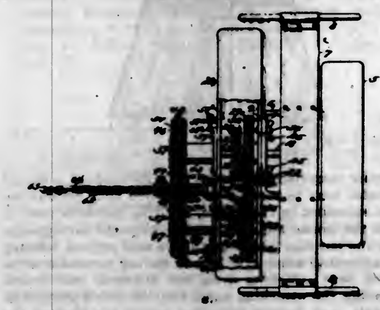
1,395,098. EMERY-WHEEL DRESSER. MICHAEL G. DONOHUE, Philadelphia, Pa., assignor of one-half to Frederick H. Shaw, Narberth, Pa. Filed Apr. 30, 1920. Serial No. 377,870. 1 Claim. (Cl. 125—37.)

An emery wheel dresser comprising a body bifurcated at its forward end and having a transverse aperture in rear of said bifurcation and aligned apertures in the walls of the bifurcation and also having longitudinal grooves in its sides, bearing strips with transverse apertures movably arranged in the said grooves of the body, a spindle removably arranged in said apertures in the walls of the bifurcation and in apertures in the bearing strips, a cutter arranged on said spindle and disposed in the bifurcation, a guard straddling the bearing strips and having side walls arranged at the outer sides of said strips to hold the spindle against endwise movement, and a bolt extending through the body aperture in rear of the bifurcation and also through apertures in the bearing strips and apertures in the side walls of the guard.



1,395,099. VEHICLE-WHEEL. AXEL E. ELLIS, Boston, Mass. Filed Jan. 9, 1915, Serial No. 1,343. Renewed Mar. 19, 1921. Serial No. 453,708. 8 Claims. (Cl. 152—8.)

2. A wheel comprising a wheel body, a circular series of levers carried thereby, a circular series of floating levers

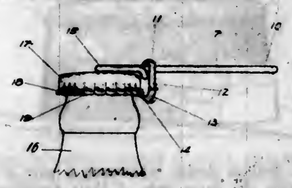


each carried by one of the first-mentioned levers, a circular series of relatively movable rim members carried by said floating levers, and helical tension springs each arranged to coact with one of the first-mentioned levers and with one of said floating levers to sustain radial and circumferential stresses between said wheel body and rim members.

1,395,100. SAWING APPARATUS. CEPHAS V. FITE, Charlotte, N. C. Filed Feb. 12, 1918. Serial No. 216,743. 4 Claims. (Cl. 143—44.)

1. In a sawing apparatus, a circular saw, hanger means for operatively supporting the saw and engaging over one side of the latter to a point beyond the center of the same to hold a bearing for the saw, the hanger and saw having a combined thickness less than the lateral set of the teeth of the saw whereby the saw and the greater portion of the hanger will be free to enter the kerf formed by the saw teeth without obstruction to the cutting action of the saw, a rotary friction driving means engaging one side of the saw near the teeth thereof, and mechanism for sustaining and bracing the saw in operative position and for actuating the driving means.

1,395,101. MANUALLY-PORTABLE SAWING-MACHINE. CEPHAS V. FITE, Charlotte, N. C. Filed Jan. 20, 1919. Serial No. 272,067. 16 Claims. (Cl. 143—44.)

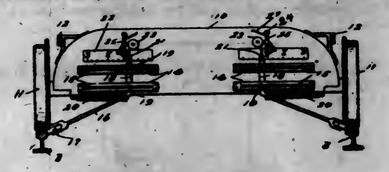


1. In a manually portable sawing machine, a motor frame having a motor carried thereby, a saw supporting frame having saw operating mechanism driven by said motor, and a rotary saw projecting forwardly from the saw supporting frame and having its greater portion clear of the supporting means therefor to permit unobstructed cutting movement thereof through a log, the rotary saw being shiftable to varying angular positions relatively to the supporting frame therefor, and means extending across a portion of the motor frame in rear of the saw supporting frame and provided with devices at opposite ends for permitting a manual grasp and portability and balancing of the complete machine and for holding the saw to its work.

1,395,102. CLASP. OTTO GUENZEL, Winecup, Wash. Filed Feb. 25, 1921. Serial No. 447,767. 5 Claims. (Cl. 24—236.)

4. A clasp, including a body portion formed with an offset end, a post secured to said body portion adjacent said offset end, a spring having one of its ends secured to the upper end of said post, said spring having the major portion of its body normally in intimate contact with the body portion of said clasp, said body portion being formed with upturned side edges.

1,395,103. STOPPER-EXTRACTOR. GEORGE GOSSER, Baltimore, Md., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md., a Corporation of Maryland. Filed Apr. 12, 1919. Serial No. 289,620. 3 Claims. (Cl. 65—47.)



1. An extractor for metallic bottle crowns said extractor being formed of wire which is folded to form a loop at each end said loops and between the two end-loops the wire being looped to tie the strands together and to produce a depending portion which depending portion is provided with a hook that extends laterally toward one of the end-loops but in a plane below the latter whereby said latter end-loop may be seated on top of a bottle crown while the lateral hook on the depending portion may be engaged with the crown flange.

1,395,104. HAIR-CLIPPER. FOREST L. GRAY, Kenmore, Ohio. Filed Apr. 26, 1920. Serial No. 376,740. 1 Claim. (Cl. 30—1.)

The combination with a hair clipping device, of a base plate, a plurality of right angularly disposed spaced blades carried thereby, said blades having convex outer surfaces terminating in a forwardly pointed end which extends from the rear end of the teeth of the clipping device to the rear edge of the base plate and spaced pairs of relatively short curved blades located between the first mentioned blades.

1,395,105. ALARM TRACK-GAGE. WILLIAM DAVID HARPER, Sydenham, Ontario, Canada. Filed Apr. 26, 1920. Serial No. 376,851. 3 Claims. (Cl. 33—144.)

1. A device of the character described comprising a wheeled support adapted to travel upon a track, a pair of outwardly spring-pressed arms slidably mounted at the end portions of the support and carrying grooved rollers engaging against the ball of the adjacent rail, indicating members at the inner ends of said arms, each end portion of the support being provided with a graduated scale over which said indicating members travel, a bell associated with each indicating member, a pivoted spring-pressed striker arm located adjacent each bell and having an end portion hinged by a knee joint connection and disposed in the path of travel of said indicator.

1,395,106. HAT-SHAPING DEVICE. JOSEPH C. HASLAM, San Francisco, Calif. Filed July 21, 1920. Serial No. 397,984. 2 Claims. (Cl. 2—108.)

1. A hat shaping device comprising a pair of spring clamps having the outer ends of their clamping edges prolonged beyond the body thereof to engage the inner sides of a central fold within a hat crown, said projecting edges adapted to engage said fold adjacent the side of the crown to form a point at the outer junction of said fold with the sides of said crown; and means for connecting said clamps.

1,395,107. WIND MUSICAL INSTRUMENT. IVAN O. HAWK, East Cleveland, Ohio, assignor of one-half to Thomas B. Soden, Cleveland, Ohio. Filed Aug. 22, 1919. Serial No. 319,192. 3 Claims. (Cl. 84—380.)

3. A musical instrument comprising a hollow body portion and provided with a blow opening suitable for the production of sound, said body portion being provided with a longitudinally extending slot, a flexible valve adapted to close said slot supported on said body portion above said slot and at an angle to the longitudinal axis of said body portion, said valve having sufficient flexibility to move down and close said slot when pressure is exerted thereon.

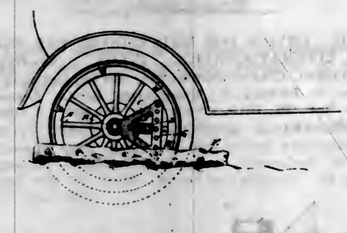
1,395,108. MULTIPLE CONNECTOR. JOHN W. HAYWOOD, New York, N. Y., assignor to Horne Manufacturing Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 27, 1919. Serial No. 279,548. 1 Claim. (Cl. 173—334.)

A multiple connector member comprising an elongated block of insulating material comprising two longitudinal halves secured together, and a pair of contained longitudinal conductor bars, perforated at intervals, the bars bearing binding terminals at one end within the block, and the cover half of the block having a short independently removable face section over said terminals.

1,395,109. BROOM. HERMANN O. HENNIG, Atlanta, Ga. Filed Mar. 23, 1920. Serial No. 368,141. 1 Claim. (Cl. 15—20.)

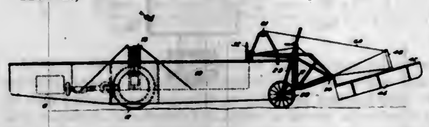
A broom comprising a handle, a frame made of a strand of material bent to provide an elongated open reinforcing portion embedded in the broom, securing members passing through the broom and said portion adjacent the opposite ends of the portion, said frame above said portion forming spacel attaching arms, said handle having tapered grooves in which said attaching arms are disposed, said broom surrounding the attaching arms and the lower portion of the handle, and flexible fastening means for binding the broom and arms to the handle.

1,395,110. LUMINOUS PENDANT. DEAN HOLE, Chicago, Ill. Filed Oct. 27, 1919. Serial No. 333,470. 7 Claims. (Cl. 240—1.)



6. A luminous pendant comprising a transparent hollow body to receive a luminous substance and provided with an annular exterior groove and a metal cap having a yieldable marginal portion to be detachably snapped into

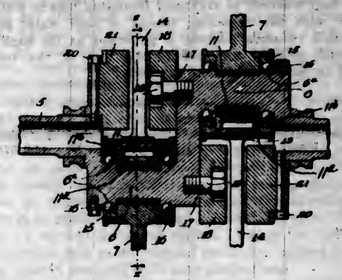
and out of engagement with said groove, said cup being provided with a central opening and therearound with



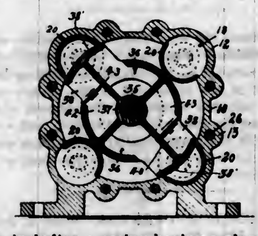
a plurality of radial spring fingers which, upon flexion, enlarges the opening for the passage of an enlargement of a strand or chain therethrough.

1,395,111. ATTACHMENT FOR MOTOR-VEHICLES. HORATIO B. HOLLIFIELD, Washington, D. C. Filed June 23, 1919. Serial No. 306,103. 3 Claims. (Cl. 180—7.)

1. A ground-engaging motor vehicle wheel having between its center and periphery a projection extending laterally beyond its outer face, adjustable in distance from the wheel's center and adapted to strike, as the wheel is forcibly rotated, an unattached bar laid upon the ground in the plane of said projection and less distant than the projection from the wheel's center.



1,395,112. WHEELED BOAT. JOHN A. HOWELL, deceased, Warrenton, Va., by Belle Howell Bohn and Frances A. Neville, executors, Washington, D. C. Filed Jan. 10, 1920. Serial No. 350,625. 5 Claims. (Cl. 115—1.)



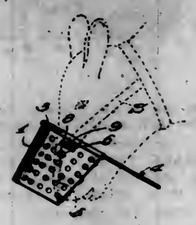
1. The combination with a boat, of a frame mounted directly in the rear of the boat's stern to swing laterally from side to side, and a rudder arranged in the rear of the frame to swing therewith and to swing vertically with respect to the frame.

1,395,113. CRANK-SHAFT. JOHN W. HUDSON, Brooklyn, N. Y. Filed Sept. 23, 1919. Serial No. 325,680. 2 Claims. (Cl. 74—38.)

1. A crank shaft having a crank pin provided with a bushing, a master rod having a clevis encircling said bushing, small rods operatively connected with said clevis, race forming members mounted in the clevis at the sides of said bushing, the crank pin having race-ways formed therein at points beyond the ends of said bushing, antifriction bodies between said race-ways of the pin and said race forming members of the clevis and weights secured to the crank shaft at points diametrically opposite the clevis and to the opposite side of the plane of rotation of the shaft relative to said clevis.

1,395,114. ROTARY PUMP. CHARLES W. JACKMAN, Detroit, Mich., assignor of one-half to Miles M. Jackman, Detroit, Mich. Filed Aug. 11, 1919. Serial No. 316,589. 1 Claim. (Cl. 103—44.)

A pump including a casing having a plurality of chambers in spaced relation and opening into the casing, an abutment rotative in each chamber and each abutment having an unobstructed interior and including a segmental portion projecting into the casing when the abutment is in one position, a rotor comprising a cylindrical central portion having openings in the ends with projections extending laterally from the ends, the projections being connected by continuous segmental portions conforming to the interior of the casing and of greater width than the entrances of the chambers so that they bridge the openings and extend beyond the edges of the same when in one position to cut off the passage for a period of time at each revolution of the rotor and said segmental portions operating against the interior of the casing and the cylindrical central portion rolling upon the segmental portion of the abutment when in another position.



1,395,115. CHILD'S GARMENT. LEAH JASLOW, Brooklyn, N. Y. Filed Jan. 18, 1921. Serial No. 438,097. 3 Claims. (Cl. 2—143.)

1. A child's garment comprising a trousers portion and a waist portion, said waist portion having at its front

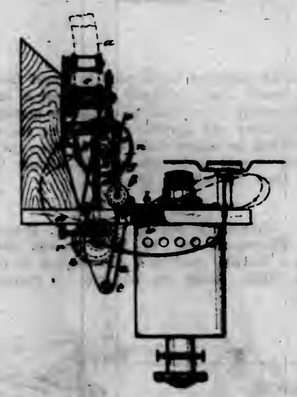
waist line fastening means for supporting the trousers portion which trousers portion is provided at its front with a flap whereon is arranged fastening means which cooperate with the fastening means of said waist portion and which trousers portion is provided at its back with an elastic member for holding the rear of the trousers portion in position against the body.

1,395,116. WEANER. FRANK E. JOHNSON, Trinidad, Colo. Filed Sept. 15, 1920. Serial No. 410,518. 1 Claim. (Cl. 119—131.)

In a calf weaner, the combination of a muzzle encircling portion of foraminous material, a bottom wall of foraminous material secured to the muzzle encircling portion, a channel formed in the upper end of the muzzle encircling portion, a bail adapted to rest in the channel and extend rearwardly below the lower jaw of the calf, and a swinging member hinged in the muzzle encircling portion and adapted to rest parallel with the bail when the head of the calf is thrust upwardly.

1,395,117. MEDICAL APPARATUS. BESS E. JOHNSTON, Chicago, Ill. Filed Mar. 22, 1920. Serial No. 367,813. 5 Claims. (Cl. 174—87.)

1. A medical apparatus comprising a casing having one end closed and the other end open, and divided into a water compartment and light chamber, a handle connected to the casing pipes communicating with the water compartment, and a spray device detachably supported at the open end of the casing and having a detachable connection with the pipes.

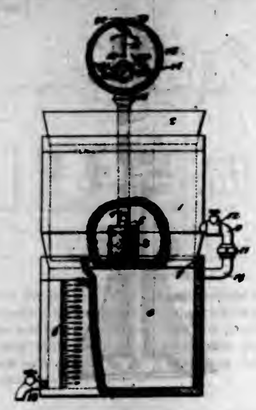


1,395,118. ATTACHMENT FOR FISHING-REELS. GEORGE D. JONES, Winterhaven, Fla. Filed Aug. 26, 1919. Serial No. 319,891. 1 Claim. (Cl. 242—84.5.)

In a fishing reel, a frame comprising a head; a drum journaled in the frame; a shaft rotatable in the head and connected operatively with the drum; a crank on the shaft; telescoped tubular members having their inner ends slidably interengaged and provided at their outer ends with flanges, one flange engaging the head, and the other flange engaging the crank, the telescoped members being

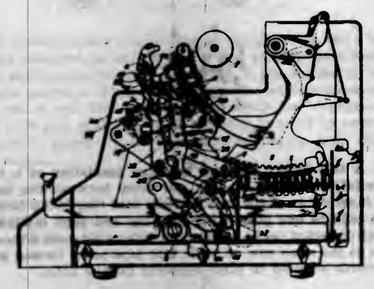
disposed about the shaft, and a helical compression spring within said members and bearing against the flanges, to press the flanges against the head and the crank, said members constituting a housing for the spring.

1,395,119. DEVICE FOR MAINTAINING THE SLACK OF CINEMATOGRAPHIC FILMS. STANISLAUS KUCHARSKI, Charlottenburg, near Berlin, Germany, assignor to Richard A. Hanssmann, Berlin, Germany. Filed Nov. 28, 1919. Serial No. 341,207. 3 Claims. (Cl. 88—18.)



1. In combination with a self-acting apparatus for displaying moving pictures, a film band, a window, means for moving one portion of the film band toward, and another portion away from the said window, while providing a certain amount of entering slack before, and a certain amount of issuing slack beyond, the window, a driving member, and a slack-lengthening member shifted by the issuing slack into engagement with the driving member when the length of the issuing slack is unduly shortened.

1,395,120. RADIUM HYDRO-EMANOMETER. GEORGE KUNKEL, Grand Junction, Colo. Filed Mar. 12, 1917. Serial No. 154,358. 3 Claims. (Cl. 250—84.)

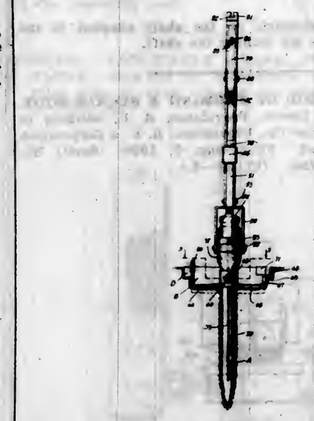


1. A device of the character described, comprising a generation reservoir, a porous cell composed of alundum

clay adapted to contain radium salts seated on the bottom of the reservoir, a removable cover for the reservoir,

and a device supported by the cover and detachably engaging the cell preventing lateral movement of the cell in the reservoir.

1,395,121. RECORDING-MACHINE. HARRY LANDSIEDEL, Norwood, Ohio, assignor to The Dalton Adding Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 11, 1920. Serial No. 357,776. 23 Claims. (Cl. 235—60.)



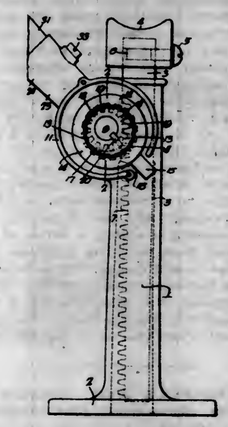
1. In a recording machine, the combination of type-carriers, spring actuated hammers for driving the type on said type-carriers to print, a latch for holding each of said hammers in retracted position, a device for releasing the latches corresponding to the type-carriers in recording positions, springs for moving latches into latching engagement with said device when the corresponding type-carriers move to recording positions, and means controlled directly by the type-carriers preventing release of the latches corresponding to the type-carriers which are out of recording position, and cooperating with said springs to move released latches to their initial positions into engagement with the corresponding hammers when the type-carriers move to their starting positions.

9. In a recording machine, a series of type driving hammers, a number of supports, a series of latches movable longitudinally on said supports into and out of latching engagement with said hammers, a bar, a stationary support to which said bar is pivoted, means for moving selected ones of said latches into position to be engaged by said bar, and a lever for oscillating said bar to release said latches from said hammers.

12. In a recording machine, a series of type driving hammers, a shaft on which said hammers are pivoted, springs for actuating said hammers in type driving operations, devices for guiding said hammers in their movements by said springs, a projection integral with each hammer, supports, latches arranged for pivotal and longitudinal movements on said supports, a bar for moving said latches out of engagement with said projections, springs for moving said latches longitudinally on said supports into engagement with said projections and pivotally into engagement with said bar, a coupling member pivoted on each latch whereby latches in lower orders will be moved out of engagement with said projections by latches in higher orders, and means for latching said couplings in position to prevent release of latches in lower orders by latches in higher orders, leaving the latches in higher orders free to be released while the latches in lower orders remain engaged with said projections.

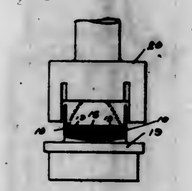
20. In a recording machine, a series of type-carriers movable to and from recording positions, hammers for driving the type on said type-carriers to record, springs for operating said hammers, latches movable into and out of latched engagement with said hammers, a swinging bar, and means movable by the type-carriers to position to hold said latches out of position to be engaged by said bar.

1,395,122. TRAPPER'S TOOL. WILLIAM R. LAZENBY, Hardin, Mont. Filed Feb. 3, 1921. Serial No. 442,217. 11 Claims. (Cl. 43—1.)



5. A tool for use in connection with a trap and anchor of the character set forth comprising a shank adapted to be driven into the ground to form an anchor receiving well, and means carried by said shank adapted upon rotation of the same to form an excavation concentric with the anchor receiving well for the reception of the trap proper, said means comprising a sleeve adapted to be positioned upon the shank, a pair of radial arms having upturned extremities extending from opposite sides of the sleeve, said arms each having a beveled side providing a cutting edge.

1,395,123. LIFTING-JACK. GEORGE O. LEOPOLD, Philadelphia, Pa., assignor to North Bros. Mf'g. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 29, 1920. Serial No. 427,000. 4 Claims. (Cl. 254—95.)



1. The combination in a lifting jack of a standard; a toothed plunger mounted in the standard; a pinion mounted in the standard, the teeth of the pinion meshing with the teeth of the plunger; a sleeve having internal

teeth engaging the pinion; means for limiting the movement of the sleeve; a shaft extending through the pinion

and sleeve; an eccentric on the shaft adapted to the sleeve; and means for turning the shaft.

1,395,124. METHOD OF FORMING A BUCKLE-BODY. FREDERICK W. LEWIS, Providence, R. I., assignor to Chapin & Hollister Co., Providence, R. I., a Corporation of Rhode Island. Filed Aug. 9, 1920. Serial No. 402,324. 6 Claims. (Cl. 29—3.)

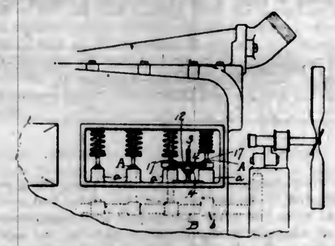
1. An improved method of forming a one-piece buckle body having longitudinally curved side edges and rearwardly turned edge flanges, which consists in cutting the blank from sheet stock, drawing up the side edges thereof, turning inwardly the side edges of the body over an arbor, and finally withdrawing the arbor.

1,395,125. PORTABLE FLUSHING DEVICE. WILFRED EMPEY DENSMORE LEWIS, JAMES SCOTT ADAMSON, and MARTIN JAMES MAHON, Ottawa, Ontario, Canada. Filed July 19, 1920. Serial No. 397,245. 2 Claims. (Cl. 285—44.)

2. A flushing device comprising a closing member, a pipe longitudinally mounted with freedom to be adjusted longitudinally in the closing member, a projection extending from the end of the pipe, a pivoted hook pivotally mounted on the projection, an operative wire for the hook extending longitudinally through the pipe, and means for connecting the outer end of the pipe to a tap, the second last mentioned means including a stepped tapered stem, a

coupling connecting the stem with the pipe, a flexible tubular member connected to the coupling at one end and having its opposite end adapted to be connected to a tap.

1,395,126. BALL-HOLDER FOR BALL-BEARINGS. KONRAD WERNER LINDMAN, Stockholm, Sweden, assignor, by mesne assignments, to Nordiska Kullager Aktiebolaget, Gottenborg, Sweden, a Limited Company of Sweden. Filed Apr. 10, 1918. Serial No. 227,619. 4 Claims. (Cl. 64—59.)

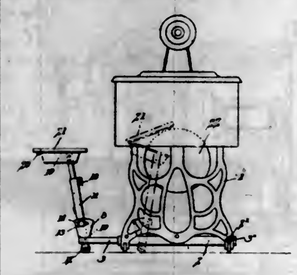


4. A ball holder for ball bearings consisting of a ring of metal, extending in axial direction between the outer and inner rings of the ball bearing, said ring being formed with laps in one piece with the ring and bent inward in radial direction, so as to form partitions between adjacent balls in the same row of balls, said laps being formed with apertures adapted to form supports for the balls.

1,395,127. INTERCHANGEABLE PRICE-CARD SECTION. HARRY L. LOVETT, Nashua, N. H. Filed May 18, 1921. Serial No. 470,731. 4 Claims. (Cl. 40—2.)

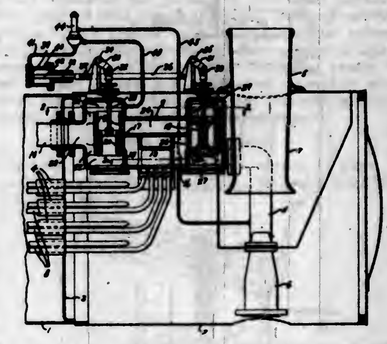
4. A price card, comprising a plurality of groups of price card sections, the cards of both groups being oppositely slitted, whereby the cards of one group may be interconnected and interchangeable with the cards of the other group, the price card sections having price marked indicia on either face and on either side of the slit, whereby upon interchanging the sections of one group with the sections of the other group different prices may be produced.

1,395,128. DEVICE FOR LIFTING PUSH-RODS ON FORD MOTORS. WILLIAM T. MCCARLEY, Luling, Tex. Filed Sept. 18, 1920. Serial No. 411,278. 4 Claims. (Cl. 29—84.)



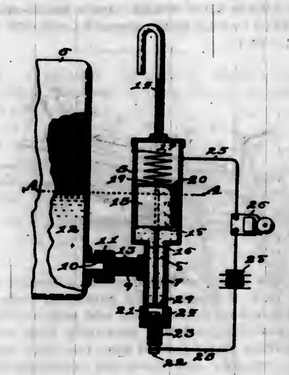
1. A device for lifting valves in automobile motors, comprising a casting formed to provide two oppositely disposed rigidly related jaws, a movable jaw pivotally carried by each of said stationary jaws, means for actuating said movable jaws and means to lift all of said jaw structures as an organized unit.

1,395,129. VEHICLE-TOP. WILLIAM P. MCCORKINDALE, Holyoke, Mass., assignor of one-half to Charles A. Lawrence, Holyoke, Mass. Filed Jan. 21, 1920. Serial No. 353,120. 1 Claim. (Cl. 296—137.)



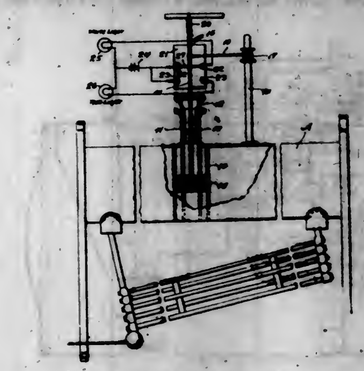
In combination, a vehicle having upright sides and a bed, guides mounted on said sides, a roof slidably interlocked with said guides to shift forwardly, a pin carried by one of said guides, a latch carried by said roof to engage said pin and a rod for releasing said latch for engagement with said pin, said roof being slidably forward to uncover the bed to permit of loading and discharging from above the vehicle.

1,395,130. SEAT CONSTRUCTION FOR SEWING AND OTHER MACHINES. ELBERT B. MCCLURD, Elizabethton, Tenn. Filed Jan. 17, 1921. Serial No. 437,904. 2 Claims. (Cl. 155—81.)



1. In a seat construction for sewing and other machines, the combination of slidable bars, upright supports pivotally connected at intermediate points in their lengths to said bars, wheels carried by the lower arms of said supports, upright braces on the bars and alongside the said supports, and means to adjustably fix the supports to said braces.

1,395,131. SUPERHEATER. NEAL TRIMBLE MCKEE, Yonkers, N. Y., assignor to The Superheater Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 25, 1920. Serial No. 361,306. 8 Claims. (Cl. 122—462.)



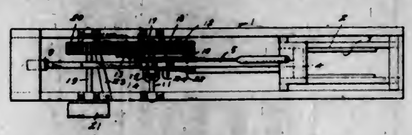
1. In a locomotive, the combination of a superheater comprising a plurality of elements, and means automatically to direct the flow of steam in response to the rate of the flow either directly to all of the elements or first to a number of the elements less than the whole and thereafter to the remaining ones.

1,395,132. LOW-SUPPLY ALARM FOR GASOLENE-TANKS. EDWARD K. MCKISSICK, Oklahoma, Okla. Filed Feb. 6, 1920. Serial No. 356,770. 1 Claim. (Cl. 200—84.)

In a device of the class described, a vented liquid container provided with a depending, integral, tubular extension, a lateral arm having a bore therein establishing communication between said extension and a tank, a cylindrical float within said container, a removable weight carried by said float, a current conducting stem passing through said weight and float extending to the bottom of said tubular extension, a threaded nipple and insulated bushing supported thereby, secured to the lower extremity of the tubular extension, a conducting bolt having an enlarged head carried by said bushing in vertical alinement with said stem, an enlarged head on the lower extremity of said stem constituting a contact point with the conducting bolt when the float is lowered and a flexible conductor secured to the upper terminal of the stem and to the container.

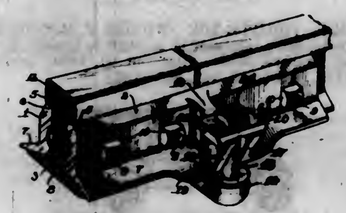
1,395,133. AUTOMATIC BOILER-FEED. MATTHEW F. MCNENNY, Goldfield, Colo. Filed Nov. 4, 1919. Serial No. 335,566. 1 Claim. (Cl. 137—101.)

In combination with a boiler and a water supply pipe leading thereto, a float disposed within the boiler and having a rod extending upwardly therethrough, an indicating device comprising signals of dissimilar nature, a support mounted adjacent the rod, two sets of contacts carried by said support and connected in series with a source of current and said signal devices, and an arm carried by said rod and bridging one set of contacts for energizing one signal when the water level within the boiler is normal, and said arm bridging the other set of contacts for energizing the other signal when the water level is below normal.



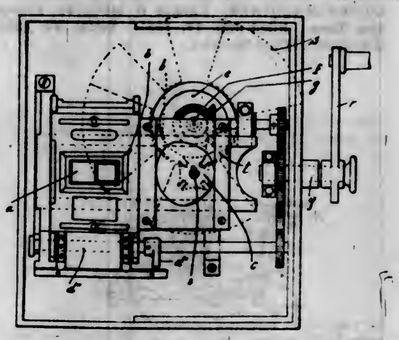
1,395,134. TRACTION-SHOE. JOHN MESSNER, Calumet, Mich. Filed Dec. 18, 1920. Serial No. 431,689. 6 Claims. (Cl. 301—44.)

6. As a new article of manufacture, a traction shoe comprising a pair of substantially pyramidal body sections, gripping extensions formed upon said body sections at one of their ends and projecting outwardly from one surface thereof, binding plates formed upon the outer ends of said gripping extensions and extending transversely thereto, said body sections provided with telescoping portions, said telescoping portions provided with alining openings, a locking key adapted for extending through said alining openings, a transverse lug formed upon said locking key for engagement with the innermost of said telescoping portions, and a locking wedge for driving through said alining openings and wedge engagement with said locking key to securely wedge the locking key in place.



1,395,135. BALING-PRESS. ALVAH PAYNE, Orange, Tex. Filed May 29, 1920. Serial No. 385,225. 4 Claims. (Cl. 100—7.)

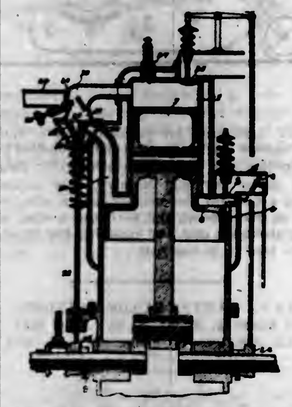
2. A baling press comprising a box, a plunger mounted for reciprocity movement therein, a beam attached to the plunger and provided with gear teeth, a pumper member located in the path of movement of the beam, a loop pivotally mounted upon the beam, a lever mechanism having a part extending into the path of movement of the loop, a shaft journaled for rotation adjacent the box, means for rotating the shaft, a disk loosely mounted upon the shaft and having a stud, a pawl pivotally mounted upon the



means which rotate the shaft and having an inner end portion adapted to engage the stud, the outer end portion of the pawl when the inner end thereof is in engagement with the stud adapted to encounter a part of the said lever mechanism, and a gear wheel fixed to the disk and meshing with the teeth upon the beam.

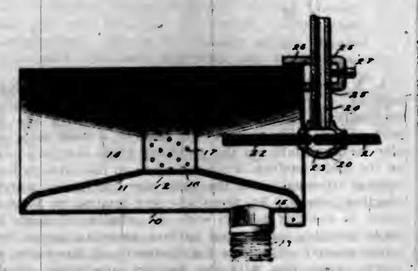
1,395,136. RAIL-JOINT. LOUIS PLUETH, Chicago, Ill. Filed Feb. 1, 1921. Serial No. 441,668. 4 Claims. (Cl. 238—172.)

4. A rail joint comprising clamping plates, a pawl rocking upon the base of the rails and having a pivotal connection with one plate and an adjustable connection with the other plate.



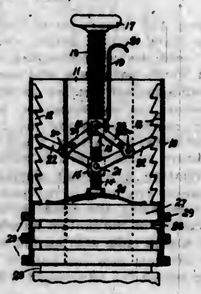
1,395,137. CINEMATOGRAPHIC MACHINE. EBALDO PLUDERI, Turro Milanese, Italy, assignor to Ettore Schieroni and Roberto Frigerio, Milan, Italy. Filed Apr. 4, 1918. Serial No. 226,695. 3 Claims. (Cl. 88—16.)

1. In a cinematographic machine for films having horizontal sets of photograms and a car transversely sliding relatively to a window formed in the machine, a driving shaft actuated by crank handle, a shaft operating the longitudinal displacement of the film and a shaft operating the transverse displacement of the car and the rotation of



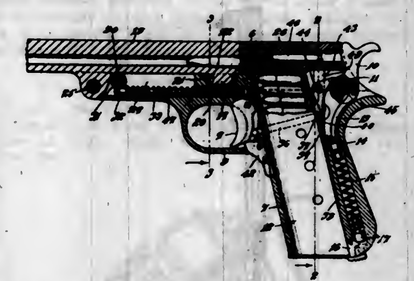
the obturator, both shafts being driven by said driving shaft, a disk keyed on the second named operating shaft fitted with a projecting pin, a gear in shape of a Malta cross coöperating with said pin, an eccentric fast with the Malta cross and revolving within a frame forming an extension of the car and leaning with its periphery in succession against either of two opposed sides of the frame, projecting ribs on the surface of the car to afford a support to the film in correspondence to the separation lines between the photograms, an obturator fitted on the said second named shaft, substantially as and to the purposes set forth.

1,395,138. INTERNAL-COMBUSTION ENGINE. EARL VERNIE PLUSH, Meade, Kans. Filed Mar. 8, 1919. Serial No. 281,334. 6 Claims. (Cl. 123—131.)



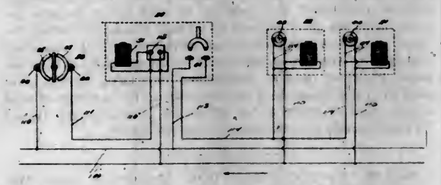
1. An internal combustion engine, comprising working and air compressor cylinders of different diameters, a duct branching from the compressor cylinder, a valve cage in communication with an annular groove, a carbureter casing having a portion covering the valve cage and a channel portion communicating with the working cylinder, the carbureter including a spray nozzle; a valve operating in said cage, arranged to be lifted from said annular groove to enable compressed air from the compressor cylinder to circulate in the annular groove and enter the carbureter casing in a substantially uniform stream, and means embodied in the carbureter coöperating with the spray nozzle to divert the air stream either wholly or in part from the spray nozzle.

1,395,139. FUEL-BURNER. HOLLIS PAINE PORTER, Tulsa, Okla. Filed Mar. 12, 1921. Serial No. 451,890. 4 Claims. (Cl. 158—109.)



1. A burner of the class described comprising a body of tubular formation, an inner section having its end portions arranged in frusto conical formation and secured to the ends of said tubular body thereby defining an air inlet chamber and a discharge nozzle, said inner section and said body defining an annular gas chamber extending for the entire length of the body and having its intermediate portion thickened, the portion of said inner section between said air inlet chamber and said discharge nozzle defining a narrow tubular throat having openings communicating with the thickened intermediate portion of said annular chamber, and a tubular jet extending axially into said air inlet chamber and terminating rearwardly of said throat for directing a jet of steam through said throat thereby creating a vacuum within the same.

1,395,140. PISTON-RING TOOL. ALBERT F. REED, Wapello, Iowa. Filed Aug. 4, 1920. Serial No. 401,142. 4 Claims. (Cl. 29—86.4.)

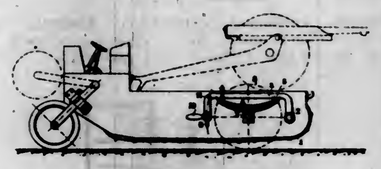


1. An implement of the class described comprising a continuous plate of resilient material bent into cylindrical form with the ends overlapping and adapted to be disposed within a piston ring, and means for expanding the cylindrical plate to correspondingly expand the piston ring to enable it to be disposed upon the piston.

1,395,141. FIREARM. EUGENE G. REISING, East Hartford, Conn. Filed May 3, 1919. Serial No. 294,397. 14 Claims. (Cl. 42—3.)

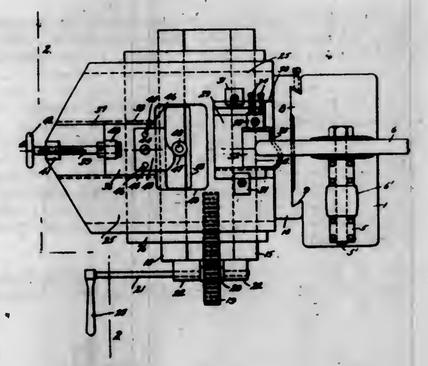
1. A firearm including a receiver, a barrel secured to the receiver at two points and having shoulders extending laterally beyond the sides of the receiver with their lower edges formed flat and in substantially a horizontal plane, said barrel and receiver being formed to provide a slot between said two points of attachment of the barrel to the receiver, a breech-bolt slidably mounted on the upper edge of the receiver back of the barrel and having forwardly extending retaining bars with flat upper edges to engage the projecting sides of said barrel whereby the breech-bolt is wholly retained in place, a cross piece connecting the ends of said retaining bars and extending through said slot, and a breech-bolt closing spring located in said slot and pressing against said cross piece to close the breech-bolt.

1,395,142. TRAIN STOP AND SIGNAL SYSTEM. JOSEPH W. RENAULT, New Haven, Conn. Filed Oct. 2, 1920. Serial No. 414,177. 7 Claims. (Cl. 246—76.)



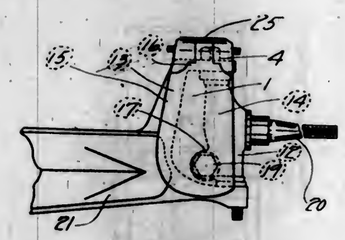
4. A train stop and signal system comprising in combination with a train carried device, electrical connected track devices, said devices embodying a normally open electric switch which includes a stationary contact member and a movable contact member operated by gravity to close said members, an electromagnet, an armature controlled thereby, means connecting the armature and the movable contact member, whereby, when the magnet is energized the contact members will be separated, means for locking the armature to prevent closing of the contact members and means extending in the path of the train carried device for releasing the armature locking means to permit of the closing of the contact members, a signal controlling device spaced from said switch and moved by the closing of the contacts into the path of the train device and a resetting switch for returning the devices to normal position.

1,395,143. DEVICE FOR AUTOMATICALLY TURNING OVER LEAVES OF A BOOK FORMED WITH SEVERAL TURNING-ARMS. ALBERT WERNER RIEBE, Königsberg, Germany. Filed July 2, 1920. Serial No. 393,745. 8 Claims. (Cl. 84—487.)



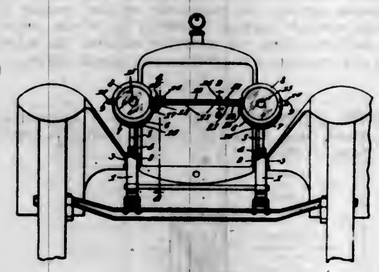
1. A leaf turner, comprising a rotary shaft, a plurality of turning arms carried thereby, radially movable arm actuating members operable by the movement of the shaft, and means for radially moving the actuating members into and out of operative relation with the turning arms during the movement of the shaft.

1,395,144. APPARATUS FOR THROWING THE WHEELS INTO AND OUT OF ACTION OF A VEHICLE HAVING BOTH WHEELS AND ENDLESS TRACKS. EMILE RIMAILHO, Paris, France, assignor to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France. Original application filed Nov. 22, 1919, Serial No. 339,903. Divided and this application filed Oct. 20, 1920. Serial No. 418,327. 3 Claims. (Cl. 305—1.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



1. In an apparatus for transforming a vehicle propelled on endless tracks into a vehicle propelled on wheels, the combination of a pivoted wheel carrying member, and a locking device for said member, said locking device comprising a seat for the member, and a slidable member arranged at one side of the seat and having a member projecting above the seat and engaging the wheel carrying member to hold it in the seat.

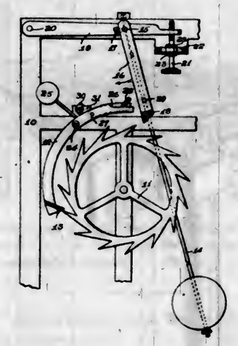
1,395,145. CUTTER-BLADE GRINDER. CHARLES FRANCIS ROBBINS, Keene, N. H. Filed Mar. 18, 1920. Serial No. 366,738. 2 Claims. (Cl. 51—100.)



1. A machine of the character stated, comprising a support, a grinding element carried by the support, a vertically adjustable platform associated with the support and movable transversely thereof, a feed table slidable longitudinally on the platform, blade carrying means on the table, pattern carrying means on the table in longitudinal alinement with the blade carrying means, a spring exerting pressure on the table and tending to hold the blade in working contact with the grinding element, said blade carrying means and pattern carrying means being independently adjustable longitudinally of the table, and means engageable with the pattern compelling simultaneous longitudinal movement of both of said means when the table is moved transversely of the platform.

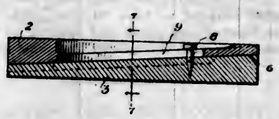
1,395,146. AUTOMOBILE-LOCK. ROBERT B. RUTHERFORD, St. Louis, Mo. Filed Apr. 28, 1921. Serial No. 465,193. 4 Claims. (Cl. 70—90.)

1. An automobile lock, comprising a pair of jaws hinged together at their top ends and adapted to fold down over the top and front and rear sides of one of the frontal steering knuckles and adjacent axle yoke; and means for locking the said jaws in said position.



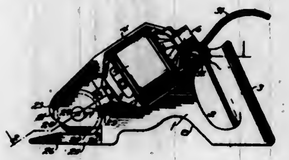
1,395,147. DIRIGIBLE HEADLIGHT. WILLIAM A. RUTHERFORD, Salem, Oreg. Filed Jan. 31, 1921. Serial No. 441,326. 1 Claim. (Cl. 240—61.)

In a device of the class described, supports; lamps mounted to swing on the supports and having shafts; a connector wherewith the shafts are rotatably assembled, to permit an adjustment of each lamp; means for securing the connector to each shaft releasably; a lever adjustable on the connector circumferentially thereof; means for holding the lever in adjusted positions on the connector circumferentially thereof; a torsion spring engaged at its ends with the lever and with one support; a stop finger cooperating with one support under the action of the spring, the stop finger being adjustable circumferentially of the connector; and means for holding the stop finger in adjusted positions circumferentially of the connector.



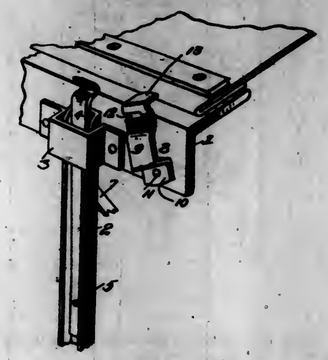
1,395,148. CLOCK-ESCAPEMENT. HENRY C. SAUL, Douglas, Wyo. Filed Feb. 8, 1921. Serial No. 443,403. 4 Claims. (Cl. 58—123.)

2. In a clock escapement, an oscillating impulse device adapted to be engaged by the scape wheel and adapted to impart an impulse to the pendulum, a pallet adapted at one end to intermittently engage and release the scape wheel, and coacting means on the pallet and impulse device engageable in a movement of the impulse device to the left, without affecting the pallet and serving to act



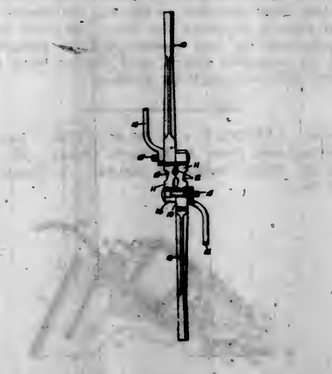
on the pallet for release of the scape wheel in the reverse movement of the impulse device.

1,395,149. PRINTER'S QUOIN. ALFRED SAUTER and LEO SAUTER, Chicago, Ill. Filed Mar. 13, 1920. Serial No. 365,534. 1 Claim. (Cl. 254—42.)



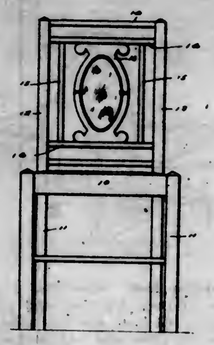
A printer's quoin comprising two wedge shaped members each provided with a rib terminating short of one end and each groove arranged at a different level but extending in the same direction as the rib, the groove of one member slidably receiving the rib of the other member, and projections on each member slidably engaging the side of its associated groove, each member being further provided with tool receiving recesses.

1,395,150. ELECTRIC CLOTH-CUTTER. FRANK A. SCALFARO and JOHN A. MCLEOD, Chicago, Ill. Filed June 21, 1920. Serial No. 390,447. 3 Claims. (Cl. 164—76.)



1. A cloth cutting device comprising a substantially triangular frame having its inclined rearward side formed into a handle portion and being adapted to be slidably moved along a flat surface, a rotary cutting blade mounted at the forward end of the frame, an electrically actuated driving mechanism disposed along the inclined upper side of said frame and operatively connected with the cutting blade, and means positioned beneath the cutting blade and extending forwardly thereof for guiding work into position to be cut by the rotary cutting blade.

1,395,151. FASTENING DEVICE FOR AUTO-PORCH BEDS. PETER C. SCHAEFER, Denver, Colo. Filed Feb. 3, 1921. Serial No. 442,128. 1 Claim. (Cl. 5—5.)

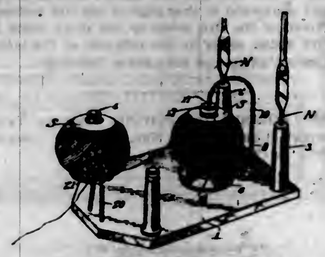


In a device of the class described, the combination with a frame, a bracket secured to said frame, of a leg provided with a spring catch extending into said bracket, said catch engaging the frame, a movably mounted locking device provided with an inner cam end, and said locking device adapted to have the cam end positioned between the bracket and catch and bearing or crowding tightly against the catch for holding the same against the frame.

1,395,152. TWISTING-TOOL. JOHN SCHNEIDER, Elizabeth, N. J. Filed Mar. 31, 1920. Serial No. 370,233. 4 Claims. (Cl. 140—118.)

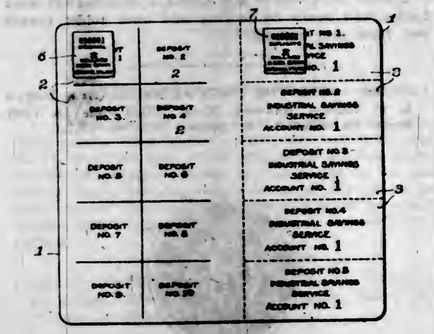
1. A twisting tool having separable heads to engage a splicing sleeve and wire strands to be joined, and having a pair of clamping bolts to hold the heads together; said tool being formed with an elongated opening for the purpose of permitting one of the clamping bolts to be shifted out of registry with one of the heads to facilitate the application and removal of a twisting tool from the work, and a plurality of various-sized semi-oval shaped depressions made in the separable heads whereby socket ovals of selected size can be formed to adapt the tool for use on splicing sleeves of various sizes.

1,395,153. CHAIR-BACK AND PICTURE-FRAME THEREFOR. BERNARD G. SCHOMACKER, Glendorf, Ohio. Filed May 16, 1921. Serial No. 470,177. 1 Claim. (Cl. 155—188.)



The combination with a chair back having a central opening, of an elongated panel of the same size as the opening and received therein, the edges of the panel presenting a continuous curve, registering apertures in the edge of the panel and in the element first named, a spring held pin operating within said apertures and an enlarged head formed on the outer end of the pin and projecting beyond the outer edge of the element first named, said pin moving outwardly to release position, and the frame being cut away for receiving the enlarged head and providing a recessed portion around the head.

1,395,154. CHRONOMETER. WILLIAM A. SLINGERLAND, Portland, Oreg. Filed Apr. 15, 1919. Serial No. 290,225. 1 Claim. (Cl. 58—2.)

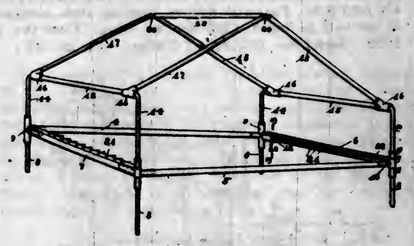


A chronometer comprising an internally toothed hour dial, a pulley rotatable therewith, a minute dial having pinion engagement with the toothed portion of the hour dial, a weighted cord engaging the said pulley, and movement controlling means comprising a tubular annulus of circular cross sectional outline containing mercury in its lower portion and subdivided by centrally perforated concavo-convex partitions facing in the same direction and spaced apart an equal distance.

1,395,155. HOLDER FOR SPOOLS, &c. ADONIRAM J. SMITH, Seattle, Wash., assignor of one-half to Thomas P. Fridan, Seattle, Wash. Filed Oct. 29, 1918. Serial No. 260,114. Renewed Mar. 28, 1921. Serial No. 456,207. 3 Claims. (Cl. 223—57.)

1. The herein described holder for spools comprising a base, a disk fixed thereon, a spur rising rigidly from the center of the disk, a spring rising from said base in rear of the disk, making a coil, and having its upper end bent forward and downward into a point standing above said spur, a rotary spindle adapted to fit the bore of the spool and enlarged at its lower end and having sockets at both extremities within which said point and spur are removably and rotatably mounted, and a thread guide rising from the front end of the base.

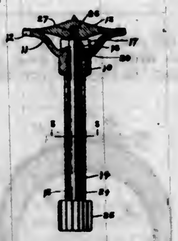
1,395,156. AUXILIARY BANKING MEANS. ORLAND V. SMITH, Milford, Conn., assignor, by mesne assignments, of one-half to Edward L. Roberts, Amarillo, Tex. Filed Nov. 25, 1918. Serial No. 263,950. 6 Claims. (Cl. 283—57.)



1. A device for evidencing bank deposits and credits including adhesive stamps of definite denominations printed in couplets of progressive serial number, the two stamps of each couplet being of like denomination and serial number, one adapted for attachment to the depositor's pass book and the other to the deposit slip.

1,395,157. SPOOL-STEWARD. RUFUS W. SMITH, Chester, S. C. Filed Mar. 15, 1919. Serial No. 282,818. 1 Claim. (Cl. 242—130.)

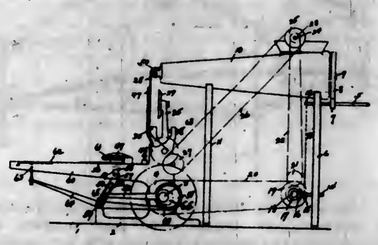
In combination, a wooden warping creel spool provided with a longitudinal bore having reduced ends, a metallic spindle extending through the bore of the spool and adapted to be supported horizontally in the creel, and cylindrical metallic journals arranged on the spindle in relatively spaced relation with the reduced ends of the bore and having an altitude considerably less than the corresponding dimensions of the reduced ends of the bore and contacting only at their curved sides with the walls of the reduced ends of the bore.



1,395,158. COLLAPSIBLE BED STRUCTURE. SAM A. SMITH, Los Angeles, Calif. Filed Dec. 12, 1919. Serial No. 344,310. 1 Claim. (Cl. 5—5.)

A collapsible bed structure including longitudinal and end members, feet, uprights, and joint members with which the feet and uprights telescope, said joint members having round and angular ends with which the longitudinal and end members of the bed respectively are connected.

1,395,159. SAFETY-RAZOR. ALEXANDER T. STEWART, Philadelphia, Pa. Filed Jan. 24, 1921. Serial No. 439,480. 2 Claims. (Cl. 30—12.)

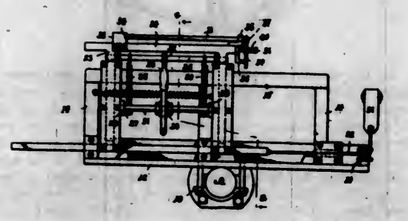


1. A safety razor comprising a tubular handle portion having opposed outwardly curving combed flanges at one end, a flexed flat spring longitudinally disposed between the combed flanges the ends whereof are turned and centrally notched, means for holding said flat spring in place, a razor having opposed hollow-ground blades adapted to seat on the aforesaid combed flanges, ribs central of said razor for coöperation with the centrally notched ends of the flat spring, and means for adjustably connecting the razor and handle portion in operative position.

1,395,160. DAYLIGHT DEVELOPING AND FIXING APPARATUS FOR ROLL-FILMS. MYRON H. STOCKWELL, Geneva, N. Y. Filed Nov. 22, 1920. Serial No. 425,764. 14 Claims. (Cl. 95—90.5.)

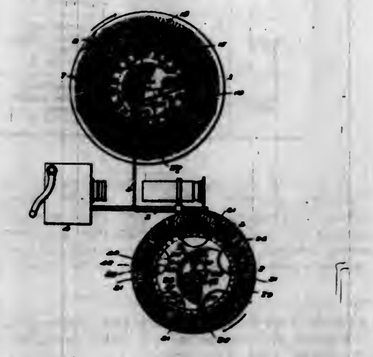
1. A roll film developing and fixing apparatus having a casing provided with a revoluble head, a series of independently revoluble nested drums each having a film outlet slot, a central spool seat, means for anchoring the free end of the film to the casing, and means for respectively and consecutively locking the drums to the head.

1,395,161. AUTOMATIC BATTING-OUT AND SLAPPING-ON DEVICE. FRANK P. STROBL, Sebring, Ohio, assignor of one-half to Ray Y. Cliff, Sebring, Ohio. Filed Oct. 6, 1920. Serial No. 415,182. 3 Claims. (Cl. 25—22.)



1. In a device of the class described, a machine for cutting out a form from a vertical plastic ribbon formed of pottery clay and placing the same on a mold, means for moving said mold and form to a desired distance from place of putting form on mold, means for releasing said mold and form, means for carrying the scraps remaining after cutting out said forms to a puddling machine, substantially as described.

1,395,162. TIRE-PROTECTING CASING. PEARL E. STROUD, South Heart, N. D. Filed June 16, 1919. Serial No. 304,367. 3 Claims. (Cl. 152—16.)

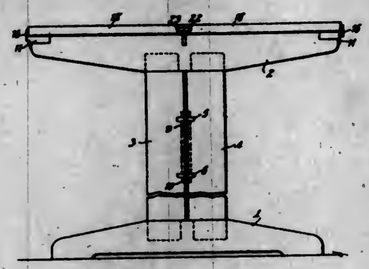


2. The combination with a pneumatic tire casing, of a thin sheet metal protecting casing embracing the outer surface of the tire casing from points adjacent the inner periphery of the tire casing, the sheet-metal casing comprising a wide and a narrow part, each a complete circle and curved to correspond to and tightly fit the outer surface of the tire casing, the wide section extending across the tread of the tire and the narrow casing firmly and detachably connected to that edge of the tire section nearest the tread of the tire, whereby the sheet metal is held to the tire casing solely by the inflation of the latter and is attachable thereto and detachable therefrom.

1,395,163. POLISHING-MACHINE. MARTIN TATOSIAN, Bridgeport, Conn. Filed Nov. 27, 1920. Serial No. 426,697. 5 Claims. (Cl. 51—95.)

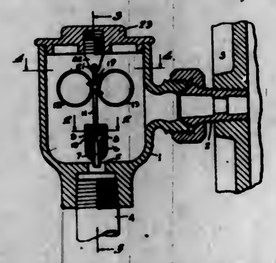
1. A machine of the character described, comprising a rotatable polishing wheel and means for supporting work to be polished and for moving said work across the face of said wheel, said means including a reciprocatory carriage, a spring for holding said carriage in normal position, a foot lever for causing longitudinal movement thereof against the action of said spring, a reciprocatory work holder, and means for moving said work holder toward and from said carriage.

1,395,164. REEL FOR PICTURE-MACHINES. JOSEPH K. E. TERVAS, Hancock, Mich. Filed June 18, 1920. Serial No. 389,682. 6 Claims. (Cl. 88—18.7.)



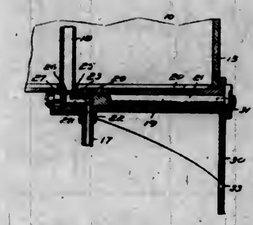
1. In a device of the character described, means for unwinding a coil of film from its center, a receiving reel, and a ring in the receiving reel, said ring adapted to lie on the coil and be lifted with it to the delivery reel.

1,395,165. DYEING-MACHINE. JAMES H. THOMPSON, Trenton, N. J., assignor to Hussong Dyeing Machine Company, Groveville, N. J., a Corporation of New Jersey. Filed Nov. 23, 1918. Serial No. 263,856. 5 Claims. (Cl. 8—19.)



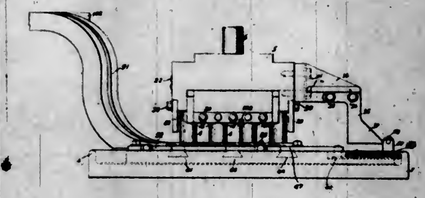
1. The combination in a dyeing machine, of a vat having a solid structure at one end with vertical cylindrical passages of an even diameter throughout and rotating circulating propellers of substantially the same size as the passages and mounted therein.

1,395,166. TABLE. GEORGE E. TOMLINSON, Winchester, Ky. Filed June 8, 1920. Serial No. 387,321. Renewed Sept. 17, 1921. Serial No. 501,423. 6 Claims. (Cl. 45—31.)



1. A table comprising a top portion having sockets in its edges, a supporting portion, a stationary post in the middle of the upper face of the supporting portion having projections thereon adapted to engage certain of said sockets, and a movable locking means at one end of the upper face of the supporting portion adapted to engage another socket to lock the top portion to the supporting portion.

1,395,167. THERMOSTATIC TRAP. REUBEN N. TRANE, La Crosse, Wis. Filed Jan. 25, 1919. Serial No. 273,085. 6 Claims. (Cl. 236—59.)

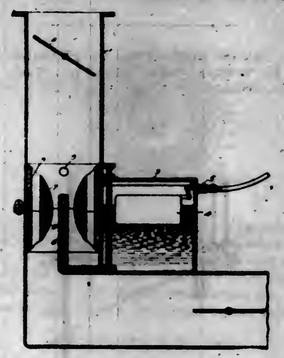


2. A thermostatically controlled device comprising a thermostatic element of substantially the shape of a figure 8, and a controlling member secured to the element at the meeting of the two loops thereof operated by the combined effect of the two loops.

1,395,168. MEASURING AND DISPENSING DEVICE. LOUISE B. TUCKER, York, Pa. Filed June 10, 1920. Serial No. 387,837. 7 Claims. (Cl. 221—100.)

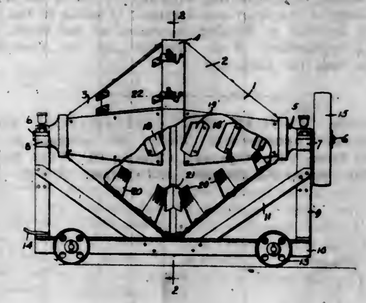
1. In combination, a liquid container, a shaft journaled in the lower portion of the container having a ported extremity, an overflow pipe section communicating with the ported extremity of the shaft, an adjustable overflow pipe section communicating with and carried by the ported extremity of the shaft and arranged to swing in the container incident to turning movement of the shaft, and means independent of the overflow pipe for conducting liquid from the container.

1,395,169. MACHINE FOR CASTELLATING NUTS. WALTER UMBDENSTOCK, Chicago, Ill., assignor to The Hill Pump Valve Company, Chicago, Ill. Filed May 8, 1919. Serial No. 295,689. 123 Claims. (Cl. 10—72.)



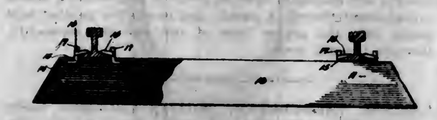
1. In a machine of the class described, means for supporting nut blanks in upright position to provide a stable arrangement thereof, a punch, and means for guiding said punch into the center bore of the nut and outwardly through the nut wall.

1,395,170. CARBURETER. WILLIAM ASHWORTH, North Adams, Mass. Filed Jan. 28, 1920. Serial No. 354,588. 1 Claim. (Cl. 123—123.)



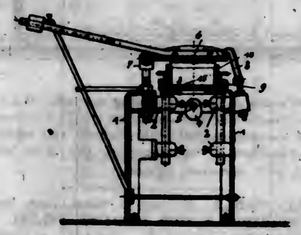
A carbureter, including a venturi, comprising two annular sections fitted together, each of said sections being formed with air by passes, and means for automatically moving one of said sections with respect to the second of

the same for alining the air by passes and regulating the passage of air through the same in direct ratio to the



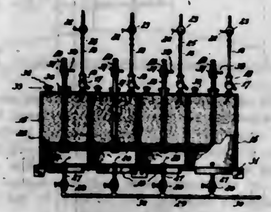
speed of the engine with which the carbureter is associated.

1,395,171. MIXER. GEORGE W. BISHOP, Jr., Lynbrook, N. Y., assignor of one-third to George de V. Gilmore, New York, N. Y. Filed May 6, 1921. Serial No. 467,499. 3 Claims. (Cl. 259—81.)



1. In a mixer for fertilizer a casing adapted to receive fertilizer chemicals, a plurality of blades arranged in the casing acting to shift the fertilizer as the casing rotates, and a plurality of stirring fingers for breaking up and finely dividing the fertilizer as the casing rotates, said fingers being arranged in groups substantially in line with said blades circumferentially.

1,395,172. RAIL TIE AND FASTENER. JOHN C. BOTT, Dell Rapids, S. D. Filed Mar. 18, 1921. Serial No. 453,195. 1 Claim. (Cl. 238—348.)

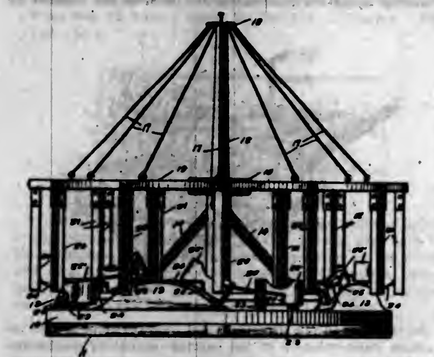


The combination with a hollow railroad tie having a relatively thin top portion provided with openings and a rail positioned at right angles thereon; of a rail fastener comprising a straight shank, a curved retaining portion at the lower end of said shank, a head at the upper end of said shank extending in an opposite direction to said retaining portion, and a squared extension on the upper end of said shank adapted to be engaged by a wrench or other tool whereby when said shank is inserted in one of said openings said fastener may be turned to bring said head in engagement with the base flange of said rail and thereby bind said retaining portion against the under side of the top portion of said tie substantially as described.

1,395,173. MANUFACTURE OF BRICKS. FRIEDRICH BRETTSCHNEIDER, Raitz, Moravia. Filed Mar. 26, 1920. Serial No. 368,989. 7 Claims. (Cl. 25—41.)

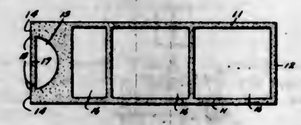
1. The process for making bricks which consists in charging plastic material into a mold-frame closing said frame and applying pressure to cause the excess-charge to escape and to be cut off between the mold-frame and cover plates, the pressure being then maintained until the rest of the excess-charge resulting from the elasticity of the mass has escaped through apertures provided for this purpose.

1,395,174. LUBRICATING DEVICE. CHARLES CALHOUN, Duquesne, Pa., assignor of one-half to Arthur G. Meeks, Duquesne, Pa. Filed Jan. 20, 1921. Serial No. 438,701. 4 Claims. (Cl. 184—39.)



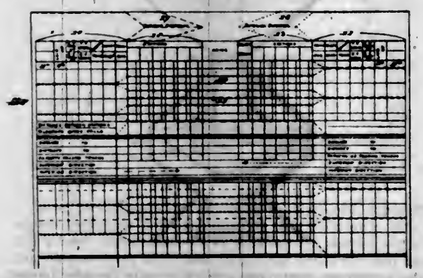
4. A force-feed lubricating device comprising a receptacle to contain the oil and having a feed-pipe extending therefrom, a piston working in the receptacle to contain the oil at one side of said piston under pressure, means for admitting steam into the receptacle at the other side of the piston, a hollow piston-rod communicating with the steam-chamber and extending through the body of oil and one end of the receptacle, a valve at the outer end of the piston communicating with an alarm device, and an operating arm for said valve projecting to one side thereof; together with a needle-valve and sight-feed in the feed pipe adjoining the receptacle, a cut-off valve in said feed pipe beyond the needle-valve and sight-feed, and an operating-arm for the cut-off valve having an upturned end in the path of the operating arm for the valve at the outer end of the piston-rod, substantially as shown and for the purpose set forth.

1,395,175. MERRY-GO-ROUND. JOSEPH L. CHINN, West Huntington, W. Va. Filed Feb. 18, 1920. Serial No. 359,754. 2 Claims. (Cl. 46—27.)



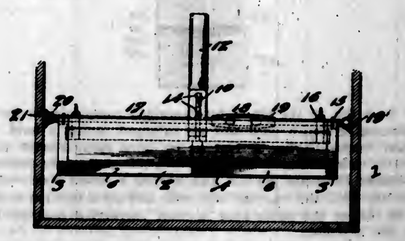
1. An amusement apparatus having a rotatable frame, inner and outer rows of depending bars thereon, a track

intermediate the rows, cars movable on the track, means connecting the cars to said bars, and a platform joining



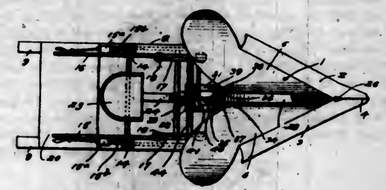
the bars of the inner row to dually serve to brace the structure and as a walk for the conductor.

1,395,176. HOLLOW TILE. JACOB VOORHIS CLOSE, Norwalk, Conn. Filed Mar. 24, 1920. Serial No. 368,293. 2 Claims. (Cl. 72—41.)



1. A building tile having a plurality of differently shaped vertical openings, sundry of the openings having one end wall recessed, the opening at one end of the tile having its outer end wall provided with wire cuts to permit its removal to form a recess at the end of the tile, the side walls of the openings having a recessed end wall being provided with wire cuts, whereby a number of differently shaped units can be formed from the tile, each having a recess in one end.

1,395,177. TRAIN-SHEET. HARVEY J. DAY and GILBERT J. FINN, Eau Claire, Wis. Filed May 19, 1920. Serial No. 382,458. 1 Claim. (Cl. 283—32.)



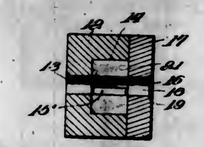
A train sheet having vertical lines defining terminal vertical columns and intermediate vertical columns, the said terminal columns having indicia representative of the terminals of a railroad group or system and the intermediate columns bearing a general designation indicative of the fact that the said intermediate columns are arranged for progressive designation to represent intermediate stops between the terminals, indexes at the top of the sheet distinguishably designated, and a plurality of horizontal lines intersecting the columns and distinguishably designated in the same manner as the indexes and identifying the indexes with the columns, all the columns being sub-divided for the terminal columns to receive trains data and the intermediate columns to receive station data.

1,395,178. WASHING-MACHINE. WILLIAM E. DENIS, New Haven, Conn., assignor to Den-Hart Manufacturing Company, Incorporated, New Haven, Conn. Filed Mar. 3, 1921. Serial No. 449,359. 8 Claims. (Cl. 259—101.)

1. In combination with a receptacle or tub, a washing machine comprising an agitating element and an adjustable means for mounting and clamping said element in the receptacle or tub, said mounting forming a support upon which the agitating element is suspended and is capable of a rocking movement.

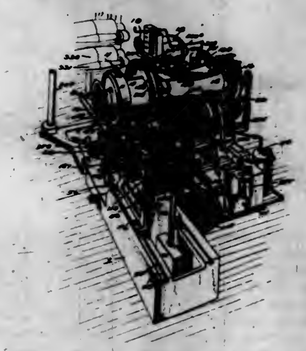
1,395,179. PLOW. JOHN M. DOERNER, St. Cloud, Minn. Filed Oct. 11, 1919. Serial No. 330,008. 1 Claim. (Cl. 37—5.)

A snow plow comprising a sled structure, a plow pivoted to said sled structure and having a pair of wing portions converging toward their forward ends, means for varying the pitch of said plow, a pivot rod secured to the sled structure, a pivot rod secured to the wings of the plow, runners having their ends looped and surrounding said rods and located forwardly of the sled structure and between the wings of the plow, a lever pivoted to the plow, links pivoted to the lever and to the runners for forcing the latter into engagement with the ground to elevate the plow.



1,395,180. MANICURING IMPLEMENT. WILLIAM BENTON ETZWEILER, Penbrook, Pa. Filed Feb. 18, 1921. Serial No. 446,038. 2 Claims. (Cl. 30—23.)

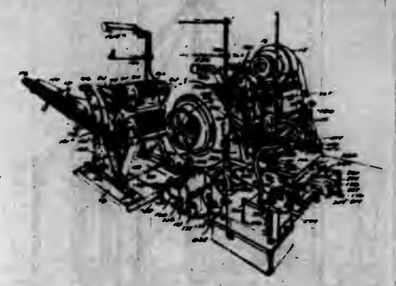
1. A manicure implement comprising a plate having a pair of longitudinally extending ribs arranged on each face thereof, spaced laterally from each other and from the side edges of the plate, the opposed faces of said ribs



being of different widths, the wider face of each rib having a filing surface with a guard extending at right angles from the base thereof, the narrower face being plain and having a filing surface extending at right angles from its base, said plain face of said rib forming a guard for the filing surface at its base.

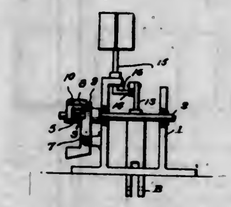
1,395,181. DIE FOR MAKING SPOKE-NIPPLES. JAMES H. GRAHAM and MAHLON S. FOLEY, Torrington, Conn., assignors to The Torrington Company, Torrington, Conn., a Corporation of Connecticut. Filed Oct. 20, 1917. Serial No. 197,643. 2 Claims. (Cl. 76—90.)

1. A die of the character described comprising a body portion having a bore and an enlarged recess, a back in said recess having a registering bore formed with flat walls terminating in beveled ends, and a member resting against the body portion and having a round bore registering with the angular bore and having a beveled outer end, all of the parts held in their correlated position by a die assembly.



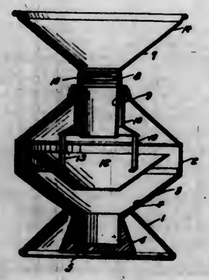
1,395,182. TIRE-MAKING MACHINE. WILLIAM B. HARSEL, Akron, Ohio, and EDWARD NALL, deceased, Akron, Ohio; Edith Alice Nall, Cuyahoga Falls, Ohio, executrix of Edward Nall, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 3, 1917. Serial No. 200,186. 93 Claims. (Cl. 154—10.)

1. A tire-making machine including a tire-building core, means for rotating the core, automatic means for stopping the same after it has accomplished a predetermined rotation, fabric-pressing devices operatively associated with the core, and means for positioning the pressing-devices toward and then effecting their operation on the core while the latter is in continued rotation.



1,395,183. TIRE-MAKING MACHINE. WILLIAM B. HARSEL, Akron, Ohio, and EDWARD NALL, deceased, Akron, Ohio; Edith Alice Nall, Cuyahoga Falls, Ohio, executrix of Edward Nall, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 3, 1917, Serial No. 200,185. Renewed Nov. 18, 1920. Serial No. 425,026. 94 Claims. (Cl. (154—10.)

1. A tire-making machine including a presser-supporting carriage, mechanism for actuating the carriage for a to-and-fro movement, a presser-member movable on the carriage, fluid-pressure means operable independently of the carriage-actuating mechanism for moving the member on



the carriage in one direction, and fluid-pressure means operable independently of the carriage-actuating mechanism and of the first mentioned pressure-means for returning the member to its initial position.

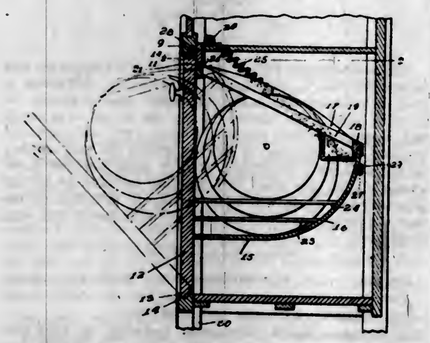
1,395,184. SWITCH-STAND. LEWIS HERSH, Ironwood, Mich. Filed July 10, 1920, Serial No. 395,286. Renewed Aug. 12, 1921. Serial No. 491,874. 5 Claims. (Cl. 246—393.)

1. A switch operating mechanism comprising a shaft; means for locking the shaft in either of its two positions, a foot operated means for releasing the shaft and simultaneously operating the same.

1,395,185. SPITTOON. VASSER C. HOLMAN, Nixon, Tex. Filed May 26, 1921. Serial No. 472,754. 4 Claims. (Cl. 4—38.)

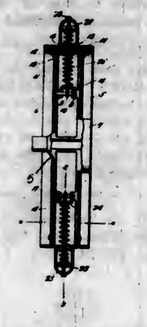
1. A spittoon comprising a body, a cover therefor having a centrally disposed opening in its top, a collar depending from the top of the cover and surrounding the opening therein and provided at its lower end with a conical flange and a conical deflector disposed within the body between the bottom thereof and the said conical flange at the lower end of the collar.

1,395,186. APPARATUS FOR TIGHTENING LEAKAGES IN AND ABOUT BOILER-TUBES AND THE LIKE. JOHAN MARIUS JOHANSEN, Trondhjem, Norway. Filed Jan. 12, 1920. Serial No. 350,774. 3 Claims. (Cl. 137—76.)



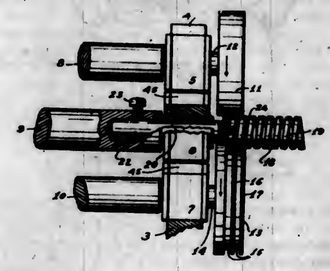
1. In an apparatus for tightening leakages and the light, a tightening plug, consisting of two halves, one half of the tightening plug being pivotally mounted at the front end of a bar, adapted to be introduced through a boiler tube, while the other half of the plug is hinged at its circumference to the first mentioned half of the plug.

1,395,187. HYDROCARBON-BURNER. ALFRED KAUFMAN, New York, N. Y. Filed Aug. 4, 1920. Serial No. 401,080. 3 Claims. (Cl. 158—82.)



1. The herein described starter for hydrocarbon burners comprising a continuous fibrous body and spaced fibrous supporting legs connected with said body and having small capillarity relatively to said body.

1,395,188. PHONOGRAPH-RECORD HOLDER. ADAM KESSLERING, Quincy, Ill. Filed Mar. 1, 1920. Serial No. 362,497. 1 Claim. (Cl. 211—16.)



In a phonograph record cabinet, a record supporting means including a hinged door, a base forming a part of the record supporting means and having connection with the hinged door, said base extending inwardly and being curved rearwardly and upwardly, partitioning members having one of their respective ends connected to the hinged door, a bar embracing the upper edge of the inwardly extending base, said partitioning members having connection with the bar, and means disposed within the cabinet and connecting the hinged wall and base for supporting records at various levels.

1,395,189. VEHICLE-WHEEL. EDWARD GEORGE KOLLASCH, Browning, Mo. Filed July 19, 1919. Serial No. 312,092. 1 Claim. (Cl. 152—44.)

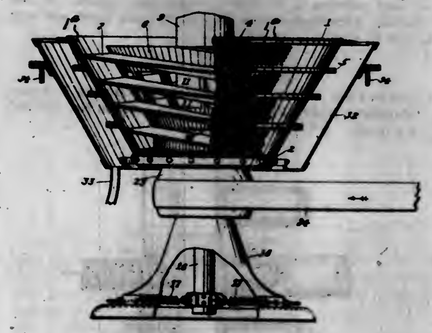
In a wheel of the class described, the combination with a rim and a tire mounted on said rim, of a metallic band having a plurality of openings therein, inturned circumferential flanges formed integrally with said band adjacent to said openings, flat ring members secured to opposite sides of said inturned flanges, a hub disposed within said band, an annular flange formed integrally with one side of said hub, engaging one of said ring members and provided with inwardly directed teats having openings therethrough, an annular flange formed integrally with the opposite side of said hub, engaging the opposing ring member and provided with inwardly directed teats having threaded orifices therein, headless bolts passing through the openings in the first mentioned teats and engaging the threads of the orifices, a plurality of outstanding circular flanges formed integrally with said band around the openings therein, cup-shaped casings engaging said flanges and inclosing said openings, a plate disposed in each of said casings and having openings therein, U-shaped members carried by said headless bolts, extending through the openings in said band and secured to said plates, bolts disposed between the arms of the U-shaped members, passing through said plates and secured to said casings, a plate secured to one end of each bolt, a helical spring surrounding each U-shaped member and exerting a pressure between said plates and tangentially arranged spokes secured to said band and connected to said rim aforesaid.

1,395,190. COILING-MACHINE. THOMAS F. LAMB, Mansfield, Ohio. Filed Nov. 4, 1919. Serial No. 335,702. 8 Claims. (Cl. 153—65.)

1. In a coiling machine, a frame, vertically alined guideways formed in said frame, journal boxes slidably fitted to said guideways, shafts journaled in said boxes in spaced relation to each other, rollers secured to two of said shafts in alinement with each other, means to impart

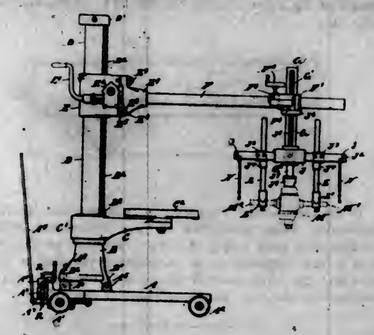
movement to said shafts in the same direction, a third shaft interposed between the first-mentioned shafts and in direct vertical alinement therewith, a mandrel fitted to the third shaft, means to impart movement to the third shaft in an opposite direction to that of the first-mentioned shafts as and for the purpose described.

1,395,191. PROCESS FOR MAKING THE COLORING OF NATURAL HORN WATER-RESISTING. MAX LAMBECK, Barmen, Germany. Filed Aug. 12, 1921. Serial No. 491,879. 1 Claim. (Cl. 8—5.)



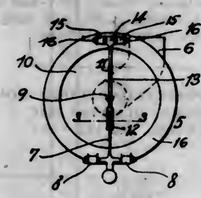
Process for making the coloring of natural horn water-resisting, which consists in exposing articles of natural horn to the action of formaldehyde.

1,395,192. GARTER. EMMA LANDGRAF, GEB. CARTHARIUS. Dresden, Germany. Filed Sept. 18, 1920. Serial No. 411,297. 1 Claim. (Cl. 241—5.)



A garter comprising, in combination, an adjustable strap, a square metal buckle on one end of said strap having lateral members and a cross-member, a knob of the latter, and an elastic ribbon with one end attached to said cross-member and having a plurality of button-holes in its other end for engagement with said knob, said other end to be led beneath the lateral members of said metal buckle, substantially as and for the purpose set forth.

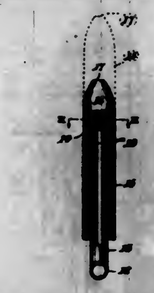
1,395,193. CENTRIFUGAL SEPARATOR. FRANK H. LINDENBERG, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 8, 1917. Serial No. 153,423. 6 Claims. (Cl. 210—69.)



1. In a separator of the class described, the combination of an upwardly flaring conical perforated basket adapted to revolve about a vertical axis and mounted for universal rotation about a center in said axis, spiral vanes within the basket arranged to revolve differentially in the same direction as the basket to control the upward movement of material upon the surface of the basket, and means acting in the transverse plane of said center of rotation to cause the revolution of the basket and the vanes at speeds bearing a definite ratio.

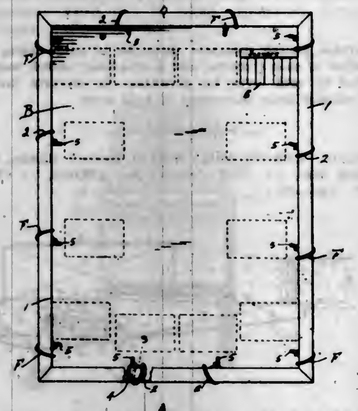
1,395,194. PORTABLE RADIAL DRILLS. ERIC G. LINDER, New York, N. Y. Filed Apr. 19, 1919. Serial No. 291,219. 17 Claims. (Cl. 77—28.)

1. In an apparatus of the character described, a platform, a columbn hinged thereto and adapted to fold upon said platform in the direction of the length of the latter, means for holding said column in its vertical operative position, and a radius arm mounted on said column to fold in the direction of the length of the platform.



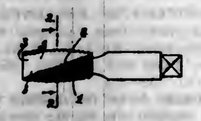
1,395,195. TONE-MODIFIER FOR SOUND-BOXES. HENRY LUBE, Astoria, N. Y. Filed Aug. 1, 1919, Serial No. 314,693. Renewed Mar. 14, 1921. Serial No. 452,235. 1 Claim. (Cl. 274—27.)

The combination with a sound box, its diaphragm and needle box, of a tone modifying element comprising a stem, a hinge portion in the upper end thereof, means for pivoting said hinge portion to the top of the said sound box, a springy clamp formed integral with the lower end of said stem, felt leaves secured within the said springy clamp, said tone modifying element being adapted to be swung on its said pivot into position on said needle bar adjacent the point where the latter is attached to the said diaphragm and to be moved outward away from said needle bar.



1,395,196. GAS OR LIQUID-FUEL BURNER. JOHN LUKASZEWSKI, Chicago, Ill. Filed Dec. 31, 1920. Serial No. 434,338. 4 Claims. (Cl. 158—10.)

1. A gas or liquid fuel burner including an inlet pipe adapted to have its outer end coupled by a flexible conduit to a fuel supply, a transverse manifold having its central portion rigid with and communicating with the inner end of said pipe, a plurality of burner pipes extending from the opposite side of the manifold in the same general direction as said first named pipe and arranged in spaced relations so as to pass upwardly between the grate bars of a stove grate, said burner pipes being provided with flanged upper ends having longitudinally extending openings therethrough, and a combined sleeve and burner tip mounted upon the flange of each burner pipe in spaced relation to the latter whereby air is admitted between the burner pipe and the sleeve and through the openings in the flange in the same direction as the flow of the fuel through the burner pipes, said combined sleeve

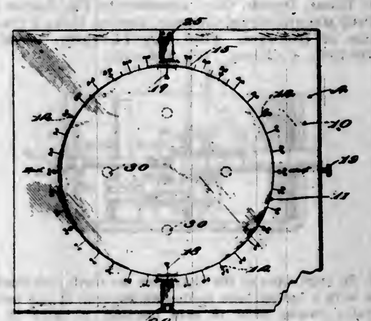


and burner tip having a restricted opening in the outer end thereof and providing a mixing chamber between said restricted opening and the open upper end of the burner pipe.

1,395,197. FILE. JOHN W. MCCANN, Pauls Valley, Okla. Filed June 19, 1920. Serial No. 390,186. 2 Claims. (Cl. 129—21.)

1. A file comprising, in combination, a body and a holding member carried thereby, said holding member being formed of a single length of material and having an end portion disposed through the body and extended outwardly over the face of the body to the margin thereof and then returned over the opposite face and extending through the body, said strand being then formed into a loop engaging the first face of the body, said strand being extended from the loop to afford a receiving hook.

1,395,198. SCREW-CUTTING TAP. JOHN MCFARLANE, Broomhill, and DUNCAN CLELLAND, Clydebank, Glasgow, Scotland. Filed Sept. 26, 1919. Serial No. 326,560. 2 Claims. (Cl. 10—141.)



2. A screw-cutting tap having a plurality of spiral flutes cut in a direction contrary to the thread of the tap, the leading face of each flute constituting in cross section, a tangent to the following face at a point where the latter meets a line joining the center of curvature thereof with the center of the tap, substantially as described.

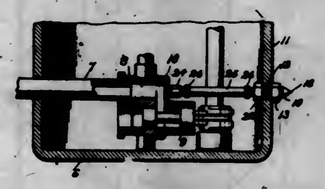
1,395,199. EYEGLASS-MOUNTING. FREDERICK C. MERRY, Kansas City, Mo., assignor to Merry Optical Company, Kansas City, Mo., a Corporation of Missouri. Filed June 6, 1921. Serial No. 475,274. 8 Claims. (Cl. 88—42.)

1. An eye-glass mounting comprising a part to be secured to a lens, parallel jaw members to receive the lens between them, tensioning means for the jaw members, and a cover plate carried by the tensioning means to cover the outer jaw member.

1,395,200. DRAWING-BOARD. LEON W. MOORE, Santa Maria, Calif. Filed Mar. 17, 1919. Serial No. 283,111. 3 Claims. (Cl. 33—46.)

1. A drawing board of the character described, comprising a straight edge section having a circular center opening, a center section shaped to fit the opening and revoluble therewithin, said straight edge section having concentric degree marks of a circle thereon and said center section being provided with indicators at diametrically opposite points thereof, and foldable sights carried by the straight edge section for alinement in the direction of a straight line joining said points.

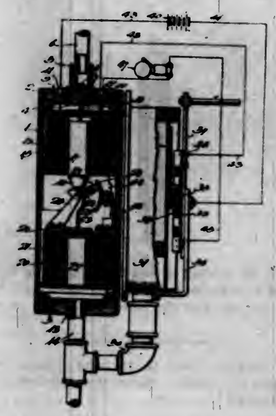
1,395,201. GAS-TESTING APPARATUS. GEORGE G. OBERFELL and ALBERT M. BALLARD, Tulsa, Okla. Filed Apr. 27, 1920. Serial No. 377,029. 9 Claims. (Cl. 73—51.)



1. A method of testing a gaseous mixture to determine the specific gravity of said mixture, which method consists of forcing air and gas alternately into a chamber, placing the air and gas alternately under pressure, allowing the gas or air in the chamber to escape through an orifice, indicating the decreases in pressure within the chamber as the gas or air escapes, noting the time re-

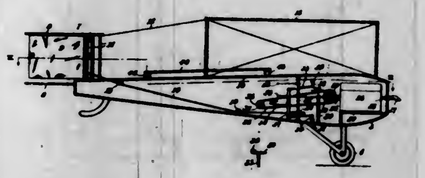
quired for dissipation of said gas or air pressure between desired pressure limits, and calculating the specific gravity

from the relation between the times required for dissipation of gaseous mixture pressure and dissipation of air mixture pressure through the same pressure limits.



1,395,202. APPARATUS FOR BLOWING BORES OF ROCK-DRILL STEELS. EDWARD L. OLDHAM and JOHN L. BARRA, Denver, Colo., assignors to The Denver Rock Drill Manufacturing Company, Denver, Colo., a Corporation of Delaware. Filed July 14, 1919. Serial No. 310,708. 4 Claims. (Cl. 284—18.)

4. In apparatus of the character set forth, the combination with a hollow base having an opening in one wall, of a valve casing fixed in said opening, a valve in said casing having a projecting stem provided with a delivery bore controlled by the position of the valve, said stem having a tapered nozzle adapted to enter the bore of a drill steel, a coupling nipple engaged in the opening of the wall, motive fluid supply means within the base, and a flexible hose connection between the supply means and the coupling.



1,395,203. ELECTROMAGNETIC VALVE. AXEL M. OLSEN, East Orange, N. J. Filed July 10, 1919. Serial No. 309,934. 4 Claims. (Cl. 137—139.)

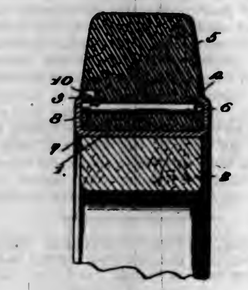
4. A device of the class described comprising a casing having a fluid inlet and a fluid outlet, a valve controlling passage of fluid through the inlet, an electro-magnet in said casing having a core constituting weight means for holding said valve in a closed position, a second electro-magnet in said casing, a support, a lever pivoted intermediate its length to said support between said magnets and having the core of the second magnet suspended from one end portion to normally retain the lever in set position with its second end portion supporting the core of the first magnet in a raised position with the valve open, the second magnet when energized moving said lever out of locking engagement with the first core to permit the latter to drop and close said valve and engage the lever to lock the lever in the adjusted position with the core of the second magnet raised, electric circuits for said magnets,

removable switch members mounted in said casing and included in said circuits, and a co-acting switch member carried by said lever for breaking the circuits through said magnet upon movement of said lever.

1,395,204. AEROPLANE. NICK G. PAPPAS, Hanna, Wyo. Filed Mar. 17, 1921. Serial No. 453,056. 1 Claim. (Cl. 244—29.)

In an aeroplane, a pair of superposed horizontal shafts, a fuselage having said shafts horizontally journaled therethrough, planes fixed upon the ends of said shafts at opposite sides of said fuselage, means operable from within the fuselage for simultaneously rotating said shafts in the same direction for tilting said plane, said means for simultaneously rotating the shafts including oppositely extending crank arms fixed to said shafts, a vertical lever having its intermediate portion pivoted upon a horizontal axis, a link connecting each end of said lever with one of said crank arms, and means to rock said lever.

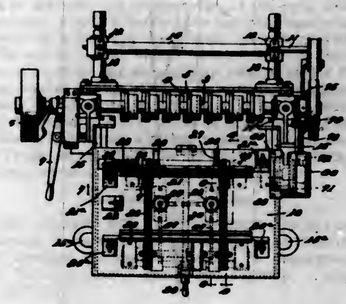
1,395,205. VEHICLE-TIRE FASTENER. WILLIAM H. PARHAM, Knoxville, Tenn., assignor to Parham Auto Patents Corporation, Knoxville, Tenn., a Corporation of Delaware. Filed May 21, 1920. Serial No. 383,121. 7 Claims. (Cl. 152—6.)



7. In a fastening device for resilient tires, the combination with a channel rim having overhanging portions, of a resilient tire arranged within said rim having a plurality of sectional cross bars, each cross bar being

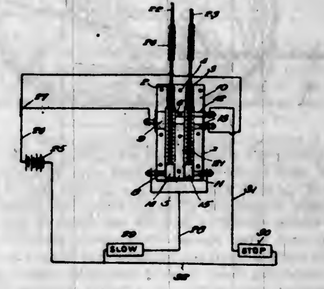
formed of two sections, one section being slidably mounted in respect to the other, the slidably mounted section being

provided with an instrument engaging member for moving said section into position for inserting or removing the tire from the rim.



1,395,206. VEHICLE-TIRE FASTENER. WILLIAM H. PARHAM, Knoxville, Tenn., assignor to Parham Auto Patents Corporation, Knoxville, Tenn., a Corporation of Delaware. Filed July 27, 1920. Serial No. 399,380. 5 Claims. (Cl. 152—6.)

5. In a tire fastener, the combination with a channel rim provided with annular grooves, of a resilient tire mounted in said rim, and transversely arranged fastening devices slidably mounted in the base of the tire, said fastening devices being provided at one of their ends with enlargements and lugs extending outwardly, said fastening devices being capable of being moved in position to allow the tire to be removed from the rim, said fastening devices being normally held in position to fasten the tire in the channel rim by the resiliency of the tire.



1,395,207. SLITTER-FEED. DANIEL P. ROBINSON and JOHN COYLE, Baltimore, Md., and ALFRED L. KRONQUEST, Chicago, Ill., assignors to Continental Can Company Inc., Syracuse, N. Y., a Corporation of New York. Filed July 3, 1919. Serial No. 308,614. 17 Claims. (Cl. 271—55.)

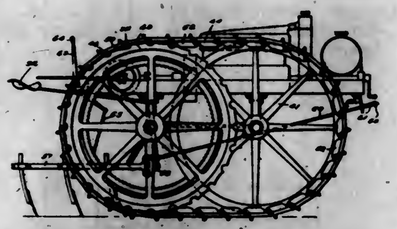
1. A feeding mechanism for slitter machines including in combination, a support for the sheets, continuously moving devices for delivering the sheets to a point closely adjacent the slitter rolls, rectifying devices, supports traveling in timing with the delivering devices on which said rectifying devices are mounted, and means for moving

the rectifying devices on their supports for engaging and moving the sheet forward into the slitter rolls.

1,395,208. SIGNAL SYSTEM. ROY E. SAGLE, Roseville, Ohio. Filed Dec. 27, 1919. Serial No. 347,880. 5 Claims. (Cl. 177—337.)

1. A signal system for automobiles or the like, including two independent signals, circuits respectively controlling said signals, a switch member adapted to control said circuits, said switch member being operated by manually actuated members for the control of the vehicle, said switch member being responsive in the actuation of either of said control members to govern one signal circuit alone and responsive in the actuation of both said control members to govern the other circuit alone, whereby in the actuation of either of said control members for the vehicle one signal only is operated and in the actuation of both said control members for the vehicle the other signal only is actuated.

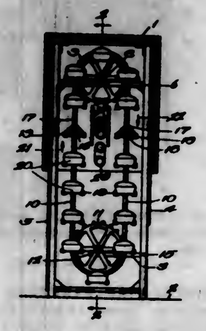
1,395,209. SPLITTING-WEDGE. PAUL SCHULTZ, Middleville, N. Y. Filed Mar. 7, 1921. Serial No. 450,178. 1 Claim. (Cl. 254—104.)



A splitting wedge comprising a body having two of its

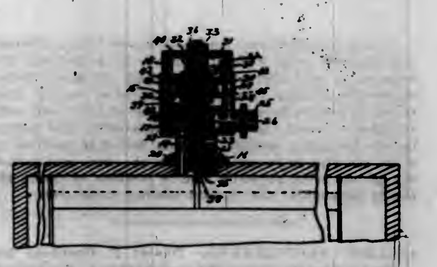
longer sides parallel and its other two sides converging toward one end, the smaller end of the body being under-

cut to form shoulders and having the portion therebelow flared to a width approximately that of the body.



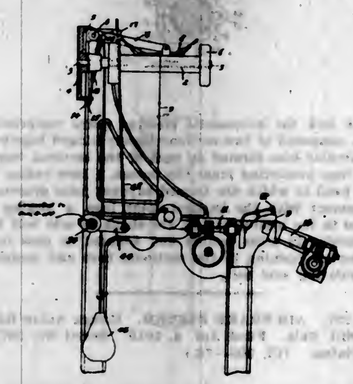
1,395,210. TRACTOR-CULTIVATOR. ROY C. SHELTON, Nashville, Tenn. Filed Oct. 1, 1919, Serial No. 327,726. Renewed Sept. 14, 1921. Serial No. 500,669. 1 Claim. (Cl. 305—8.)

In a tractor cultivator, a traction wheel arranged on each side of the tractor, each embodying a pair of spaced fellies, said fellies being provided with transverse alined grooves, an idler wheel arranged on each side of the tractor, each embodying a single felly, the fellies of said idler wheels extending between the fellies of said traction wheels and being spaced transversely therefrom, and a flexible endless tread surrounding each side of said wheels and embodying links, each of said links comprising a flat rectangular body portion of a width substantially equal to that of the traction wheel, said body portion being provided upon its inner face with spaced longitudinal tracks adapted to receive said idler wheels therebetween, the spaced fellies of said traction wheels being adapted to receive said tracks therebetween, said body portion being further provided on one end with a pair of spaced ears, said ears projecting inwardly of the body portion and being provided with openings, a pair of relatively wide ears carried by the opposite end of said body portion and projecting inwardly therebeyond, the inwardly projecting portions of said last named ears being adapted to be received in the transverse grooves of said traction wheels, said first named ears being received between the last named ears of the next link of the chain, and a pivot pin passing through said ears.



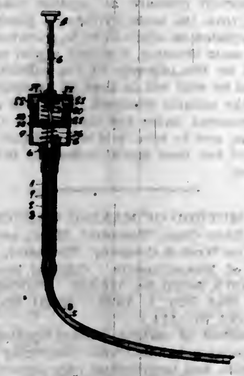
1,395,211. BAKING APPARATUS. FREDERICK T. SNYDER, Oak Park, Ill., assignor to S. D. Flood, Chicago, Ill. Filed July 30, 1919. Serial No. 314,258. 23 Claims. (Cl. 107—57.)

1. Baking apparatus including a baking chamber having an entrance opening in its bottom and normally permanently closed from direct communication with the external air at all other portions thereof; a source of baking heat positioned above said entrance opening; and a proofing chamber located below said source of baking heat and below said baking chamber and normally in communication with the baking chamber through the entrance opening and forming a continuation of the latter and normally permanently closed from communication with the external air except at its bottom.



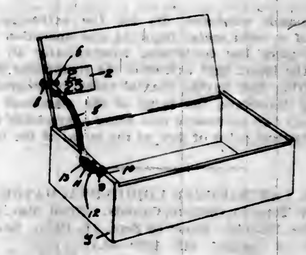
18. Baking apparatus including a baking chamber having an entrance opening in its bottom and normally permanently closed from direct communication with the external air at all other portions thereof; a source of baking heat positioned above said entrance opening; a proofing chamber located below said source of baking heat and normally in communication with the baking chamber through the entrance opening of the latter and normally permanently closed from communication with the external air except at its bottom; carriers for the material to be baked; conveying mechanism for causing said carriers to travel through an orbit inclosed by the baking and proofing chambers, the walls of the chambers being arranged with relation to their carriers to enable the latter to move without disturbance of the air; and means below said source of heat for driving said conveying mechanism.

1,395,212. FUEL-SUPPLY-CONTROL MECHANISM. ALFRED E. WALDEN, Detroit, Mich. Filed Feb. 7, 1920. Serial No. 356,991. 6 Claims. (Cl. 158—36.)



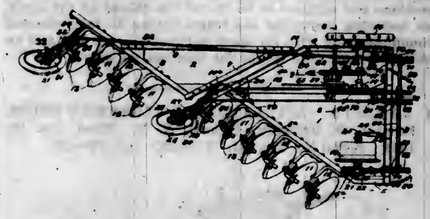
1. In a fuel supply control system, the combination with a compartment adapted to receive liquid fuel, and a float therein, of a valve movable to place the interior of said compartment under atmospheric pressure or under pressure lower than atmospheric pressure, and a second valve engageable with and operated by said float for controlling the movement of said first-mentioned valve.

1,395,213. BALLING-MACHINE. ALEXANDER GROUNDWATER WALLS, Paisley, Scotland, assignor to Walter McGee & Son, Limited, Paisley, Renfrewshire, Scotland, a Corporation of the United Kingdom of Great Britain and Ireland. Filed Feb. 11, 1916. Serial No. 77,750. 1 Claim. (Cl. 242—156.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



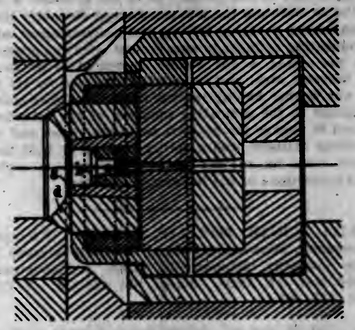
In an automatic balling machine, the combination with a bobbin carrier sustaining a bobbin from which the yarn is unwound, of a drag shoe actve on the yarn during the unwinding operation to apply tension to the yarn in opposition to the unwinding movement, a normally inoperative brake lever, and means operative on the knocking off of the machine for causing said brake lever to engage said drag shoe, whereby said drag shoe is caused to bear with increased pressure on the yarn to arrest the bobbin.

1,395,214. CAMERA-SHUTTER RELEASE. ARTHUR S. WARNE, Vancouver, British Columbia, Canada. Filed July 21, 1919. Serial No. 312,328. 5 Claims. (Cl. 235—91.)



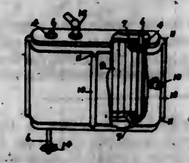
1. A means for indicating, said means comprising the combination with a stem rectangular in cross section, said stem having a partial twist, a hollow casing provided with a viewing aperture through the cover of which casing said stem is endwise movable with provision preventing rotation of it in relation to the casing, an indicator cylinder rotatably mounted within the casing and having around its periphery numbers corresponding to the number of exposures of the camera film, the upper edges of said cylinder having a corresponding number of notches designed to engage a retaining detent projecting from the upper end of the casing and engaging projections across the upper face of the closed end of the cylinder, a spring tending to maintain the plunger stem at the outer limit of its movement, a spring holding the notched upper edge of the indicating cylinder in engagement with the projections from the casing, a nut washer apertured to fit the endwise movable stem and be partially rotated by its twist, said nut washer having ratchet projections corresponding in number to the indicating numbers of the cylinder and adapted to engage the projections in the closed end of the indicating cylinder, and a spring tending to hold the nut washer with its ratchet face in engagement with the radial projections of the indicating cylinder.

1,395,215. CIGAR-BOX-LID HOLDER. WILLIAM M. ANDERSON, Minneapolis, Minn., assignor to Ideal Products Company, Minneapolis, Minn., a Copartnership. Filed Nov. 11, 1920. Serial No. 423,258. 7 Claims. (Cl. 217—61.)



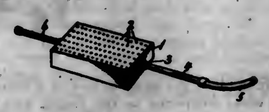
1. A cigar box lid holder comprising a spring bar having at one end a lid engaging fork and at its other end a box engaging fork, and a spring finger independent of the box-engaging fork and having a box engaging anchor barb.

1,395,216. GANG-PLOW. JOHN B. BARTHOLOMEW, Peoria, Ill., assignor to Avery Company, Peoria, Ill., a Corporation of Illinois. Original application filed Oct. 12, 1916, Serial No. 125,288. Divided and this application filed May 4, 1917. Serial No. 166,368. 9 Claims. (Cl. 97—67.)



1. In a gang plow, the combination of a frame, a series of plowing disks connected to the frame, two wheels arranged to run on the top of the land for supporting the forward parts of the frame, the extreme front disks forming furrows outside of both land wheels, and arranged to rise and fall in horisontal parallelism with the rear disks, a wheel for supporting the rear parts of the frame, and means for adjusting one of the forward wheels angularly and holding it in adjusted position to compensate for the side thrust of the said projecting front disks.

1,395,217. CASCADE EXTRUSION-DIE FOR COLD OR HOT SPINNING OF METALS. LOUIS HIPPOLYTE EDMOND BRIOT, Paris, France. Filed Dec. 18, 1920. Serial No. 431,687. 5 Claims. (Cl. 207—17.)

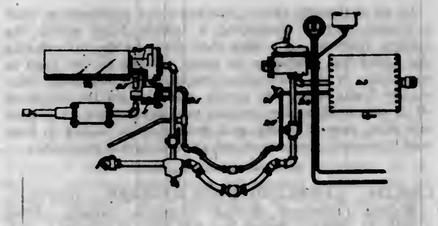


1. A cascade extrusion die for the extrusion under pressure of a solid metal ingot at one operation into a single one-piece bar containing substantially all of the metal of the ingot, said extrusion die comprising a series of interfitting dies having coaxial bores of progressively-decreasing diameters, the ratio of the diameters of the bores of any two successive dies being appreciably greater than the critical point of flow of the metal of the ingot.

1,395,218. CENTRIFUGAL LIQUID-EVACUATOR. JOHN A. BELT, Toronto, Ontario, Canada. Filed Mar. 3, 1917, Serial No. 152,446. Renewed Sept. 19, 1921. Serial No. 501,830. 3 Claims. (Cl. 103—43.)

1. In a device of the class described, the combination of a frame composed of two similar sections, holding bars securing said sections together, a shaft journaled in each section, a sectional side inclosing the space between the sections and adapted to be moved thereabout by the shaft, an inclosing casing for the frame having an inlet opening communicating with the space between the sections and an outlet opening, and means for rotating the shaft.

1,395,219. APPARATUS FOR CLEANSING FELTS. EDWARD D. BENNETT, Pulaski, N. Y. Filed Apr. 29, 1919. Serial No. 293,484. 1 Claim. (Cl. 92—50.)

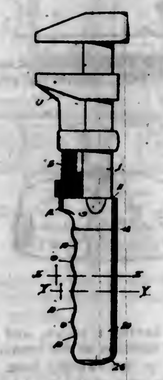


An apparatus for cleaning paper machine felts comprising a substantially rectangular box having a flat foraminous side and means for conducting a cleansing fluid under pressure into said box and through the foramina thereof, said box being portable and movable along and against the side of the felt opposite that into which the material to be removed enters.

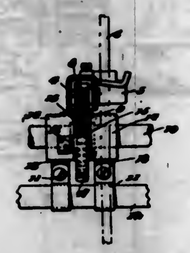
1,395,220. AUTOMOBILE-LOCK. FLETCHER O. BOSWELL, Philadelphia, Pa. Filed Jan. 21, 1919. Serial No. 272,260. 4 Claims. (Cl. 70—90.)

1. A lock for automobile steering gears comprising a clamp composed of two sections loosely hinged together, a semicircular boss formed on each of the sections, bayonet joint lugs projecting from the bosses, a lock casing having a head in which are formed bayonet joint grooves for engagement with the bayonet joint lugs, a locking bolt carried in the locking casing, the shank of said bolt being rectangular in cross section and adapted to pass into a rectangular opening in the sectional boss and means for manipulating said bolt.

1,395,221. AIR-BRAKE SYSTEM. HENRY ALLIS BRYAN, Madill, Okla. Filed Apr. 4, 1919. Serial No. 287,613. 3 Claims. (Cl. 303—76.)



1. A holding valve having a main chamber directly open to main reservoir pressure, an exhaust chamber open to the exhaust from the brake cylinder, a piston rod in said chambers, a piston on said rod to be operated by the pressure in the main chamber, a second piston on said rod to be operated by the pressure in the exhaust chamber, a valve carried by said rod to close an atmospheric exhaust port from the exhaust chamber, when the rod is at the limit of movement under the influence of the first mentioned piston, and to open said atmospheric exhaust port when the rod has been moved under the influence of the second piston.

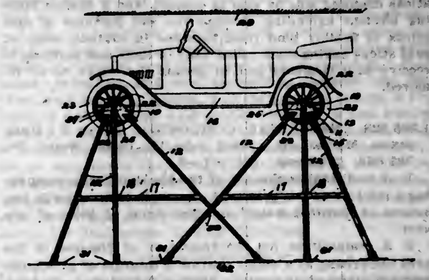


1,395,222. METHOD OF MAKING WRENCH-HANDLES. RUSSELL READ COES, Worcester, Mass., assignor of one-half to Coes Wrench Company, Worcester, Mass., a Corporation of Massachusetts. Original application filed July 24, 1919, Serial No. 312,923. Divided and this application filed July 1, 1920. Serial No. 393,230. 2 Claims. (Cl. 76—114.)

1. The method of making wrench-handles, which consists in forming a handle-frame comprising the neck-embracing ferrule, and longitudinal edge-supporting members integrally connected by laterally projecting transverse braces or cross-tie members disposed at intervals thereon with intervening spaces, providing a plurality of protuberances and depressions along the handle-frame; assembling and securing said handle-frame upon the wrench-bar shank, inclosing said shank and frame within a straight section of wrought-metal tubing of uniform gage and of a size suitable to fit the exterior of the frame members, then subjecting the assembled handle to pressure in dies, thereby

compressing the tubing rigidly upon the exterior of the outstanding member of the handle-frame and forcing portions of the tubular member inward into the intervening depressions to form finger-receiving corrugations in the exterior grip surface.

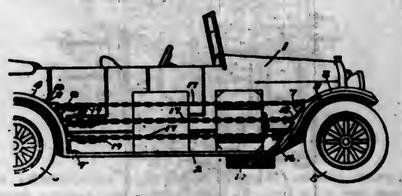
1,395,223. THREAD-SPINNING MACHINE. WILLIAM B. CONYNGHAM, Wilkes-Barre, Pa. Filed Oct. 27, 1920. Serial No. 420,005. 21 Claims. (Cl. 19—28.)



6. A combination with the feed shaft of a thread spinning machine having a spinning unit drive gear thereon of a fixed shield arranged adjacent the shaft and a thread cutter carried by said shield to cut the thread on its attempt to wind about the shaft.

1,395,224. FUEL-FEEDING DEVICE. JOSEPH C. COULOMBE, Lowell, Mass. Filed Jan. 15, 1916. Serial No. 72,198. 18 Claims. (Cl. 158—36.)

1. In a fuel feeding device having a suction chamber, a distributing chamber, a connection from the suction chamber to a source of suction, a connection from the suction chamber to a source of liquid supply, said distributing chamber open to atmospheric pressure; of a valve opening between the two chambers, a primary valve and a secondary valve controlling said opening, and means dependent upon the rise of liquid in the suction chamber for opening said valves.



1,395,225. METAL DOUBLE-DECKING BUCK FOR AUTOMOBILES. EDWARD S. EVANS, Detroit, Mich. Filed Sept. 8, 1919. Serial No. 322,555. 10 Claims. (Cl. 248—41.)

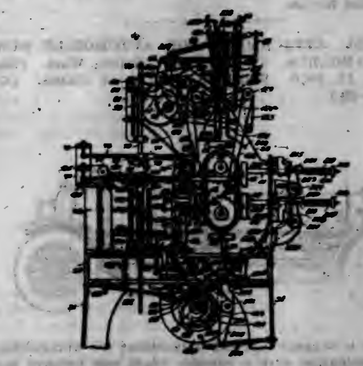
1. In an automobile loading means, a support including a mounting means comprising a sheet metal head plate having a laterally extending hub receiving saddle in one edge thereof, and legs removably attached to the plate supportingly projecting from the opposite edge thereof when assembled for use.

1,395,226. ATTACHMENT FOR AUTOMOBILE RUNNING-BOARDS. THOMAS L. FAY, Seattle, Wash. Filed Sept. 13, 1920. Serial No. 409,773. 3 Claims. (Cl. 224—29.)

1. In a baggage carrying attachment for automobiles, the combination with a running board and forward and rearward mud guards continuing therefrom, of bars secured to extend along the outer edges of said mud guards

having sockets at spaced intervals therein, a plurality of chains having ends equipped with rings that are slidable along one of said bars and adapted to be seated in said sockets, and having opposite end portions extendible about the other bar and adapted to be seated in its sockets to hold the chains at adjustably spaced distances, and hooks at the free ends engageable with links of the chains to secure these ends about the latter bar for the purpose set forth.

1,395,227. PAD OR MAT. HUGO FRESEN, Geneseo, N. Y. Filed Feb. 24, 1920. Serial No. 360,552. 2 Claims. (Cl. 68—27.)



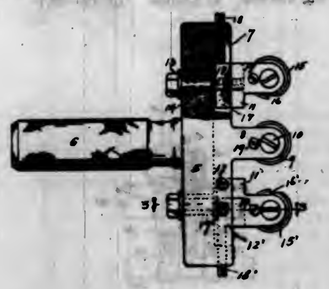
1. A flexible device of the kind described comprising sticks disposed side by side in contact, and a flexible binding element extending through the end portions of said sticks to flexibly bind them together in contact, some of said sticks having open ended slots in their end portions to receive said elements and to permit the sticks to be removed.

1,395,228. MEDICINAL COMPOUND. LOUIS J. HAISSIKOS, Moline, Ill. Filed July 17, 1920. Serial No. 397,053. 2 Claims. (Cl. 167—9.)

1. A medicinal compound of the kind set forth, comprising a mixture of two grains of pilocarpin hydrochlorid, two ounces of distilled water, and five drops of juice of *uva ursi*.

2. A composition for the treatment of diseases of the eyes comprising as a major portion a solution of pilocarpin hydrochlorid and as a minor portion the juice of *uva ursi*.

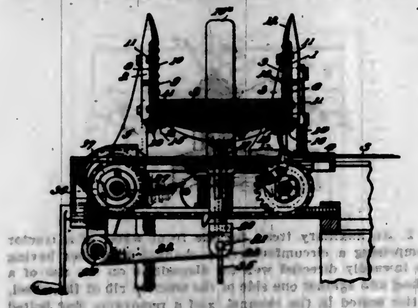
1,395,229. RECEPTACLE-MAKING MACHINE. HARRY A. INMAN and WILLIAM H. INMAN, Newark, N. Y. Filed Apr. 26, 1920. Serial No. 376,811. 55 Claims. (Cl. 93—44.)



1. In a receptacle making machine, a plurality of spaced blank folding devices, a movable mandrel for holding and shaping blanks having a continuous movement past certain of said devices to bring a blank into folding engagement therewith and having a dwell in its movement adjacent others of said devices during folding operations by the latter, and actuating means for said mandrel and said other folding devices.

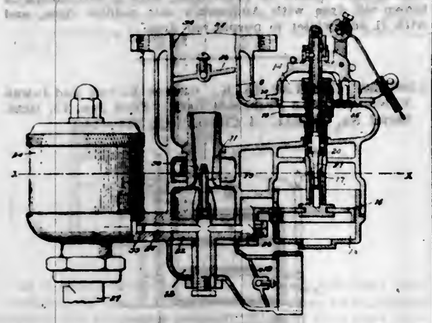
1,395,230. KNITTED CAP. DAVID KARGES, Milwaukee, Wis. Filed Mar. 7, 1921. Serial No. 450,249. 3 Claims. (Cl. 2—107.)

1. A knitted cap having a crown, and a band secured to the rear and side portions of the crown and adapted to be swung upwardly or downwardly from the lower margin of the crown, the ends of the band being rack knitted to form transverse extensions to provide ear muffs, and means carried by said crown for temporarily holding said ear muffs in a raised position when said band is adjusted to an upwardly extending position.

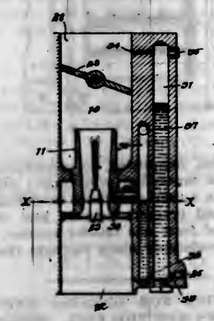


1,395,231. THREAD-GAGE. ROY A. KENYON, Newcastle, Ind. Filed July 14, 1920. Serial No. 396,113. 6 Claims. (Cl. 33—168.)

1. In a screwthread measuring device, the combination of a plurality of gage members each comprising a cylinder with screwthreaded periphery to receive the thread to be measured, the periphery of one of the gages being notched approximately the depth of its threads to a radial plane, said radial plane when the notched gage is in use being in a plane which is radial to a cooperating gage, and means for supporting the gages.



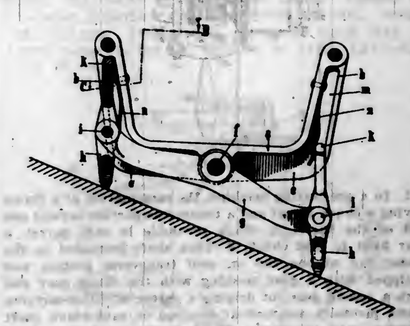
1,395,232. MAGAZINE AND SHEET-WITHDRAWING MECHANISM THEREFOR. ALFRED L. KNOWLTON, Chicago, Ill., assignor to Continental Can Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed July 2, 1919. Serial No. 308,474. 16 Claims. (Cl. 271—32.)



1. The combination of a magazine for supporting stacked sheets, and means for withdrawing the sheets from the bottom of the magazine, said magazine having means at spaced intervals for assisting in supporting the stacked sheets at points above the lower end thereof,

whereby the pressure of the stacked sheets on the lowermost sheet being withdrawn due to the weight of the stack is substantially uniform.

1,395,233. CARBURETER. FRANK C. MOCK, Chicago, Ill., assignor to Stromberg Motor Devices Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 28, 1915. Serial No. 46,774. 4 Claims. (Cl. 261—41.)



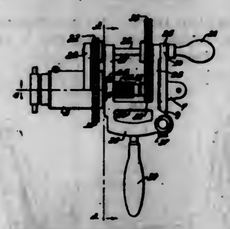
1. In a carbureter, a carbureting chamber having an air inlet and a mixture outlet, a throttle controlling said outlet, a constant level liquid fuel supply chamber, a fuel inlet for said carbureting chamber, a passageway leading from said fuel supply chamber to said fuel inlet and having a restriction therein, a well connected to said passageway between said restriction and said fuel inlet, said well, above the fuel level therein, being connected by a passageway for air only with the mixture outlet, whereby the partial vacuum applied to said well when the throttle approaches closed position causes liquid fuel to rise therein to a level above that of the fuel in the constant level chamber, the opening of the throttle reducing said vacuum and permitting said fuel to drop and feed to said fuel inlet.

2. In a carbureter, a carbureting chamber having an air inlet and a mixture outlet, a throttle controlling said outlet, a constant level liquid fuel supply chamber, a fuel nozzle extending into said carbureting chamber and fed from said supply chamber, a U-shaped well fed from said supply chamber, and a fuel nozzle leading from one arm of said well above the normal level of liquid fuel therein, said arm communicating with the atmosphere, and means subjecting the other arm to suction above the throttle to lift the fuel therein above the normal level, the reduction of said suction permitting a drop of the fuel in the last mentioned arm and a consequent rise of the fuel in the first named arm above the fuel nozzle leading therefrom.

3. In a carbureter, a carbureting chamber having an air inlet and a mixture outlet, a throttle controlling said outlet, a constant level liquid fuel supply chamber, a fuel nozzle extending into said carbureting chamber and fed from said supply chamber, a U-shaped well fed from said supply chamber, and a fuel nozzle leading from one arm of said well above the normal level of liquid fuel therein, said arm communicating with the atmosphere, a restricted connection between the other arm and atmosphere, means subjecting said other arm to suction to lift the fuel therein above the normal level, the reduction of such suction permitting a drop of the fuel level in said other arm and consequent flow of fuel to the first named arm and a rise in fuel level therein above the fuel nozzle leading therefrom.

4. In a carbureter, a carbureting chamber having an air inlet and a mixture outlet, a throttle controlling said outlet, a constant level liquid fuel supply chamber, a fuel nozzle extending into said carbureting chamber and fed from said supply chamber, a U-shaped well fed by a restricted passage from said supply chamber, a fuel nozzle leading from one arm of said well above the normal level of liquid therein, said arm communicating with the atmosphere, and means subjecting the other arm to suction to lift the fuel therein above the normal level, the reduction of said suction permitting a drop of fuel level in said other arm and a rise of the fuel level in the first named arm above the fuel nozzle leading therefrom.

1,395,234. CLIMBING-IRON. JOSEPH SELINGER-BALZER, Obersteinmaur, Switzerland. Filed Dec. 3, 1920. Serial No. 428,174. 1 Claim. (Cl. 36—62.)



A climbing-iron comprising a bowed member having grooves at each end and adapted to serve as a foot-rest, a lever having a horizontal axis centrally of its ends mounted on said bowed member, and a pivotally mounted spur at each end of the lever and arranged to be guided in the grooves of said bowed member.

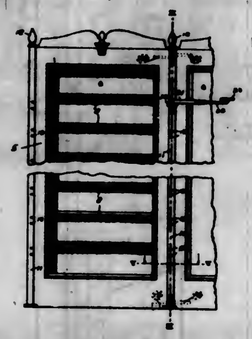
1,395,235. DENTAL AMALGAM OR ALLOY MIXER. BOHUSLAV STEIL, Chicago, Ill. Filed July 22, 1921. Serial No. 487,080. 2 Claims. (Cl. 259—75.)

1. The combination with a cylindrical frame having a laterally and radially extended arm provided with a slot disposed longitudinally with respect to said frame, of a cylindrical body rotatably mounted in said frame and having at one of its ends an external annular flange to co-act with the adjacent end of the frame, a centrally orificed filling located in the body for rotation therewith, a disk having a central opening surrounding a portion of said filling and secured to that end of the body opposite its flange, a segmental cam-block on the face of the disk adjacent the body and a spring pressed lever pivoted at one of its ends in the slot of the said arm and having at its other end spaced resilient clamping members for a container.

1,395,236. MACHINE FOR REPAIRING CUES AND THE LIKE. HENRY O. TAYLOR, Rockford, Ill. Filed Feb. 10, 1920. Serial No. 357,495. 13 Claims. (Cl. 144—205.)

1. In a cue-cutting machine, the combination of a frame having a chuck barrel and a transverse portion beyond one end of the barrel, a chuck revoluble in said barrel, a gear fixed to said chuck, a crank shaft journaled on the frame and at one end on said transverse portion and equipped with a gear meshing with the chuck gear and with a second gear for driving a cutter, a cutter-carrying frame pivotally mounted at one end on said crank shaft between said transverse frame portion and the chuck barrel, a cutter shaft journaled on said cutter-carrying frame and equipped with a cutter and a gear meshing with said cutter driving gear, and a handle on the outer end of said cutter-carrying frame, whereby the cutter may be moved into and out of cutting relation with a cue carried by said chuck.

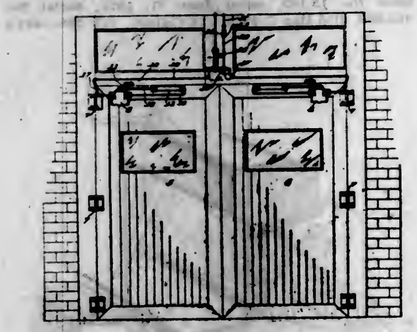
1,395,237. TREAD FOR TRACTOR-WHEELS. HENRY B. TURNER, Salem, Calif. Filed Feb. 26, 1921. Serial No. 447,970. 3 Claims. (Cl. 301—39.)



2. An auxiliary tread for the front wheel of a tractor comprising a circumferentially channeled member having an inwardly directed web for disposition on the rim of a wheel and against one side of the traction rib of the wheel, a tire seated in the channel, and a removable ring bolted to the web outwardly of the periphery of the rib and disposed on the rim and against the other side of the rib.

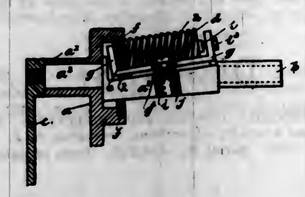
1,395,238. AZO DYE AND ITS PROCESS OF MANUFACTURE. ROBERT ARNOT, Zurich, Switzerland. Filed Oct. 12, 1920. Serial No. 416,517. 5 Claims. (Cl. 8—1.)

1. The diazonium compounds of retene which form with R salt reddish to violet dyes, with G salt brown to brown-red dyes with Andersen's salt reddish dyes, and with H acid violet to purple red dyes.



1,395,239. DISPLAY-RACK. GEORGE BAILEY and JAMES P. NIELSEN, San Francisco, Calif. Filed Jan. 13, 1920. Serial No. 351,611. 1 Claim. (Cl. 211—14.)

A display device, comprising, in combination, a series of frames, hinges connecting said frames together, said hinges mounted on a tubular member extending the length of the frames and brackets between said frames, said brackets supported from said tubular member, and adapted to swing approximately about the axes thereof.



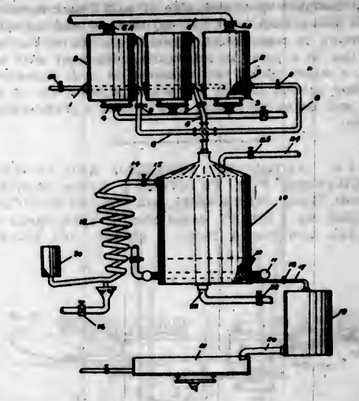
1,395,240. DEVICE FOR OPENING AND CLOSING GARAGE-DOORS AND THE LIKE. MYRON L. HANEY, Beloit, Wis. Filed Feb. 10, 1920. Serial No. 357,546. 6 Claims. (Cl. 268—9.)

1. In a door-check and closer device, the combination of a hinged door, a door-check and closer carried by the door and having an operating part, a connection between said operating part and a fixed support, whereby the door upon being opened will be closed and checked by said device, a fluid pressure device supported by the door, a connection between said fluid-pressure device and the operating part of the door-check and closer device, and means for causing

said fluid-pressure device to open the door through the agency of said operating part of the door-check and closer device.

1,395,241. PENCIL-SHARPENER. SAMUEL WHITEHEAD, Romford, England. Filed May 15, 1914. Serial No. 838,796. 1 Claim. (Cl. 120—96.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

In a pencil sharpener of the character described comprising a stationary and a revoluble member, an adjustable support for the cutter pivotally mounted upon said revoluble member, a screw connecting said support with said revoluble member, and a spring interposed between said support and said revoluble member, substantially as described.



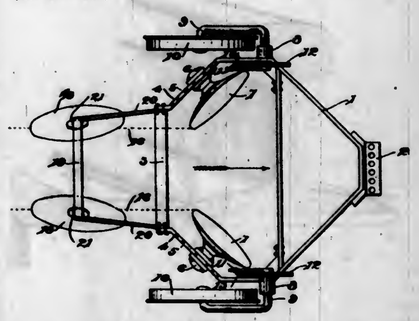
1,395,242. COLLOIDAL SUSPENSION OF POLYMERS AND PROCESS OF MAKING THE SAME. JOHN WARNE PHILLIPS, Chicago, Ill. Filed Mar. 6, 1919. Serial No. 281,067. 16 Claims. (Cl. 134—11.)

2. The process of forming a suspension of tung oil polymers which comprises dissolving tung oil in a solvent and polymerizing the dispersed oil.

REISSUES.

15,211. PROCESS FOR THE PRODUCTION OF ALCOHOL FROM GAS CONTAINING ETHYLENE. CLEBURNE A. BASORE, Auburn, Ala. Filed Sept. 2, 1921. Serial No. 498,161. Original No. 1,385,515, dated July 26, 1921, Serial No. 452,285, filed Mar. 14, 1921. 11 Claims. (Cl. 23—24.)

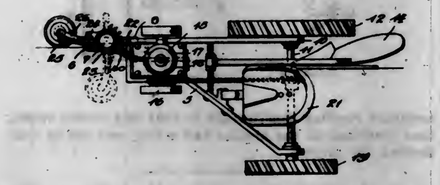
2. The hereindescribed process for the production of ethyl alcohol from a mixture of sulfuric acid and ethyl hydrogen sulfate, which consists in adding to said mixture water in amount equal to from 50 per cent. to 70 per cent. or the volume of the said mixture, subjecting the



resultant reacting constituents to heat in a closed vessel, then distilling off the alcohol and water, and finally condensing the alcohol.

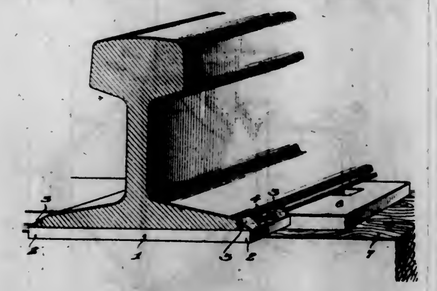
15,212. PRESS-BUTTON. ALFRED MANN, Barmen, Germany, assignor, by mesne assignments, to Waldes & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 2, 1920. Serial No. 355,785. Original No. 1,128,341, dated Feb. 16, 1915, Serial No. 698,830, filed May 21, 1912. 6 Claims. (Cl. 24—218.)

1. A press button comprising a stud member and a socket member or cap, the socket member being formed with an opening to receive the stud which is of approximately the same diameter as the largest part of the head of the stud and said socket member being formed also with slots, to receive a retaining spring, in a part of the cap which is of less diameter than the widest part thereof.



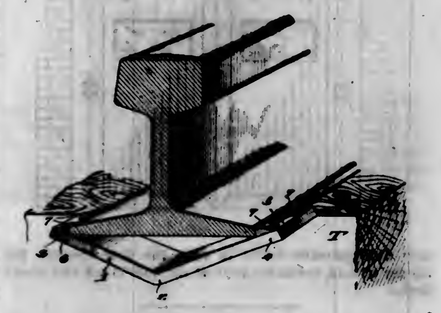
15,213. MACHINE FOR RIDGING LAND. VERNON E. PARRISH, Cupertino, Calif. Filed Aug. 23, 1921. Serial No. 494,684. Original No. 1,339,040, dated May 4, 1920, Serial No. 334,506, filed Oct. 30, 1919. 10 Claims. (Cl. 97—37.)

1. A machine for ridging land including a frame, plowing means mounted upon each side thereof and with-



in the same and arranged to turn the plowed soil inwardly toward the draft line of the machine, a lever operatively mounted upon each side of said frame forwardly of said plows, each lever having its outer end extending backwardly in substantial parallel relation to the said draft line to a point in substantial alinement with said plows, a wheel operatively mounted on each backwardly extending portion of said levers and adjacent one of said plows, and means for locking each lever in a predetermined position.

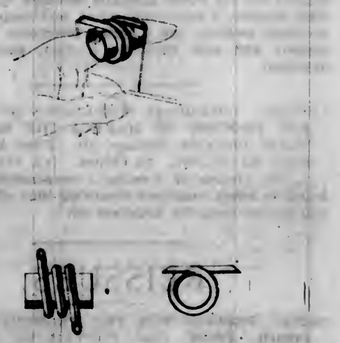
15,214. AUTOMATIC STEERING AND CONTROL MECHANISM FOR TRACTORS. RALPH WHIPPLE, Detroit, Mich. Filed Aug. 31, 1921. Serial No. 497,381. Original No. 1,296,027, dated Mar. 4, 1919, Serial No. 265,146, filed Dec. 3, 1918. 3 Claims. (Cl. 97—81.)



1. In combination with a tractor provided with a source of power and control means therefor, steering mechanism, a pilot device connected with said steering mechanism and adapted to travel in a furrow and to be held from turning by contact with the wall thereof, means for holding said pilot device against the furrow wall, and connections between the steering mechanism and the power control adapted to be actuated by the steering mechanism when the same is turned by said holding means as the pilot device turns from contact with the furrow wall.

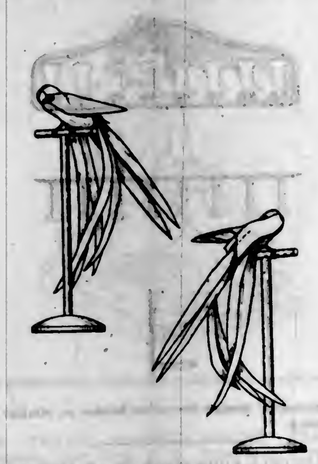
15,215. WELDED RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed Aug. 15, 1921. Serial No. 492,320½. Original No. 1,359,864, dated Nov. 23, 1920, Serial No. 404,427, filed Aug. 18, 1920. Reissue No. 15,131, dated June 21, 1921, Serial No. 466,595, filed May 3, 1921. 13 Claims. (Cl. 238—321.)

10. A rail anchor consisting of a body part extending across the rail base and welded to both flanges.



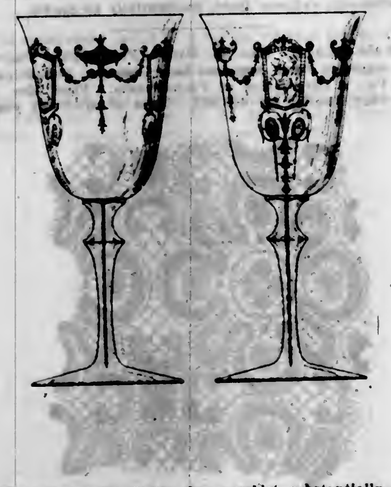
15,216. WELDED RAIL-ANCHOR. BENJAMIN WOLHAUPTER, New Rochelle, N. Y. Filed Aug. 15, 1921. Serial No. 492,321½. Original No. 1,369,808, dated Feb. 22, 1921, Serial No. 430,821, filed Dec. 15, 1920. Reissue No. 15,132, dated June 21, 1921, Serial No. 466,596, filed May 3, 1921. 14 Claims. (Cl. 238—321.)

1. A rail anchor consisting of a bent bar extending across the rail base and welded to the edges of the rail flanges.



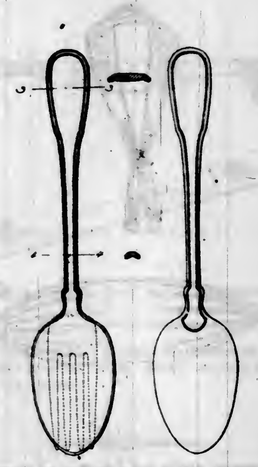
DESIGNS.

59,449. TENSION DEVICE FOR KNITTING. SANTO ABATE and JOHN BUONINCONTRI, Irvington, N. J. Filed Feb. 10, 1921. Serial No. 444,045. Term of patent 14 years.



The ornamental design for a tension device for knitting, as shown.

59,450. FIGURETTE. LAURA L. ADAM, Seattle, Wash. Filed May 4, 1921. Serial No. 465,702. Term of patent 3½ years.

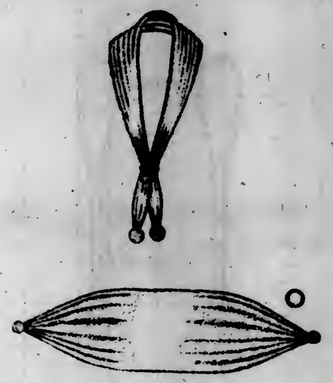


The ornamental design for a figurette, as shown.

59,451. GOBLET. JOSEPH O. BALDA, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, Ohio. Filed Apr. 5, 1919. Serial No. 287,889. Term of patent 14 years.

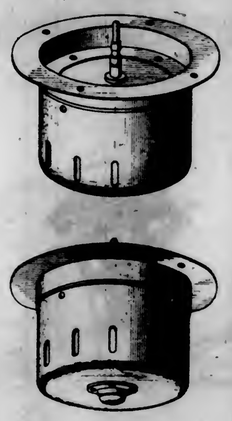
The ornamental design for a goblet substantially as shown and described.

59,452. HANDLE FOR A SPOON, FORK, OR SIMILAR ARTICLE. ARTHUR LEROY BARNEY, New York, N. Y., assignor to Tiffany & Company, New York, N. Y., a Corporation of New York. Filed June 16, 1921. Serial No. 478,165. Term of patent 14 years.



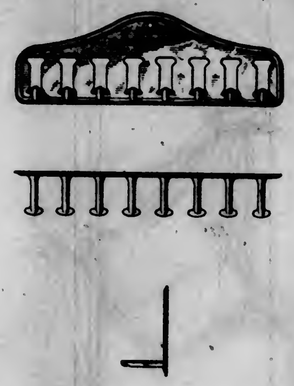
The ornamental design for a handle for a spoon, fork, or other similar article as shown.

59,453. FINGER-RING. ISIDOAR BERNSTEIN, Brooklyn, N. Y. Filed Nov. 11, 1920. Serial No. 423,490. Term of patent 7 years.



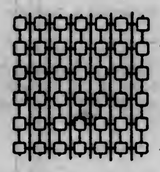
The ornamental design for a finger ring as shown.

59,454. MUFFLER. JESSE W. BETTMANN, New York, N. Y., assignor to Atlantic Knitting Mills Inc., New York, N. Y., a Corporation of New York. Filed Feb. 10, 1921. Serial No. 444,041. Term of patent 3½ years.



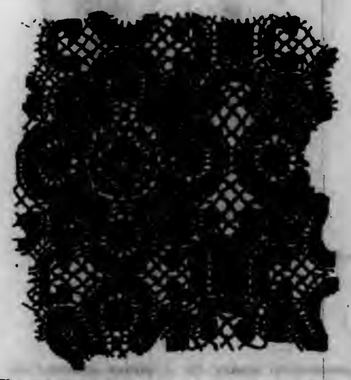
The ornamental design for a muffler, as shown.

59,455. MOTOR-CASING. HENRY C. BRACHTL, Chicago, Ill. Filed Jan. 5, 1920. Serial No. 349,618. Term of patent 7 years.



The ornamental design for a motor casing, as shown.

59,456. TIE-HOLDER OR SIMILAR ARTICLE. ABEL COLE, Chicago, Ill. Filed May 7, 1921. Serial No. 467,585. Term of patent 7 years.

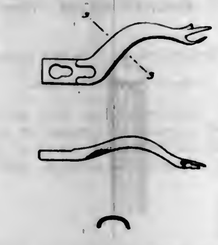


The ornamental design for a tie holder or similar article, as shown.

59,457. AIR-CELL FORMATION OF AN AUTOMOBILE-RADIATOR FRONT. ELMER H. CROSS, Toledo, Ohio. Filed Mar. 26, 1920. Serial No. 369,104. Term of patent 3½ years.

The ornamental design for an air cell formation of an automobile radiator front, substantially as shown.

59,458. LACE. MARC H. DAUDY, Philadelphia, Pa., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1921. Serial No. 468,433. Term of patent 3½ years.

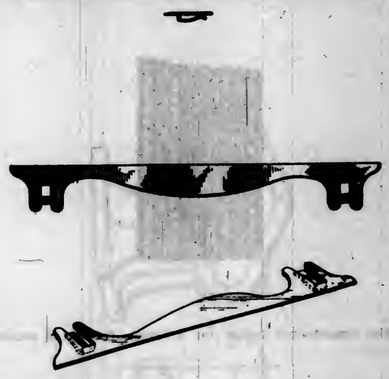


The ornamental design for lace, substantially as shown.

59,459. STATUETTE. LOUIS DAVIDOVITS, New York, N. Y. Filed June 18, 1921. Serial No. 478,754. Term of patent 14 years.

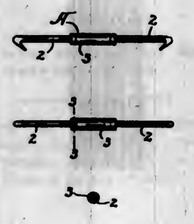
The ornamental design for a statuette, as shown.

59,460. SEWING-MACHINE LOOPER. CHARLES A. DEARBORN, New York, N. Y. Filed Mar. 1, 1921. Serial No. 448,852. Term of patent 14 years.



The ornamental design of a sewing machine looper, as shown.

59,461. SEWING-MACHINE PRESSER-FOOT. CHARLES A. DEARBORN, New York, N. Y. Filed Mar. 1, 1921. Serial No. 448,853. Term of patent 14 years.



The ornamental design of a sewing machine presser foot, as shown.

59,462. RULER. ARTHUR P. DRAPER, Lebanon, Mo. Filed May 10, 1920. Serial No. 380,422. Term of patent 14 years.

The ornamental design for a ruler, as shown.

59,463. COLLAR-PIN. ALFRED M. DUTCHER, St. Paul, Minn. Filed May 26, 1920. Serial No. 384,474. Term of patent 3½ years.

The ornamental design for a collar pin as shown.

59,464. CAP. LOUIS H. ENSTEN, Cleveland, Ohio. Filed Oct. 21, 1920. Serial No. 418,627. Term of patent 14 years.

The ornamental design for a cap, as shown.

59,465. TEXTILE FABRIC. Thomas W. Hoyne, Jr., Brooklyn, N. Y. Filed July 8, 1921. Serial No. 483,369. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

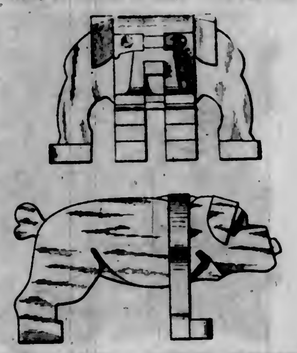
59,466. TEXTILE FABRIC. Thomas W. Hoyne, Jr., Brooklyn, N. Y. Filed July 8, 1921. Serial No. 483,370. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

59,467. RAG DOLL OR ARTICLE OF SIMILAR NATURE. Bertha E. Friet, New York, N. Y. Filed June 28, 1921. Serial No. 479,926. Term of patent 7 years.

The ornamental design for a rag doll or article of similar nature as shown.

59,468. COMBINED PERFUMER AND DISINFECTOR. Alfred J. Blanton, Bridgeport, Conn. Filed Apr. 7, 1921. Serial No. 459,484. Term of patent 7 years.



An ornamental design for a combined perfumer and disinfector or similar article as shown.

59,469. TASSEL. William J. Gagnon, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Mar. 22, 1921. Serial No. 454,486. Term of patent 14 years.

The ornamental design for a tassel, substantially as shown.

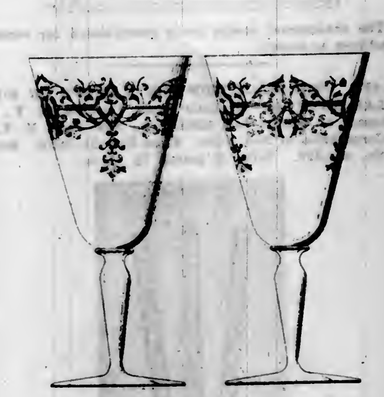
59,470. ANIMAL FIGURE. James S. Gledhill and William H. Smith, Los Angeles, Calif. Filed Mar. 15, 1921. Serial No. 452,549. Term of patent 7 years.

The ornamental design for an animal figure, as shown.

59,471. BOW-HOLDER. Edward R. Hamilton, Westfield, Mass. Filed Dec. 20, 1920. Serial No. 433,949. Term of patent 3½ years.

The ornamental design for a bow holder as shown.

59,472. COVER FOR AN INKSTAND. Harry Haupt, Elmsford, N. Y., assignor to Kimpton, Haupt & Co., New York, N. Y., a Firm. Filed Feb. 21, 1919. Serial No. 278,527. Term of patent 14 years.

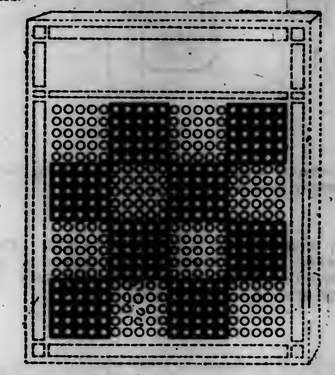


The ornamental design for a cover for an inkstand, as shown.

59,473. SANITARY DRINKING-FOUNTAIN. Alfred G. Hawa, Berkeley, Calif. Filed Nov. 1, 1920. Serial No. 421,194. Term of patent 14 years.

The original design for a sanitary drinking fountain substantially as shown and described.

59,474. GOBLET OR SIMILAR ARTICLE. Thomas Clarence Hensey, Newark, Ohio, assignor to A. H. Heisey & Co., Newark, Ohio. Filed Apr. 5, 1919. Serial No. 287,888. Term of patent 14 years.



The ornamental design for a goblet or similar article substantially as shown and described.

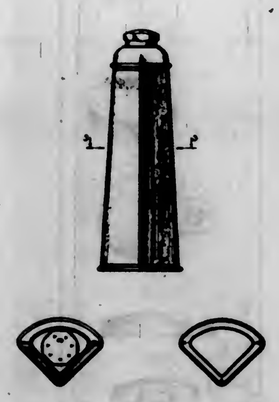
59,475. SERVICE BADGE OR BUTTON. HAYWOOD H. HILLYER, St. Louis, Mo. Filed Dec. 14, 1918. Serial No. 266,823. Term of patent 3½ years.

The ornamental design for a service badge or button as shown and described.

59,476. PUNCH-BOARD FOR VENDING-MACHINES. JOSEPH W. HOODWIN, Chicago, Ill., assignor to J. W. Hoodwin Company, Chicago, Ill., a Corporation. Filed Aug. 25, 1920. Serial No. 405,968. Term of patent 7 years.

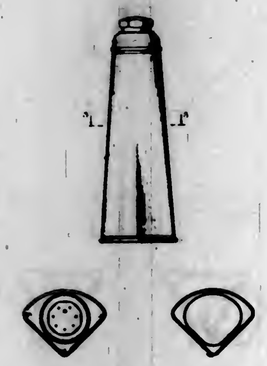
The ornamental design for a punch-board for vending machines as shown.

59,477. ORNAMENTATION FOR A GLOVE OR SIMILAR ARTICLE. WILLIAM HORN, Oneonta, N. Y., assignor to Quality Silk Mills, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 31, 1920. Serial No. 434,378. Term of patent 3½ years.



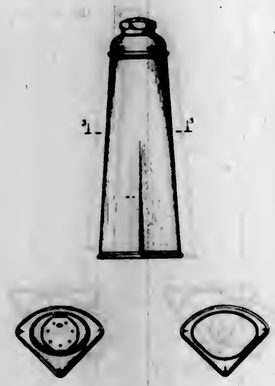
The ornamental design for ornamentation for a glove or similar article, as shown.

59,478. ORNAMENT FOR LIGHTING-FIXTURES. HAMILTON T. HOWELL, New York, N. Y., assignor to Alfred Vester Sons, Inc., Providence, R. I., a Corporation of Rhode Island. Filed Dec. 20, 1920. Serial No. 432,117. Term of patent 14 years.



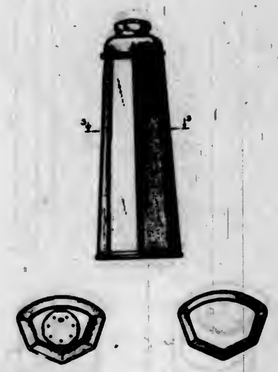
The ornamental design for an ornament for lighting fixtures, as shown.

59,479. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEM S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,804. Term of patent 7 years.



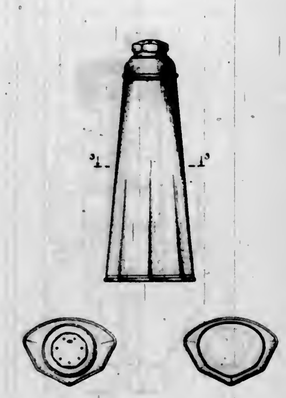
The ornamental design for a powder container or similar receptacle as shown and described.

59,480. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEM S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,805. Term of patent 7 years.



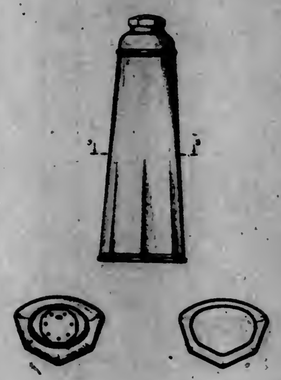
The ornamental design for a powder container or similar receptacle as shown and described.

59,481. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEM S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,806. Term of patent 7 years.



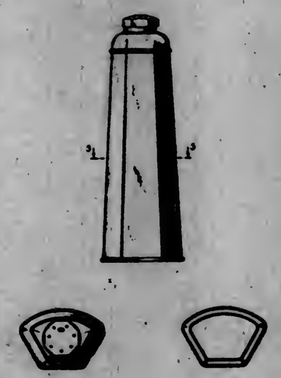
The ornamental design for a powder container or similar receptacle as shown and described.

59,482. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEM S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,807. Term of patent 7 years.



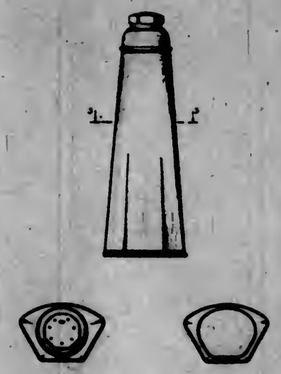
The ornamental design for a powder container or similar receptacle as shown and described.

59,483. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEM S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,808. Term of patent 7 years.



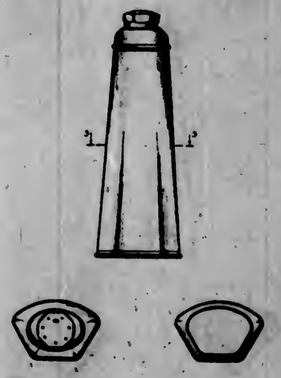
The ornamental design for a powder container or similar receptacle as shown and described.

59,484. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,809. Term of patent 7 years.



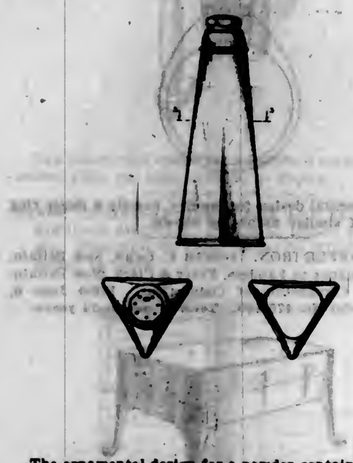
The ornamental design for a powder container or similar receptacle as shown and described.

59,485. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,810. Term of patent 7 years.



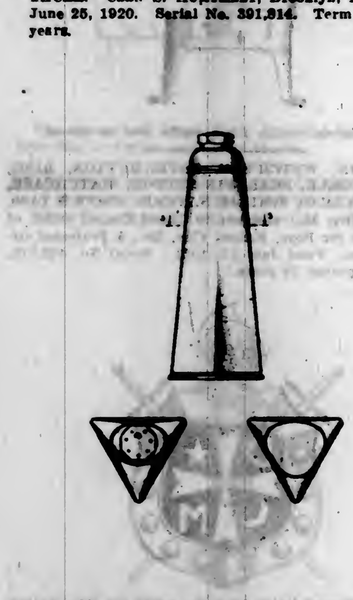
The ornamental design for a powder container or similar receptacle as shown and described.

59,486. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,811. Term of patent 7 years.



The ornamental design for a powder container or similar receptacle as shown and described.

59,487. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,812. Term of patent 7 years.



The ornamental design for a powder container or similar receptacle as shown and described.

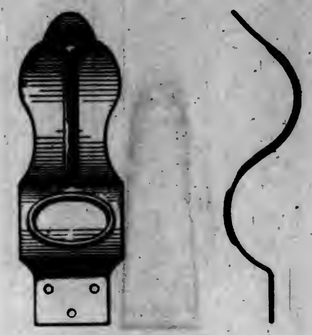
59,488. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,813. Term of patent 7 years.

The ornamental design for a powder container or similar receptacle as shown and described.

59,489. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed June 25, 1920. Serial No. 391,814. Term of patent 7 years.

The ornamental design for a powder container or similar receptacle as shown and described.

59,490. POWDER-CONTAINER OR SIMILAR RECEPTACLE. CLEN S. HUMPHREY, Brooklyn, N. Y. Filed June 26, 1920. Serial No. 392,109. Term of patent 7 years.



The ornamental design for a powder container or similar receptacle as shown and described.

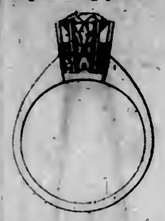
59,491. DOLL. EDNA A. HUTCHISON, Independence, Mo. Filed July 5, 1921. Serial No. 482,609. Term of patent 3½ years.

The ornamental design for a doll, as shown.

59,492. NEWSPAPER AND PARCEL HOLDER. PIETRO JACOVINI, Philadelphia, Pa. Filed Feb. 4, 1921. Serial No. 442,551. Term of patent 7 years.

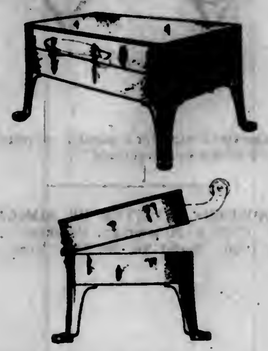
The ornamental design for a newspaper and parcel holder, as shown.

59,493. CHAIN ORNAMENT. KONSTANTY KOSTOWSKI, Rockwood, Pa. Filed Apr. 12, 1921. Serial No. 460,817. Term of patent 7 years.



The ornamental design for a chain ornament as shown.

59,494. TIRE. EMIL J. KRAFT, Racine, Wis., assignor to Racine Rubber Company, Racine, Wis., a Corporation of Wisconsin. Filed June 15, 1921. Serial No. 477,835. Term of patent 14 years.



The ornamental design for a tire, as shown.

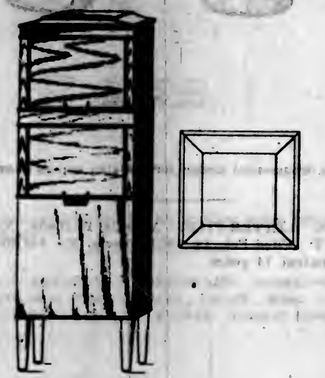
59,495. JEWELRY—NAMELY, A FINGER-RING OR ARTICLE OF SIMILAR NATURE. JACQUES KREISLER, New York, N. Y., assignor to Jacques Kreisler & Co., New York, N. Y., a Firm composed of Jacques Kreisler and Adele Stern. Filed Dec. 6, 1920. Serial No. 428,821. Term of patent 3½ years.

The ornamental design for jewelry, namely a finger ring or article of similar nature as shown.

59,496. WAFFLE-IRON. JOSEPH F. LAMB, New Britain, Conn., assignor to Landers, Frary & Clark, New Britain, Conn., a Corporation of Connecticut. Filed June 6, 1921. Serial No. 475,460. Term of patent 14 years.

The ornamenal design for a waffle iron as shown.

59,497. PIN, WATCH-FOB, LAPEL-BUTTON, RING, BELT-BUCKLE, SEAL, PIN-BUTTON, WATCHCASE, OR ARTICLE OF SIMILAR NATURE. FRANK S. LAND, Kansas City, Mo., assignor to Grand Council Order of De Molay for Boys, Kansas City, Mo., a Fraternal Organization. Filed Jan. 17, 1921. Serial No. 438,015. Term of patent 14 years.



The ornamental design for a pin, watch fob, lapel button, ring, belt buckle, seal, pin button, watchcase, or article of similar nature, as shown.

59,498. COMBINED HINGE AND BRACKET SOCKET-PIECE FOR LAMP-CASINGS. LEON LAPEDUS, Brooklyn, N. Y. Filed Jan. 5, 1921. Serial No. 435,277. Term of patent 3½ years.

The ornamental design for a combined hinge and bracket socket piece for lamp castings, as shown.

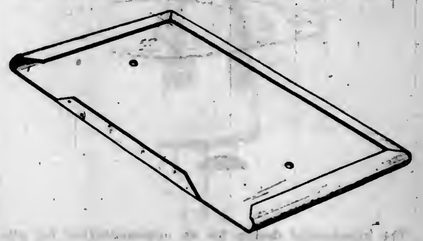
59,499. COMBINED BREAD-BOX AND FLOUR-BIN OR SIMILAR ARTICLE. PHILIP G. LUCAS, Jr., St. Louis, Mo. Filed Apr. 26, 1920. Serial No. 376,880. Term of patent 14 years.

The ornamental design for a combined bread box and flour bin, or similar article, as shown.

59,500. INCANDESCENT ELECTRIC LAMP. ANTHONY C. MANNWEILER, Fort Wayne, Ind. Filed June 9, 1921. Serial No. 476,854. Term of patent 14 years.

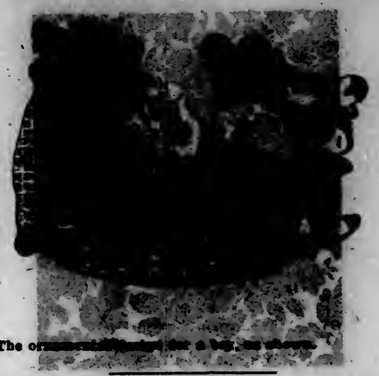
The ornamental design for an incandescent electric lamp, as shown.

59,501. TEXTILE FABRIC. WALTER WILLIAM MAYER, New York, N. Y. Filed June 15, 1921. Serial No. 477,526. Term of patent 7 years.



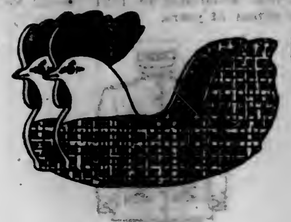
The ornamental design for a textile fabric substantially as shown.

59,502. MILITARY UNIFORM. HASKELL K. MEACHAM, Abilene, Tex. Filed May 10, 1921. Serial No. 468,435. Term of patent 14 years.



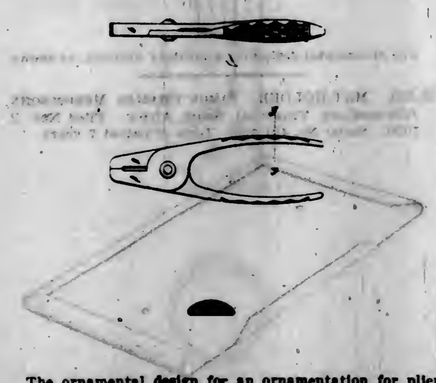
The ornamental design for a military uniform, as shown.

59,503. MAT-HOLDER. SIMON CHARLES MENDELSOHN, Johannesburg, Transvaal, South Africa. Filed Nov. 2, 1920. Serial No. 421,423. Term of patent 7 years.



The ornamental design for a mat holder, as shown.

59,504. TOY. Roy Mosby, Newton, N. H. Filed Apr. 12, 1921. Serial No. 460,810. Term of patent 7 years.

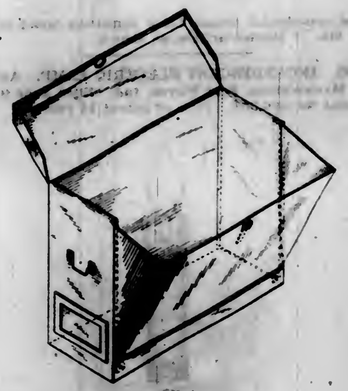


The ornamental design for a toy, as shown.

59,505. TOY. Roy Mosby, Newton, N. H. Filed Apr. 12, 1921. Serial No. 460,811. Term of patent 7 years.

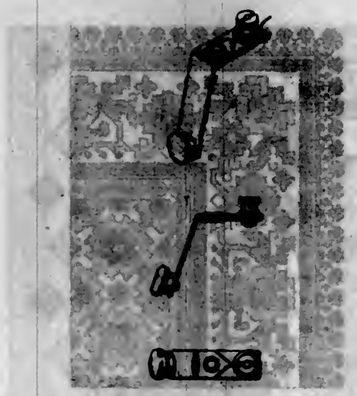
The ornamental design for a toy, as shown.

59,506. ORNAMENTATION FOR PLIER-HANDLES OR SIMILAR TOOLS. Earl W. Myers, New York, N. Y. Filed May 20, 1921. Serial No. 471,256. Term of patent 14 years.



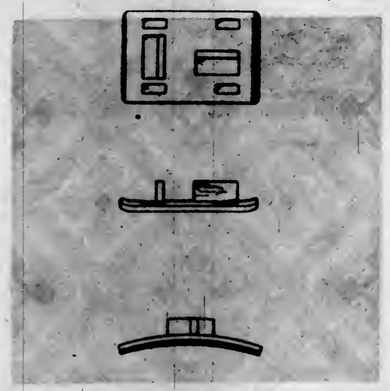
The ornamental design for an ornamentation for plier handles or similar tools, as shown.

59,507. LOVING-CUP. Katherine H. Cone, Baltimore, Md. Filed Jan. 31, 1921. Serial No. 441,437. Term of patent 14 years.



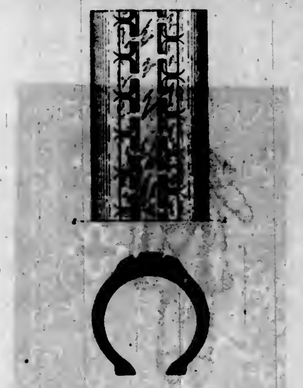
The ornamental design for a loving cup as shown.

59,508. LETTER-FILE. Arthur Paulson, New York, N. Y. Filed Feb. 12, 1921. Serial No. 444,699. Term of patent 14 years.



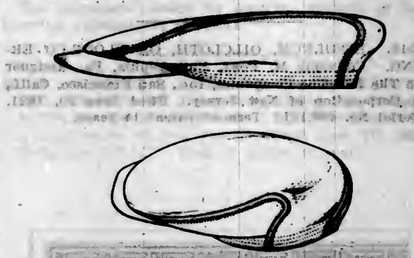
The ornamental design for a letter file as shown.

59,509. IGNITION-TESTER AND SPARK-GAP. Charles H. Buck, Philadelphia, Pa. Filed June 13, 1921. Serial No. 477,321. Term of patent 7 years.



The ornamental design for an ignition tester and spark gap, as shown.

59,510. ANTISKID CROSS-CHAIN. Alexander M. Jamieson and Jesse Murphy, Duluth, Minn. Filed June 17, 1921. Serial No. 478,442. Term of patent 14 years.



The ornamental design for an antiskid cross chain, as shown.

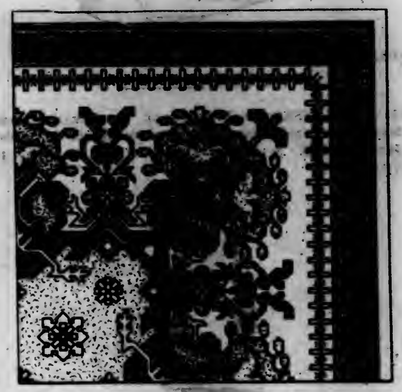
59,511. TIRE. Reuben Phillips, New Haven, Conn., assignor to The Dale Tire & Rubber Co., New Haven, Conn., a Corporation. Filed July 26, 1920. Serial No. 398,591. Term of patent 14 years.

The ornamental design for a tire, as shown.

59,512. CAP. Benjamin Podolsky, New York, N. Y. Filed June 2, 1921. Serial No. 474,581. Term of patent 3½ years.

The ornamental design for a cap, as shown.

59,513. DRESSED DOLL. Simon de Kabanine and Mary de Poroshovchenkova, London, England. Filed Jan. 13, 1920. Serial No. 351,364. Term of patent 14 years.

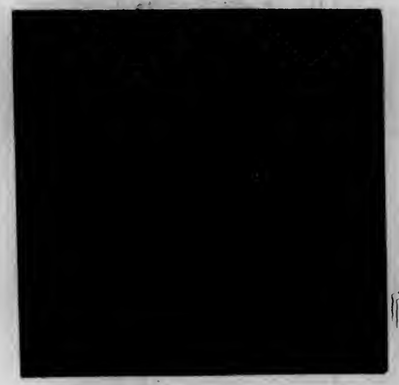


The ornamental design for a dressed doll as shown.

59,514. DRESSED DOLL. SERGE DE KASARINE and MARY DE POSNOVCHIKOVA, London, England. Filed JAN. 13, 1920. Serial No. 351,265. Term of patent 14 years.

The ornamental design for a dressed doll as shown.

59,515. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. POST, Philadelphia, Pa., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,121. Term of patent 14 years.

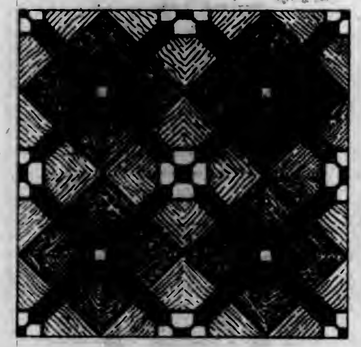


The ornamental design for linoleum, oilcloth or floor covering, substantially as shown.

59,516. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. POST, Philadelphia, Pa., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,122. Term of patent 14 years.

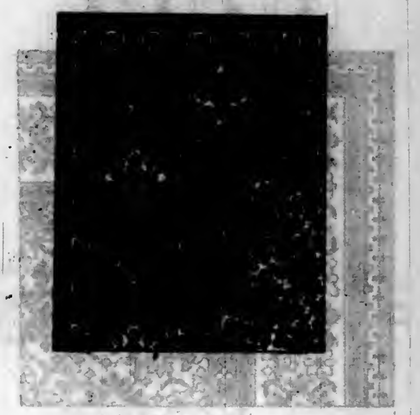
The ornamental design for linoleum, oilcloth or floor covering, substantially as shown.

59,517. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. POST, Philadelphia, Pa., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,123. Term of patent 14 years.



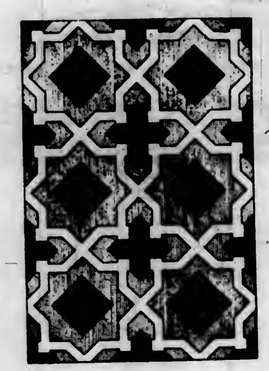
The ornamental design for linoleum, oilcloth or floor covering, substantially as shown.

59,518. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. POST, Philadelphia, Pa., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,124. Term of patent 14 years.



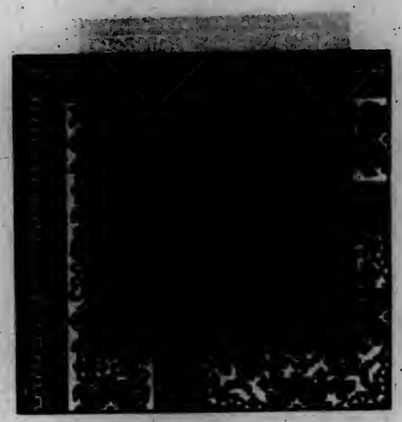
The ornamental design for linoleum, oilcloth or floor covering, substantially as shown.

59,519. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. POST, Philadelphia, Pa., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,125. Term of patent 14 years.



The ornamental design for linoleum, oilcloth or floor covering, substantially as shown.

59,520. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. POST, Philadelphia, Pa., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,126. Term of patent 14 years.

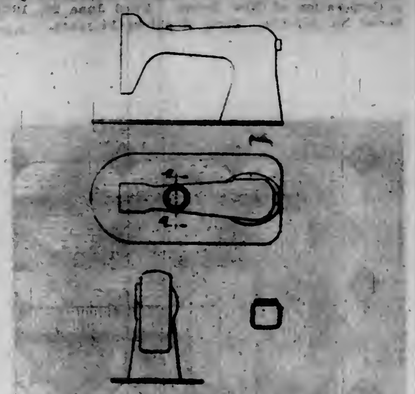


The ornamental design for linoleum, oilcloth, or floor covering, substantially as shown.

59,521. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. POST, Philadelphia, Pa., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,127. Term of patent 14 years.

The ornamental design for linoleum, oilcloth, or floor covering, substantially as shown.

59,522. LINOLEUM, OILCLOTH, OR FLOOR-COVERING. CORNELIA M. PEET, Philadelphia, Pa., assignor to The Pantasote Companies, Inc., San Francisco, Calif., a Corporation of New Jersey. Filed June 20, 1921. Serial No. 479,128. Term of patent 14 years.

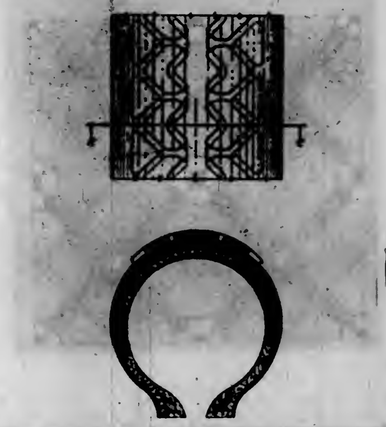


The ornamental design for linoleum, oilcloth or floor covering, substantially as shown.

59,523. FINGER-RING. HENRY RUPPIENN, Chicago, Ill. Filed July 18, 1921. Serial No. 485,752. Term of patent 7 years.

The ornamental design for a finger ring as shown.

59,524. SEWING-MACHINE HEAD. ALBERT D. SMITH, Detroit, Mich. Filed June 7, 1920. Serial No. 387,192. Term of patent 3½ years.

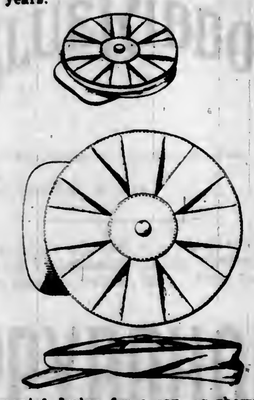


The ornamental design for a sewing machine head, as shown.

59,525. RING FOR LIGHTING-FIXTURES. CURTIS A. SMITH, New Rochelle, N. Y., assignor to Robert Findlay Manufacturing Co., New York, N. Y., a Corporation of New York. Filed Mar. 28, 1921. Serial No. 456,496. Term of patent 7 years.

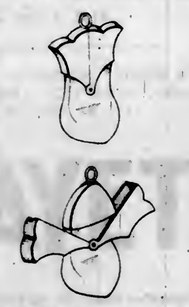
The ornamental design for a ring for lighting fixtures, as shown.

59,526. TIRE. ROBERT J. SMITH, Erie, Pa., assignor to Continental Rubber Works, Erie, Pa., a Corporation of Pennsylvania. Filed June 1, 1921. Serial No. 474,262. Term of patent 7 years.



The ornamental design for a tire, as shown.

59,527. PLAYING-CARDS. JESSIE GRIFFIN STICKNEY, San Francisco, Calif. Filed Sept. 8, 1920. Serial No. 409,003. Term of patent 7 years.

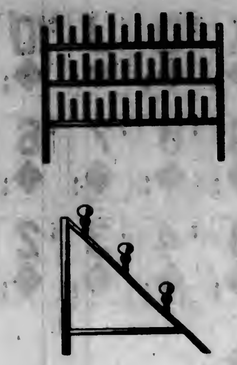


The ornamental design for playing cards, as shown.

59,528. CAP. HARRY WALDBAUM, Philadelphia, Pa. Filed Apr. 29, 1921. Serial No. 465,542. Term of patent 3½ years.

The ornamental design for a cap, as shown.

59,529. CHARM. EDWARD L. WEED, Providence, R. I., assignor to Potter & Buffinton Company, Providence, R. I., a Corporation of Rhode Island. Filed June 18, 1921. Serial No. 478,745. Term of patent 7 years.



The ornamental design for a charm, as shown.

59,580. COMBINED ERASER AND PENCIL-SHARPENER. LOUIS ZELICK, Philadelphia, Pa. Filed Feb. 24, 1921. Serial No. 447,619. Term of patent 7 years.

The ornamental design for a combined eraser and pencil sharpener as shown.

59,581. GAME APPARATUS. JOSEPH KOPP, Elmira, N. Y. Filed Sept. 16, 1920. Serial No. 411,332. Term of patent 7 years.

The ornamental design for a game apparatus, as shown.

TRADE-MARKS

OFFICIAL GAZETTE, OCTOBER 25, 1921.

[PUBLISHED OCTOBER 31, 1921.]

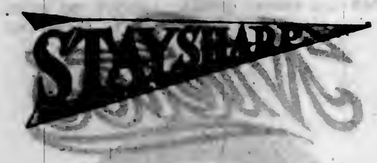
Claims use since July, 1917.

Ser. No. 131,373. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) AIMÉ RABOIN & CIE., Lyon, France. Filed Apr. 20, 1920.

The right to the exclusive use of the word "Trade-Mark" is disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Silk Piece Goods.
Claims use since before 1840.

Ser. No. 131,673. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) STEPHEN URBAN, Cleveland, Ohio. Filed Apr. 26, 1920.



Consisting of applicant's photograph.
Particular description of goods.—Eye Medicine.
Claims use since Jan. 1, 1920.

Ser. No. 132,182. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) O. A. BIDNER CO., Burlington, Iowa. Filed May 8, 1920.

Disclaimer as made of the words "Manufacturing, Machinists, Mike-Proof Products, 215 Division street, Burlington, Iowa," apart from the mark shown and said.
Particular description of goods.—Babbitting-Jigs for Gasolene-Engine Connecting-Rods, Water-Motors, and Special Tools Made to Order, Dies and Jigs for the Production of Metal Specialties.
Claims use since Apr. 21, 1920.

Ser. No. 132,344. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE BAKER-WERCHTER COMPANY, Cleveland, Ohio. Filed May 12, 1920.

No claim is made to the words "Stay Sharp High Speed Steel Tools" apart from the mark shown on the drawing.
Particular description of goods.—Cutting-Tools for Metal-Working Machines.
Claims use since Jan. 15, 1920.

Ser. No. 132,668. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) E. R. H. TAGGART, Liberty, Mo. Filed May 19, 1920.

CUDDLE

Particular description of goods.—Animal Toys.
Claims use since Mar. 1, 1920.

Ser. No. 133,751. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) THE RAILWAY SPECIALTY COMPANY, Atchison, Kans. Filed June 15, 1920.

Particular description of goods.—Crank-Shaft-Bearing-Boring Machines, Arbor-Press Bushing Drivers, Ball-Race Tools, Transmission-Drum Supports, Bench-Clamps for Ford Cylinder-Blocks, Piston-Clamps, Bench-Clamps, Transmission-Drum Holders, Connecting-Rod Alinement-Jigs, Rear-Axle-Sleeve Pullers, Transmission-Drum Clamping Devices, Grease-Guns, Engine-Stands, Front-Axle Straightening and Bending Bars, Bending-Irons, Turning-Bars, Combination Adjustable Lathe-Tool Holders, Burning-In and Testing Stands for Automobile-Motors, Babbitting-Mandrels for Use in Babbitting Automobile Cylinder-Blocks, Babbitting-Ladles for Use in Pouring Babbitt in Automobile Cylinder-Blocks, Cylinder-Reboring Machines, Transmission-Bushing-Reaming Machines.
Claims use since July 7, 1919.

Ser. No. 133,783. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KAEMPFER'S INCORPORATED, Chicago, Ill. Filed June 16, 1920.

Particular description of goods.—A Mixture or Combination of Seeds Used as Food for Birds.
Claims use since Mar. 13, 1920.

Ser. No. 134,563. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE CARPENTER STEEL COMPANY, Reading, Pa. Filed July 6, 1920.

STAR-ZENITH

Particular description of goods.—Tool-Steels in Bars, Billets, and Shapes.
Claims use since about 1904.

Ser. No. 134,569. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE CARPENTER STEEL COMPANY, Reading, Pa. Filed July 6, 1920.

ZENITH

Particular description of goods.—Tool-Steels in Bars, Billets, and Shapes.
Claims use since about 1899.

Ser. No. 134,570. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE CARPENTER STEEL COMPANY, Reading, Pa. Filed July 6, 1920.

"TITAN"

Particular description of goods.—Tool-Steels in Bars, Billets, and Shapes.
Claims use since about 1899.

Ser. No. 134,583. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) THE CARPENTER STEEL COMPANY, Reading, Pa. Filed July 6, 1920.

TROJAN

Particular description of goods.—Alloy Steels in Bars, Billets, and Shapes.
Claims use since about 1903.

Ser. No. 135,128. (CLASS 22. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) W. & S. BUTCHER LIMITED, Sheffield, England. Filed July 19, 1920. Under ten-year proviso.

WADE & BUTCHER
SHEFFIELD

DECISIONS
OF THE
COMMISSIONER OF PATENTS
AND OF
UNITED STATES COURTS IN PATENT CASES.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—Sixth Circuit.

STOWE *v.* AMERICAN REFRACTORIES CO.

Decided July 22, 1921.

[274 Fed. Rep., 241.]

1. PATENTS—792,822, FOR PROCESS OF MAKING REFRACTORY COMPOUND FOR FURNACE-LININGS, NOT INFRINGED.

Davison's patent, No. 792,822, for a process or method of making a refractory compound for furnace-linings or similar purposes, *Held* not infringed.

2. SAME—USING ROTARY KILN INSTEAD OF STATIONARY KILN, HELD NOT TO BE INVENTION.

A process or method of making a refractory compound for furnace linings, which used a dry mix and rotary kiln, *Held* not to be construed as including such method of mixing, as, in view of state of art, it would not be invention to substitute such method for wet mix and stationary kiln.

APPEAL from the District Court of the United States for the Eastern Division of the Southern District of Ohio; John E. Sater, judge.

Suit by Charles B. Stowe against the American Refractories Company for infringement of patent. From a decree dismissing the bill, plaintiff appeals. Decree affirmed.

Mr. Edward R. Alexander for the appellant.

Mr. Frederick W. Winter (*Messrs. Winter & Brown* on the brief) for the appellee.

Before KNAPPEN, DENISON, and DONAHUE, Circuit Judges.

DENISON, *Cir. J.*:

Infringement suit brought by Stowe, owner of Patent No. 792,822, issued June 20, 1905, to Davison, upon application filed April 18, 1904, for a process or method of making a refractory compound for furnace-linings or similar purposes. The claims sued upon are Nos. 3 and 4, which read as follows:

3. The process of making a refractory magnesite compound which consists in comminuting natural magnesite, silica and oxid of iron, mixing the ingredients in a dry state, burning the mixture to clinker and comminuting the clinker.

4. The process of making a refractory magnesite compound which consists in comminuting natural magnesite, silica and oxid of iron, mixing the ingredients in a dry state, burning the mixture to clinker in a rotary kiln and comminuting the clinker.

There were the usual defenses of invalidity and non-infringement. The court below dismissed the bill for lack of infringement.

As early as 1896 it had developed that the most suitable known material for making refractory furnace-linings needed in certain steel processes was a magnesite ore found in Austria. This was pulverized, heated to a high temperature, which caused it partially to fuse together in clinker form, and was then ground into a fine granular condition. It might be sold in this shape to the user, to be by him spread upon the floor of the furnace and fused into an unbroken lining, or it might be made up into bricks and used in that form.

It was known that this ore contained, in somewhat variable proportions, magnesia, iron, and silica; and it was commonly, if not universally, supposed that the iron was necessary as a flux for the magnesia, and that the silica was an undesirable element. It was Davison's substantial discovery, as the patent owner now contends, that the silica played a useful part in the combination, in that it considerably reduced the temperature necessary to frit or begin to fuse the material, as compared with a combination from which the silica was absent; and it may be conceded, for the purpose of this discussion, that this discovery, calling for a purposeful, instead of an incidental, presence of silica, would lend patentability to a claim for putting together by known processes the known ingredients of the natural material, if the necessary novelty existed.

Several manufacturers, including the Harbison-Walker Company, had been engaged in making this class of material since long before the date of Davison's invention. Some ten years after the patent issued, the Harbison-Walker Company altered its process, and the defendant began to use the process of Harbison-Walker embodying this change. Upon this change the charge of infringement rests. We think the simplest way to meet the controlling issues is to consider this change. If it did not involve an inventive step, so that defendant's present process is not patentably distinguishable from that which was used before Davison's invention, it is obvious that Davison can have no patent which can be construed broadly enough to support the charge of infringement and can at the same time escape the defense of invalidity.

As early as 1898 the Harbison-Walker Company, which had been buying and using the Austrian mag-

nesite for this purpose, found difficulty in obtaining this material. The company thereupon proceeded to import and use a Grecian magnesite ore, which was similar to the Austrian save for a deficiency in iron. The company supplied this deficiency by adding iron ore, and then thoroughly pulverized the mixture, moistened it sufficiently to make a thick paste, made this up into small blocks or "dobies," and burned these "dobies" in kilns of the types in common use for burning bricks. By this process the carbonic acid gas was driven off and the material "dead-burned." It was then in fritted or clinker form, and was thereafter ground and used as above described. If the Davison patent extends—as we assume it does—to the mixture of magnesite and silica, by using the raw material which naturally contains both, it is clear that it discloses nothing not previously in use by Harbison-Walker, except that Davison mixed his materials dry and, as specified in claim 4, burned them in a rotary kiln.

Thus we come to the question, as decisive, whether in 1904 it would have been invention to substitute in the Harbison-Walker process a dry mix and a rotary kiln for a wet mix and a stationary kiln. The person skilled in the art to whom this problem was presented would have before him his pulverized magnesite ore, containing silica and needing iron, and also his pulverized iron ore. He would know that these materials should be mixed as intimately and perfectly as possible and then burned to the fritting or clinker stage. He would know that the rotary kiln was an instrumentality in common used for simultaneous mixing and burning of material which was to be fused into a clinker form. It was then specially familiar in making Portland cement, in which the more important materials to be thus fused were limestone and aluminum. While the finished magnesite refractory and the finished cement are distinctly different products, it is not easy to point out any substantial distinction in the mixing, burning, and fritting steps of the process of making the one or the other.

The art of making one kind of synthetic rock (Portland cement concrete) and the art of making another kind of synthetic rock (magnesite refractory) are not so totally dissimilar as are dyeing cloth and tanning leather (*Tannage Co.* v. *Zahn*, [3 C. C. A.,] 70 Fed., 1003; 17 C. C. A., 552,) or polishing wood and pulverizing clay. (*Potts* v. *Creager*, 155 U. S., 606; 15 Sup. Ct., 194; 39 L. Ed., 275; 70 O. G., 494.) They are as similar as heating water to get a useful heat medium and heating wines to age them, (*Dreyfus* v. *Searle*, 124 U. S., 60; 8 Sup. Ct., 390; 31 L. Ed., 352,) or lifting paper sheets and lifting pills. (*Stearns* v. *Russell* [6 C. C. A.,] 85 Fed., 226; 29 C. C. A., 121.) Concrete, plaster of Paris, fire-brick, the mortars in which they are set, and furnace-linings are all fire-resisting materials in different degrees. Concrete is used for a protective lining, as in paper-pulp digesters. (*Munising Co.* v. *American Co.*, [C. C. A., 6,] 228 Fed., 700; 143 C. C. A., 222.)

The substitution of the rotary kiln for the other method of burning impresses us as being only the step which would have occurred to any one fairly familiar with this kind of work; yet we might hesitate to act upon this impression, were it not fortified by other things appearing in the record; and these other things are important, not so much as direct anticipations, but as evidence confirmatory of the obvious character of the substitution. The patents to Reid of 1874 and to Ransome of 1886 describe rotary kilns for burning pulverized gypsum, or lime, cement, etc., and specify the advantages of that device for accomplishing exactly what Davison wished to accomplish. The Ransome patent especially points out that for this purpose the operator may take his choice between putting the material in blocks and burning in a stationary kiln, or pulverizing it and feeding it into a rotary kiln, and also points out that the ingredients, such as clay and chalk, may be mixed either wet or dry, and evidently contemplates that the stationary and rotary kilns and the wet and dry mixes are known equivalents—not only with reference to clay and chalk, but also as to cements "made with other materials than clay and chalk."

The De Navarro patent of 1896 not only describes the distinct advantages of the rotary kiln for making Portland cement, but points out that it contains the same ingredients which constitute the magnesite refractory, viz. silica, alumina, iron, and magnesia. Though, of course, the proportions are very different, the process of mixing and burning is precisely that contemplated by Davison when he calls for a rotary kiln. Indeed, it should be noted that Davison's specification does not describe any new method of kiln treatment, but merely says:

> I then pass the mixture through an ordinary rotary cement kiln, * * * in a well-understood manner.

The Krottnaurer patent of 1900 and the Lossing patent of 1901 further describe the operation of rotary kilns to accomplish effective mixing and burning, not only of cement, but, in the latter patent, of earths and chemicals. If it should be thought that there are such distinctions between burning magnesite and burning cement that the cement kiln would not be familiar to the magnesite worker—though this is in the face of Davison's references to the rotary cement kiln as a thing well known to the artisans whom he was addressing—we find in the British patent to Kirkpatrick of 1902, where Kirkpatrick was discussing the manufacture of magnesite compositions for use in furnaces, a statement that he uses a rotary or any other suitable furnace or kiln.

The use of a rotary kiln in this very situation was not new in 1904. In May, 1899, the Harbison-Walker Company burned several tons of Grecian magnesite mixed with iron ore in a rotary kiln. Although the product was sold, this was an experimental use; but the company soon thereafter installed a rotary kiln for this express purpose. It was used to some extent, although not largely, in such manner that if the use had persisted it would

plainly have been a complete anticipation. It was installed to use with natural gas and this proved to be an unsatisfactory method of heating. Within a short time after this experiment was discontinued, the Harbison-Walker Company obtained the exclusive importation rights to the Austrian magnesite, and thereafter had no use for any synthetic process until importations of the Austrian product were cut off by the war of 1914. It then returned to and continued to use the rotary kiln.

Further confirmation of the obviousness of the substitution is found in the Collom patent application of June, 1899. Collom was an employee of the Harbison-Walker Company, and had conceived the idea that dolomite, an inexpensive native material, could be used in place of the imported magnesite to make the desired refractory composition. His application for a patent describes the dry mixture and the rotary kiln and the complete process of Davison more fully than Davison does—save for the substitution of the dolomite, which he thinks an equivalent of magnesite. This application was abandoned, and hence it is important only as indicating that the use of the rotary kiln was an expedient to which every one naturally turned. (See *Baker* v. *Hughes Co.*, [C. C. A., 2,] 270 Fed., 97, 99.)

Such counter force as might otherwise be found in the abandonment is not here present, because Collom sought no patent upon the use of the rotary kiln, and therefore did not abandon any such claim. He seems to take for granted that its use in this connection would be nonpatentable. It is often true that an abandoned attempt to use some device is evidence of the fact that one who later succeeds in using it has made an invention, but it is evidence only; and these instances of failure to use the rotary kiln to any considerable extent have little, if any, force as indicating that its use was not obvious when its known results were desired.

(1, 2) Putting these considerations with the fact that the use of the rotary kiln for burning magnesite was established in Europe, and that such European usage was known in this country, and with the testimony of experts as to the common knowledge of the rotary kiln and what it would do, we are driven to the conclusion that it would not have been invention in 1904 to substitute this process of burning for the kiln burning which Harbison-Walker was using, in its then current method of manufacturing magnesite refractory materials. It follows that the patent cannot receive a construction broad enough to cover a continuation of the old Harbison-Walker method with only this change.

We may add that a reading of Davison's specification convinces us that he thought that his invention was in the addition, during manufacture, of silica and iron to natural magnesite—or at the most, in the addition of one of these elements to natural material containing the other two. The theory that he had discovered a new method of mixing and burning materials that others were then mixing and burning would have surprised him.

Our conclusion directly affects claim 4. Claim 3 can be distinguished from the old Harbison-Walker process only by limiting the mixing and burning to a method substantially like that of the rotary, and then it is governed by the same considerations as claim 4.

The decree is affirmed.

ADJUDICATED PATENTS.

(U. S. C. C. C. A. Ohio.) The Davison patent, No. 792,822, for process of making refractory compound for furnace-linings, not infringed. *Stowe* v. *American Refractories Co.*, 274 Fed. Rep., 241.

(U. S. D. C. Pa.) The Hanna patent, No. 979,849, claims 9 to 12, for distributing-plate for automatic stoker, *Held* valid and infringed. *Mechanical Const. Co.* v. *Locomotive Stoker Co.*, 274 Fed. Rep., 411.

(U. S. D. C. Pa.) The Street patent, No. 1,130,443, claims 1 to 3 and 9, for automatic stoker, *Held* not infringed. *Mechanical Const. Co.* v. *Locomotive Stoker Co.*, 274 Fed. Rep., 411.

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 4TH DAY OF OCTOBER, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abrams, John M., Brooklyn, N. Y. Resilient tire. No. 1,392,671; Oct. 4.

Abrams, John M., Brooklyn, N. Y. Resilient tire. No. 1,392,672; Oct. 4.

Adams, Frederic W. (See Pfrommer, W. D., and Adams.)

Adams, Gilbert L., Eldorado, assignor of one-half to C. F. Brown, Hollidaysburg, Pa. Tie plate. No. 1,392,733; Oct. 4.

Adams, Virgil P., Bremerton, Wash. Serving-machine. No. 1,392,611; Oct. 4.

Adde & Company. (See Ek, Emil, assignor.)

Aderer, Hugo, East Orange, N. J., assignor to J. F. Jelenko & Co., New York, N. Y. Palatal bar. No. 1,392,612; Oct. 4.

Adler, Marcus, Chicago, Ill. Time-card, pay-envelop, and daily-production record. No. 1,392,613; Oct. 4.

Aktiebolaget Ljungstrom Angturbin. (See Ljungstrom, Fredrik, assignor.)

Aldeen, Reuben A., and S. Hillman, Rockford, Ill. Instrument of precision. No. 1,392,734; Oct. 4.

Allen, Leonard M. (See Clifton, Sydney, assignor.)

Allen, Sherman T. (See Clifton, Sydney, assignor.)

Amato, Joseppe, Ossining, N. Y. Pen or pencil holder. No. 1,392,388; Oct. 4.

American Can Company. (See Graham, Charles W., assignor.)

American Laundry Machinery Company, The. (See Benjamin, D. H., and Link, assignors.)

American Laundry Machinery Company, The. (See Braley, C. L., and Waream, assignors.)

American Laundry Machinery Company, The. (See Prestwich, Sydney, assignor.)

American Laundry Machinery Company, The. (See Snow, Arthur E.)

American Laundry Machinery Company. (See Waream, Charles E., assignor.)

American Sheet and Tin Plate Company. (See McElhaney, James E., assignor.)

American Tar Products Company. (See Puening, Frans, assignor.)

American Telephone and Telegraph Company. (See Crisson, George, assignor.)

American Trust Company, trustee. (See Nicoson, Lemuel C., assignor.) (Reissue.)

Anderson, Albert, Miles City, Mont. Advertising device and paper-holder. No. 1,392,611; Oct. 4.

Anderson, Lars, Chicago, Ill. Mechanical movement. No. 1,392,389; Oct. 4.

Anderson, Lars, Chicago, Ill. Pump. No. 1,392,390; Oct. 4.

Anderson, Per A., New York, N. Y. Piston-ring. No. 1,392,614; Oct. 4.

Anthony Company. (See Anthony, William C., assignor.)

Anthony, William C., assignor to Anthony Company, Streator, Ill. Body support and lock. No. 1,392,615; Oct. 4.

Armstrong, Sir W. G., Whitworth and Company. (See Lee, H. W., and Swindale, assignors.)

Arnold Print Works. (See Jones, S. M., and Harlow, assignors.)

Aston, Taggart, Bellingham, Wash. Wharf-wall and the like. No. 1,392,616; Oct. 4.

Atwood, Leonard, Boston, Mass. Fishing-reel. No. 1,392,735; Oct. 4.

Augustin, Edwin J., Wauwatosa, assignor of one-third to G. Baser and one-third to O. Gray, Milwaukee, Wis. Pressure-regulating valve. No. 1,392,617; Oct. 4.

Automatic Arc Welding Company. (See Morton, Harry D., assignor.)

Automatic Bowling Alley Co. (See Loewenbach, Hugo, assignor.)

Averill, Rex G. (See Darrah, W. A., and Averill.)

Ayers, Norman, McArthur, Ohio. Lever mechanism. No. 1,392,618; Oct. 4.

Bagnell, Thomas, Hemmingford, Quebec, Canada. Wheel-tire. No. 1,392,735; Oct. 4.

Baker, Bernt, Highland Park, Mich. Safety-stirrup. No. 1,392,673; Oct. 4.

Baker Casing Shoe Company. (See Baker, Reuben C., assignor.)

Baker, Reuben C., assignor to Baker Casing Shoe Company, Coalinga, Calif. Casing-plug. No. 1,392,619; Oct. 4.

Baker, Robert D., Detroit, Mich. Grading roadbeds for concrete roads. No. 1,392,674; Oct. 4.

Baldwin, Tracy C. (See Tuttle, E. H., Miller, and Tuttle.)

Ball & Ball Carburetor Company. (See Ball, Frederick O., assignor.)

Ball, Frederick O., assignor to Ball & Ball Carburetor Company, Detroit, Mich. Reatomiser. No. 1,392,473; Oct. 4.

Ballantine, William B. (See Sulman, H. L., and Ballantine.)

Ballas, Charles P., *et al.* (See Mamalakis, John E., assignor.)

Barnes, John W., Cheshire, England. Machine for scarfing boiler and ship plates, cutting inclined keyways, or other purposes. No. 1,392,549; Oct. 4.

Barnett, Otto R., Glencoe, assignor to P & M Company, Chicago, Ill. Rail-anchor. No. 1,392,288; Oct. 4.

Baroni, Michael. (See Tremolada, Guglielmo, assignor.)

Bartlett, Leonard, assignor to Reliance Machine & Specialty Co., Boston, Mass. Roller-filler for bearings. No. 1,392,550; Oct. 4.

Barts, Frank E., Pittsburgh, Pa. Quick-adjustable monkey-wrench. No. 1,392,391; Oct. 4.

Batchelder, Frank R., assignor to Mills Belt Company, Worcester, Mass. Woven carrier equipment. No. 1,392,551; Oct. 4.

Battelle, Percy E., Louisa, Va. Log-jack. No. 1,392,885; Oct. 4.

Batts, William O., Wilmot, Kans. Safety apparatus for trains or cars. No. 1,392,620; Oct. 4.

Bauer, George, *et al.* (See Augustin, Edwin J., assignor.)

Baynes, Bernard C., *et al.* (See Berry, George A., assignor.)

Beale, William J. (See Butler, William A., assignor.)

Beall, Charles R., assignor to The Union Switch & Signal Company, Swissvale, Pa. Apparatus for the control of railway-switches. No. 1,392,737; Oct. 4.

Beaton, Angus, Vulcan, Alberta, Canada. Draft-equaliser. No. 1,392,738; Oct. 4.

Bebow, Hans J., Fond du Lac, Wis. Snowplow. No. 1,392,739; Oct. 4.

Bechman, Louis H., assignor to Duplex Printing Press Company, Battle Creek, Mich. Machine for shaping matrices. No. 1,392,621; Oct. 4.

Bedard, Joseph, Columbus, Ohio. Windshield-protector. No. 1,392,474; Oct. 4.

Bell, John E., Brooklyn, assignor to Power Specialty Company, New York, N. Y. Economizer for steam-boilers. No. 1,392,675; Oct. 4.

Benjamin, Charles S. (See Treneer, J. M., and Benjamin.)

Benjamin, Dana H., Cleveland Heights, and G. N. Link, Cincinnati, assignors to The American Laundry Machinery Company, Norwood, Ohio. Garment press and steaming mechanism. No. 1,392,289; Oct. 4.

Bennett Injector Company. (See Wood, A. J., assignor.)

Bergren, Oscar W., Waltham, Mass. Tapping-block. No. 1,392,740; Oct. 4.

Berkovi, Leopold, assignor to La Reine Hair Waver and Curler Company Limited, London, England. Hair waver and curler. No. 1,392,812; Oct. 4.

Berry, George A., Excelsior Springs, Mo., assignor of one-third to W. J. Marah, St. Louis, and one-third to B. C. Baynes, Excelsior Springs, Mo. Price-ticket holder. No. 1,392,622; Oct. 4.

Berry, Joseph E., Carthage, Mo. Cloth-clamp. No. 1,392,552; Oct. 4.

Bersted, Alfred and M., Chicago, Ill. Balance-weight cover-support for phonographs. No. 1,392,290; Oct. 4.

Bersted, Martin. (See Bersted, Alfred and M.)

Bibb, Carlisle H., assignor of one-half to J. T. Bibb, Sr., Pasadena, Calif. Making aldehydes and other oxidation products. No. 1,392,886; Oct. 4.

Bibb, John T., Sr. (See Bibb, Carlisle H., assignor.)

Bill, Jean, Legano, Italy. Electrically-heated stamping-machine. No. 1,392,553; Oct. 4.

Billon, Frédéric, assignor to Firm Scintilla, Solothurn, Switzerland. Magneto-electric ignition-machine. No. 1,392,554; Oct. 4.

Bingham, George W., Cleveland, Ohio, assignor to The International Moving Picture & Film Company, Nashville, Tenn. Motion-picture apparatus. No. 1,392,475; Oct. 4.

Bird, Charles S. (See Goldberg, Solomon H., assignor.)

Blackburn, Edward S., Austin, Tex. Identifying-tag. No. 1,392,291; Oct. 4.

Blue, Edward G., Grape Creek, Ill. Demountable rim. No. 1,392,292; Oct. 4.

Bobroff, Bornett L., Milwaukee, Wis. Signaling system. No. 1,392,293; Oct. 4.

Bodle, Josiah W., Effingham, S. C. Automatic car-replacer. No. 1,392,892; Oct. 4.

Boedeker, Walter U., assignor, by mesne assignments, to The H. B. Corporation, Chicago, Ill. Dish-washing machine. No. 1,392,476; Oct. 4.
Bonsall, Thomas L., Ottawa, Ontario, Canada. Mop. No. 1,392,741; Oct. 4.
Borresen, Helge A., Marquette, Mich. Main-spring barrel for timepieces. No. 1,392,676; Oct. 4.
Bowden-Smith, Edward C., London, England. Valve. No. 1,392,294; Oct. 4.
Bowman, Robert H., assignor to The Firestone Tire & Rubber Co., Akron, Ohio. Resilient tire. No. 1,392,571; Oct. 4.
Bosung, Joseph A., and P. S. McMahon, Denver, Colo. Double compound power-applying machine. No. 1,392,296; Oct. 4.
Braley, Charles L., and C. E. Waream, assignors to The American Laundry Machinery Company, Cincinnati, Ohio. Collar, cuff, and neckband press. No. 1,392,296; Oct. 4.
Brandenburger, John A. (See McKelvey, L. F., and Brandenburger.)
Brantigam, Willard E., Avery, Idaho. Balancing-relay. No. 1,392,742; Oct. 4.
Brentano, John J., St. Paul, Oreg. Shoe-holding stand. No. 1,392,393; Oct. 4.
Broadley, Joseph R., London, England. Machine for grinding ores, mineral stones, and the like. No. 1,392,887; Oct. 4.
Brotherton, Wilbur. (See Howe, Solon G., assignor.)
Brousseau, Harry, Bath, Me. Steering-gear for ships. No. 1,392,394; Oct. 4.
Brown, Charles F. (See Adams, Gilbert L., assignor.)
Brown, Julius A., Peekskill, N. Y. Reproducer for phonographs. No. 1,392,677; Oct. 4.
Brown, Thomas, Salt Lake City, Utah. Automobile-polish, (composition.) No. 1,392,477; Oct. 4.
Bruah, Howard R., Chicago, Ill. Extendible truck construction. No. 1,392,395; Oct. 4.
Brunecken, Johannes, Cologne-Bickendorf, Germany. Starting induction-motor. No. 1,392,555; Oct. 4.
Brunett, Dewitt A., Minneapolis, Minn. Hot-air furnace. No. 1,392,888; Oct. 4.
Bryan, Andrew J. (See Bush, H. L., and Bryan.)
Bucovaz, Antonio, *et al.* (See Hemphill, Henry B., assignor.)
Buffalo Forge Company. (See Day, Arthur A., assignor.)
Buhr, Joseph F., Detroit, Mich. Chuck. No. 1,392,678; Oct. 4.
Bull, George F., Small Heath, Birmingham, assignor of one-half to C. H. Pugh, Limited, Birmingham, England. Thread-guide of spinning, twisting, doubling, and like frames. No. 1,392,743; Oct. 4.
Burke, Joseph H., Portland, Me. Circular-saw guard. No. 1,392,396; Oct. 4.
Burnett, Charles C. (See Crawford, Frank, assignor.)
Burnside, Arthur E., South Jacksonville, Fla. Automobile-jack. No. 1,392,297; Oct. 4.
Bush, Horace L., and A. J. Bryan, Graham, Tex. Spring-wheel. No. 1,392,813; Oct. 4.
Butcher, James M., assignor, by mesne assignments, to Sentinel Alarm Co., Chicago, Ill. Alarm device. No. 1,392,397; Oct. 4.
Butler, William A., Portsmouth, assignor of one-half to W. J. Beale, Norfolk, Va. Tie-plate and rail-fastener. No. 1,392,398; Oct. 4.
Butterick Publishing Company, The. (See Sieger, Philip C., assignor.)
Byers, Firm B., New York, N. Y. Collar and necktie holder. No. 1,392,298; Oct. 4.

Crogan, Jacob R., Shaunavon, Saskatchewan, Canada. Clutch for grain-separators. No. 1,392,403; Oct. 4.
Cruickshank, Arthur B., London, England. Heat-distributer. No. 1,392,868; Oct. 4.
Cullin, Jasper F., assignor, by mesne assignments, to W. J. Hartwig, Detroit, Mich. Insulation for armatures. No. 1,392,557; Oct. 4.
Culver, Lagar R., Portland, Oreg. Keyhole-guard. No. 1,392,404; Oct. 4.
Cunniff, Edward A. and J. V., Fall River, assignors to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,392,817; Oct. 4.
Cunniff, Edward A., and J. V., Fall River, assignors to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,392,818; Oct. 4.
Cunniff, John V. (See Cunniff, Edward A. and J. V.)
Cunningham, Auren A., assignor of one-half to G. P. Wiig, Omaha, Nebr. Mop-bucket. No. 1,392,483; Oct. 4.
Custer, Bessie, Satanta, Kans. Union-garment. No. 1,392,303; Oct. 4.
Cutter, George, Company. (See Larkins, Ernest M., assignor.)
Darrah, William A., and R. Averill, assignors to The Ohio Brass Company, Mansfield, Ohio. Electric coupling. No. 1,392,558; Oct. 4.
Davidson, Clarence B., San Francisco, Calif. Manifolding-books and manifolding. No. 1,392,748; Oct. 4.
Davis, Abbott B., Saugatuck, Mich. Toy boat. No. 1,392,485; Oct. 4.
Davis, Abbott B., Saugatuck, Mich. Toy duck. No. 1,392,385; Oct. 4.
Davis, Frank F., Chester, Pa. Piston-wrist-pin construction. No. 1,392,819; Oct. 4.

Davis, John W., Dallas, Tex. Lineman's safety-chair. No. 1,392,620; Oct. 4.
Davis, Robert B., assignor to Robert B. Davis Tool Company, St. Louis, Mo. Boring-tool. No. 1,392,804; Oct. 4.
Davis, Robert B., Tool Company. (See Davis, Robert B., assignor.)
Davis, Tommie, Fort Lyon, Colo. Folding car-step. No. 1,392,821; Oct. 4.
Day, Arthur A., assignor to Buffalo Forge Company, Buffalo, N. Y. Door structure for air-washers and the like. No. 1,392,305; Oct. 4.
Day, Henry B., Los Angeles, Calif. Automobile-surfacing. No. 1,392,559; Oct. 4.
Deal; Orval T. (See Doman, John P., assignor.)
Deere & Company. (See Carlson, Oscar F. H., assignor.)
Defiance Machine Works. (See McCarty, William T., assignor.)
De Laval Separator Company, The. (See Hulbert, John L., assignor.)
DeLong, Susan E., Fellows, Calif. Receptacle. No. 1,392,550; Oct. 4.
De Voe, Albert H., Westfield, N. J., assignor to The Singer Manufacturing Company. Bearing and oiling means therefor. No. 1,392,306; Oct. 4.
Dice, John L. (See Doyle, S. T., and Dice.)
Dice, Robert E., Indianapolis, Ind. Folding stand. No. 1,392,486; Oct. 4.
Dick, Harvey H., Lincoln, Ill. Boiler-cleaner. No. 1,392,307; Oct. 4.
Dimin, Morris B., Brooklyn, N. Y. Vehicle-fender. No. 1,293,625; Oct. 4.
Doman, John P., assignor of one-half to O. T. Deal, Los Angeles, Calif. Tool-handle. No. 1,392,627; Oct. 4.
Dominguez, Manuel D., New Orleans, La. Trolley. No. 1,392,560; Oct. 4.
Donati, Adolph, Brooklyn, N. Y. Bicycle stand or support. No. 1,392,749; Oct. 4.
Doremus, Andrew J., *et al.* (See Treneer, J. M., and Benjamin, assignors.)
Dougherty, Stephen O., Toronto, Ontario, Canada. Shade and curtain hanger. No. 1,392,405; Oct. 4.
Dowd, John C., Merchantville, N. J. Vehicle-spring. No. 1,392,680; Oct. 4.
Downey, Millard J., Chicago, Ill. Theft-signal for motor-vehicles. No. 1,392,869; Oct. 4.
Doyle, Silas T., and J. L. Dice, Caledonia, Ohio. Piston-ring assemblage. No. 1,392,308; Oct. 4.
Draper Corporation. (See Cunniff, Edward A. and J. V., assignors.)
Draper Corporation. (See Snow, Isaac, assignor.)
Dreebaler, John A., Hillsdale, Mich. Shoe-retainer. No. 1,392,628; Oct. 4.
Driver-Harris Company. (See Henderson, John C., assignor.)
Dubbs, Carbon P., Wilmette, Ill. Converting hydrocarbons. No. 1,392,629; Oct. 4.
Duffy, Charles H., Cherry Chase, Md. Clevis-antirattling and pin-retaining attachment. No. 1,392,561; Oct. 4.
Duplex Printing Press Company. (See Bechman, Louis H., assignor.)
Dupré, Wilfred, Worcester, Mass. Dustpan. No. 1,392,406; Oct. 4.
Durham, William R., Detroit, Mich. Nut-keeper for milling-machines. No. 1,392,681; Oct. 4.
Earle, Stanley B., Hornchurch, England. Stropping or sharpening apparatus for razor-blades. No. 1,392,309; Oct. 4.
Earp, Thue R., Chattanooga, Tenn. Tire-mold. No. 1,392,487; Oct. 4.
Eclipse Specialty Manufacturing Company. (See Meyer, John F., assignor.)
Edwards, James N., Shiatook, Okla. Pump-jack. No. 1,392,310; Oct. 4.
Egeland, Oscar, McVille, N. D. Time-controlled feeding device. No. 1,392,311; Oct. 4.
Egnell, Axel, Paris, France. Interlocking device. No. 1,392,630; Oct. 4.
Eisenhand, Henry G., Denver, Colo. Photoprinting device. No. 1,392,312; Oct. 4.
Eisenschmid, William, Etna, Pa., assignor to Pittsburgh Taximeter Company. Printing-taximeter. No. 1,392,631; Oct. 4.
Ek, Emil, Portland, Me., assignor to Adde & Company. Brake for lineal-measuring registers. No. 1,392,572; Oct. 4.
Ek, Emil, Portland, Me., assignor to Adde & Company. Register for lineal-measuring. No. 1,392,573; Oct. 4.
Electric Storage Battery Company, The. (See Flanders, Louis, H., assignor.)
Elwell, Cyril F. (See Lane, Charles J., assignor.)
Emley, Warren E., Washington, D. C. Making plastic calcined gypsum. No. 1,392,574; Oct. 4.
Empire Cream Separator Company. (See McCornack, Herbert, assignor.)
Eppler, Andrew, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sewing-machine. No. 1,392,822; Oct. 4.
Estabrook, Charles E., Springport, Ind. Railway-tie and rail-fastener. No. 1,392,562; Oct. 4.
Etablissements Jacob Holtzer. (See Vergnlaud, Louis, assignor.)
Evans, William L. (See Ross, William H., assignor.)
Eynon, Howard B., Wellsville, N. Y. Brush connection. No. 1,392,563; Oct. 4.
Fauquenon, Harry, Chicago, Ill. Cushion-heel for shoes and the like. No. 1,392,823; Oct. 4.
Fallow, Gavin S., Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Screw-thread gage. No. 1,392,313; Oct. 4.
Farias, Robert, Pittsburgh, Pa. Rail-anchor. No. 1,392,407; Oct. 4.
Faust, Clyde A. (See Faust, Jacob N. and C. A.)
Faust, Jacob N. and C. A., Chicago, Ill. Garment-supporter. No. 1,392,314; Oct. 4.
Feibel, Jacob, New York, N. Y., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting-machine. No. 1,392,408; Oct. 4.
Fessler, Charles, assignor to Fisher Body Corporation, Detroit, Mich. Method and apparatus for protecting workmen sandpapering automobile-bodies. No. 1,392,870; Oct. 4.
Fetters, Arthur H. (See Fuller, Charles E., assignor.)
Feuerman, Richard. (See Hirk, William W., assignor.)
Fickles, William E., Norfolk, Va. Metal-reinforcing frame for concrete structures. No. 1,392,315; Oct. 4.
Finch, Stanley W., Washington, D. C., and E. M. Kennard, Clarendon, Va. Transmission-control device for motor-vehicles. No. 1,392,316; Oct. 4.
Fink, Henry A., Chicago, Ill., assignor to Continental Can Company, Inc., Syracuse, N. Y. Magazine for blanks of sheet metal. No. 1,392,750; Oct. 4.
Firestone Tire & Rubber Company, The. (See Bowman, Robert H., assignor.)
Firestone Tire and Rubber Company, The. (See Goedenberger, Daniel E., assignor.)
Firestone Tire and Rubber Company, The. (See Tuttle, John C., assignor.)
Fischer, Henry J., and B. M. Wolf, Manchester, N. H. Holder and illuminator for number-plates. No. 1,392,751; Oct. 4.
Fisher, Alfred. Chicago, Ill. Brass-furnace. No. 1,392,317; Oct. 4.
Fisher Body Corporation. (See Fessler, Charles, assignor.)
Fisher Body Corporation. (See Simpson, Emory G., assignor.)
Fisk, D. B., & Co. (See Henkel, August G., assignor.)
Fisk Rubber Company, The. (See Midgley, Thomas, assignor.)
Flanders, Ida Y., administratrix. (See Flanders, Louis H.)
Flanders, Louis H., deceased, Jenkintown, Pa.; I. Y. Flanders, administratrix, assignor to The Electric Storage Battery Company, Philadelphia, Pa. Filling apparatus for storage batteries and the like. No. 1,392,632; Oct. 4.
Fletcher, Charles F., Farmington, W. Va. Wrench. No. 1,392,318; Oct. 4.
Fletcher, Charlie F., Farmington, W. Va. Dirigible headlight for vehicles. No. 1,392,488; Oct. 4.
Foster, Joseph B., Roanoke, Va. Dental bridge. No. 1,392,824; Oct. 4.
Foster Machine Company. (See McKein, John O., assignor.)
Foulke, Francis E., Albany, N. Y. Rotary-valve packing-ring. No. 1,392,752; Oct. 4.
Franck-Philipson, Axel, Chicago, Ill. Producing solidified soluble disinfectant. No. 1,392,564; Oct. 4.
Franck, Val F., Louisville, Ky. Safety-razor. No. 1,392,753; Oct. 4.
Francke Co., The. (See Francke, William J., assignor.)
Francke, William J., Highland, Park, assignor to The Francke Co., New Brunswick, N. J. Uniform-motion universal joint. No. 1,392,754; Oct. 4.
Francke, William J., Highland Park, assignor to The Francke Co., New Brunswick, N. J. Flexible coupling. No. 1,392,755; Oct. 4.
Frank, Julius E., St. Louis, Mo. Belt. No. 1,392,319; Oct. 4.
Freeman-Daugbaday Company. (See Le Clair, Frank J., assignor.)
French, William H., Detroit, Mich. Propulsion means for vehicles. No. 1,392,565; Oct. 4.
Fritz, William C., Milwaukee, Wis. Incubator. No. 1,392,566; Oct. 4.
Fulghum, Claud L., Quincy, Ill. Elevator-door-operating mechanism. No. 1,392,320; Oct. 4.
Fullenwider, George R., Fairfield, Mont. Cigar-carrier. No. 1,392,409; Oct. 4.
Fuller, Charles E., assignor of one-half to A. H. Fetters, Omaha, Nebr. Steam-boiler low-water signal. No. 1,392,682; Oct. 4.
Fulton Company, The. (See Fulton, Weston M., assignor.)
Fulton, Weston M., assignor to The Fulton Company, Knoxville, Tenn. Centrifugal regulating device. No. 1,392,890; Oct. 4.
Gahan, Hugh N., Kelowna, British Columbia, Canada. T-square. No. 1,392,756; Oct. 4.
Gaines, Thomas R., Norwood, Ohio. Tags. No. 1,392,410; Oct. 4.
Gales, George T. W., Uniontown, Pa. Battery-clamp. No. 1,392,757; Oct. 4.
Gammeter, William F., Cadiz, Ohio. Stock-roll. No. 1,392,321; Oct. 4.
Gavin, John H., assignor, by mesne assignments, to Wolff Manufacturing Company, Chicago, Ill. Valve-stem for the valves of compression-cocks and the like. No. 1,392,411; Oct. 4.
Geer, Harry R., Johnstown, Pa. Universal mill. No. 1,392,489; Oct. 4.

Genth, Charles H., and W. Kline, Philadelphia, Pa. Combined measuring and dispensing device. No. 1,392,490; Oct. 4.

Gibbs, John C., Lancaster, Pa. Ice-cream freezer. No. 1,392,412; Oct. 4.

Gill, George W., assignor of one-fourth to W. L. Carroll, one-fourth to B. W. Ward, and one-fourth to G. Samberg, Battle Creek, Mich. Engine or motor. No. 1,392,522; Oct. 4.

Gilman, Emma G., Paterson, N. J. Duster. No. 1,392,633; Oct. 4.

Gladish, Laura, St. Louis, Mo. Supporting and stretching bracket for shades and curtains. No. 1,392,575; Oct. 4.

Glair, Harry F., assignor to Standard Oil Company, (of Indiana,) Whiting, Ind. Filtration. No. 1,392,758; Oct. 4.

Goddard, Joseph, assignor to Seneca Camera Manufacturing Company, Rochester, N. Y. View-finder for photographic cameras. No. 1,392,750; Oct. 4.

Goldberg, John H., Washington, D. C. Combination clothes hanger and brush. No. 1,392,634; Oct. 4.

Goldberg, Solomon H., Chicago, Ill., assignor to C. S. Bird, Walpole, Mass. Machine for making flexible waterproof roofing. No. 1,392,823; Oct. 4.

Gonsales, Ramon, Manila, Philippine Islands. Compasses. No. 1,392,525; Oct. 4.

Goodenberger, Daniel E., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Manufacturing solid tires. No. 1,392,576; Oct. 4.

Goodyear Tire & Rubber Company, The. (See Heffelinger, Glen B., assignor.)

Gordon, Wiley P., Edgefield, S. C., and T. B. Jacocks, Tarboro, N. C. Inner tube. No. 1,392,826; Oct. 4.

Gornlak, Josef, Denver, Colo. Beehive. No. 1,392,635; Oct. 4.

Gow, Alexander M., Duluth, Minn. Ore-washer. No. 1,392,413; Oct. 4.

Graber, Fred G., Canton, Ohio. Kitchen utensil. No. 1,392,491; Oct. 4.

Graf, Alexander, Berlin-Hermsdorf, Germany. Switch for electric circuits. No. 1,392,324; Oct. 4.

Graham, Charles W., Allendale, N. J., assignor to American Can Company, New York, N. Y. Machine for and method of lining can ends. No. 1,392,492; Oct. 4.

Graham, Charles W., Allendale, N. J., assignor to American Can Company, New York, N. Y. Semi-automatic gasket-lining machine. No. 1,392,493; Oct. 4.

Gray, Otto, *et al.* (See Augustin, Edwin J., assignor.)

Greene, Frederick J., Racine, Wis. Automatic riveting-machine. No. 1,392,494; Oct. 4.

Gregg Company, The. (See Gregg, Louis D., assignor.)

Gregg, Louis D., assignor to The Gregg Company, Limited, Hackensack, N. J. Journal-bearing. No. 1,392,636; Oct. 4.

Gremmels, Felix, Mannheim, Germany, assignor to Techno-Service Corporation, New York, N. Y. Balanced closing device for water-conduits. No. 1,392,637; Oct. 4.

Gremmels, Felix, Mannheim, Germany, assignor to Techno-Service Corporation, New York, N. Y. Ship-lock lift. No. 1,392,638; Oct. 4.

Griffin, John. (See Lloyd, Robert R., assignor.)

Griner, Clarence R., Bowling Green, Ohio. Pitman-tightening device. No. 1,392,760; Oct. 4.

Grove, Paul O., Buffalo, N. Y. Sign-letter and the like. No. 1,392,639; Oct. 4.

Gumaer, Albert P., East Orange, N. J. Portable shower-bath apparatus. No. 1,392,496; Oct. 4.

H. B. Corporation, The. (See Boedeker, Walter U., assignor.)

Haase, Leo G., Pasadena, Calif. Post. No. 1,392,577; Oct. 4.

Hackett, Henry, A. Smith, and C. Southall, Birmingham, England. Machine for wrapping sweetmeats and the like. No. 1,392,683; Oct. 4.

Hagey, J. Clarke, Chicago, and A. Swensen, Cicero, assignors to The Cable Company, Chicago, Ill. Indicating device usable with music-recording mechanism. No. 1,392,640; Oct. 4.

Hain, James C., Los Angeles, Calif. Concrete-form. No. 1,392,498; Oct. 4.

Hall Scott Motor Car Company. (See Buckstell, Glover E., assignor.)

Hallee, Onesime J., Chisholm, Me. Dam construction. No. 1,392,414; Oct. 4.

Hamilton, Edward E., Westfield, Mass. Bow-holder. No. 1,392,684; Oct. 4.

Hampson, James F., Edwin, Manitoba, Canada. Plow. No. 1,392,685; Oct. 4.

Hanson, Bengt M. W., Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Vertical-surface-grinding machine. No. 1,392,325; Oct. 4.

Hardwick, James F., Gwensboro, Ky. Burglar-alarm. No. 1,392,326; Oct. 4.

Hardy, John N., H. D. Wilson, and D. S. Long, Waycross, Ga. Hot-water radiator. No. 1,392,801; Oct. 4.

Harlow, Ivan O. (See Jones, S. M., and Harlow.)

Harmer, Joseph J., New York, N. Y. Arc-light. No. 1,392,497; Oct. 4.

Harrison, James M., Cleveland, Ohio. Damper control for heat-exchange apparatus. No. 1,392,761; Oct. 4.

Hartley, John W. (See Roper, E. A., and Hartley.)

Hartwig, William J. (See Cullin, Jasper F., assignor.)

Hastings, Herbert, Brighton, N. Y. Combined fluid-level indicator and reserve-valve. No. 1,392,415; Oct. 4.

Hastings, Ruben C. M., assignor to International Telephone Company, Columbus, Ohio. Selective telephone system. No. 1,392,762; Oct. 4.

Hattersley, John M., Birmingham, England. Folding stereoscope. No. 1,392,327; Oct. 4.

Havran, John, Portland, Oreg. Curtain-shade circuit-closer. No. 1,392,641; Oct. 4.

Hawthorne Company, The. (See Nikonow, John P., assignor.)

Heath, Lewis W., and H. D. Cook, assignors to Consolidated Press Company, Hastings, Mich. Swaging and forging press. No. 1,392,328; Oct. 4.

Hebner, George J., Rochester, N. Y. Adjustable ladder. No. 1,392,642; Oct. 4.

Hedtler, Robert S., and M. R. Taylor, Norfolk, Va. Variable direction propelling apparatus. No. 1,392,763; Oct. 4.

Heffelinger, Glen B., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio. Measuring and cutting apparatus. No. 1,392,871; Oct. 4.

Hem, Halvor O., assignor to Toledo Scale Company, Toledo, Ohio. Weighing-scale. No. 1,392,827; Oct. 4.

Hemphill, Henry B., assignor of one-fourth to A. Bucovaz and one fourth to R. Ciavora, Eldorado, Ill. Burner for stoves. No. 1,392,643; Oct. 4.

Henderson, John C., New York, N. Y., assignor to Driver-Harris Company, Harrison, N. J. Producing compound metals. No. 1,392,416; Oct. 4.

Henkel, August G., assignor to D. B. Fisk & Co., Chicago, Ill. Hat-shaping device. No. 1,392,826; Oct. 4.

Henney, David S., Montclair, N. J. Spark-plug. No. 1,392,329; Oct. 4.

Leonard, John E., Los Angeles, Calif., assignor, by mesne assignments, to Mitchell Camera Co. Adjustable iris for cameras. No. 1,392,876; Oct. 4.

Lepak, Henry, Minneapolis, Minn. Grain-treating machine. No. 1,392,649; Oct. 4.

Lerevers, Robert R., Cairo, Ill. Sole-channeling cutter. No. 1,392,422; Oct. 4.

Levin, Nils D., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Mining-machine truck. No. 1,392,835; Oct. 4.

Levin, Nils D., assignor to The Jeffrey Manufacturing Company, Columbus, Ohio. Mining-machine truck. No. 1,392,836; Oct. 4.

Lewinson, Hyman, Erie, Pa. Self-filling fountain-pen. No. 1,392,837; Oct. 4.

Lewinson, Hyman, Erie, Pa. Self-filling fountain-pen. No. 1,392,838; Oct. 4.

Lewis, Frank B., and T. S. Cooke, assignors to Standard Oil Company, Whiting, Ind. Distilling petroleum-oils. No. 1,392,584; Oct. 4.

Lewis, John E., Milwaukee, Wis. Selective change-making machine. No. 1,392,691; Oct. 4.

Lewis, Robert, Topeka, Kans. Lantern. No. 1,392,774; Oct. 4.

Liken, Clarence L., Enid, Okla. Flagman's lantern. No. 1,392,775; Oct. 4.

Lill, Jacob, Chicago, Ill. Corner-brace. No. 1,392,839; Oct. 4.

Lindbladh, Harmon E., Boston, Mass. Pen-clamp for ruling-machines. No. 1,392,423; Oct. 4.

Lindholm, Arthur C., Springfield, Mass. Recoating attachment. No. 1,392,585; Oct. 4.

Lindquist, Charles A. and E. V., Des Moines, Iowa, assignors to Qupee Hose Supporter Company, Eau Claire, Wis. Hose-supporter. No. 1,392,776; Oct. 4.

Lindquist, Eric V. (See Lindquist, Charles A. and E. V.)

Link, George N. (See Benjamin, D. H., and Link.)

Linstrom, Frank O., Watertown, and P. A., Castlewood, S. D. Headlight for vehicles. No. 1,392,424; Oct. 4.

Linstrom, Peter A. (See Linstrom, Frank O. and P. A.)

Lippold, Carl T., Los Angeles, Calif. Tire-blow-out clamp and emergency mud-hook. No. 1,392,425; Oct. 4.

Ljungström, Fredrik, Brevik, Lidingön, assignor to Aktiebolaget Ljungstrom Angturbin, Stockholm, Sweden. Air-cooled locomotive-condenser. No. 1,392,511; Oct. 4.

Lloyd, Robert R., assignor of one-half to J. Griffin, Des Moines, Iowa. Puncture-proof inner tube. No. 1,392,894; Oct. 4.

Loewenbach, Hugo, Hartland, assignor to Automatic Bowling Alley Co., Milwaukee, Wis. Game apparatus. No. 1,392,586; Oct. 4.

Long, David S. (See Hardy, J. N., Wilson, and Long.)

Longman, Garfield D. (See Putnam, W., and Longman.)

Loveless, John M., Glezen, Ind. Auto-carrier. No. 1,392,777; Oct. 4.

Low, Arthur B., Denver, Colo. Pressure-gage. No. 1,392,587; Oct. 4.

Lowe, Robert G., Clawson, Mich. Power-agitator. No. 1,392,345; Oct. 4.

Lübcke, Hermann K. E., Lübeck, Germany. Taximeter. No. 1,392,895; Oct. 4.

Lukenbach, William W., Philadelphia, Pa. Sanitary telephone device. No. 1,392,840; Oct. 4.

McCarty, William F., assignor to Defiance Machine Works, Defiance, Ohio. Boring-machine. No. 1,392,778; Oct. 4.

McCloskey, John E., Johnstown, Pa. Shade-roller support. No. 1,392,512; Oct. 4.

McCollough, W. A., & Sons. (See McCollough, William A., assignor.)

McCollough, William A., assignor to W. A. McCollough & Sons, Inc. Hog-waterer. No. 1,392,513; Oct. 4.

McCornack, Herbert, assignor to Empire Cream Separator Company, Bloomfield, N. J. Pulsating mechanism. No. 1,392,346; Oct. 4.

McCoy, Josephine, Sandusky, Ohio. Stovepipe-holder. No. 1,392,841; Oct. 4.

McElhaney, James R., Vandergrift, assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa. Method and apparatus for making terne plates. No. 1,392,665; Oct. 4.
McGill, Wisdom, Waco, Tex. Lock. No. 1,392,514; Oct. 4.
McKeen, John O., assignor to ceter Machine Company, Westfield, Mass. Device for guiding, cleaning, and tensioning yarn. No. 1,392,515; Oct. 4.
McKelvey, Louis F., and J. A. Rauschenberger, Indianapolis, Ind. Photo-film clip. No. 1,392,516; Oct. 4.
McMahon, Patrick S. (See Bosung, J. A., and McMahon.)
McManamen, John J., Mitchell, S. D., C. F. Smith, and A. L. Munro, assignors to Smith Engineering Works, Milwaukee, Wis. Sand and gravel washer. No. 1,392,779; Oct. 4.
McMillian, John F., Humble, Tex. Fishing-tool. No. 1,392,650; Oct. 4.
MacDonald, John P., Chester, Pa. Grinding-tool. No. 1,392,426; Oct. 4.
MacLeod, Angus P. (See MacLeod, George S., assignor.)
MacLeod, George S., assignor of one-half to A. P. MacLeod, Seattle, Wash. Front-bumper bracket. No. 1,392,427; Oct. 4.
MacLeod, George S., assignor of one-half to A. P. MacLeod, Seattle, Wash. Rear-bumper bracket for automobiles. No. 1,392,428; Oct. 4.
Maheux, Henri, Montreal, Quebec, Canada. Match-box. No. 1,392,429; Oct. 4.
Mamalakis, John E., assignor of one-third to C. P. Ballas and one-third to G. J. Cajoleas, Opelousas, La. Holder. No. 1,392,842; Oct. 4.
Marsh, Henry S., and R. S. Cochran, Youngstown, Ohio. Pickling metal articles. No. 1,392,780; Oct. 4.
Marsh, Henry S., and R. S. Cochran, Youngstown, Ohio. Apparatus for pickling metal articles. No. 1,392,781; Oct. 4.
Marsh, Howard E. (See Starr, E. B., and Marsh.)
Marsh, Orlando R., Chicago, Ill. Phonograph-reproducer. No. 1,392,430; Oct. 4.
Marsh, W. J., et al. (See Berry, George A., assignor.)
Marshall, Albert H., Chicago, Ill. Apparatus for dispensing and printing paper tape. No. 1,392,692; Oct. 4.
Marshall, Alfred M., Savannah, Ga. Mixing and screening device for fertilizers and the like. No. 1,392,589; Oct. 4.
Martin, William C., Memphis, Tenn. Backband-hook. No. 1,392,843; Oct. 4.
Massury, Alfred F., assignor to International Motor Company, New York, N. Y. Drive for motor-vehicles. No. 1,392,517; Oct. 4.
Matsuoka, Tokichi. (See Higuchi, Monnosuke, assignor.)
May, Ferdinand H. (See Horn, J., May, and Meilnor.)
Measuregraph Company, The. (See Turner, Douglas, assignor.)
Meilner, Josef. (See Horn, J., May, and Meilner.)
Merolle, Augustus L., assignor to L. R. N. Carvalho, Brooklyn, N. Y. Cap-threading machine. No. 1,392,844; Oct. 4.
Merrick, Frank W., assignor to Union Lock Stitch Company, Boston, Mass. Lasting-machine. No. 1,392,590; Oct. 4.
Merrill, Ayres P., Natches, Miss. Plow and pulveriser. No. 1,392,845; Oct. 4.
Meyer, Ferd H., Oakland, Calif. Grouser for tractor-treads. No. 1,392,693; Oct. 4.
Meyer, John F., Chicago, Ill., assignor, by mesne assignments, to Eclipse Specialty Manufacturing Company. Timer for internal-combustion engines. No. 1,392,694; Oct. 4.
Meyer, Ralph F., Freeport, Pa. Ignition mechanism. No. 1,392,431; Oct. 4.
Middaugh, James O. (See Hofmeister, F. J., and Middaugh.)
Midgley, Ernest C., Wheatland, N. D. Snow-removing machine. No. 1,392,877; Oct. 4.
Midgley, Ernest C., Wheatland, N. D. Dimmer. No. 1,392,878; Oct. 4.
Midgley, Thomas, Hampden, assignor to The Fisk Rubber Company, Chicopee Falls, Mass. Collapsible core. No. 1,392,347; Oct. 4.
Miles, Frederick C., San Francisco, Calif. Auto attachment. No. 1,392,432; Oct. 4.
Militor Corporation, The. (See Neuteboom, Boudewijn E., assignor.)
Miller, Frank S., St. Louis, Mo. Fuel-saving device. No. 1,392,695; Oct. 4.
Miller, Frederick C., Chicago, Ill. Wheel-tire. No. 1,392,433; Oct. 4.
Miller, John C. (See Tuttle, E. H., Miller, and Baldwin.)
Miller, Robert M., Milwaukee, Wis. Vise. No. 1,392,434; Oct. 4.
Mills Belt Company. (See Batcheider, Frank R., assignor.)
Milner, William J., Stockton, Calif. Automatic press for concrete blocks. No. 1,392,435; Oct. 4.
Minney, Arthur W., Stockton, Calif. Wrench. No. 1,392,651; Oct. 4.
Minney, Arthur W., Stockton, Calif. Wrench. No. 1,392,782; Oct. 4.
Miah, George F., Inwood, W. Va. Sled. No. 1,392,783; Oct. 4.
Mitchell Camera Co. (See Leonard, John E., assignor.)
Mittag & Volger. (See Stark, Harry S., assignor.)
Mobley, Ora, Cincinnati, Ohio. Tire-tool. No. 1,392,591; Oct. 4.
Molyneux, George B., Bayonne, N. J. Controlling device for mechanisms, &c. No. 1,392,696; Oct. 4.
Morton, Harry D., assignor to Automatic Arc Welding Company, Detroit, Mich. Method of and apparatus for arc-welding. No. 1,392,436; Oct. 4.
Morton, Harry D., assignor to Automatic Arc Welding Company, Detroit, Mich. Arc-welding system and operating the same. No. 1,392,437; Oct. 4.
Mosant, William D., Lynchburg, Va. Power-transmission device. No. 1,392,845; Oct. 4.
Munro, Alexander L. (See McManamen, J. J., Smith, and Munro.)
Murphy, Edward F. (See Murphy, Hugh J. and E. F.)
Murphy, Hugh J. and E. F., Troy, N. Y. Trolley-mount. No. 1,392,846; Oct. 4.
Musay, William H., Chicago, Ill. Fuel-feeding device for automobiles. No. 1,392,652; Oct. 4.
National Safety Appliance Company. (See Wist, E., and Chittenden, assignors.)

Ricardo, Harry R., London, England. Mechanism for the driving of cam-shafts of internal-combustion engines. No. 1,392,597; Oct. 4.
Rice, Harvey T., Norfolk, N. Y. Collapsible shaft. No. 1,392,798; Oct. 4.
Richards, Bernard W., Chicago, Ill. Cut-off for gasoline-feed on motor-vehicles. No. 1,392,449; Oct. 4.
Richards, James N. (See Westman, William H. and A. D., and Richards.)
Richardson, John H., Melrose, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Machine for trimming soles. No. 1,392,799; Oct. 4.
Rintoul, William, T. J. Nolan, and O. W. Strickland, assignors to Nobel's Explosives Company, Limited, Stoventson, Scotland. Explosive. No. 1,392,851; Oct. 4.
Rixson, Oscar C., New Rochelle, N. Y. Suspension for vehicles. No. 1,392,356; Oct. 4.
Robbins, William W., Lorain, Ohio. Mining machinery. No. 1,392,598; Oct. 4.
Roberts, Alvin L., Philadelphia, Pa. Rolled metal section. No. 1,392,800; Oct. 4.
Rochon, Charles, Fall River, Mass. Window-screen. No. 1,392,706; Oct. 4.
Rodgers, John E., Imperoyal, Nova Scotia, Canada. Fuel-oil burner. No. 1,392,450; Oct. 4.
Roesch, Alfred, assignor to Charles J. Tagliabue Manufacturing Co., Brooklyn, N. Y. Capillary tube and making the same. No. 1,392,658; Oct. 4.
Rollman, Bruce B. (See Synck, H., and Rollman.)
Rooss, Herbert H., Lincoln, Nebr. Clamping device for shoe-heels. No. 1,392,357; Oct. 4.
Roper, Ernest A., Oakworth, near Keighley, and J. W. Hartley, Haworth, near Keighley, England. Weighing apparatus. No. 1,392,659; Oct. 4.
Rose, Albert F., Tulsa, Okla. Fishing-tool. No. 1,392,599; Oct. 4.
Rose, William H., Jersey City, N. J. Liquid-soap dispenser. No. 1,392,600; Oct. 4.
Rose, William H., Jersey City, N. J. Soap-dispenser. No. 1,392,601; Oct. 4.
Rosencrans, Emil C., Evansville, Ind. Adjustable window-curtain bracket. No. 1,392,602; Oct. 4.
Ross, Roger I., Troy, Ohio. Gum-tape cutter and moistener. No. 1,392,358; Oct. 4.
Ross, William H., Washington, D. C., assignor of one-half to W. L. Evans, Columbus, Ohio. Preparing ethylene and other unsaturated hydrocarbons. No. 1,392,852; Oct. 4.
Rotman, D. R. (See Plauson, Hermann, assignor.)
Rowe, William N., Hibbing, Minn. Air-lifting device. No. 1,392,451; Oct. 4.
Roy, Alexander, Hill City, S. D. Ore-car. No. 1,392,801; Oct. 4.
Ruckstell, Glover E., assignor to Hall Scott Motor Car Company, Incorporated, San Francisco, Calif. Transmission-bearing and universal-joint cap. No. 1,392,452; Oct. 4.
Rudqvist, Carl, Munich, Germany. Two-stroke-cycle engine. No. 1,392,359; Oct. 4.
Russell, Nelson J., Chicago, Ill. Fuel-saving device for furnaces. No. 1,392,453; Oct. 4.
Ryan, Patrick J., New York, N. Y. Anchor. No. 1,392,526; Oct. 4.
Ryder, Henry, New York, N. Y. Pneumatic tire. No. 1,392,553; Oct. 4.
Saal, Henry G. (See Stafford, Frederick S., assignor.)
Sanberg, Carl, et al. (See Gill, George W., assignor.)
Santoro, Filippo, Holyoke, Mass. Extension-table. No. 1,392,527; Oct. 4.
Schmick, Henry J., Williamsport, Pa., assignor to Schmick Screw and Gear Company, Wilmington, Del. Method of and means for generating mechanical elements. No. 1,392,528; Oct. 4.
Schmick Screw and Gear Company. (See Schmick, Henry J., assignor.)
Schweizerische Sodafabrik. (See Cramer, Carl, assignor.)
Scintilla, Firm. (See Billon, Frédéric, assignor.)
Schussler, Francis, Wilkes-Barre, Pa. Aeroplane-guy-wire connection. No. 1,392,529; Oct. 4.
Searle, Ephraim F., Lawrence, Mass. Apparatus for facilitating the cutting of recesses in walls. No. 1,392,360; Oct. 4.
Sears, Willard T., Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y. Gear-cutter. No. 1,392,361; Oct. 4.
Sebestahowicz, Felix, McKeesport, Pa. Fire-escape. No. 1,392,660; Oct. 4.
Seelman, John J., Milwaukee, Wis. Withdrawing fluids from sealed containers without contamination. No. 1,392,454; Oct. 4.

Seese, Samuel R., Vanderbilt, Pa. License-certificate-display case. No. 1,392,661; Oct. 4.
Segal Metal Products Company. (See Segal, Samuel, assignor.)
Segal, Samuel, assignor to Segal Metal Products Company, Inc., New York, N. Y. Lock. No. 1,392,707; Oct. 4.
Seib, George A., assignor to Remington Typewriter Company, Ilion, N. Y. Typewriting-machine. No. 1,392,362; Oct. 4.
Seibold, Raymond W., Camp Douglas, Wis. Game. No. 1,392,662; Oct. 4.
Seldomridge, Harry, Clinton, Ind. Suspending device for tools and the like. No. 1,392,530; Oct. 4.
Seneca Camera Manufacturing Company. (See Goddard, Joseph, assignor.)
Sensibar, Jacob R., Chicago, Ill. Depositing sand. No. 1,392,663; Oct. 4.
Sentinel Alarm Co. (See Butcher, James M., assignor.)
Serrell, Lemmel W., New York, N. Y. Electric fireless cooker and range. No. 1,392,802; Oct. 4.
Shaff, Ernest H., Grand Haven, Mich. Suitcase-lock. No. 1,392,531; Oct. 4.
Shannon, Edwin P., Lockland, Ohio. Clamping means for rotary members. No. 1,392,363; Oct. 4.
Sheer, Henry M., Quincy, Ill. Knockdown brooder-canopy. No. 1,392,708; Oct. 4.
Sheer, Henry M., Quincy, Ill. Heater for incubators. No. 1,392,709; Oct. 4.
Shone, Carl F., Wichita, Kans. Siding-marker. No. 1,392,710; Oct. 4.
Shore, Albert F., New York, N. Y. Spring suspension system. No. 1,392,603; Oct. 4.
Sieger, Philip C., assignor to The Butterick Publishing Company, New York, N. Y. Sewer's gage. No. 1,392,455; Oct. 4.
Simpson, Emory G., Highland Park, assignor to Fisher Body Corporation, Detroit, Mich. Windshield construction. No. 1,392,880; Oct. 4.
Simpson, John T., Newark, N. J. Reinforced-concrete building. No. 1,392,532; Oct. 4.
Singer Manufacturing Company, The. (See De Voe, Albert H., assignor.)
Sitz, Clara B., Washington, D. C. Hairpin. No. 1,392,711; Oct. 4.
Skarzynski, John, assignor of one-half to J. Smolienski, South Amboy, N. J. Trap. No. 1,392,666; Oct. 4.
Skidmore, Benjamin, Jr., Chicago, Ill. Hydraulic air-compressor and vacuum-producer. No. 1,392,854; Oct. 4.
Skidmore, Benjamin, Jr., Chicago, Ill. Hydraulic air-compressor and vacuum-producer. No. 1,392,855; Oct. 4.
Skidmore, Benjamin, Jr., Chicago, Ill. Hydraulic air-compressor and vacuum-producer. No. 1,392 856; Oct. 4.
Skidmore, Benjamin, Jr., Chicago, Ill. Hydraulic air-compressor and vacuum-producer. No. 1,392,857; Oct. 4.
Sloane Brothers. (See Sloane, Max, assignor.)
Sloane, Max, assignor to Sloane Brothers, Brooklyn, N. Y. Fastener for handbags. No. 1,392,712; Oct. 4.
Sloboda, Joseph, Charlerol, Pa. Milk-boiler. No. 1,392,664; Oct. 4.
Smith, Arthur. (See Hackett, H., Smith, and Southall.)
Smith, Charles F. (See McManamen, J. J., Smith, and Munro.)
Smith, Charles G., Cambridge, Mass. Jewelry. No. 1,392,604; Oct. 4.
Smith Fastnessring Works. (See McManamen, J. J., Smith, and Munro, assignors.)
Smith, Franklin P. (See Smith, James D., assignor.)
Smith, Frederick A., Brasted, England. Ignition device for internal-combustion engines. No. 1,392,364; Oct. 4.
Smith, James D., assignor of one-half to F. P. Smith, Chicago, Ill. Wire-bending apparatus. No. 1,392,713; Oct. 4.
Smith, James D., assignor of one-half to F. P. Smith, Chicago, Ill. Wire-inserting mechanism for wire-mesh fabricated material. No. 1,392,714; Oct. 4.
Smith, Roy D., and A. Christopherson, Mohler, Idaho. Four-wheel drive. No. 1,392,866; Oct. 4.
Smith William H., Bridgeport, Conn. Spring-wheel. No. 1,392,859; Oct. 4.
Smolienski, John. (See Skarzynski, John, assignor.)
Smyth, Charles F., assignor to Connecticut Aircraft Company, New Haven, Conn. Inflatable fabric boat and bed or cushion. No. 1,392,533; Oct. 4.
Snell, Lyle E., assignor to Cadillac Motor Car Company, Detroit, Mich. Hydrocarbon-motor. No. 1,392,534; Oct. 4.
Snow, Arthur E., Erie, Pa., assignor to The American Laundry Machinery Company, Norwood, Ohio. Steam-generator. No. 1,392,366; Oct. 4.
Snow, Isaac, Lawrence, assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,392,803; Oct. 4.
Snow, Isaac, Lawrence, assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,392,804; Oct. 4.
Snow, Isaac, Lawrence, assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,392,805; Oct. 4.
Snow, Isaac, Lawrence, assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,392,806; Oct. 4.
Snow, Isaac, Lawrence, assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,392,807; Oct. 4.
Société Anonyme des Ateliers et Chantiers de la Loire. (See Laupretre, Claude, assignor.)
Société de Moteurs à Gaz et d'Industrie Mechanique. (See Cottard, Jean B., assignor.)
Societe Des Moteurs Salmson (Systeme Canton-Unne). (See Postal-Vinay, Pierre J. B., assignor.)
Sommer, J. L., Manufacturing Co. (See Sommer, John L., assignor.)
Sommer, John L., Newark, N. J., assignor to J. L. Sommer Manufacturing Co. Key-ring clip. No. 1,392,715; Oct. 4.
Southall, Christopher. (See Hackett, H., Smith, and Southall.)
Spalding, A. G., & Bros. (See Pierce, George L., assignor.)
Spatter, Noah, Kansas City, Mo., and A. Wellkoff, Wilkes-Barre, Pa. Faucet with drinking attachment. No. 1,392,456; Oct. 4.
Spraggins, Mary C., Jersey City, N. J. Bag-support. No. 1,392,716; Oct. 4.
Stafford, Frederick S., assignor to H. G. Saal, Chicago, Ill. Wheel. No. 1,392,367; Oct. 4.
Stafford, Hal R., deceased, North Plainfield, N. J.; M. M. Stafford, administratrix. Invisible cab-turret. No. 1,392,457; Oct. 4.
Stafford, Mary M., administratrix. (See Stafford, Hal R.)
Standard Oil Company. (See Lewis, F. B., and Cooke, assignors.)
Standard Oil Company, (of Indiana.) (See Glair, Harry F., assignor.)
Stark, Harry S., assignor to Mittag & Volger, Incorporated, Park Ridge, N. J. Typewriter-ribbon. No. 1,392,458; Oct. 4.
Starr, Edward B., and H. E. Marsh, Lompoc, Calif. Apparatus for cutting bricks or blocks from natural deposits. No. 1,392,459; Oct. 4.
Starr, Jennie M., Montrose, S. D. Antiskid-chain. No. 1,392,881; Oct. 4.
Steen, John L., assignor to The Triple Metals Corporation, Waukegan, Ill. Attachment for washboiler. No. 1,392,460; Oct. 4.
Stevens, Leslie, Glen Ridge, N. J. Hat-shaping apparatus. No. 1,392,605; Oct. 4.
Stevenson, William D., Pittsburgh, Pa. Composite article including phenols and formaldehyde and making same. No. 1,392,535; Oct. 4.
Stoch, Jan, Uniontown, Pa. Fastener for adjustable windows. No. 1,392,606; Oct. 4.
Stoewsand, Charles F., assignor to W. Kargus, L. Cleppe, and C. F. Stoewsand, Chicago, Ill. Shaving-brush. No. 1,392,369; Oct. 4.
Stoewsand, Charles F., et al. (See Stoewsand, Charles F., assignor.)
Stoner, Charles A., Toledo, Ohio. Pulley. No. 1,392,717; Oct. 4.
Straub, Charles, Chicago, Ill. Bevel-protractor. No. 1,392,607; Oct. 4.
Strawn, Ervin E., assignor to The Omnigraph Company, Des Moines, Iowa. Printing-plate holder. No. 1,392,806; Oct. 4.
Streib, John F., Avalon, assignor to Pressed Steel Car Company, Pittsburgh, Pa. Brake mechanism. No. 1,392,848; Oct. 4.
Strickland, Oliver W. (See Ristoul, W., Nolan, and Strickland.)
Stroud, Lamont H., Sheridan, Wyo. Station-indicator. No. 1,392,718; Oct. 4.
Stroebing, Edward H., Tonawanda, N. Y. Auxiliary seat for baby-carriages. No. 1,392,461; Oct. 4.
Sulman, Henry L., and W. B. Ballantine, London, England. Manufacture of alloys. No. 1,392,462; Oct. 4.
Summerbell, William J., Chicago, Ill. Trussed-roof structure. No. 1,392,882; Oct. 4.
Sutliff, Lewis S., Charleston, S. C. Switch. No. 1,392,665; Oct. 4.
Swaim, Patrick M., Lonoke, Ark. Elevated coasting apparatus. No. 1,392,719; Oct. 4.
Swensen, Alfred. (See Hagny, J. C., and Swensen.)
Swindale, John W. (See Lee, H. W., and Swindale.)
Sybert, William W., assignor of one-half to C. A. Cooper, Tulsa, Okla. Piston-ring. No. 1,392,536; Oct. 4.
Sykes, William W., South Richmond, Va. Safety device for throttles. No. 1,392,537; Oct. 4.
Synck, Henry, Coldwater, Ohio, and B. B. Rollman, Pittsburgh, Pa., assignors, by mesne assignments, to The New Idea Spreader Company, Coldwater, Ohio. Feeding mechanism. No. 1,392,720; Oct. 4.
Tobacco, John, Rochester, N. Y. Balloon toy. No. 1,392,861; Oct. 4.
Taggart, Thomas M., Belvedere, Calif. Gasifier for low-gravity oils. No. 1,392,463; Oct. 4.
Tagliabue, Charles J., Manufacturing Co. (See Roesch, Alfred, assignor.)
Taylor, Milan E. (See Heditler, R. S., and Taylor.)
Techno-Service Corporation. (See Gremmels, Felix, assignor.)
Thomas, Edward G., assignor to Toledo Scale Company, Toledo, Ohio. Signal for weighing-scales. No. 1,392,808; Oct. 4.
Thomas, Lester O., assignor to New England Confectionery Company, Boston, Mass. Assembling-machine. No. 1,392,853; Oct. 4.
Thompson, Carl G., Knoxville, Tenn. Grinding-mill. No. 1,392,464; Oct. 4.
Thompson, Carl G., Knoxville, Tenn. Driving mechanism. No. 1,392,465; Oct. 4.

Thompson, George K., New York, N. Y. Car-truck. No. 1,392,721; Oct. 4.
Thurston, Elmer A., Chippewa Falls, Wis. Belt-fastener. No. 1,392,722; Oct. 4.
Tice, Percival E., Chicago, Ill. Pneumatic liquid-supply-tank gage. No. 1,392,535; Oct. 4.
Till, Henry, Pittsburg, Calif. Can-opener. No. 1,392,466; Oct. 4.
Tipograph, Carl M., New York, N. Y. Sweatband. No. 1,392,539; Oct. 4.
Toledo Scale Company. (See Hem, Halvor O., assignor.)
Toledo Scale Company. (See Thomas, Edward G., assignor.)
Topp, Charles A., Lebanon, Mo. Window and door securer. No. 1,392,467; Oct. 4.
Tow, Isidore, New York, N. Y. Detachable keyboard for transposing music on pianos. No. 1,392,883; Oct. 4.
Tremolada, Guglielmo, Detroit, Mich., assignor of one-half to M. Baroni, Winnipeg, Manitoba, Canada. Reinforced spring. No. 1,392,540; Oct. 4.
Treneer, Joseph M., New York, N. Y., and C. S. Benjamin, East Orange, N. J., assignors to A. J. Doremus, West New Brighton, N. Y., and H. G. Turner, Paterson, N. J. Purification of hydrocarbons. No. 1,392,370; Oct. 4.
Triple Metals Corporation, The. (See Steen, John L., assignor.)
Turner, Douglas, assignor to The Measuregraph Company, St. Louis, Mo. Fabric-measuring and cost-computing machine. No. 1,392,725; Oct. 4.
Turner, Howard G., et al. (See Treneer, J. M., and Benjamin, assignors.)
Tuttle, Edson H., J. C. Miller, and T. C. Baldwin, Conneaut, Ohio. Steam-boiler-compound-feeder. No. 1,392,862; Oct. 4.
Tuttle, John C., assignor to The Firestone Tire and Rubber Company, Akron, Ohio. Manufacturing tires. No. 1,392,606; Oct. 4.
Underhill, Charles R., New Haven, Conn. Method and means of selection. No. 1,392,609; Oct. 4.
Union Lock Ditch Company. (See Merrick, Frank W., assignor.)
Union Switch & Signal Company, The. (See Beall, Charles E., assignor.)
United Shoe Machinery Corporation. (See Cosgrove, John W., assignor.)
United Shoe Machinery Corporation. (See Eppler, Andrew, assignor.)
United Shoe Machinery Corporation. (See Jorgensen, Bernhardt, assignor.)
United Shoe Machinery Corporation. (See Ray, Eugene J., assignor.)
United Shoe Machinery Corporation. (See Richardson, John H., assignor.)
University of Minnesota. (See Kendall, Edward C., assignor.)
V. & O. Press Company, The. (See Oswald, Herman, assignor.)
Venesia, Nestor. (See Puiggari, M., and Venesia.)
Vergniaud, Louis, assignor to Etablissements Jacob Holtzer, Paris, France. Process and apparatus for the manufacture of crucibles. No. 1,392,541; Oct. 4.
Williams, Mark A., New Castle, Pa. Hopper-car. No. 1,392,871; Oct. 4.
Vine, Jerry T., assignor of one-half to T. Conroy, Seattle, Wash. Automatic pump control. No. 1,392,372; Oct. 4.
Vorce, Albert F., Ludington, Mich. Hand-embroidery needle. No. 1,392,542; Oct. 4.
Wagner, Alice B. (See Wagner, William G., assignor.)
Wagner, William G., assignor to A. B. Wagner, Carter, S. D. Spring-tire. No. 1,392,667; Oct. 4.
Wainwright, Joseph E., Brooklyn, N. Y. Valve-lifting device. No. 1,392,373; Oct. 4.
Walker, Fred, Philadelphia, Pa. Hairpin. No. 1,392,374; Oct. 4.
Walton, Francis W. B., San Francisco, Calif. Means for mooring ships. No. 1,392,668; Oct. 4.
Ward, Bernie W., et al. (See Gill, George W., assignor.)
Waream, Charles E., Cincinnati, assignor to The American Laundry Machinery Company, Norwood, Ohio. Garment-press. No. 1,392,375; Oct. 4.
Waream, Charles E. (See Braley, C. L., and Waream.)
Warren, Clinton J., Winchester, Mass. Automobile-handling device for garages and the like. No. 1,392,610; Oct. 4.
Washburn, George P., Los Angeles, Calif. Molding apparatus for battery strap-posts. No. 1,392,884; Oct. 4.
Wasserlein, Froes Company. (See Wasserlein, Victor E., assignor.)
Wasserlein, Victor E., New York, N. Y., assignor to Wasserlein, Froes Company, Inc. Carbureter fuel control. No. 1,392,724; Oct. 4.
Waterman, Mabel, New Rochelle, N. Y. Toy animal. No. 1,392,725; Oct. 4.
Waters, Edward, Capreal, Ontario, Canada. Railway-tie. No. 1,392,376; Oct. 4.
Watkins, Henry E., Oakland, Calif., assignor to Frank A. Weeks Mfg. Co., New York, N. Y. Pencil attachment. No. 1,392,468; Oct. 4.
Watkins, Verna O., Atlanta, Ga. Educational board. No. 1,392,726; Oct. 4.
Watrous, Isaac A., Bridgeport, Conn. Electrically-operated machine for scraping irregular wooden surfaces. No. 1,392,543; Oct. 4.
Webke, Charles, New York, N. Y. Candy-pressing machine. No. 1,392,863; Oct. 4.
Weeks, Frank A., Mfg. Co. (See Watkins, Henry E., assignor.)
Weir, G. & J., Limited. (See Lang, Charles R., assignor.)
Weis, John A., Chicago, Ill. Expansible and contractible structure. No. 1,392,609; Oct. 4.
Welikoff, Atanas. (See Spatter N., and Welikoff.)
Welsh, Clyde L., Pittsburgh, Pa. Mechanical toy. No. 1,392,727; Oct. 4.
Wertheim, Max, Pietermaritsburg, Natal, South Africa. Sugar-cane cutter. No. 1,392,377; Oct. 4.
Westman, Alfred D. (See Westman, William H. and A. D., and Richards.)
Westman, William H. and A. D., and J. N. Richards, Chatham, Ontario, Canada. Oil-cock-wrench. No. 1,392,728; Oct. 4.
Whitright, Samuel L., New Haven, Conn. Fuel-vaporising heater. No. 1,392,729; Oct. 4.
Wiet, Eugene, and F. Chittenden, assignors to National Safety Appliance Company, San Francisco, Calif. Electropneumatic valve. No. 1,392,544; Oct. 4.
Wilz, Garrett P. (See Cunningham, Auren A., assignor.)
Wilhelm, John H., New York, N. Y. Safety-holder for milk-bottles and the like. No. 1,392,809; Oct. 4.
Willard, Louie E., Chula, Ark. Controlling mechanism. No. 1,392,378; Oct. 4.
Williams, Edward R., Sharpsburg, Pa. Dispensing device. No. 1,392,370; Oct. 4.
Williams, Rolland G., Bridgeport, Conn. Pole-mounting. No. 1,392,730; Oct. 4.
Williams, Samuel O., Northumberland, England. Road-wheel for vehicles. No. 1,392,545; Oct. 4.
Williams, William E., Chicago, Ill. Flanged-disk pressed-steel wheel. No. 1,392,381; Oct. 4.
Williams, William E., Chicago, Ill. Pressed steel wheel. No. 1,392,380; Oct. 4.
Williamson, Charles S., Chicago, Ill. Apparatus for handling coal, ore, and the like. No. 1,392,382; Oct. 4.
Williamson, Colonel J., assignor to Williamson Machine Company, San Francisco, Calif. Apparatus for cleaning eggs. No. 1,392,546; Oct. 4.
Williamson Machine Company. (See Williamson, Colonel J., assignor.)
Willis, Prior F., St. Louis, Mo. Valve. No. 1,392,547; Oct. 4.
Willis, Williiam, Pawtucket, R. I. Automobile-signal. No. 1,392,731; Oct. 4.
Wills, Walter B., Baltimore, Md. Strainer. No. 1,392,383; Oct. 4.
Wilson, Harry D. (See Hardy, J. N., Wilson, and Long.)
Wilson, Stephen G., Philadelphia, Pa. Broom. No. 1,392,384; Oct. 4.
Winter, Lester A. (See Norman, Orville P., assignor.)
Wise, Charles A., and E. B. Wise, Lawrence, Kans. Tractor-hitch. No. 1,392,864; Oct. 4.
Wise, Elmer B. (See Wise, Charles A. and E. B.)
Wishart, John O. (See Wishart, William and J. O.)
Wishart, William and J. O., assignors to Clinton Refrigerating Company, Clinton, Iowa. Process and apparatus for making ice. No. 1,392,885; Oct. 4.
Witt, Arthur G., Hamilton, Ontario, Canada. Shock-absorber. No. 1,392,886; Oct. 4.
Wolf, Bernhard M. (See Fischer, H. J., and Wolf.)
Wolff Manufacturing Company. (See Gavin, John H., assignor.)
Wones, Raymond O., Maplewood, Ohio. Pump. No. 1,392,670; Oct. 4.
Wood, A. J, Grand Rapids, assignor to Bennett Injector Company, Muskegon, Mich. Truck. No. 1,392,387; Oct. 4.
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Insert-printing press. No. 1,392,469; Oct. 4.
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Insert feeding and cutting device. No. 1,392,470; Oct. 4.
Wood, Henry A. W., assignor to Wood Newspaper Machinery Corporation, New York, N. Y. Machine for delivering magazines and the like. No. 1,392,471; Oct. 4.
Wood Newspaper Machinery Corporation. (See Wood, Henry A. W., assignor.)
Woodman, George A., Chicago, Ill. Railway-car end. No. 1,392,472; Oct. 4.
Wrigley, Wm. Jr., Company. (See Johnson, Charles W., assignor.)
Wuensch, Joseph W., St. Paul, Minn. Tag-holder. No. 1,392,548; Oct. 4.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 4TH DAY OF OCTOBER, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Advertising device and paper-holder. A. Anderson. No. 1,392,611; Oct. 4.

Aeroplane. Device for fixing an engine in an. P. J. R. Postel-Vinay. No. 1,392,655; Oct. 4.

Aeroplane-guy-wire connection. F. Schumaier. No. 1,392,529; Oct. 4.

Air-compressor and vacuum-producer, Hydraulic. B. Skidmore, Jr. No. 1,392,854; Oct. 4.

Air-compressor and vacuum-producer, Hydraulic. B. Skidmore, Jr. No. 1,392,855; Oct. 4.

Air-compressor and vacuum-producer, Hydraulic. B. Skidmore, Jr. No. 1,392,856; Oct. 4.

Air-compressor and vacuum-producer, Hydraulic. B. Skidmore, Jr. No. 1,392,857; Oct. 4.

Air-lifting device. W. N. Howe. No. 1,392,451; Oct. 4.

Aircraft, without slowing the propeller, Means for varying the speed and stopping way of. J. G. A. Kitchen. No. 1,392,831; Oct. 4.

Alarm: *See*—
Burglar-alarm.

Alarm. J. Horn, F. H. May, and J. Meilner. No. 1,392,588; Oct. 4.

Alarm device. J. M. Butcher. No. 1,392,397; Oct. 4

Aldehydes and other oxidation products, Making. C. H. Bibb. No. 1,392,886; Oct. 4.

Alloys, Manufacture of. H. L. Sulman and W. Ballantine. No. 1,392,462; Oct. 4.

Anchor. P. J. Ryan. No. 1,392,526; Oct. 4.

Animal-trap. A. F. Renken. No. 1,392,797; Oct. 4.

Applying device. J. W. Cosgrove. No. 1,392,301; Oct. 4.

Arc-light. J. J. Harmer. No. 1,392,497; Oct. 4.

Arc-welding, Method of and apparatus for. H. D. Morton. No. 1,392,436; Oct. 4.

Arc-welding system and operating same. H. D. Morton. No. 1,392,437; Oct. 4.

Armatures, Insulation for. J. F. Cullin. No. 1,392,557; Oct. 4.

Assembling-machine. L. O. Thomas. No. 1,392,858; Oct. 4.

Auto attachment. F. C. Miles. No. 1,392,432; Oct. 4.

Auto-carrier. J. M. Loveless. No. 1,392,777; Oct. 4.

Automobile-bodies, Method and apparatus for protecting workmen sandpapering. C. Fessler. No. 1,392,870; Oct. 4.

Automobile-holder, Adjustable. L. C. Nicoson. (Reissue.) No. 15,203; Oct. 4.

Automobile-jack. A. E. Burnside. No. 1,392,297; Oct. 4.

Automobile-lifter. L. L. Kellogg. No. 1,392,358; Oct. 4.

Automobile-lock. F. H. Howard. No. 1,392,400; Oct. 4.

Automobile-lock. R. N. Lawrence. No. 1,392,772; Oct. 4.

Automobile-polish, (Composition.) T. Brown. No. 1,392,477; Oct. 4.

Automobile-radiators, Device for controlling the temperature of. R. L. Pate. No. 1,392,521; Oct. 4.

Automobile-radiators, Device for controlling the temperature of. R. L. Pate. No. 1,392,522; Oct. 4.

Automobile-signal. W. Willis. No. 1,392,731; Oct. 4.

Automobile-surfacing. H. B. Day. No. 1,392,889; Oct. 4.

Automobile transmission, Gear-shifting means for. F. J. Hofmeister and J. O. Middaugh. No. 1,392,830; Oct. 4.

Automobiles, Fuel-feeding device for. W. H. Muxy. No. 1,392,652; Oct. 4.

Automobiles, Rear-bumper bracket for. G. S. MacLeod. No. 1,392,428; Oct. 4.

Baby-carriages, Auxiliary seat for. E. H. Struebing. No. 1,392,461; Oct. 4.

Backband-hook. W. C. Martin. No. 1,392,843; Oct. 4.

Bag-support. M. C. Spraggins. No. 1,392,716; Oct. 4.

Bank, Small-coin. I. J. Kusel. No. 1,392,689; Oct. 4.

Bar: *See*—
Palatal bar.

Bath apparatus, Portable shower-. A. P. Gumaer. No. 1,392,495; Oct. 4.

Battery-clamp. G. T. W. Gales. No. 1,392,757; Oct. 4.

Battery strap-posts, Molding apparatus for. G. P. Washburn. No. 1,392,884; Oct. 4.

Bearing and oiling means therefor. A. H. De Voe. No. 1,392,906; Oct. 4.

Bearings, Roller-filler for. L. Bartlett. No. 1,392,550; Oct. 4.

Bed-clamp. M. Leaf. No. 1,392,561; Oct. 4.

Beehive. J. Gorniak. No. 1,392,635; Oct. 4.

Belt. J. E. Frank. No. 1,392,319; Oct. 4.

Belt-fastener. E. A. Thurston. No. 1,392,722; Oct. 4.

Bevel-protractor. C. Straub. No. 1,392,607; Oct. 4.

Bicycle stand or support. A. Donati. No. 1,392,749; Oct. 4.

Block: *See*—
Tapping-block.

Board: *See*—
Educational board.

Body support and lock. W. C. Anthony. No. 1,392,615; Oct. 4.

Boiler: *See*—
Milk-boiler.

Boiler and ship plates, cutting inclined keyways, or other purposes, Machine for scarfing. J. W. Barnes. No. 1,392,549; Oct. 4.

Boiler-cleaner. H. H. Dick. No. 1,392,307; Oct. 4.

Book and manifolding, Manifolding-. C. B. Davidson. No. 1,392,748; Oct. 4.

Boring-machine. W. F. McCarty. No. 1,392,778; Oct. 4.

Boring-tool. R. R. Davis. No. 1,392,304; Oct. 4.

Bottles, Safety-holder for milk-. J. H. Wilhelm. No. 1,392,809; Oct. 4.

Bow-holder. E. E. Hamilton. No. 1,392,684; Oct. 4.

Box: *See*—
Match-box.

Brace: *See*—

Musical instruments. Virzi Bros. No. 145,678; Oct. 4.
Mustard, sardines, vinegar, canned vegetables, &c. California Conserving Co. No. 149,710; Oct. 4.
Needles, Sewing-. George Borgfeldt & Co. No. 151,504; Oct. 4.
Oil for mops. Gem Hammock & Fly Net Company. No. 120,529; Oct. 4.
Oil made from cotton-seed, Salad and cooking. Globe Cotton Oil Mills. No. 146,546; Oct. 4.
Oil, Olive-. Pallarés Hermanos. No. 133,580; Oct. 4.
Oils, Vegetable and mayonnaise and salad. Strohmeyer & Arpe Company. No. 146,276; Oct. 4.
Ointment, Healing-. Beech Chemical Company. No. 148,792; Oct. 4.
Oranges, grapefruit, lemons, limes, &c., Fresh. J. M. Knight. No. 149,084; Oct. 4.
Oven-temperature regulator. Claus Automatic Gas Cock Co. No. 148,535; Oct. 4.
Pads, Chair-. T. E. Brawley. No. 142,551; Oct. 4.
Pails, pans, vats, scoops, &c. Edward C. Walker, 3d. No. 139,998; Oct. 4.
Paint and oils. Sup-R-Lin Products Co. No. 149,105; Oct. 4.
Paint and varnish remover. Standard Varnish Works. No. 150,375; Oct. 4.
Paint and varnish remover. Taylor-Van Houten Co. No. 150,642; Oct. 4.
Paints. Rinker-Deas Paint Co. No. 148,557; Oct. 4.
Paper and cloth, Flint. Baeder Adamson Co. No. 150,847; Oct. 4.
Paper and cloth, Flint, garnet, and emery. Baeder Adamson Company. No. 150,846; Oct. 4.
Paste, cold-cream, complexion-powder, &c., Tooth-. Nathan & Cie. Laboratoires, Cadum. No. 149,238; Oct. 4.
Pavements and paving materials. Warren Brothers Company. No. 151,967; Oct. 4.
Pendants, Luminous. H. T. Paiste Company. No. 148,246; Oct. 4.
Perfume, Liquid and powdered. Colgate Company. No. 149,446; Oct. 4.
Perfumes, toilet cream, &c. Société Anonyme des Parfums d'Arys. No. 149,620; Oct. 4.
Petroleum, Emulsion of. Angier Chemical Co. No. 138,745; Oct. 4.
Pharmaceutical preparation. Calco Chemical Company, The. No. 149,172; Oct. 4.
Pharmaceutical preparation. Comer, Fetterly & Company. No. 148, 923; Oct. 4.
Pharmaceutical preparations. Menley & James, Limited, New York. No. 137,066; Oct. 4.
Phonograph-record files. Phonograph Accessories Co. No. 131,352; Oct. 4.
Phonograph-records, Album for. F. S. Betts. No. 140,429; Oct. 4.
Photographic film. Seneca Camera Manufacturing Company. No. 146,746; Oct. 4.
Photographic plates and films. Heiser Co. No. 140,893; Oct. 4.
Piano-player, Player-rolls for. Billings Player Roll Company. No. 142,918; Oct. 4.
Pianos and player attachments for such or similarly keyed musical instruments, Player-. J. P. Eustis Manufacturing Company. No. 146,628; Oct. 4.
Pianos, Perforated note-sheets for player-. Q. R. S. Music Company. No. 144,684; Oct. 4.
Picture films, Motion-. Cosmoramic Pictures Corporation. No. 146,250; Oct. 4.
Picture films showing sketches, drawings, and photographs, Motion-. J. Ollendorff. No. 146,586; Oct. 4.
Picture slides, eye-glasses, lenses, &c., Moving-. New Era Optical Co. No. 140,297; Oct. 4.
Picture slides, eyeglasses, &c., Moving-. New Era Optical Co. No. 140,300; Oct. 4.
Pictures, Motion-. Educational Films Corporation of America. No. 147,869; Oct. 4.
Pills, Laxative. A. N. Gaebler. No. 148,590; Oct. 4.
Pins, Straight and safety. Plume & Atwood Mfg. Company, The. No. 149,201; Oct. 4.
Pipe-fittings, Iron and steel. J. Pantenkey. No. 148,163; Oct. 4.
Players, Expression-control devices for pneumatic. Clark Pneumatic Action Co. No. 145,457; Oct. 4.
Poison, Insect-. Exchange Orange Products Company. No. 148,723; Oct. 4.
Potash salt of the cyan-mercury-salicylic acid. J. D. Riedel Aktiengesellschaft. No. 148,551; Oct 4.
Poultry, Dressed. Missouri Egg & Poultry Company. No. 144,215; Oct. 4.
Powder, Baking-. Wilkes & Seaman Co. No. 148,681; Oct. 4.
Powder, Face-. W. C. Dillman. No. 148,674; Oct. 4.
Powder, Face-. M. Robins. No. 147,210; Oct. 4.
Powder for affections of the skin. R. Flores. No. 149,580; Oct. 4.
Powder for general household cleaning purposes. J. N. Hoyt. No. 146,486; Oct. 4.
Powder, Medicated foot-. P. L. De Weese. No. 149,215; Oct. 4.
Powder, Talcum. Talcum Puff Co. No. 149,605; Oct. 4.
Powders, Face-. F. J. de S. Coty. No. 138,542; Oct. 4.
Preparation for indigestion, constipation, bad breath, &c. G. J. Novak. No. 148,811; Oct. 4.
Preparation for removal of paints, finishes, enamels, &c. Sherwin-Williams Company. No. 147,134; Oct. 4.
Preparation for treatment of pyorrhea. E. F. Greer. No. 148,886; Oct. 4.
Preparation for use as a mouth-cleanser. W. H. Graves. No. 149,181; Oct. 4.
Prophylactics. Lowy Laboratory, Inc. No. 140,841; Oct. 4.
Remedy for hay-fever, bronchitis, &c. R. Filkins. No. 149,394; Oct. 4.
Remedy for treatment of rheumatism, headache, &c. J. Filipowics & Co. No. 149,222; Oct. 4.
Salt, Common. Worcester Salt Co. Nos. 149,307–8; Oct. 4.
Salve for cuts, sprains, piles, &c. N. W. Kline. No. 111,457; Oct. 4.
Sausage. Swift and Company. No. 133,233; Oct. 4.
Sausage, water, and cereal, potted meat products. Jacob E. Decker & Sons. No. 137,065; Oct. 4.
Sex of human beings and animals and of the embryo of eggs, Instruments for indicating. J. H. Arnold. No. 145,986; Oct. 4.
Shoe parts—namely, rubber heels. Brooks & Co. No. 147,005; Oct. 4.
Shoe-polish. N. Piccoli. No. 149,599; Oct. 4.
Soap. Western Soap Company. No. 151,901; Oct. 4.
Soaps. Fitzpatrick Bros. No. 151,665; Oct. 4.
Soaps. Fitzpatrick Bros. No. 151,667; Oct. 4.
Soaps. The Pioneer Tar Soap Company. No. 151,809; Oct. 4.
Soap, soap powder, &c. United Turkey Red Company. No. 144,439; Oct. 4.
Spark-plugs. Sharp Spark Plug Company. No. 117,415; Oct. 4.
Spark-plugs for internal-combustion engines. Cloud Accessories Corporation. No. 135,009; Oct. 4.
Spectacles, eyeglasses, ophthalmic lenses, and frames therefor. Economy Spectacle Company. No. 148,187; Oct. 4.
Steam-accumulator. Aktiebolaget Vaporackumulator. No. 137,168; Oct. 4.
Steam tables, culinary warmers, cookers, &c. Aldrich Manufacturing Co. No. 149,996; Oct. 4.
Steel plates, strips, and sheets. Sharon Steel Hoop Company. No. 149,837; Oct. 4.
Steel shafts, &c., Rolled-. Hydraulic Steel Company. No. 152,038; Oct. 4.
Sugar, gelatin, and fruit-acid compound. Miles Manufacturing Company. No. 146,190; Oct. 4.
Suits, Dresses, shirts, &c., Children's. A. Flax. No. 142,496; Oct. 4.
Tablets, Medicinal. C. E. Kiesling. No. 149,191; Oct. 4.
Talking-machines and records. Polyphonwerke Aktiengesellschaft. No. 146,544; Oct. 4.
Tanks or containers for liquids, Steel. Glass Coating Company. No. 129,570; Oct. 4.
Tanning extracts. New York Quebracho Extract Company. Nos. 148,968–70; Oct. 4.
Tea and coffee. American Grocers Society, Inc. No. 146,768; Oct. 4.
Thread, Cotton. Societe Francaise de Cotons à Coudre, (Societe Anonyme). No. 150,476; Oct. 4.
Thread, Cotton. Societe Francaise de Cotons à Coudre, (Societe Anonyme). No. 150,477; Oct. 4.
Thread, Cotton. Societe Francaise de Cotons à Coudre, (Societe Anonyme). Nos. 150,479–81; Oct. 4.
Thread, Cotton. Societe Francaise de Cotons à Coudre, (Societe Anonyme). Nos. 150,482–5; Oct. 4.
Thread, Cotton. Societe Francaise de Cotons à Coudre, (Societe Anonyme). Nos. 150,487–8; Oct. 4.
Tinware, Japanned and galvanized ware, sheet-metal products, &c. E. E. Lawson Company. No. 141,873; Oct. 4.
Tire-protecting and skid-preventing devices. C. Knestrick. No. 147,425; Oct. 4.
Tires and tubes therefor, Elastic vehicle-. The Goodyear Tire & Rubber Company. No. 151,830; Oct. 4.
Toilet preparation. Astra Chemical Company. No. 149,457; Oct. 4.
Tonic and liver preparation. R. I. Eaton. No. 130,093; Oct. 4.

PUBLISHED FOR OPPOSITION.

[Act of Feb. 20, 1905, Sec. 6, as amended Mar. 2, 1907.]

Tonic and reconstructive, General. American Apothecaries Company. No. 149,499; Oct. 4.
Tonic in liquid form, Blood and nerve. The Clausen Zoller Company. No. 149,541; Oct. 4.
Trunks. Hartmann Trunk Co. No. 146,434; Oct. 4.
Valves, socks, bibs, and pipe-connectors. Cleveland Brass Manufacturing Co. No. 148,255; Oct. 4.
Vehicle axles and gear-casing construction therefor, Motor-. The Torbensen Axle Company. No. 149,724; Oct. 4.
Vehicle-spring. T. W. C. Hartmann. No. 148,736; Oct. 4.
Vending-machines provided with means for keeping contents hot. C. L. Paine. No. 148,893; Oct. 4.
Violins and parts thereof. Jackson-Guldan Violin Company. No. 145,949; Oct. 4.
Washing compound. J. J. Downey. No. 139,737; Oct. 4.
Water proof cement for building. The Staveley Coal & Iron Co. Limited. No. 152,140; Oct. 4.
Waterproof cloth in the piece. Pantasote Leather Company. No. 149,482; Oct. 4.
Waterproofing composition. J. Zoltowski. No. 146,154; Oct. 4.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 4, 1921.

NOTE.—First number—class, second number—subclass, third number—patent number.

3— 22: 1,392,539
144: 1,392,205
149: 1,392,532
1— 26: 1,392,495
1,392,580
5— 18: 1,392,695
41: 1,392,561
7— 12: 1,392,685
9— 20: 1,392,533
9.5— 2: 1,392,533
10— 72: 1,392,661
123: 1,392,705
147: 1,392,740
13— 6: 1,392,536
14: 1,392,580
85: 1,392,709
125: 1,392,357

Berger, Knute, assignor to Washington Iron Works, Seattle, Wash. Slack-puller for cableways. No. 1,393,604; Oct. 11.

Bergmaug, Karl, Brooklyn, N. Y. Packing-tool. No. 1,393,605; Oct. 11.

Berneburg, Eduard, Leipsig, Germany. Typewriter. No. 1,393,194; Oct. 11.

Bernitz, Ernest, assignor to Bernitz Furnace Appliance Company, Boston, Mass. Furnace-wall. No. 1,393,606; Oct. 11.

Bernitz Furnace Appliance Company. (See Bernitz, Ernest, assignor.)

Berridge, Russell W., Detroit, Mich. Manufacture of grape and other fruit juices. No. 1,393,422; Oct. 11.

Beylik, Franklin C., Glendale, assignor of one-half to N. W. Schwartslose, Los Angeles, Calif. Pectous material and making the same. No. 1,393,660; Oct. 11.

Billings, Cecil M., Brooklyn, assignor to Delmore Manufacturing Co., Inc., New York, N. Y. Vehicle-axle support. No. 1,393,004; Oct. 11.

Billings, Cecil M., Brooklyn, assignor to Delmore Manufacturing Co., Inc., New York, N. Y. Motor parcel-vehicle. No. 1,393,005; Oct. 11.

Billings & Spencer Company, The. (See Bayrer, Louis G., assignor.)

Bishop Company, The. (See Bishop, Frederick R., assignor.)

Bishop, Frederick R., North Attleboro, Mass., assignor to The Bishop Company. Ophthalmic mounting. No. 1,393,340. Oct. 11.

Bittner, Fred H., Bottineau, N. D. Adjustable reach. No. 1,393,661; Oct. 11.

Black, Archibald, Brooklyn, assignor, by mesne assignments, to L-W-F Engineering Company, Inc., College Point, Long Island, N. Y. Fuselage. No. 1,393,488; Oct. 11.

Black, George H., Rochester, N. Y., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Insole and making the same. No. 1,392,906; Oct. 11.

Blaisdell Company. (See Brooks, Harry A., assignor.)

Blass, Ferdinand M. E., East Orange, N. J. Self-heating smoothing-iron. No. 1,393,423; Oct. 11.

Blaser, Emmer H. (See Stalley, C. E., and Blaser.)

Block, Alexander, New York, N. Y. Lock. No. 1,393,006; Oct. 11.

Blunden, George T., London, England. Device for mounting timepieces. No. 1,393,607; Oct. 11.

Bocher, Aaron C., Milwaukee, Wis. Electrically-operated voting apparatus. No. 1,393,074; Oct. 11.

Boeckly, Paul. (See Schlatter, G. S., and Boeckly.)

Bogaty, Hermann. (See Ayres, E. B., and Bogaty.)

Boos, August N. E., New York, N. Y. Service-check and receipt. No. 1,393,480; Oct. 11.

Borden Company, The. (See Nonneman, Ira W., assignor.)

Borden Company, The. (See Taylor, Burt E., assignor.)

Boyce, William E., New York, N. Y. Article of merchandise. No. 1,393,608; Oct. 11.

Boyton, John C., and O. H. Nickerson, assignors to The Adapti Company, Cleveland, Ohio. Electric-light fitting. No. 1,393,075; Oct. 11.

Boyuls, Cecil H., Louisville, Ky. Garment-former. No. 1,392,907; Oct. 11.

Bower, Thomas F., Farmdale, Ohio. Road-building machine. No. 1,393,341; Oct. 11.

Bradley, Charles F., Hobart, Ind. Antislap device for pistons. No. 1,393,490; Oct. 11.

Brady, Horace L., Los Angeles, Calif. Fish-grapple. No. 1,393,076; Oct. 11.

Bradley, Ross E., Roland Park, Md. Billet-casting. No. 1,393,195; Oct. 11.

Brahmer, Leland F., Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company. No. 1,393,401; Oct. 11.

Breitweiser, Bert E., Wichita, Kans. Detachable tire-protector. No. 1,393,196; Oct. 11.

Brinton, William C., Jr., assignor, by mesne assignments, to Philbrin Corporation, Kennett Square, Pa. Electrical condenser. No. 1,393,077. Oct. 11.

Brockhagen, George J., Brooklyn, N. Y. Change-making machine. No. 1,393,424; Oct. 11.

Bronnert, Emile, Mulhouse, Alsace-Lorraine, France. Manufacture of artificial silk. No. 1,393,197; Oct. 11.

Bronnert, Emile, Mulhouse, Alsace-Lorraine, France. Manufacture of viscose silk. No. 1,393,198; Oct. 11.

Bronnert, Emile, Mulhouse, Alsace-Lorraine, France. Manufacture of artificial silk. No. 1,393,199; Oct. 11.

Brooks, Harry A., Glendale, assignor to Blaisdell Company, Los Angeles, Calif. Filter-cleaning apparatus. No. 1,393,492; Oct. 11.

Brossoit, James J. (See Maurer, A., and Brossoit.)

Brown, A. & F., Company, The. (See Woodward, Arthur C., assignor.)

Brown, Hugh E., assignor to W. M. Welch Manufacturing Company, Chicago, Ill. Experimental truss unit. No. 1,393,007; Oct. 11.

Browne, Vere B., Tarentum, Pa. Open-hearth furnace. No. 1,393,493; Oct. 11.

Browning Company, The. (See Johnson, Howard F., assignor.)

Bryant Electric Company, The. (See Catlin, Hoyt, assignor.)

Bryant, Henry D., Springfield, Mass. Amusement device. No. 1,393,494; Oct. 11.

Bryce, James W., Bloomfield, N. J., assignor to The Computing Scale Company, Dayton, Ohio. Automatic scale. No. 1,392,908; Oct. 11.

Buchsbaum, Samuel, Chicago, Ill. Belt-buckle. No. 1,393,425; Oct. 11.

Buebke, Charles M., assignor to P. F. Buebke, Portland, Oreg. Demountable baggage-rack for automobile running-boards. No. 1,393,200; Oct. 11.

Buebke, Phillip F. (See Buebke, Charles M., assignor.)

Bunnell, George H., and B. E. Titus, Midway, Utah. Vulcaniser. No. 1,393,496; Oct. 11.

Bunting Iron Works. (See Driscoll, Dennis L., assignor.)

Burkam, John. (See Helby, C. G., Burkam, Lindquist, Riggin, Allen, and Lau.)

Burke, Harry C., Santa Ana, Calif. Clocking device for detail-strips. No. 1,393,242; Oct. 11.

Burkleo, Peter, Library, Pa. Switch-throw. No. 1,393,496; Oct. 11.

Burns, Kathlyn L., assignor to Ovida Co., New York, N. Y. Diaphragm-confiner. No. 1,393,609; Oct. 11.

Burrese, John R., Tulsa, Okla. Automatic switch-point-locking device. No. 1,393,662; Oct. 11.

Burrowes, E. T., Company, The. (See Cole, Warren W., assignor.)

Butler, Frank L., Chicago, Ill. Electric fixture. No. 1,393,078. Oct. 11.

Butler, Frank L., Chicago, Ill. Electric fixture. No. 1,393,079; Oct. 11.

Butts, Eugene B., Chicago, Ill. Collapsible light and rain shield for vehicles. No. 1,393,080; Oct. 11.

Bussaird, Raleigh B., Washington, D. C., assignor, by mesne assignments, to Davis Automatic Equipment Corporation, New York, N. Y. Coin-controlled lock mechanism. No. 1,393,201; Oct. 11.

Bijur Motor Appliance Company. (See Wolfsohn, Lionel M., now by judicial change of name Lionel M. Woolson, assignor.)

Byllesby, H. M., & Company. (See Welch, W. J., and Tracy, assignors.)

Cadman, Addi B., assignor to Warner Manufacturing Company, South Beloit, Wis. Trailer-truck. No. 1,393,497; Oct. 11.

Callard, Robert P., and C. A. Rhonemus, Charleston, W. Va., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Sheet-glass-drawing machine. No. 1,393,081; Oct. 11.

Calthrop, Everard R., assignor to E. R. Calthrop's Aerial Patents Limited, London, England. Parachute. No. 1,393,082; Oct. 11.

Calthrop, E. R., Aerial Patents Limited. (See Calthrop, Everard R., assignor.)

Campbell, Leslie S., Brighton, England. Carbureter. No. 1,393,426; Oct. 11.

Campbell, William A., Pittsburgh, Pa. Vise. No. 1,393,083; Oct. 11.

Camward Engineering Co. (See Howard, John A., Sr., assignor.)

Candee, Zenas P., assignor to The Waterbury Farrel Foundry and Machine Company, Waterbury, Conn. Machine element. No. 1,393,610; Oct. 11.

Canfield, George E., assignor to J. M. Dobson, Minneapolis, Minn. Centrifugal governor for Fordson tractors. No. 1,393,084; Oct. 11.

Carboni, Matthew J., New York, N. Y. Electric sign. No. 1,393,008; Oct. 11.

Carhart, Alfred B., Winchester, assignor to Crosby Steam Gage & Valve Company, Boston, Mass. Safety-valve. No. 1,393,258; Oct. 11.

Carle, Harry S., Chicago, Ill. Door and gate brace. No. 1,393,611; Oct. 11.

Carlson, Oscar F., Chicago, Ill. Burner. No. 1,392,909; Oct. 11.

Carnation Milk Products Co. (See Grindrod, George, assignor.)

Carouso, Victor, Oakland, Calif. Battery switch-lock. No. 1,393,259; Oct. 11.

Carpenter, Allan O., Corning, N. Y., assignor to Ingersoll-Rand Company, Jersey City, N. J. Compressor. No. 1,393,085; Oct. 11.

Carr, James, Syracuse, N. Y. Tool-chuck. No. 1,393,260; Oct. 11.

Carrier Engineering Corporation. (See Carrier, Willis H., assignor.)

Carrier, Willis H., assignor to Carrier Engineering Corporation, Buffalo, N. Y. Method of and apparatus for drying, conditioning, and regulating the moisture content of hygroscopic materials. No. 1,393,086; Oct. 11.

Carroll, Charles E., Malden, Mass. Card-counter. No. 1,393,009; Oct. 11.

Carver, Wilfred A., Buffalo, N. Y. Fountain-feed rotary brush. No. 1,393,663; Oct. 11.

Casey, Marion E., Ware Shoals, S. C., assignor to M. H. Flowers, Asheville, N. C. Self-tightening gear and pulley attachment. No. 1,393,261; Oct. 11.

Catlin, Hoyt, Fairfield, assignor to The Bryant Electric Company, Bridgeport, Conn. Electric switch. No. 1,393,612; Oct. 11.

Catlin, Thomas S., Waveland, Ind. Jar-holder. No. 1,393,010; Oct. 11.

Cavalenes, John S. (See Soteros, L. C., and Cavalenes.)

Celite Products Company. (See Jordan, Walter L., assignor.)

Chalman, John E., assignor to Union Special Machine Company, Chicago, Ill. Binder for sewing-machines. No. 1,393,498; Oct. 11.

Charbonneau, Arthur A., Montreal, Quebec, Canada. Cigar-mold. No. 1,393,087; Oct. 11.

Chauvet, Felix E., St. Louis, Mo. Vehicle-spring. No. 1,393,263; Oct. 11.

Chase, Milton M., Cheyenne, Wyo. Retainer for motion-picture-film reels. No. 1,392,910; Oct. 11.

Chase-Shawmut Company, The. (See Conant, Franklin N., assignor.)

Chesnutt, John L., Long Beach, Calif. Swivel-caster. No. 1,392,911; Oct. 11.

Chesnutt, John L., Long Beach, Calif. Ball-bearing string-proof wheel. No. 1,392,912; Oct. 11.

Chesnutt, John L., Long Beach, Calif. Swivel-caster. No. 1,392,913; Oct. 11.

Chesnutt, John L., Long Beach, Calif. Swivel-caster. No. 1,392,914; Oct. 11.

Chisholm-Moore Manufacturing Company, The. (See Esmsberg, Arthur S., assignor.)

Christie, Evi W., Sewaren, assignor to Wheeler Condenser and Engineering Company, Carteret, N. J. Condensing apparatus. No. 1,393,499; Oct. 11.

Christoph, Edward A. (See Christoph, Emil A., assignor.)

Christoph, Emil A., assignor of one-half to E. A. Christoph, Chicago, Ill. Electric toaster. No. 1,393,427; Oct. 11.

Christoffersen, William. (See Samuelson, P. W., and Christoffersen.)

Church, Frederick B., Azusa, assignor to International Precipitation Company, Los Angeles, Calif. Process and apparatus for recovering metallic values from ores. No. 1,393,428; Oct. 11.

Cincinnati Frog & Switch Company. (See Edelblute, Thomas H., assignor.)

Clark, Edward B., Golconda, Ill. Indicating device. No. 1,393,500; Oct. 11.

Clark, John T., Provo, Utah. Necktie-holder. No. 1,393,262; Oct. 11.

Clark, Otis B., and C. H. Franklin, Schenectady, N. Y., assignors to General Electric Company. Drop-hammer. No. 1,393,501; Oct. 11.

Clark, Solomon. (See Lyttle, J. D., and Clark.)

Clark, William C., Spokane, Wash. Railway-spike. No. 1,393,343; Oct. 11.

Claus, Carl, Philadelphia, Pa. Dining-room turntable. No. 1,393,202; Oct. 11.

Clausen, Henry P., Mount Vernon, assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. No. 1,393,429; Oct. 11.

Clausen, Henry P., Mount Vernon, assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. No. 1,393,430; Oct. 11.

Clausen, Henry P., Mount Vernon, assignor to Western Electric Company, Incorporated, New York, N. Y. Machine-switching telephone system. No. 1,393,502; Oct. 11.

Clausen, Henry P., Mount Vernon, assignor to Western Electric Company, Incorporated, New York, N. Y. Electrical system. No. 1,393,503; Oct. 11.

Claybek, Stephen G., Gerdenville, N. Y. Air-brake-piston-leather-expanding ring. No. 1,393,664; Oct. 11.

Clendenon, James L., Ensley, Ala. Hub for gears, pulleys, and tools. No. 1,392,915; Oct. 11.

Clifton, Jesse A., Orangeburg, S. C. Wax-melting machine and seal-maker. No. 1,393,263; Oct. 11.

Closson, Clarence E., Potlatch, Idaho. Advertising-cabinet. No. 1,393,665; Oct. 11.

Coates, Frederick, Wyoming, assignor to Federal Products Company, Cincinnati, Ohio. Paste-applying machine. No. 1,393,505; Oct. 11.

Cohan-Epner Co. (See Jaroll, Louis, assignor.)

Cole, John A., New York, N. Y. Truck-loader. No. 1,392,916; Oct. 11.

Cole, Warren W., assignor to The E. T. Burrowes Company, Portland, Me. Combined parting-bead and weather-strip. No. 1,393,264; Oct. 11.

Collie, James H., Birkenhead, England. Multiple-cable gland for bulkheads and the like and plastic filling compound therefor. No. 1,393,089; Oct. 11.

Collins, Daniel, New York, N. Y. Vehicle-wheel. No. 1,393,504; Oct. 11.

Computing Scale Company, The. (See Bryce, James W., assignor.)

Conant, Franklin N., Newburyport, Mass., assignor, by mesne assignments, to The Chase-Shawmut Company. Renewable fuse. No. 1,392,917; Oct. 11.

Connecticut Tool and Engineering Company, The. (See Matthews, Frank E., assignor.)

Connor, Robert D., Withington, Manchester, England. Method and apparatus for drawing wire. (Reissue.) No. 15,205; Oct. 11.

Conrad, Nicholas J., assignor to Schweitzer & Conrad, Chicago, Ill. Method of and means for switching. No. 1,393,344; Oct. 11.

Conway, William J., San Francisco, Calif. Truck-loading device. No. 1,393,345; Oct. 11.

Copeland, Harry L., Walla Walla, Wash. Moving form for concrete construction. No. 1,393,506; Oct. 11.

Cook, Frank J., Cleveland, Ohio. Insulating composition of matter. No. 1,393,346; Oct. 11.

Cook, Stanley S. (See Parsons, C. A., Cook, and Douglas.)

Cooke, Samuel H., and J. O. Miller, Greenville, S. C. Spring-support for looms. No. 1,393,347; Oct. 11.

Cooper, Arthur E., Beacon, N. Y. Billiard-cue holder. No. 1,393,265; Oct. 11.

Cooper, David S. (See Croft, Charles L., assignor.)

Cordes, Frank, Pittsburgh, Pa. Chill-mold. No. 1,393,666; Oct. 11.

Cornell, Fred, Los Angeles, Calif. Oil service-fountain. No. 1,393,507; Oct. 11.

Cornell, John M., Seabright, N. J. Construction of rolling doors, shutters, and curtains. No. 1,392,918; Oct. 11.

Cousins, George, Oswego, N. Y. Micrometer-caliper. No. 1,393,266; Oct. 11.

Cousins, George, Oswego, N. Y. Staybolt-chuck. No. 1,393,267; Oct. 11.

Cowardin, Harry A. (See Cowardin, Samuel P. and H. A.)

Cowardin, Samuel P. and H. A., Richmond, Va. Fuel-injector for internal-combustion engines. No. 1,393,090; Oct. 11.

Craig, Robert M., Wilkinsburg, Pa. Metallic-denture-drawing die. No. 1,392,919; Oct. 11.

Crampton, Arthur F., West Hartford, Conn. Means for refining small grinding-wheels. No. 1,393,667; Oct. 11.

Crane Company. (See Link, Maximilian W., assignor.)

Croft, Charles L., Balham, London, assignor of one-half to D. S. Cooper, London, England. Catch for stands for motorcycles and the like. No. 1,393,508; Oct. 11.

Crosby Steam Gage & Valve Company. (See Carhart, Alfred B., assignor.)

Crosley, Powel, Jr., Cincinnati, Ohio. Vulcaniser. No. 1,393,091; Oct. 11.

Crown Cork and Seal Company of Baltimore City, The. (See Kryzanowsky, Constant J., assignor.)

Crown Cork and Seal Company of Baltimore City, The. (See Taylor, Samuel W., assignor.)

Crown, Earl T., St. Petersburg, Fla. Easy-starting device for automobiles. No. 1,393,268; Oct. 11.

Culman, Carl, Maplewood, Mo. Calipers for pivot testing, truing, and poising of balance staffs and wheels. No. 1,393,203; Oct. 11.

Culver, Clarence C., U. S. Army. Localizer. No. 1,393,431; Oct. 11.

Cummings, Jay H., Elmira, N. Y. Automatic rough-grinding mechanism for piston-rings. No. 1,393,669; Oct. 11.

Daggett, George W., North Girard, Pa. Automatic pressure-regulated air-valve. No. 1,393,204; Oct. 11.

Dailey, Edward J., Jr., New York, N. Y. Lamp. No. 1,393,432; Oct. 11.

Dane, Clayton A., and A. A. Kraemer, Philadelphia, Pa., assignor to The Hess-Bright Manufacturing Company. Cage for antifriction-bearings. No. 1,392,920; Oct. 11.

Daniels, Lee G., Rockford, Ill. Automatic lathe. No. 1,393,205; Oct. 11.

Daniels, Lee G., Rockford, Ill. Lathe. No. 1,393,206; Oct. 11.

Davenport, George R., Detroit, Mich., assignor to The Studebaker Corporation. Valve attachment. No. 1,393,345; Oct. 11.

Davies, Llewelyn J., Cincinnati, Ohio. Valve-spring lifter. No. 1,393,669; Oct. 11.

Davis Automatic Equipment Corporation. (See Bussard, Raleigh B., assignor.)

Davis, James C., Hinsdale, assignor to American Steel Foundries, Chicago, Ill. Method of and means for reclaiming molding-sand. No. 1,393,092; Oct. 11.

Davis Motor Corporation. (See Davis, Theodore E., assignor.)

Davis, Marion A., Sherman, Tex. Automobile-windlass. No. 1,393,349; Oct. 11.

Davis, Theodore E., Brigham, Utah, assignor to Davis Motor Corporation. Internal-combustion engine. No. 1,393,670; Oct. 11.

Day, Albert V. T., New Rochelle, N. Y., assignor to The Union Switch & Signal Company, Swissvale, Pa. Railway-traffic-controlling apparatus. No. 1,393,011; Oct. 11.

Deane, Maude B. (See McCully, Thomas A., assignor.)

Dean, William W., Wilmette, Ill., assignor to Efficiency Electric Corporation, New York, N. Y. Motor-governing device. No. 1,393,433; Oct. 11.

Deichmann, Albert. (See Wenschow, Karl, assignor.)

Delmore Manufacturing Co. (See Billings, Cecil M., assignor.)

Dennis, Alfred A., Grand Rapids, Mich. Phonograph sound-box. No. 1,393,434; Oct. 11.

Dennis, Leonard J. (See Abraham, M., and Dennis.)

Denis, Luc L. B., Paris, France. Dynamic system adapted to impart to a mechanical system a rapid movement of oscillation. No. 1,393,671; Oct. 11.

Denman-Jones, Adrian, Holloway, London, England. Heating device for automobiles. No. 1,393,093; Oct. 11.

De Reamer, Frank C., Schenectady, N. Y., assignor to General Electric Company. Electric switch. No. 1,393,509; Oct. 11.

De Save, Arthur E., Mobile, Ala. Oil-tank. No. 1,393,719; Oct. 11.

Descalles, Eugène M. O., Paris, France, assignor to D. O. T. Societe Anonyme pour l'Exploitation des brevets Descalles, Liege, Belgium. Permutation-lock. No. 1,393,269; Oct. 11.

Dick, A. B., Company. (See Hill, Edward W., assignor.)

Diehl, Ambrose N., Duquesne, and F. E. Leahy, McKeesport, Pa. Apparatus for burning gases. No. 1,392,921; Oct. 11.

Dierkes, Henry H., New York, N. Y. Curtain-support. No. 1,393,672; Oct. 11.

Dilg, Charles H. J., New York, N. Y. Shelf-support. No. 1,393,012; Oct. 11.

Dillon, Edward L., assignor to L. Norvell, trustee, St. Louis, Mo. Well-drilling machine. No. 1,393,350; Oct. 11.

Dillon, William C., Fort Dodge, Iowa. Auxiliary air device. No. 1,392,922; Oct. 11.

Dingee, Marian P., Philadelphia, Pa. Silencer for communion-cup racks. No. 1,393,673; Oct. 11.
Dittes, Jesse Littleton, Colo., assignor to Ingersoll-Rand Company, Jersey City, N. J. Pin-puller. No. 1,393,004; Oct. 11.
Dobson, James M. (See Canfield, George R., assignor.)
Doehler Die Casting Company. (See Gutmueller, Robert, assignor.)
Doe, Walter S., Kent, Ohio. Battery-connector. No. 1,393,674; Oct. 11.
Doe, Walter S., Kent, Ohio. Flashlight. No. 1,393,675; Oct. 11.
Dodds, Ethan I., assignor to Flannery Bolt Company, Pittsburgh, Pa. Staybolt structure. No. 1,393,351; Oct. 11.
Dodge, William L., Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. No. 1,393,352; Oct. 11.
D. O. T. Societe Anonyme pour l'Exploitation des brevets Descalles. (See Descalles, Eugene M. O., assignor.)
Douglas, Louis M. (See Parsons, C. A., Cook, and Douglas,)
Doxford, Robert P. (See Keller, Karl O., assignor.)
Dow Chemical Company, The. (See Barstow, E. O., and Jones, assignor.)
Dow, Fred T., Bangor, Me. Treating peat and similar substances. No. 1,393,435; Oct. 11.
Dowdy, Morton T., East Bakersfield, Calif. Combination-lock for automobiles. No. 1,393,676; Oct. 11.
Downard, James S., Ardmore, Okla. Block-molding machine. No. 1,393,270; Oct. 11.
Drabek, Charles, Cleveland, Ohio. Combined spring and lever suspension for vehicles. No. 1,393,095; Oct. 11.
Draper Corporation. (See Rhoades, Alonzo E., assignor.)
Draper Corporation. (See Youngquist, Henry W., assignor.)
Draper, George E., Pittsburg, Kans. Tire-valve. No. 1,392,923; Oct. 11.
Dreher, John, and L. A. Olmscheuk, Mispah, Minn. Combination lifting-jack and tire expander and contractor. No. 1,393,271; Oct. 11.
Drew Electric and Manufacturing Company. (See Schwarz, Paul G., assignor.)
Driggs, Louis L., New York, N. Y. Semi-automatic gun. No. 1,393,353; Oct. 11.
Driscoll, Dennis L., Coalinga, assignor of one-half to Bunting Iron Works, San Francisco, Calif. Fishing appliance for use in drilling operations. No. 1,393,096; Oct. 11.
Driver-Harris Company. (See Hunter, Matthew A., assignor.)
Dubisky, Michael J., Rockford, Ill. Guard for punch-presses. No. 1,393,510; Oct. 11.
Dubrow, Frederick, Sausalito, Calif. Artificial fish-bait. (Reissue.) No. 15,204; Oct. 11.
Duncanson, Vincent E., Lynchburg, Ohio. Eyeglass-holder. No. 1,393,511; Oct. 11.
Dunlop Rubber Company, The. (See Healea, William H., assignor.)
Dunning, Hiram F., Turtleford, Saskatchewan, Canada. Toy. No. 1,393,512; Oct. 11.
Du Pont, E. I. de Nemours & Company. (See Albert, Talbot J., Jr., assignor.)
Du Pont, E. I., de Nemours & Company. (See Embardt, John C., assignor.)
Du Pont, E. I. de Nemours & Company. (See Haon, Harry J., assignor.)
Du Pont, E. I., de Nemours & Company. (See Henning, Clarence I. B., assignor.)
Du Pont, E. I., de Nemours and Company. (See Houlehan, Arthur E. assignor.)
Du Pont, E. I., de Nemours & Company. (See Stetson, F. W., and Essex, assignors.)
Du Pont, E. I., de Nemours & Company. (See Stine, C. M. A., and Gilson, assignors.)
Du Pont, Francis I., Wilmington, Del. Oil-burning apparatus. No. 1,393,207; Oct. 11.
Dupré, William H., Vicksburg, Miss. Grease-cup. No. 1,393,027; Oct. 11.
Dutton, William H., and C. E. Stone, Cedar Rapids, Iowa, assignors to The Tokheim Oil Tank & Pump Company. Liquid measuring and dispensing apparatus. No. 1,393,272; Oct. 11.
Duval, Ernest H., Monroe, Mich., assignor to George W. Swift, Jr., Incorporated, Bordentown, N. J. Stamping-machine. No. 1,393,513; Oct. 11.
Dyer, Harry W., East Orange, N. J. Spring-bumper. No. 1,393,354; Oct. 11.
Eastman, Joseph, Manitowoc, Wis. Nozzle-holder. No. 1,393,098; Oct. 11.
Ebert, Earnest R. (See Ebert, George H. and E. R.)
Ebert, George H. and E. R., Burlington, Iowa. Attaching means for antiskidding-chains. No. 1,393,099; Oct. 11.
Eckhardt, Adolph W., New York, N. Y. Pneumatic vehicle-wheel. No. 1,393,514; Oct. 11.
Eclipse Machine Company. (See Whitney, Maurice P., assignor.)
Edelblute, Thomas H., Pittsburgh, Pa., assignor to Cincinnati Frog & Switch Company, Cincinnati, Ohio. Parallel ground-throw switch-stand. No. 1,393,677; Oct. 11.
Efficiency Electric Corporation. (See Dean, William W., assignor.)
Egerton, Henry C., Passaic, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Diaphragm and making such diaphragm. No. 1,393,515; Oct. 11.
Egry Register Company, The. (See Noth, George J., assignor.)
Elder, George W. (See Elder, John R. and G. W.)
Elder, John R., Sioux City, and G. W. Elder, Forest City, Iowa. Animal-trap. No. 1,393,516; Oct. 11.
Elliott, Bamford, Worcester, Mass. Suitcase. No. 1,393,272; Oct. 11.
Elliott, William S., Pittsburgh, Pa. Cutter for tube-cleaners and other purposes. No. 1,393,618; Oct. 11.
Embardt, John C., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Coated article. No. 1,393,355; Oct. 11.
Empire Cream Separator Company. (See McCormack, Herbert, assignor.)
Endless Belt Corporation. (See Grupe, William F., assignor.)
Erickson, Oscar F., and H. P. Olson, Madison, Wis. Balanced-gear drive for automobiles. No. 1,393,209; Oct. 11.
Hricson, Charles O., Helmetta, N. J. Fuel-oil-gas mixer. No. 1,393,517; Oct. 11.
Esenwein, William H., Bellevue, Pa. Swimming frog. No. 1,393,518; Oct. 11.
Espeland, Franklin A., Oakes, N. D. Mopping-machine. No. 1,393,100; Oct. 11.
Espeland, Franklin A., Oakes, N. D. Scrubbing-machine. No. 1,393,101; Oct. 11.
Essex, Jesse L. (See Stetson, F. W., and Essex.)
Eustice, Alfred L., Chicago, Ill. Fuse-terminal-attaching means. No. 1,393,102; Oct. 11.
Evans, Willis J., New York, N. Y. Device for administering medicine. No. 1,393,209; Oct. 11.
Evenson, Edwin G., and H. J. Anderson, Minneapolis, Minn. Laundry-tub faucet. No. 1,393,103; Oct. 11.
Fairbanks, E. and T., and Company. (See Starr, Morton H., assignor.)
Falk, Arthur, Duluth, Minn. Spotlight-support. No. 1,393,678; Oct. 11.
Fan Flame Spark Plug Co. (See Gill, Horace E., assignor.)
Farish, James H., *et al.* (See Albright, Jacob J., assignor.)
Farnsworth, Frederick C., Conshohocken, Pa. Duplex pumping trap. No. 1,392,924; Oct. 11.
Farwell, Ray O., Dubuque, Iowa. Driving mechanism for machine-spindles. No. 1,393,104; Oct. 11.
Feaster, Edward B., Boston, Mass. Filer and making the same. No. 1,393,698; Oct. 11.
Federal Products Company. (See Coates, Frederick, assignor.)
Ferguson, John L., Joliet, Ill. Forming containers. No. 1,393,274; Oct. 11.
Feriani, Gaetano, assignor to Societa Brevetti Feriani, Rome, Italy. Winch. No. 1,393,436; Oct. 11.
Fernald, Mark E., Saugus, Mass. Sole-marking machine. No. 1,393,105; Oct. 11.
Ferragamo, Salvatore, Santa Barbara, Calif. Turnbuckle. No. 1,393,614. Oct. 11.
Fireman, Peter, Trenton, N. J., assignor to Magnetic Pigment Company. Pigment and producing the same. No. 1,392,925; Oct. 11.
Fireman, Peter, Trenton, N. J., assignor to Magnetic Pigment Company. Pigment and producing the same. No. 1,392,926; Oct. 11.
Fireman, Peter, Trenton, N. J., assignor to Magnetic Pigment Company. Pigment and producing same. No. 1,392,927; Oct. 11.
Flannery Bolt Company. (See Dodds, Ethan I., assignor.)
Florence, Wilfrid N., Middlebury, Vt. Traction-wheel. No. 1,393,210; Oct. 11.
Flowers, Mamie H. (See Casey, Marion R., assignor.)
Folts, Irving J., Seattle, Wash. Regulator. No. 1,393,615; Oct. 11.
Forderer, John W., San Francisco, Calif. Sound-reproducer for phonographs. No. 1,393,106; Oct. 11.
Ford Instrument Company. (See Meitner, Elemer, assignor.)
Forster, John, Los Angeles, Calif. Lock-joint. No. 1,393,679; Oct. 11.
Foss, Manton E., Wilder, Minn. Pump. No. 1,392,928; Oct. 11.
Foster, Samuel G., Westfield, N. J. Adjustable window-screen. No. 1,393,616; Oct. 11.
Frame, Augustus J. (See Ash, T., and Frame.)
Frame, John, Searsport, Me. Artificial bait. No. 1,393,617; Oct. 11.
Franklin, Charles H. (See Clark, O. R., and Franklin.)
Franz, Hector A., Hood River, Oreg. Annunciator. No. 1,393,275; Oct. 11.
French, James C., assignor to F. C. Austin, Chicago, Ill. Traction-engine. No. 1,393,519; Oct. 11.
Fried. Krupp Aktiengesellschaft. (See Vollmer, John, assignor.)
Friederich, Ernst, Berlin, Germany, assignor to General Electric Company. Inclosed-arc device and starting the same. No. 1,393,520; Oct. 11.
Frühling, Curt. (See Frühling, Otto and C.)
Frühling, Otto and C., Braunschweig, Germany. Suction-dredge. No. 1,393,680; Oct. 11.

Frykman, August, Souris, N. D., assignor of one-fourth to F. W. Galland, Minneapolis, Minn. Piston-ring. No. 1,393,211; Oct. 11.
Fuller, Aubrey V., New York, N. Y. Filling-machine. No. 1,393,276; Oct. 11.
Fuller, Frederick L., Bridgeport, Conn., assignor to The National Cash Register Company, Dayton, Ohio. Machine for printing and issuing railway-tickets. No. 1,392,929; Oct. 11.
Fuller, Jesse W., Little Rock, Ark. Connecting device for wires. No. 1,393,107; Oct. 11.
Furman, Leonard L. (See Hogan, L. J., and Furman.)
Gabrielson, Carl, Syracuse, N. Y. Platen-clutch for type-writing-machines. No. 1,393,277; Oct. 11.
Gaines, Roy Edw., Evansville, Ind. Spring. No. 1,393,618; Oct. 11.
Galland, Frank W. (See Frykman, August, assignor.)
Galvin, John E. (See Priwer, Herman F., assignor.)
Gander, James S., Forest Gate, England. Safety device for oil-burning apparatus. No. 1,393,212; Oct. 11.
Gardner, Patrick, Brooklyn, N. Y. Mattress. No. 1,393,619; Oct. 11.
Garrett, James O., Denver, Colo. Truck-brake. No. 1,393,013; Oct. 11.
Garrett, John B., Troy, N. Y. Daylight X-ray-film-developing tank. No. 1,393,108; Oct. 11.
Garrett, John B., Troy, N. Y. Film-envelop. No. 1,393,100; Oct. 11.
Gas Machinery Company, The. (See Rugg, Daniel M., assignor.)
Gates, Andrew W., Monmouth, Ill. Die for making articles of plastic material. No. 1,393,014; Oct. 11.
Gauntt, Forest G., Fort Wayne, Ind. Motor-vehicle headlight. No. 1,393,278; Oct. 11.
Gavin, Peter, Vancouver, British Columbia, Canada. Tube-expander. No. 1,393,620; Oct. 11.
Gee Electric Company. (See Morris, Stephen W., assignor.)
Geist, Fred, Jr., Ellington, Mo. Means employed in accounting systems. No. 1,392,930; Oct. 11.
Gerli, Paul, New York, N. Y. Hydroplane-station. No. 1,392,931; Oct. 11.
George, John H., assignor to E. A. Hawthorne, Bridgeport, Conn. Electric-lighting apparatus. No. 1,393,357; Oct. 11.
General Electric Company. (See Clark, O. R., and Franklin, assignors.)
General Electric Company. (See De Reamer, Frank C., assignor.)
General Electric Company. (See Friederich, Ernst, assignor.)
General Electric Company. (See Langmuir, Irving, assignor.)
General Electric Company Limited, The. (See McColl, Albert E., assignor.)
General Electric Company. (See Steenstrup, Christian, assignor.)
General Electric Company. (See White, William C., assignor.)
General Explosives Company. (See Sturgis, William B., assignor.)
Gersdorff, Albert L., Bartlesville, Okla. Temperature-indicating device. No. 1,393,279; Oct. 11.
Gessert, Jacob, Buffalo, N. Y. Spring for pin-setting machines. No. 1,393,110; Oct. 11.
Getchell, Benjamin E., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn. Inclosed-switch construction. No. 1,393,111; Oct. 11.
Gets Manufacturing Co. (See Barcus, George N., assignor.)
Giampietro, Vincent, Baltimore, Md. Oil-extracting apparatus. No. 1,393,621; Oct. 11.
Glinn, Harrie M., Boston, Mass. Clutch mechanism. No. 1,392,932; Oct. 11.
Gilbert, Alfred, Birmingham, England. Post-card. No. 1,393,213; Oct. 11.
Gill, Horace E., assignor to Fan Flame Spark Plug Co., Yonkers, N. Y. Spark-plug. No. 1,392,933; Oct. 11.
Gilson, John L. (See Stine, C. M. A., and Gilson.)
Gilson Manufacturing Company. (See Large, George, assignor.)
Glandt, William F., Stanton county, near Leigh, Nebr. Gate-fastener. No. 1,392,934; Oct. 11.
Glaudel, George, Los Angeles, assignor of one-half to G. L. Mitchell, Santa Monica, Calif. Auxiliary windshield. No. 1,393,681; Oct. 11.
Glaudel, George, Los Angeles, assignor, by mesne assignments, of fifty per cent. to G. L. Mitchell, Santa Monica, Calif. Wind-deflector. No. 1,393,682; Oct. 11.
Glickman, David, Chicago, Ill. Suspenders. No. 1,392,935; Oct. 11.
Glyeyn Corporation, The. (See Saunders, Harold F., assignor.)
Gobeille, Napoleon. (See Leduc, J., and Gobeille.)
Godillon, Victor H., assignor to Societe d'Optique et de Mecanique de Haute Précision, Paris, France. Stabilizing apparatus for sighting instruments. No. 1,393,437; Oct. 11.
Godsal, Philip T., Iscoyd Park, England. Small-arm. No. 1,393,112; Oct. 11.
Gooding, George B. (See Robinson, J. T., Gooding, and Russo.)
Good Inventions Co. (See Good, John, assignor.)
Good, John, Garden City, assignor to Good Inventions Co., New York, N. Y. Burner-regulation system. No. 1,393,280; Oct. 11.
Goodrum, Charles L. (See McQuarrie, J. L., and Goodrum.)
Goodrum, Charles L., assignor to Western Electric Company, Incorporated, New York, N. Y. Machine-switching telephone system. No. 1,393,521; Oct. 11.
Goodrum, Charles L., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. No. 1,393,522; Oct. 11.
Goss, Daniel B., Cuyahoga Falls, Ohio. Bumper and tire-carriers. No. 1,393,113; Oct. 11.
Graber, Harry F. (See Townley, Richard B., assignor.)
Grandjean, Adolphe, Paris, France. Portable loading apparatus. No. 1,393,214; Oct. 11.
Grant, Albert E., New York, N. Y. Combined burner and gas-generator unit. No. 1,393,358; Oct. 11.
Gray, Francis C., College Corner, Ohio. Antiskid-chain. No. 1,393,523; Oct. 11.
Gray, Walter, Washington, D. C. Broom. No. 1,393,215; Oct. 11.
Greene Aeronautical Company, The. (See Greene, Otto W., assignor.)
Greene, Otto W., assignor to The Greene Aeronautical Company, Elyria, Ohio. Clutch mechanism. No. 1,392,936; Oct. 11.
Greim, Albert P., Toms River, N. J. Trap. No. 1,393,438; Oct. 11.
Greist Manufacturing Company, The. (See Russell, Herbert H., assignor.)
Grey, John F., New Orleans, La. Steam-turbine. No. 1,393,114; Oct. 11.
Grid-Iron-Grip Company. (See Slauson, Louis E., assignor.)
Grindrod, George, Kent, assignor to Carnation Milk Products Co., Seattle, Wash. Preservative for milk. No. 1,393,282; Oct. 11.
Groene, William F., assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio. Turning and facing lathe. No. 1,393,115; Oct. 11.
Grupe, William F., Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc. Tipping mechanism. No. 1,393,524; Oct. 11.
Grupe, William F., Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc. Counting mechanism. No. 1,393,525; Oct. 11.
Grupe, William F., Hudson Heights, N. J., assignor to Endless Belt Corporation, Inc. Tipping mechanism for cigarette-machines. No. 1,393,526; Oct. 11.
Gudka, E. E., Mfg. Co. (See Williams, Frank P., assignor.)
Guthrie, Grover, Massena, Iowa. Device for holding hogs. No. 1,393,527; Oct. 11.
Gutmueller, Robert, Woodhaven, assignor to Doehler Die Casting Company, Brooklyn, N. Y. Casting apparatus. No. 1,393,216; Oct. 11.
Guthridge, Charles F., Los Angeles, Calif. Typist's copy-stand. No. 1,393,116; Oct. 11.
Halbach, John F., Philadelphia, Pa. Auto-wheel protector. No. 1,393,528; Oct. 11.
Haley, Arthur L., Seattle, Wash. Sawing taper logs. No. 1,393,529; Oct. 11.
Haley, Timothy, Springfield, Ohio. Gas regulator and safety device. No. 1,393,217; Oct. 11.
Hall, Arthur J., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. System of control. No. 1,393,439; Oct. 11.
Hall, Robert F., Birmingham, England. Manufacture of glass articles. No. 1,393,118; Oct. 11.
Halfpenny, Herbert, Brantford, Ontario, Canada. Amusement device. No. 1,393,117; Oct. 11.
Halsey, William S., Dover, N. J. I-beam trolley. No. 1,393,015; Oct. 11.
Hamel Shoe Machinery Company. (See Angell, Otis R., assignor.)
Hamilton, Edward L., McCrory, Ark. Convertible vehicle-body. No. 1,393,440; Oct. 11.
Hammer, Charles, Queens, assignor to American Metal Cap Company, Brooklyn, N. Y. Means for sealing receptacles. No. 1,393,016; Oct. 11.
Hammagren, Oran S., Minneapolis, Minn. Metal-working machine. No. 1,392,937; Oct. 11.
Haon, Harry J., Newburgh, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Panel. No. 1,393,359; Oct. 11.
Hapner, Adam L., Cincinnati, Ohio. Baker's peel. No. 1,393,683; Oct. 11.
Harms, Albert E. (See Möller, M. W., and Harms.)
Harris, Hollis H., assignor to The Thew Shovel Company, Lorain, Ohio. Steering mechanism for self-propelled crane-trucks. No. 1,393,119; Oct. 11.
Harris, Hollis H., assignor to The Thew Shovel Company, Lorain, Ohio. Spring-truck. No. 1,393,360; Oct. 11.
Harris, Hollis H., assignor to The Thew Shovel Company, Lorain, Ohio. Power-shovel. No. 1,393,361; Oct. 11.
Harris, Hollis H., assignor to The Thew Shovel Company, Lorain, Ohio. Power-shovel. No. 1,393,362; Oct. 11.
Harris, Hollis H., assignor, by mesne assignments, to The Thew Shovel Company, Lorain, Ohio. Convertible excavating-machine. No. 1,393,363; Oct. 11.
Hart, H. C., *et al.* (See Shepard, Wilbur L., assignor.)
Hastings, Charles E., Chicago, Ill., assignor to National Dairy Machine Company, Goshen, Ind. Side-car attachment for motorcycle. No. 1,392,938; Oct. 11.

Hathaway, Edgar F., Dorchester, Mass., assignor to Mohawk Carpet Mills, Inc., Amsterdam, N. Y. Chenille-strip distribution. No. 1,392,939; Oct. 11.

Hawthorne, Ellsworth A. (See George, John H., assignor.)

Hayworth, William A., Universal, Ind. Car-coupling. No. 1,393,364; Oct. 11.

Heales, William H., Coventry, assignor to The Dunlop Rubber Company, Limited, London, England. Detachable wire-spoked wheel. No. 1,393,441; Oct. 11.

Heck, George D., Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company. Dental engine. No. 1,393,120; Oct. 11.

Helby, Carl G., J. Burkam, D. E. Lindquist, F. L. Riggin, E. W. Allen, and E. Lau, Sarnia, Canada, assignor, by mesne assignments, to Mueller Metals Company, Port Huron, Mich. Blank for and method of making fuse-bodies. No. 1,393,121; Oct. 11.

Heil, John, Melrose Park, Ill. Tool for removing cores and valve-core stools from tire-valves. No. 1,393,365; Oct. 11.

Heindl, Stephen O., assignor of one-half to E. Zeits, Chicago, Ill. Razor grinder. No. 1,393,283; Oct. 11.

Heinrichs, Berg, assignor to Mid-West Box Company, Anderson, Ind. Machine for sealing boxes. No. 1,393,122; Oct. 11.

Heller, Henry R., New York, N. Y., assignor, by mesne assignments, to Auto Pneumatic Action Co. Player-piano action. No. 1,393,123; Oct 11.

Hellmund, Rudolf E. (See Storer, N. W., and Hellmund.)

Hellmund, Rudolf E. Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company. Control system. No. 1,393,442; Oct. 11.

Helmond, William F., Hartford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting-machine. No. 1,392,940; Oct. 11.

Henderson, Robert I., Toronto, Ontario, Canada. Carburetor. No. 1,393,366; Oct. 11.

Henderson, Robert I., Toronto, Ontario, Canada. Carburetor. No. 1,393,367; Oct. 11.

Henke, Harold W., Lewisham, London, England. Speed-indicating instrument or the like. No. 1,393,624; Oct. 11.

Henon, John D., Philadelphia, Pa. Adjustable templet-form holder for self-centering templet-holders. No. 1,393,125; Oct. 11.

Henning, Albert, Leytonstone, London, England. Non-inflammable volatile liquid. No. 1,393,124; Oct. 11.

Henning, Clarence I. B., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del. Propellent smokeless-powder charge. No. 1,393,623; Oct. 11.

Henry, George J., San Francisco, Calif. Radiant reflector. No. 1,393,368; Oct. 11.

Henry, George J. (See Shoenberg, M. H., and Henry.)

Henry, George M., Pullman, Wash. Phonograph-record-cabinet attachment. No. 1,393,284; Oct. 11.

Henschel, Charles J., Brooklyn, N. Y. Ship's telegraph. No. 1,393,684; Oct. 11.

Henschel, Charles J., Brooklyn, N. Y. Annunciator-drop. No. 1,393,685; Oct. 11.

Hermes, Mike W., Bulger, Pa. Trolley-wire extension-splice. No. 1,393,530; Oct. 11.

Herrbold, William J., Kalamazoo, Mich. Portable hoist. No. 1,393,218; Oct. 11.

Hess-Bright Manufacturing Company, The. (See Dane, C. A., and Kraemer, assignors.)

Hettelsater, Henry C., and E. K. Scott, Oak Park, assignor to F. K. Hoover Chicago, Ill. Scale and transfer car. No. 1,393,017; Oct. 11.

Hewes, Laurence I. (See Purcell, C. H., and Hewes.)

Hewett, Robert J., Westfield, N. J. Electric signaling system. No. 1,393,443; Oct. 11.

Hewitt, Peter C., Ringwood Manor, N. J. Relay. No. 1,393,018; Oct. 11.

Hewitt, Peter C., Ringwood Manor, N. J. Constant-current distribution system. No. 1,393,019; Oct. 11.

Hewitt, Peter C., Ringwood Manor, N. J. Apparatus for translating electrical variations. No. 1,393,369; Oct. 11.

Higham, Harold. (See Bayles, E. A., and Higham.)

Hill, Edward W., assignor to A. B. Dick Company, Chicago, Ill. Stenciling material. No. 1,393,444; Oct. 11.

Hinds, Francis E., Lansing, Kans. Saw-gage. No. 1,393,126; Oct. 11.

Hirsch, Henry, assignor to L. B. Koch, New York, N. Y. Shutter control for cinematographic targets. No. 1,392,941; Oct. 11.

Hobbs, John R., London, England. Piston. No. 1,393,285; Oct. 11.

Hobbs, John R., London, England. Tool for grinding internal cylindrical surfaces. No. 1,393,625; Oct. 11.

Hogan, Leonard J., and L. L. Furman, Williamsburg, Iowa. Water-trough. No. 1,393,686; Oct. 11.

Hohl, George I., Newark, N. J. Intermittent-motion mechanism. No. 1,393,219; Oct. 11.

Holzapfel, Albert C., New York, N. Y. Paint. No. 1,393,220; Oct. 11.

Hohmann, Richard K., assignor to Hohmann Sewing Machine Company, Peru, Ind. Sewing-machine take-up mechanism. No. 1,393,127; Oct. 11.

Hohmann Sewing Machine Company. (See Hohmann, Richard K., assignor.)

Hoopes, William, assignor to Aluminum Company of America, Pittsburgh, Pa. Making aluminum nitrid and other chemical substances. No. 1,393,370; Oct. 11.

Hoopes, William, assignor to Aluminum Company of America, Pittsburgh, Pa. Apparatus for making aluminum nitrid and other chemical substances. No. 1,393,371 Oct. 11.

Hoopes, William, assignor to Aluminum Company of America, Pittsburgh, Pa. Making aluminum nitrid and other chemical substances. No. 1,393,372; Oct. 11.

Hoopes, William, assignor to Aluminum Company of America, Pittsburgh, Pa. Electrical resister. No. 1,393,373; Oct. 11.

Hoover, Frank K. (See Hettelsater, H. C., and Scott, assignors.)

Hosford, William F., Oak Park, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y. Reeling-machine. No. 1,393,286; Oct. 11.

Hostater, Margaret E., Westfield, N. Y. Dish-washing machine. No. 1,393,687; Oct. 11.

Hough, Samuel, and W. Lohr, Philadelphia, Pa. Automatic lubricating shackle-bolt. No. 1,393,128; Oct. 11.

Houlehan, Arthur E., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del. Manufacture of diphenylamin. No. 1,392,942; Oct. 11.

Howard, John A., Sr., West New Brighton, N. Y., assignor to Camward Engineering Co., Inc. Electric incubator. No. 1,393,531; Oct. 11.

Howard, John A., Sr., West New Brighton, N. Y., assignor to Camward Engineering Co., Inc. Electric floor mop or brush. No. 1,393,532; Oct. 11.

Howell, Frank B., Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill. Boiler. No. 1,393,622; Oct. 11.

Howerth, Herbert J., Cleveland, Ohio. Shock-absorber. No. 1,393,374; Oct. 11.

Howle, Ernest O., Nashville, Tenn., and J. E. Leonard, Cedar Rapids, Iowa. Stove and range. No. 1,393,129; Oct. 11.

Hoyt, William C., South Bend, Wash. Combination level and bevel. No. 1,393,533; Oct. 11.

Hudson, Alexander M., New York, N. Y. Wheel-fender. No. 1,393,020; Oct. 11.

Huffman, Louis, Toronto, Ontario, Canada. Knob-lock. No. 1,393,021; Oct. 11.

Hughes, Burton S., assignor to Zaremba Company, Buffalo, N. Y. Evaporator. No. 1,393,221; Oct. 11.

Hughes, Joseph W., Bethlehem, Pa. Automobile-locking device. No. 1,393,022; Oct. 11.

Humphris, Frank, Boscombe, England. Construction of adjustable spanners, wrenches, clamps, pipe-cutters, pipe-grips, and the like. No. 1,393,534; Oct. 11.

Humphrey, John P., Springfield, Ill. Sunshade for vehicles. No. 1,393,130; Oct. 11.

Hunt, Alexander Geo., St. Louis, Mo. Fuel-saver and primer. No. 1,393,535; Oct. 11.

Hunt, Homer, Hartford, Conn. Ladder attachment. No. 1,393,536. Oct. 11.

Hunter, Matthew A., Troy, N. Y., assignor to Driver-Harris Company, Harrison, N. J. Thermo-couple. No. 1,393,375; Oct. 11.

Hunter, Thomas B., San Francisco, Calif. Apparatus for cap-stemming raisins. No. 1,393,287; Oct. 11.

Hurwitz, Samuel J., Youngstown, Ohio. Rim-tool. No. 1,392,943; Oct. 11.

Husted, Monroe G., Bridgeton, N. J. Automatic feed and reverse for lathes. No. 1,393,131; Oct. 11.

Hutchinson, Job, Brooklyn, N. Y. Internal-combustion engine. No. 1,393,132; Oct. 11.

Hutton, Frank O., Sacramento, Calif. Canning machinery. No. 1,393,288; Oct. 11.

Hyde, Charles L., Plainfield, N. J. Support for tube and the like. No. 1,393,023; Oct. 11.

Icy-Hot Bottle Company, The. (See Altenberg, George P., assignor.)

Ingersoll-Rand Company. (See Carpenter, Allan O., assignor.)

International Precipitation Company. (See Church, Frederick B., assignor.)

Ingersoll-Rand Company. (See Bayles, Lewis C., assignor.)

Ingersoll-Rand Company. (See Ditson, Jesse, assignor.)

International Motor Company. (See Matthews, Joseph L., assignor.)

Ingersoll-Rand Company. (See Smith, William A., assignor.)

Irish, William E., Cleveland, Ohio. Thermally operated device. No. 1,393,376; Oct. 11.

Iverson, Sören L. (See Albrechtsen, H., and Iversen.)

Jack, Charles P. M., Glasgow, Scotland. Navigable vessel. No. 1,393,537; Oct. 11.

Jacobs, Carl, et al. (See Roll, John M., assignor.)

Jacobs, E. B., et al. (See Roll, John M., assignor.)

Jacobus, David S., Jersey City, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Steam-boiler economiser system. No. 1,393,445; Oct. 11.

Jacobus, David S., Jersey City, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Fluid-pressure-operating device. No. 1,393,446; Oct. 11.

Jaroll, Louis, assignor to Cohan-Epner Co., New York, N. Y. Belt-buckle. No. 1,393,222; Oct. 11.

Jarusa, Leon, Chicago, Ill. Scrubbing-machine. No. 1,393,133; Oct. 11.

Jelalian, Martin, Cranston, R. I. Spring-cushion device for vehicle-tires. No. 1,393,377; Oct. 11.

Jenkins, B. Crawford, et al. (See Albright, Jacob J., assignor.)

Jessup, Albert H., assignor to American Sterilizer Company, Erie, Pa. Sterilizer. No. 1,392,944; Oct. 11.

Johansen, Svend, Winnipeg, Manitoba, Canada. Automatic clock-controlled switch-operating device. No. 1,393,447; Oct. 11.

Johnson, Axel, Oakland, assignor to American Can Company, San Francisco, Calif. Apparatus for truing can-bodies and positioning ends thereupon. No. 1,393,134; Oct. 11.

Johnson, Ernest N., Winnipeg, Manitoba, Canada. Switch-rail. No. 1,393,538. Oct. 11.

Johnson, Howard F., assignor to The Browning Company, Cleveland, Ohio. Differential brake. No. 1,393,135. Oct. 11.

Johnson, Howard A., Norfolk, Va. Centrifugal brake. No. 1,393,289; Oct. 11.

Johnson, Merton E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sole. No. 1,393,688; Oct. 11.

Johnson, William C., New Haven, Conn. Pencil-sharpener. No. 1,393,378; Oct. 11.

Johnson, Rosamond L., Port Orchard, Wash. Muster-check board. No. 1,393,136; Oct. 11.

Jones, Coulter W. (See Barstow, E. O., and Jones.)

Jordan, Walter L., Glendale, assignor to Celite Products Company, Los Angeles, Calif. Reclaiming used lubricating-oils. No. 1,393,223; Oct. 11.

Jordan, Walter L. (See Krieger, A. H., and Jordan.)

Jourdain, Louis, Lowell, Mass. Thread-cutter for looms. No. 1,393,539; Oct. 11.

Joy, William H., and H. G. Porter, Lansing, Mich. Knock-down voting-booth. No. 1,393,224; Oct. 11.

Karro, William W., Great Neck, N. Y. Skate. No. 1,393,024; Oct. 11.

Katafiasz, Michael. (See Lewandowski, A., and Katafiasz.)

Katz, Max, assignor to Voss & Stern, New York, N. Y. Fabric. No. 1,393,025; Oct. 11.

Kaufman, Saul. (See Miller, Harry B., assignor.)

Keene, Louise T., Corning, Calif. Bedclothes-clamp. No. 1,393,137; Oct. 11.

Kellar, James E., Sistersville, W. Va. Well-boring machine. No. 1,392,945; Oct. 11.

Keller, Bela A., assignor of one-third to M. E. Messersmith, Newark, N. J., and one-third to M. E. Stern, New York, N. Y. Treatment of metals and their surfaces. No. 1,393,290; Oct. 11.

Keller, Karl O., assignor of one-half to R. P. Doxford, Sunderland, England. Internal-combustion engine. No. 1,393,626; Oct. 11.

Kelley, Edward F., assignor to The Raybestos Company, Bridgeport, Conn. Clevis. No. 1,393,379; Oct. 11.

Kelley, John M., Rochester, N. Y. Pump. No. 1,393,138; Oct. 11.

Kelley, Isaac N., et al. (See Mullins, John C., Jr., assignor.)

Kelly, John F., Pittsfield, Mass. Desiccating food. No. 1,393,540; Oct. 11.

Kemp, Edward R. (See Kotzebue, Meinhard H., assignor.)

Kemp, Robert, Washington, D. C., assignor to Westinghouse Electric & Manufacturing Company. Structural element. No. 1,393,541; Oct. 11.

Kennon, Charles W., Tampa, assignor of one-half to W. W. Pemble, Leesburg, Fla. Cinder-guard. No. 1,393,627; Oct. 11.

Kent, Clarence H. (See Percy, C., and Mills, assignors.)

Kepler, George D., assignor of one-half to H. D. Saylor, Pottstown, Pa. Puller for crank-pins, &c. No. 1,393,026; Oct. 11.

Keystone Steel & Wire Company. (See Sommer, John, assignor.)

Kiesel, William F., Jr., Altoona, Pa. Journal-box hinge-pin. No. 1,393,139; Oct. 11.

Kietz, Adolf, Cleveland, Ohio. Device for waving hair. No. 1,393,448; Oct. 11.

Kight, Garland F., Norfolk, Va. Stock. No. 1,393,380; Oct. 11.

King, John Y., Lansdowne, Pa. Shock-absorbing spring. No. 1,393,140; Oct. 11.

King, Sam T., Williamsfield, Ill. Traffic-signal. No. 1,393,381; Oct. 11.

Kirk, Laurence H. (See Lipe, W. C., and Kirk.)

Kirschberg, Harold, Pittsburgh, Pa. Light-projector. No. 1,393,027; Oct. 11.

Kistner, Herman, Elizabeth, assignor, by mesne assignments, to Victory Hammered Piston Ring Company, Newark, N. J. Packing-ring. No. 1,393,542; Oct. 11.

Klein, William C., Allentown, Pa. Vehicle-drive. No. 1,393,543; Oct. 11.

Kobis, Felix, Worcester, Mass. Combination monkey and pipe wrench. No. 1,393,028; Oct. 11.

Koch, Lydia B. (See Hirsch, Henry, assignor.)

Koenig, Frederick, Pittsburgh, Pa. Underfeed stoker. No. 1,393,292; Oct. 11.

Kolchinsky, Ushir, Philadelphia, Pa. Steam-cooker. No. 1,393,546; Oct. 11.

Kostko, Jaroslaw K., St. Louis, Mo. Method and means for improving the commutation of dynamo-electric machines. No. 1,393,141; Oct. 11.

Kotzebue, Meinhard H., assignor to E. R. Kemp, Tulsa, Okla. Vaporizing burner for hydrocarbon fuels. No. 1,393,547; Oct. 11.

Koudelka, John G., Antigo, Wis. Chimney-cleaner. No. 1,393,548; Oct. 11.

Kovar, Joseph J., Owatonna, Minn. Harrow-cart. No. 1,392,946; Oct. 11.

Knight, James H., Westtown, Pa. Toy. No. 1,393,544; Oct. 11.

Knowles, Frederick C. S., Freeport, N. Y. Rear signal device for vehicles. No. 1,393,291; Oct. 11.

Knuth, Edwin C., Milwaukee, Wis. Concrete pile. No. 1,393,545; Oct. 11.

Kraemer, Albert A. (See Dane, C. A., and Kraemer.)

Kraus Engine Company. (See Kraus, Otto, assignor.)

Kraus, Otto, assignor to Kraus Engine Company, New York, N. Y. Power plant. No. 1,392,947; Oct. 11.

Kraus, Otto, assignor to Kraus Engine Company, New York, N. Y. Flame-maintaining device. No. 1,392,948; Oct. 11.

Krenzer, George J., Port Washington, Wis. Radiator-draining attachment for automobiles. No. 1,393,549; Oct. 11.

Krieger, Arthur H., Los Angeles, Calif., and W. L. Jordan, New York, N. Y. Heat-insulating formed body and making same. No. 1,393,225; Oct. 11.

Kruse, Herman, Jersey City, N. J. Transfer-paper and ink therefor. No. 1,393,142; Oct. 11.

Krysanowsky, Constant J., Mount Washington, assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md. Opener. No. 1,393,029; Oct. 11.

Kuehn, Charles P., assignor to A. Stein & Company, Chicago, Ill. Buckle. No. 1,393,143; Oct. 11.

Kushner, Samuel, New York, N. Y. Pneumatic alarm. No. 1,393,382; Oct. 11.

La Gier, August F., assignor of one-third to J. F. Miller and one-third to I. B. Smith, Los Angeles, Calif. Sanitary can-gate. No. 1,393,689; Oct. 11.

Lackie, Oscar M., Duluth, Minn. Road-machine. No. 1,393,724; Oct. 11.

Lake Torpedo Boat Company, The. (See Barraja-Frauenfelder, Joseph, assignor.)

Lakin, William T., Long, Md. Reproducer for talking-machines. No. 1,393,293; Oct. 11.

Lamb, Peter, Winnipeg, Manitoba, Canada. Knife-cleaner. No. 1,393,449; Oct. 11.

Lambert, Henry M., Portland, Oreg. Wheel-rim. No. 1,393,030; Oct. 11.

Lamson Company, The. (See Talsey, Fred E., assignor.)

Landrivon, Joanny. (See Altwegg, J., and Landrivon.)

Langmuir, Irving, Schenectady, N. Y., assignor to General Electric Company. Method of and means for obtaining high vacua. No. 1,393,550; Oct. 11.

Large, George, assignor to Gilson Manufacturing Company, Port Washington, Wis. Fuel-pump for internal-combustion engines. No. 1,393,551; Oct. 11.

Larsen, Sofus A. E., Copenhagen, Denmark. Double tubular lock. No. 1,392,949; Oct. 11.

Laskey, William B., Marblehead, Mass. Machine and method for making candy. No. 1,393,144; Oct. 11.

Laupot, Louis. (See Robertson, C., and Laupot.)

Lau, Richard. (See Helby, C. G., Burkam, Lindquist, Riggin, Allen, and Lau.)

Lawrence, Melvin G., Revere, Mass. Thumb-tack. No. 1,392,950; Oct. 11.

Le Blond, R. K., Machine Tool Company, The. (See Groene, William F., assignor.)

Leahy, Frank E. (See Diehl, A. N., and Leahy.)

Leavitt, Henry E., Berkeley, Calif. Cooling apparatus. No. 1,393,226; Oct. 11.

Lee, Edward W., Los Angeles, Calif. Pneumatic tire. No. 1,392,951; Oct. 11.

Leduc, Joseph, and N. Gobeille, St. Hyacinthe, Quebec, Canada. Gas heating apparatus. No. 1,393,227; Oct. 11.

Leichter, Benjamin, Brooklyn, N. Y. Window or key lock. No. 1,393,628; Oct. 11.

Leighton, Henry B. (See Pharmenter, George A., assignor.)

Leonard, Frank B., Los Angeles, Calif., assignor of one-half to A. E. Beasley, Toronto, Ontario, Canada. Automobile-lock. No. 1,393,552; Oct. 11.

Leonard, Joseph E. (See Howle, E. O., and Leonard.)

Leonhardt, Martin W., Chattanooga, Tenn. Adjustable dust-collector. No. 1,393,553; Oct. 11.

Leonhardt, Martin W., Chattanooga, Tenn. Adjustable dust-collector. No. 1,393,554; Oct. 11.

Levin, Max, Chicago, Ill. Steamer. No. 1,393,725; Oct. 11.

Lewandowski, Anthony, and M. Katafiasz, Toledo, Ohio. Merry-go-round. No. 1,393,629; Oct. 11.

Libbey-Owens Sheet Glass Company, The. (See Callard, R. P., and Rhonemus, assignors.)

Liberty Company, The. (See Liberty, Saul R., assignor.)

Liberty, Saul R., assignor to The Liberty Company, Pawtucket, R. I. Bobbin-holder for shuttles. No. 1,393,145; Oct. 11.

Limoges, Laurence L., Sioux City, Iowa. Folding luggage-carrier. No. 1,393,294; Oct. 11.

Linebarger, Charles E., Chicago, Ill. Method and apparatus for making small balls or pellets. No. 1,393,383; Oct. 11.

Lindquist, David E. (See Helby, C. G., Burkam, Lindquist, Riggin, Allen, and Lau.)

Link, Maximilian W., assignor to Crane Company, Chicago, Ill. Magnetically-operated valve. No. 1,392,952; Oct. 11.

Link, Vincent, Detroit, Mich., assignor to The Studebaker Corporation. Internal-combustion engine. No. 1,393,295; Oct. 11.

Lindstadt, Otto, Madison, Nebr. Valve for water-tanks. No. 1,393,384; Oct. 11.

Lipe, Willard C., Syracuse, N. Y., and L. H. Kirk, Havre de Grace, Md. Railway motor-car. No. 1,393,146; Oct. 11.

Lockyer, Robert H., San Francisco, Calif. Faucet. No. 1,393,555; Oct. 11.

Locomotive Pulverized Fuel Company. (See Muhlfeld, John E., assignor.)

Lohr, William. (See Hough, S., and Lohr, assignors.)

Lomas, Harry, and J. Mortimer, London, England. Hypodermic syringe. No. 1,393,720; Oct. 11.

Lomax, Joseph B., Furness Vale, near Stockport, England. Finishing or lustring textile fabrics. No. 1,393,296; Oct. 11.

Lorentz, Albert M., McMechen, W. Va. Milk-strainer. No. 1,393,631; Oct. 11.

Lynn, John, New York, N. Y. Window-ventilator. No. 1,393,556; Oct. 11.

Lyttle, James D., Fenn, and S. Clark, Grangeville, Idaho. Combined road grading and leveling machine. No. 1,393,385; Oct. 11.

L-W-F Engineering Company. (See Black, Archibald, assignor.)

Magariello, John B. and J., New York, N. Y. Bed-spring. No. 1,392,954; Oct. 11.

Magariello, Joseph. (See Magariello, John B. and J.)

Magerle, Edmund, and H. Martinek, assignors of one-third to A. Vogimayer, Vienna, Austria. Device or arrangement for the continuous movement of rolling or sliding bodies. No. 1,393,231. Oct. 11.

Magnetic Pigment Company. (See Fireman, Peter, assignor.)

Manshel, Charles, Newark, N. J. Check stamping and issuing machine. No. 1,393,232; Oct. 11.

Marquart, Walter E., San Francisco, Calif. Collapsible rim. No. 1,393,302; Oct. 11.

Marriott, Burton J., Petrolia, Ontario, Canada. Window screen. No. 1,393,560; Oct. 11.

Martell, Albert A., assignor to The Taft-Peirce Manufacturing Company, Woonsocket, R. I. Plug-gage. No. 1,393,233; Oct. 11.

Martin, Fernand P. Paris, France. Apparatus for delivering materials. No. 1,393,561; Oct. 11.

Martin, Harry L., and W. C. Willis, Memphis, Tenn. Car seal. No. No. 1,393,033; Oct. 11.

Martin, Robert L., Ocala, Fla. Automobile-body with traveling and housekeeping conveniences. No. 1,392,955; Oct. 11.

Martin, Robert L., Ocala, Fla. Cooking-stove. No. 1,392,956; Oct. 11.

Martin, William L., Harvard, Ill. Automatic watering-bowl or drinking-fountain. No. 1,393,303; Oct. 11.

Martinek, Hermann. (See Magerle, E., and Martinek.)

Matchette, Frank J., Milwaukee, Wis., assignor to The Servidor Company, Wilmington, Del. Lock. No. 1,393,149; Oct. 11.

Matthews, Bessie A., et al., executrices. (See Taylor, James L.)

Matthews, Frank E., assignor to The Connecticut Tool and Engineering Company, Bridgeport, Conn. Pulley and sheath therefor. No. 1,392,957; Oct. 11.

Matthews, Joseph L., Highland Park, N. J., assignor to International Motor Company, New York, N. Y. Sand-blast nozzle. No. 1,393,562; Oct. 11.

Maurer, Anton, and J. J. Brossoit, Salt Lake City, Utah. Spare-tire holder. No. 1,393,563; Oct. 11.

McCabe, Edward F., Maplewood, N. J. Conveying system. No. 1,393,386; Oct. 11.

McCaskey Register Company, The. (Incorporated in 1914.) (See Moseley, Emerson B., assignor.)

McColl, Albert E., Dumbarton, Scotland, assignor of one-half to The General Electric Company Limited, Birmingham, England. Protective device for alternating-current electric systems. No. 1,393,228; Oct. 11.

McCornack, Herbert, Glen Ridge, assignor to Empire Cream Separator Company, Bloomfield, N. J. Milking-machine system. No. 1,393,387; Oct. 11.

McCowan, David A., Toronto, Ontario, Canada. Vending-machine. No. 1,393,147; Oct. 11.

McCulley, Thomas A., assignor of forty-five one-hundredths to M. B. Deane, San Francisco, Calif. Razor-hone. No. 1,393,297; Oct. 11.

McDonald, Leslie R., Montreal, Quebec, Canada. Automatic repeating mechanism for phonographs. No. 1,393,229; Oct. 11.

McDonald, Leslie R., Moptreal, Quebec, Canada. Automatic repeating mechanism for phonographs. No. 1,393,230; Oct. 11.

McFeggans, Daniel L., Newark, N. J. Door-stop. No. 1,393,032; Oct. 11.

McGinn, Francis W., Baltimore, Md. Mud-lug for automobile-wheels. No. 1,393,450; Oct. 11.

McGrath, Andrew F., New York, N. Y. Spring-wheel. No. 1,393,630; Oct. 11.

McGraw, Thomas H., Jr., Oakmont, Pa. Steam-separator. No. 1,393,298; Oct. 11.

McIntosh, Thomas J., Daisell, S. C. Reversible fork and rake. No. 1,393,299; Oct. 11.

McLean, Hilliard N. A., et al. (See Todd, Samuel J., assignor.)

McNaull, Mrs. Macie K. (See McNaull, William D., assignor.)

McNaull, William D., assignor to Mrs. Macie K. McNaull, Toledo, Ohio. Vehicle-tire. No. 1,392,953; Oct. 11.

McNutt, Lawrence E., assignor to The Allen Filter Company, Toledo, Ohio. Dispensing-faucet. No. 1,393,800; Oct. 11.

McQuarrie, James L., Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Sound-modifying device. No. 1,393,567; Oct. 11.

McQuarrie, James L., Montclair, N. J., and C. L. Goodrum, assignors to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. No. 1,393,558; Oct. 11.

McQuarrie, James L., and C. L. Goodrum, assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. No. 1,393,559; Oct. 11.

McQuarrie, William R. D., Buffalo, N. Y. Picture spinning-top. No. 1,393,148; Oct. 11.

McVeety, Charles, Cheltenham, Pa. Hot-air heating system. No. 1,393,301; Oct. 11.

Mead, William J., Orange, Tex. Fuel-oil burner. No. 1,392,958; Oct. 11.

Meadery, Chauncey C., New York, N. Y. Aeroplane. No. 1,393,150; Oct. 11.

Meitner, Elemer, Brooklyn, assignor, by mesne assignments, to Ford Instrument Company, Incorporated, New York, N. Y. Range and bearing indicator. No. 1,392,959; Oct. 11.

Mekanisk Industri Company. (See Möller, M. W., and Harms, assignor.)

Merritt, A. T. (See Mizsell, George, assignor.)

Merritt, Frank W., Duluth, Minn. Heater. No. 1,393,224; Oct. 11.

Messersmith, Marion E., et al. (See Keller, Beler A., assignor.)

Metz, Ralph A., Baton Rouge, La. Apparatus for cooling oil or other heated liquids. No. 1,393,631; Oct. 11.

Mid-West Box Company. (See Heinrichs, Berg, assignor.)

Miller, Jacob H., Cresson, Pa. Grease-cup. No. 1,393,304; Oct. 11.

Miller, John F., et al. (See La Gier, August F., assignor.)

Miller, John O. (See Cooke, S. H., and Miller, assignors.)

Miller, Harris B., Philadelphia, Pa. Dumping hoist-vehicle. No. 1,393,151; Oct. 11.

Miller, Harry B., assignor of one-half to S. Kauffman, Syracuse, N. Y. Relief-valve for oil-cans. No. 1,393,084; Oct. 11.

Miller, William G., Raynham, Mass. Nose-guard for spectacles. No. 1,393,152; Oct. 11.

Milliken, Foster, et al., trustees. (See Milliken, Foster, assignor.)

Milliken, Foster, Lawrence, N. Y., assignor to F. Milliken, S. F. Weaver, and J. M. Reppiier, as trustees. Alloy. No. 1,393,268; Oct. 11.

Mills, Chester B., East McKeesport, Pa., assignor to Westinghouse Electric & Manufacturing Company. Making current-collector rings. No. 1,393,564; Oct. 11.

Mills, William. (See Percy, C., and Mills.)

Mitchell, George L. (See Glaudel, George, assignor.)

Mitchell, George, London, England. Apparatus for making emulsions. No. 1,393,632; Oct. 11.

Mitrovich, Adolph, San Antonio, Tex. Glass. No. 1,393,225; Oct. 11.

Mizsell, George, assignor of one-half to A. T. Merritt, Newport News, Va. Reaming-tool. No. 1,392,960; Oct. 11.

Mohawk Carpet Mills. (See Hathaway, Edgar F., assignor.)

Möller, Morten W., and A. E. Harms, assignors to Mekanisk Industri Company Ltd., Copenhagen, K, Denmark. Machine for grinding shaving-machine blades. No. 1,393,634; Oct. 11.

Moltrup, James T., Beaver Falls, Pa. Method of and apparatus for pickling rods, pipes, and the like. No. 1,393,633; Oct. 11.

Moody, Helen E., Atlantic City, N. J. Electrical brush. No. 1,393,635; Oct. 11.

Mork, Harry S., Brookline, Mass., assignor, by mesne assignments, to American La France Fire Engine Company, Inc., Elmira, N. Y. Fire-extinguisher composition. No. 1,393,236; Oct. 11.

Mork, Harry S., Brookline, Mass., assignor, by mesne assignments, to American La France Fire Engine Company, Inc., Elmira, N. Y. Fire-extinguisher composition. No. 1,393,237; Oct. 11.

Morrison, Louis A. (See Andreason, Christian, assignor.)

Morrison, Lewis E., Newark, assignor to himself, and S. H. Plum, 2d, Madison, N. J. Transfer mechanism for printing-machines. No. 1,393,036; Oct. 11.

Morrison, Lewis E., Newark, assignor to himself, and S. H. Plum, 2d, Madison, N. J. Tripping mechanism for printing machines. No. 1,393,037; Oct. 11.

Morrise, Frank E., London, England. Wind-screen. No. 1,393,239; Oct. 11.

Morris, John F., Peoria, Ill. Device for treatment by temperature. No. 1,393,153; Oct. 11.

Morris, Stephen W., assignor of one-half to Gee Electric Company, Wheeling W. Va. Press for armature-coils. No. 1,393,035; Oct. 11.

Morris, William L., Broseley, Mo. Egg-candler. No. 1,393,238; Oct. 11.

Mortimer, James. (See Lomax, H., and Mortimer.)

Morton, Henry, Wood Bay, Manitoba, Canada. Grain-cleaning machine. No. 1,393,154; Oct. 11.

Moseley, Emerson B., deceased; M. L. Moseley, administratrix, assignor to The McCaskey Register Company, (Incorporated in 1914,) Alliance, Ohio. Filing-appliance case. No. 1,393,690; Oct. 11.

Moseley, Metta L., administratrix. (See Moseley, Emerson B.)

Mossner, Peter C., Saginaw, Mich. Automatic reversing device for washing-machines. No. 1,392,961; Oct. 11.

Moyer, William W., Camden, N. J., assignor to Victor Talking Machine Company. Sound-box for talking-machines. No. 1,393,691; Oct. 11.

Mueller Metals Company. (See Helby, C. G., Burkam, Lindquist, Rigxin, Allen, and Lau, assignors.)

Muhlfeld, John E., Scarsdale, N. Y., assignor, by mesne assignments, to Locomotive Pulverized Fuel Company, Pulverized-fuel-burning locomotive. No. 1,393,240; Oct. 11.

Müller, Friederich, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y. Cutter-grinding machine. (Reissue.) No. 15,206; Oct. 11.

Mullins, John C., Jr., assignor of one-half to C. O. Ramsey, Coeburn, and one-fourth to I. N. Kelley, Big Stone Gap, Va. Thrust-bearing for Ford motor-shafts. No. 1,393,305; Oct. 11.

Murphy, John M., Shamokin, Pa. Support for elevator-cars. No. 1,392,962; Oct. 11.

Murphy, Walter P. (See Wolff, Frank W., assignor.)

Murray, Helge O. H. (See Thompson, Millard F., assignor.)

Murray, Thomas B., Scotstown, Scotland. Cylinder of combustion-engines. No. 1,393,636; Oct. 11.

Myers, F. E., & Brother. (See Myers, Philip A., assignor.)

Myers, Philip A., assignor to F. E. Myers & Brother, Ashland, Ohio. Power-head. No. 1,393,306; Oct. 11.

National Cash Register Company, The. (See Fuller, Frederick L., assignor.)

National Binding Machine Company. (See Anable, Frederick S., assignor.)

National Dairy Machine Company. (See Hastings, Charles E., assignor.)

Nelson, John, Chicago, Ill. Steering-wheel lock. No. 1,393,731; Oct. 11.

Nelson, Ralph M., and E. L. Aachenbach, Sellersville, Pa., assignors to United States Gauge Company, New York, N. Y. Pressure-gage. No. 1,393,155; Oct. 11.

Neth, George J., assignor to The Ecry Register Company, Dayton, Ohio. Speed-regulating device. No. 1,392,963; Oct. 11.

Neyland, Carr A., Spokane, Wash. Making type and type holders. No. 1,393,307; Oct. 11.

Neyland, Carr A., Spokane, Wash. Making type and type-holders. No. 1,393,308; Oct. 11.

Nicholson, William T., Blackpool, England. Package for belt-hooks. No. 1,393,451; Oct. 11.

Nickerson, Orin H. (See Boyton, J. C., and Nickerson.)

Nielsen, Aage W., Chicago, Ill. Can-soldering machine. No. 1,392,964; Oct. 11.

Nonneman, Ira W., assignor to The Borden Company, Warren, Ohio. Pipe-cutter. No. 1,393,156; Oct. 11.

Norvell, Lorenzo, trustee. (See Dillon, Edward L., assignor.)

Nutwell, Goff N., Fresno, Calif. Can-opener. No. 1,393,630; Oct. 11.

Ohashi, Hydesaburo, assignor to Hydesaburo Ohashi & Co., Inc., New York, N. Y. Coating-machine. No. 1,393,637; Oct. 11.

Ohashi, Hydesaburo, & Co. (See Ohashi, Hydesaburo, assignor.)

Olkowski, Frank, Three Lakes, Wis. Mechanical toy. No. 1,393,638; Oct. 11.

Ollivier, Jocelyn E., La Vignette, St. Gervais les Bains, France. Propeller mechanism. No. 1,393,157; Oct. 11.

Olmschenk, Lawrence A. (See Dreher, J., and Olmschenk.)

Olsen Manufacturing Corporation. (See Olson, Emil, assignor.)

Olson, Emil, assignor to Olsen Manufacturing Corporation, Rochester, N. Y. Sash-holder. No. 1,393,300; Oct. 11.

Olson, Hans P. (See Erickson, O. F., and Olson.)

On-The-Dot-Level Device. (See Thullen, Christopher F., assignor.)

Ost, Frederick A., Minneapolis, Minn. Ratchet mechanism. No. 1,393,692; Oct. 11.

Otten, Lawrence F., Newport, Ky. Belt-buckle. No. 1,393,721; Oct. 11.

Ottl, Joseph, Oklahoma, Okla. Reversible clutch. No. 1,393,693; Oct. 11.

Ovida Co. (See Burns, Kathlyn L., assignor.)

Packard Motor Car Company. (See Vincent, Jesse G., assignor.)

Padden, Robert W., Kansas City, Mo. Vehicle-wheel. No. 1,393,694; Oct. 11.

Palmer, Eleanore L. D., New Brighton, Pa. Bathtub. No. 1,393,310; Oct. 11.

Palmer, Miguel J., et al. (See Sanchez, Leonardo, assignor.)

Pantaleone, Joseph, and M. Zoda, Trenton, N. J. Sidewalk snow-sweeper. No. 1,393,640; Oct. 11.

Parker, Alexander, Etna Mills, Calif. Debris or sediment collector. No. 1,393,389; Oct. 11.

Parker, Clark W., New York, N. Y. Brake mechanism. No. 1,393,390; Oct. 11.

Parmenter, George A., West Medford, assignor of one-half to H. B. Leighton, Cambridge, Mass. Puzzle. No. 1,393,565; Oct. 11.

Parsons, Charles A., S. S. Cook, and L. M. Douglas, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Geared turbine system. No. 1,393,391; Oct. 11.

Parsons, Charles A., S. S. Cook, and L. M. Douglas, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Geared turbine system. No. 1,393,392; Oct. 11.

Parsons, Charles A., S. S. Cook, and L. M. Douglas, Newcastle-upon-Tyne, England; said Cook and said Douglas assignors to said Parsons. Geared turbine system. No. 1,393,393; Oct. 11.

Patented Metalware Corporation. (See Rachlin, Max, assignor.)

Paulus, George R., assignor to The United Electric Company, Canton, Ohio. Vacuum-cleaner brush. No. 1,393,695; Oct. 11.

Paulson, Peter A., Appleton, Wis. Process and apparatus for reclaiming by-products. No. 1,393,241; Oct. 11.

Pawsat, Ewald F., assignor to Wald Manufacturing Company, Sheboygan, Wis. Flashlight-bracket for bicycles. No. 1,393,158; Oct. 11.

Pemble, William W. (See Kennon, Charles W., assignor.)

Pendleton, Harry C., Piedmont, Calif. Method and means for facilitating sealing deep wells. No. 1,393,311; Oct. 11.

Percy, Clark, South Bellingham, and W. Mills, Anacortes, assignors of one-third to C. H. Kent, Seattle, Wash. Machine for cutting can-tops. No. 1,393,159; Oct. 11.

Perfecto Gear Differential Co. (See Thompson, John A., assignor.)

Perrin, John V., Lynn, Mass., Ticket-holder. No. 1,393,696; Oct. 11.

Perry, Arthur H., De Witt, Ark. Switch. No. 1,393,312; Oct. 11.

Peteler, Adolph, Freeport, N. Y. Lifting-jack. No. 1,393,242; Oct. 11.

Peterson, John, Faribault, Minn. Table-leaf support. No. 1,393,566; Oct. 11.

Peterson, Niels J., Minneapolis, Minn. Valve-grinder. No. 1,393,567; Oct. 11.

Pfanstiehl, Carl A., Highland Park, assignor to Pfanstiehl Company, Inc., North Chicago, Ill. Puppet-valve. No. 1,393,726; Oct. 11.

Pfanstiehl Company. (See Pfanstiehl, Carl A., assignor.)

Pfingsten, John H., Milwaukee, assignor to Presto Color Company, Cudaby, Wis. Color-base for leather-finishers and making the same. No. 1,393,697; Oct. 11.

Philadelphia Textile Machinery Company, The. (See Ayres, E. B., and Bogaty, assignors.)

Philbrin Corporation. (See Brinton, William C., Jr., assignor.)

Phillips, Ross M. G., New Haven, assignor to The Phillips Time Switch Co., Shelton, Conn. Timing mechanism. No. 1,393,894; Oct. 11.

Phillips Time Switch Co., The. (See Phillips, Ross M. G., assignor.)

Platt, Walter J., San Leandro, Calif. Rotary pump. No. 1,393,698; Oct. 11.

Pickering, Joseph T., New Brighton, England. Disk wheel for automobiles. No. 1,393,729; Oct. 11.

Piersen, Edwin H., assignor to The Piersen Manufacturing Company, Topeka, Kans. Perforator. No. 1,393,243; Oct. 11.

Piersen Manufacturing Company, The. (See Piersen, Edwin H., assignor.)

Pierson, A. N., et al. (See Shepard, Wilbur L., assignor.)

Pines Manufacturing Company. (See Raleigh, James F., assignor.)

Pittsburgh Plate Glass Company. (See Wilson, Robert E., assignor.)

Pittman & Company. (See Pittman, Carl L., assignor.)

Pittman, Carl L., assignor to Pittman & Company, De Leon, Tex. Safety attachment for railway-car trucks. No. 1,393,313; Oct. 11.

Pitman, Henry L., Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y. Combined typewriting and computing machine. No. 1,393,244; Oct. 11.

Pletscher, Otto, Albisrieden, Switzerland. Electric machine. No. 1,393,395; Oct. 11.

Plum, S. Haines 2d. (See Morrison, Lewis E., assignor.)

Porter, David E., administrator. (See Pratt, Albert B., assignor.)

Porter, Harry G. (See Joy, W. H., and Porter.)

Potter, Rutherford B., Brighton, Colo. Gradometer. No. 1,393,314; Oct. 11.

Pratt, Albert B., deceased; D. E. Porter, administrator, Lyndon Vt. Nut. No. 1,393,160; Oct. 11.

Pratt & Whitney Company. (See Müller, Friederich, assignor.) (Reissue.)

Presto Color Company. (See Pfingsten, John H., assignor.)

Priwer, Herman F., Springfield, Ohio, assignor of one-half to J. E. Galvin. Electric steel furnace. No. 1,392,965; Oct. 11.

Purcell, Charles H., and L. I. Hewes, Portland, Oreg. Pavement for roads and streets. No. 1,393,699; Oct. 11.

Pym, Charles F., Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. End-lasting mechanism. No. 1,393,396; Oct. 11.

Quicksafe Manufacturing Company. (See Waller, Robert H., assignor.)

Rachlin, Max, New York, assignor to Patented Metalware Corporation, Brooklyn, N. Y. Gutter-hanger. No. 1,392,966; Oct. 11.

Racine Tool & Machine Co. (See Reinhardt, W. C., and Banker, assignors.)

Raichlen, C. Frederick. (See Schmidt, Henrik J., assignor.)
Raleigh, James F., Chicago, Ill., assignor to Pines Manufacturing Company. Shutter apparatus for radiators. No. 1,393,161; Oct. 11.
Ramage, John P., Liberton, Scotland. Envelop-making machine. No. 1,393,162; Oct. 11.
Ramsey, Charles O., *et al.* (See Mullins, John C., Jr., assignor.)
Rankin, Robert, Leamington Spa, England. Electric generator and motor. No. 1,393,038; Oct. 11.
Rasely, Warren M., Worcester, Mass. Educational toy. No. 1,393,163; Oct. 11.
Raybestos Company, The. (See Kelley, Edward F., assignor.)
Reboul, Alexandre M. J. E., Constantinople, Turkey. Folding safety-razor. No. 1,393,700; Oct. 11.
Reinhardt, William C., and O. H. Banker, assignors to Racine Tool & Machine Co., Racine, Wis. Tire-cutting machine. No. 1,393,164; Oct. 11.
Remsberg, Arthur S., Lakewood, assignor to The Chisholm-Moore Manufacturing Company, Cleveland, Ohio. Chain-shackle. No. 1,393,568; Oct. 11.
Repplier, James M., *et al.*, trustees. (See Milliken, Foster, assignor.)
Reynolds, Frank P., assignor to Ballard Knitting Co., Norristown, Pa. Take-up mechanism for knitting-machines. No. 1,393,039; Oct. 11.
Rhodmon, Thomas H., Meadville, Pa. Adjustable stand. No. 1,393,165; Oct. 11.
Rhoades, Alonzo E., assignor to Draper Corporation, Hopedale, Mass. Feeler mechanism for looms. No. 1,393,597; Oct. 11.
Rhonemus, Clarence A. (See Callard, R. P., and Rhonemus.)
Richard, Clarence A. (See Richard, Clement C., C. A., and O. K.)
Richard, Clement C., C. A., and O. K., Detroit, Mich. Punch and die retainer. No. 1,393,040; Oct. 11.
Richard, Otis K. (See Richard, Clement C., C. A., and O. K.)
Richards, Howard N., Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company. Insulator. No. 1,393,398; Oct. 11.
Richardson, Albert J., Joplin, Mo. Dial. No. 1,393,569; Oct. 11.
Richardson, Brodie J., and C. S. Barber, Waterbury, Conn. Lock-latch for handbags. No. 1,392,967; Oct. 11.
Richardson, Thomas H., Lexington, N. C. Cleaning apparatus. No. 1,393,641; Oct. 11.
Ricketts, James R., Kansas City, Mo. Trolley-catcher. No. 1,393,570; Oct. 11.
Riek, Constance A., Hermann, Mo. Combined fly-swatter and brush. No. 1,393,571; Oct. 11.
Riggin, Fred L. (See Helby, C. G., Burkam, Lindquist, Riggin, Allen, and Lan.)
Ritchie, Foster, Ealing, England. Pantograph apparatus. No. 1,393,572; Oct. 11.
Ritter, John A., Lansdowne, Pa. Headlamp. No. 1,393,573; Oct. 11.
Robertson, Charles, and L. Laupot, assignors to Universal Chain Co., Inc., Stroudsburg, Pa. Apparatus for making chain-links. No. 1,393,041; Oct. 11.
Robertson, Robert R., Berkeley, Calif. Etching apparatus. No. 1,393,315; Oct. 11.
Robinson, Francis J., Aurora, Ontario, Canada. Stretcher and drier for hides and leather. No. 1,392,968; Oct. 11.
Robinson, John T., Company. (See Robinson, J. T., Gooding, and Russo, assignors.)
Robinson, John T., G. E. Gooding, and D. J. Russo, assignors to John T. Robinson Company, Boston, Mass. Paper-box machine. No. 1,392,969; Oct. 11.
Rohmiller, Aldace P., Mapleton, Iowa. Spoon-holder. No. 1,393,574; Oct. 11.
Roll, John M., assignor of one-half to C. Jacobs and one-fourth to E. E. Jacobs, Correctionville, Iowa. Tire-tread-removing device. No. 1,393,575; Oct. 11.
Roll, John M., assignor of one-half to C. Jacobs and one-fourth to E. E. Jacobs, Correctionville, Iowa. Tire-tread-removing device. No. 1,393,576; Oct. 11.
Ros-Aux Company. (See Upham, William P., assignor.)
Rosemeyer, John H., Elmira, Idaho. Cable-holding device. No. 1,393,245; Oct. 11.
Rose, William, Gainsborough, England. Apparatus feeding for both feeding and counting cigarettes for packeting, applicable also to analogous purposes. No. 1,393,642; Oct. 11.
Rossiter, William M., Sunbury, Pa. Thread-cutting shuttle. No. 1,393,643; Oct. 11.
Rotary Rod Weeder and Manufacturing Company. (See Van Patten, L. C., and Wolfe, assignors.)
Roth, Edward N., assignor to Roth Manufacturing Company, Chicago, Ill. Hose-coupling gasket. No. 1,393,316; Oct. 11.
Roth Manufacturing Company. (See Roth, Edward N., assignor.)
Roumégnère, Jean L. P., Auch, France. Hollow metal crown for artificial teeth. No. 1,393,166; Oct. 11.
Rowe, Alfred H., Winnipeg, Manitoba, Canada. Scrubbing-machine. No. 1,393,453; Oct. 11.
Rowe, Bertrand P., Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company. Disconnecting-switch. No. 1,393,454; Oct. 11.
Royston, Ernest R. (See Bayles, E. A., and Higham, assignor.)
Rugg, Daniel M., assignor to The Gas Machinery Company, Cleveland, Ohio. Coke and gas oven. No. 1,393,455; Oct. 11.
Ruggles, William G., New York, N. Y. Orientator. No. 1,393,456; Oct. 11.
Russell, Herbert H., New Haven, Conn., assignor to The Geniet Manufacturing Company. Sewing-machine ruffler. No. 1,392,970; Oct. 11.
Russell, Floyd W., Akron, Ohio. Making pneumatic-tire shoes. No. 1,393,644; Oct. 11.
Russell, William S., St. Louis, Mo. Automatic type-cabinet. No. 1,393,317; Oct. 11.
Russo, Domenico J. (See Robinson, J. T., Gooding, and Russo.)
Ryason, Samuel M., Oquawka, Ill. Napkin-clasp. No. 1,393,577; Oct. 11.
Saal, Henry G., Chicago, Ill. Spring-motor. No. 1,393,167; Oct. 11.
Salsich, Neil E., Bethlehem, Pa. Automatic safety spring-latch. No. 1,393,246; Oct. 11.
Samain, Pierre, Cusy, France. Tubular flood or sluice gate. No. 1,393,578; Oct. 11.
Samuelson, Peter W., and W. Christofferson, Pepin, Wis. Torsion-tube hoist and holder. No. 1,392,971; Oct. 11.
Sanches, Leonardo, assignor of forty per cent. to A. Angulo and twenty per cent. to M. J. Palmer, Habana, Cuba. Safety electric signal for railways. No. 1,393,701; Oct. 11.
Sanches, Leonardo, assignor of one-half to A. Angulo, and twenty per cent. to M. J. Palmer, Habana, Cuba. Ignition device for internal-combustion engines. No. 1,393,702; Oct. 11.
Sangiuliano, Thomas, Wilkes-Barre, Pa. Nut-blanching machine. No. 1,393,168; Oct. 11.
Santa Cruz Portland Cement Co. (See Bachman, Llewellyn T., assignor.)
Sauer, John G., Rochester, N. Y. Lifting-jack. No. 1,393,247; Oct. 11.
Saunders, Harold F., Boundbrook, N. J., assignor to The Glysyn Corporation, New York, N. Y. Producing olefins. No. 1,393,248; Oct. 11.
Saunders, Harold F., Boundbrook, N. J., assignor to The Glysyn Corporation, New York, N. Y. Producing olefins. No. 1,393,249; Oct. 11.
Saxton, Thomas W., Barham, England. Means for indicating direction applicable for use with aircraft such as aeroplanes. No. 1,393,318; Oct. 11.
Saylor, Henry D. (See Kepler, George G., assignor.)
Sackren, William, Brooklyn, N. Y. Radiator-core. No. 1,393,042; Oct. 11.
Scarff, Alfred M., Croydon, England. Surgical truss. No. 1,393,722; Oct. 11.
Schermuly, Augustus W. L., Sutton, England. Pulley. No. 1,393,723; Oct. 11.
Schlatter, Gustav, and P. Boeckly, Arbon, assignor to Société Anonyme Adolphe Saurer, Arbon, Switzerland. Dumping-body for trucks, &c. No. 1,393,169; Oct. 11.
Schlenker, Oscar C., Hereford, Tex. Combined tire-carrier and rim spreader and constrictor. No. 1,393,319; Oct. 11.
Schlehr, Joseph A., Northville, S. D. Pliers and end wrench. No. 1,393,399; Oct. 11.
Schmidinger, Joseph, New York, N. Y. Combustion-stencil. No. 1,393,170; Oct. 11.
Schmidt, Henrik J., Brooklyn, N. Y., assignor to C. F. Raichlen, Bayonne, N. J. Machine for tying packages. No. 1,392,972; Oct. 11.
Schneider, John, Elizabethport, N. J. Coupling. No. 1,393,171; Oct. 11.
Schneider, Richard J., Ogallala, Nebr. Child's vehicle. No. 1,392,973; Oct. 11.
Schoenberg, Ralph A., now by judicial change of name Ralph A. Belmont, New York, N. Y., assignor to Beaver Machine and Tool Co., Inc., Newark, N. J. Pull-socket. No. 1,393,043; Oct. 11.
Schram, Oscar B., Oshkosh, Wis. Adjustable chair. No. 1,393,457; Oct. 11.
Schrans, Frederick G., Philadelphia, Pa. Metal-extrusion press. No. 1,393,579; Oct. 11.
Schrans, Frederick G., Philadelphia, Pa. Billet and rod handling means for metal-extension presses. No. 1,393,580; Oct. 11.
Schulz, Carl F., New York, N. Y. Carbureter. No. 1,393,044; Oct. 11.
Schulse, Herman E. (See Van Nostrand, C. H., and Schulse.)
Schwarz, Paul G., assignor to Drew Electric and Manufacturing Company, Indianapolis, Ind. Catenary trolley-clamping ear. No. 1,393,458; Oct. 11.
Schwarzmann, Wolfgang E., Longmeadow, and C. F. Toren, assignors to American Bosch Magneto Corporation, Springfield, Mass. Impulse-coupling. No. 1,393,703; Oct. 11.
Schwarzmann, Wolfgang E., Longmeadow, assignor to American Bosch Magneto Corporation, Springfield, Mass. Electric brush. No. 1,393,704; Oct. 11.
Schwartzlose, Noah W. (See Beylik, Franklin G., assignor.)
Schweitzer & Conrad. (See Conrad, Nicholas J., assignor.)
Scott, Ernest K. (See Hettelsater, H. C., and Scott.)
Scott, John W., Englewood, N. J., assignor to Arbuckle Brothers, New York, N. Y. Producing soluble concentrated coffee. No. 1,393,045; Oct. 11.

Scott-Paine, Hubert, Southampton, England. Construction of bodies of flying-boats and like light vessels. No. 1,393,645; Oct. 11.
Seed, William E., Preston, England. Unwinding device. No. 1,393,705; Oct. 11.
Seek, James H., Philadelphia, Pa. Supplemental air-intake device for gas-engines. No. 1,393,172; Oct. 11.
Sells, Ogden S., Buffalo, N. Y. Labeling-machine. No. 1,393,581; Oct. 11.
Semley, George B., Kenosha, Wis. Sheet-turner. No. 1,393,400; Oct. 11.
Servidor Company, The. (See Matchette, Frank J., assignor.)
Shafer, Ira, and C. A. Small, San Diego, Calif. Coating and forming machine. No. 1,393,401; Oct. 11.
Shannon, James, Canonbury, London, England. Oil-stove. No. 1,393,706; Oct. 11.
Sharbaugh, Wilbur F., Wheeling, W. Va. Safety milk-can spout. No. 1,393,250; Oct. 11.
Shear, Edward E., and W. G. Waechtler, Kingston, N. Y.; said Waechtler assignor to said Shear. Railroad safety appliance. No. 1,393,173; Oct. 11.
Sheet Steel Products Co., The. (See Baxter, Kenneth S., assignor.)
Shepard, Wilbur L., Elmwood, assignor of one-fourth to H. C. Hart, Unionville, and one-fourth to A. N. Pierson, Cromwell, Conn. Hydrocarbon-engine. No. 1,393,174; Oct. 11.
Shepard, Wilbur L., Elmwood, and E. A. Beals, Hartford, Conn. Locomotive. No. 1,393,402; Oct. 11.
Sherard, Oliver E., Emmett, Idaho. Shoe-heel. No. 1,393,175; Oct. 11.
Shoenberg, Milton H., San Francisco, Calif. Safety-switch. No. 1,393,322; Oct. 11.
Shoenberg, Milton H., San Francisco, Calif. Electric thermal control. No. 1,393,323; Oct. 11.
Shoenberg, Milton H., and G. J. Henry, San Francisco, Calif. Adjustable electric heater. No. 1,393,320; Oct. 11.
Shoenberg, Milton H., and G. J. Henry, San Francisco, Calif. Radiant heater. No. 1,393,321; Oct. 11.
Simplex Refrigerating Corporation. (See Williams, Edward T., assignor.)
Singer, Joseph, Los Angeles, Calif. Wrist-pin grinder. No. 1,393,046; Oct. 11.
Singer Manufacturing Company, The. (See Allen, Edward B., assignor.)
Slauson, Louis E., Moline, assignor to Grid-Iron-Grip Company, Rock Island, Ill. Tractor-wheel. No. 1,393,707; Oct. 11.
Slauson, Louis E., assignor to Grid-Iron-Grip Company, Rock Island, Ill. Traction-wheel. No. 1,393,708; Oct. 11.
Slauson, Louis E., assignor to Grid-Iron-Grip Company, Rock Island, Ill. Traction-shoe. No. 1,393,709; Oct. 11.
Small, Charles A. (See Shafer, I., and Small.)
Small, Frank E., Jamaica, N. Y. Magazine-crayon. No. 1,393,251; Oct. 11.
Smith, Benjamin H., Turtle Creek, Pa., assignor to Westinghouse Electric & Manufacturing Company. Wing-nut. No. 1,393,459; Oct. 11.
Smith, Clifford, Philadelphia, Pa. Resilient wheel. No. 1,393,324; Oct. 11.
Smith, George L., assignor to United States Ordnance Company, Washington, D. C. Wire fence. No. 1,393,176; Oct. 11.
Smith, Herbert E., Manchester, N. H. Vehicle-spring. No. 1,392,974; Oct. 11.
Smith, Irving R., *et al.* (See La Gier, August F., assignor.)
Smith, Jesse A. B., Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting-machine. No. 1,393,177; Oct. 11.
Smith, Launcelot E., South Shields, C. Zulver, London, and H. A. Thompson, North Shields, England. Liquid-fuel fittings for furnace-fronts. No. 1,393,646; Oct. 11.
Smith, Luther D., Toledo, Ohio. Electric heating element. No. 1,393,325; Oct. 11.
Smith, William A., Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J. Drill-sharpener. No. 1,393,403; Oct. 11.
Smith, William S., Cambridge, Mass. Safety device for electrically-operated systems. No. 1,393,404; Oct. 11.
Società Brevetti Feriani. (See Feriani, Gaetano, assignor.)
Société Anonyme Adolphe Saurer. (See Schlatter, G. S., and Boeckly, assignors.)
Societe Chimique des Usines du Rhone, (Anciennement Gilliard P. Monnet et Cartier.) (See Altwegg, J., and Landrivon, assignors.)
Societe d'Optique et de Mecanique de Haute Précision. (See Godillon, Victor H., assignor.)
Sommer, John, Peoria, assignor to Keystone Steel & Wire Company, South Bartonville, Peoria, Ill. Bale-tie machine. No. 1,393,178; Oct. 11.
Soss, Joseph, New York, N. Y. Door. No. 1,393,047; Oct. 11.
Soteros, Louis C., and J. S. Cavalenes, Gary, Ind. Screen. No. 1,393,405; Oct. 11.
Sonsthagen, Asbjorn, Leytonstone, England. Machine for coating chocolate bonbons. No. 1,393,460; Oct. 11.
Spencer, John A., Los Angeles, Calif. Strip for correcting music. No. 1,393,710; Oct. 11.
Sperry, Arthur B., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone system. No. 1,393,326; Oct. 11.
Spillane, Frank J., Brooklyn, N. Y. Arch for fireboxes. No. 1,396,647; Oct. 11.
Stailey, Charles E., and E. H. Blazer, Portsmouth, Ohio. Wheel. No. 1,393,711; Oct. 11.
Starr, Morton H., St. Johnsbury, Vt., assignor to E. and T. Fairbanks and Company. Dial-scale. No. 1,393,179; Oct. 11.
Stein, A., & Company. (See Kuehn, Charles P., assignor.)
Stern, Moses E., *et al.* (See Keller, Bela A., assignor.)
Stetson, Fred W., and J. L. Essex, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Removing and recovering solvent from nitrocellulose explosives. No. 1,393,713; Oct. 11.
Stever, John M. (See Beagle, William J., assignor.)
Steverson, Enoch B., Portsmouth, Va. Toy. No. 1,393,583; Oct. 11.
Steele, Charles B., Philadelphia, Pa. Convertible rolling chair. No. 1,393,461; Oct. 11.
Steenstrup, Christian, Schenectady, N. Y., assignor to General Electric Company. Shaft-coupling and making same. No. 1,393,582; Oct. 11.
Steere, Frank W., and W. C. Woodland, Detroit, Mich. Process and means for removing suspended matter from gas. No. 1,393,712; Oct. 11.
Stickney, Burnham C., Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y. Typewriting-machine. No. 1,392,975; Oct. 11.
Stiles, Fred M., Norristown, Pa. Ladder-hook. No. 1,393,048; Oct. 11.
Stimpson, Walter F., Detroit, Mich. Computing-scale. No. 1,392,976; Oct. 11.
Stine, Charles M. A., and J. L. Gilson, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del. Producing picric acid. No. 1,393,714; Oct. 11.
Stohr, Franz, Vienna, Austria. Manufacturing ferruginous preparations. No. 1,393,049; Oct. 11.
Stone, Clayton E. (See Dutton, W. H., and Stone.)
Stone, Frank, Slater, Mo. Lubricator. No. 1,393,584; Oct. 11.
Storer, Norman W., and R. E. Hellmund, Pittsburgh, Pa., assignors to Westinghouse Electric and Manufacturing Company. System of control. No. 1,393,715; Oct. 11.
Stowe & Woodward Company. (See Wilkie, Robert J., assignor.)
Strite, George T., Minneapolis, Minn. Traction-machine. No. 1,393,462; Oct. 11.
Stuart Products Corporation. (See Askin, Joseph M., assignor.)
Stubbs, Charles T., Milwaukee, Wis. Valve-lifter. No. 1,393,180; Oct. 11.
Studebaker Corporation. (See Davenport, George R., assignor.)
Studebaker Corporation, The. (See Link, Vincent, assignor.)
Sturgis, Frank M., Forsyth, Ill. Flexible mud-lug. No. 1,393,252; Oct. 11.
Sturgis, William B., assignor to General Explosives Company, Chicago, Ill. Explosive. No. 1,393,463; Oct. 11.
Sturtevant Mill Company. (See Sturtevant, Thomas J., assignor.)
Sturtevant, Thomas J., Wellesley, assignor to Sturtevant Mill Company, Boston, Mass. Mixing-machine. No. 1,393,181; Oct. 11.
Sullivan Machinery Company. (See Willey, Frank E., assignor.)
Surface, Harry E., Bloomington, Ill. Wagon-dump. No. 1,393,464; Oct. 11.
Sutton, Francis A., Oakhurst, Ashford, England, assignor to C. C. Williams, Acting Chief of Ordnance, U. S. Army, trustee. Fuse for projectiles. No. 1,393,585; Oct. 11.
Swan, Gertrude S., Detroit, Mich. Combined card game and educational apparatus. No. 1,392,977; Oct. 11.
Swanson, Peter, Ely, Minn. Auxiliary arch-bar. No. 1,393,716; Oct. 11.
Swift, George W., Jr., Incorporated. (See Duval, Ernest H., assignor.)
Taft-Peirce Manufacturing Company, The. (See Martell, Albert A., assignor.)
Taggart, Dawson M., East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. No. 1,393,465; Oct. 11.
Taggart, Joseph W. (See Baker, James E., assignor.)
Taisey, Fred R., Lowell, assignor to The Lamson Company, Boston, Mass. Pneumatic-despatch-tube carrier. No. 1,393,466; Oct. 11.
Tait, Godfrey M. S., Washington, D. C. Apparatus for the progressive heating or cooling of milk-bottles and other containers. No. 1,393,717; Oct. 11.
Talley, John E., and J. W. Thompson, Philadelphia, Pa. Display apparatus. No. 1,393,050; Oct. 11.
Tamamura, Yusuke, Tokyo-fu, Japan. Differential clip for aerial ropeways. No. 1,392,978; Oct. 11.
Tamborello, Frank, Milwaukee, Wis. Vehicle brake mechanism. No. 1,393,051; Oct. 11.
Tanner, Arthur R. W., Little Sutton, England. Nail-container and nail-delivering device. No. 1,393,586; Oct. 11.
Tanner, Earl T., Des Moines, Iowa. Automobile-lock. No. 1,393,182; Oct. 11.
Tanking, William T., Jr., Racine, Wis. Support. No. 1,393,052; Oct. 11.

Tate, Joshua A., St. Louis, Mo. Burglar-trap. No. 1,393,183; Oct. 11.

Tate, Ralph M., *et al.* (See Todd, Samuel J., assignor.)

Taufer, Fred, Meadow Lands, Pa. Game. No. 1,392,979; Oct. 11.

Taylor, Arthur W., Manchester, England. Apparatus for displaying garments and like articles. No. 1,393,327; Oct. 11.

Taylor, Burt E., Mount Vernon, assignor to The Borden Company, New York, N. Y. Can-charging apparatus. No. 1,393,406; Oct. 11.

Taylor, Emma A., *et al.*, executrices. (See Taylor, James L.)

Taylor, James L., deceased, Poughkeepsie, N. Y.; E. A. Taylor and B. A. Matthews, executrices. Clamp. No. 1,393,718; Oct. 11.

Taylor, Samuel W., assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md. Bottle-capping apparatus. No. 1,392,980; Oct. 11.

Teehan, John F., Brockton, Mass. Shoe and making the same. No. 1,393,730; Oct. 11.

Tenney, Fred, Buckingham, England. Shuttlecock device for use in games. No. 1,393,407; Oct. 11.

Tenney, Fred, Doncaster, England. Game. No. 1,393,408; Oct. 11.

Thatcher, Charles J., New York, N. Y. Producing separators. No. 1,393,467; Oct. 11.

Thayer, Burt W., Minneapolis, Minn. Undergarment. No. 1,393,468; Oct. 11.

Thew Shovel Company, The. (See Harris, Hollis H., assignor.)

Thompson, Ethel G., Minneapolis, Minn. Doll figure. No. 1,392,981; Oct. 11.

Thompson, Herbert A. (See Smith, L. E., Zulver, and Thompson.)

Thompson, John A., Sedro Woolley, assignor to Perfecto Gear Differential Co., Seattle, Wash. Tractor driving mechanism. No. 1,393,409; Oct. 11.

Thompson, John W. (See Talley, J. E., and Thompson.)

Thompson, Millard F., assignor of one-half to H. O. H. Murray, Washington, D. C. Solution-identifying means for medicinal preparation. No. 1,393,253; Oct. 11.

Thompson, Robert, Bakerstown, Pa. Corn-husking table. No. 1,393,645; Oct. 11.

Thompson, Robert H., Brookline, Mass. Time-stamp. No. 1,393,410; Oct. 11.

Throop, William D., Norwich, Conn. Electric switch. No. 1,393,649; Oct. 11.

Thullen, Christopher F., Chicago, Ill., assignor to On-The-Dot-Level Device. Level device. No. 1,393,328; Oct. 11.

Tillman, Ferdinand J., St. Louis, Mo. Hair-cutting device. No. 1,393,053; Oct. 11.

Tinker, Frank, Erdington, Birmingham, England. Production of petrol. No. 1,393,184; Oct. 11.

Titus, Bliss E. (See Bunnell, G. H., and Titus, assignor.)

Todd, Samuel J., assignor of one-fourth to H. N. A. McLean and one-fourth to R. M. Tate, Detroit, Mich. Puncture-proof shoe for pneumatic tires. No. 1,393,185; Oct. 11.

Tokheim Oil Tank & Pump Company, The. (See Dutton, W. H., and Stone, assignors.)

Toren, Charles F. (See Schwarzmann, W. E., and Toren.)

Townley, Richard E., assignor of two-fifths to H. F. Graber, Cincinnati, Ohio. Coal-furnace lighter. No. 1,393,469; Oct. 11.

Tracy, Atlee H. (See Welch, W. J., and Tracy.)

Trood, Samuel, Pittsburgh, Pa. Oven. No. 1,393,650; Oct. 11.

Trowbridge, Emory E., Kansas City, Kans. Drain-tile. No. 1,393,329; Oct. 11.

Trumbull Electric Manufacturing Company, The. (See Getchell, Benjamin E., assignor.)

Turnbull, Andrew, Santa Ana, Calif. Resilient wheel. No. 1,393,651; Oct. 11.

Turner, Giles M., Milwaukee, Wis. Material-rack. No. 1,393,054; Oct. 11.

Turner, James T., Atlanta, Ga. Machine for making ice-cream cones. No. 1,393,587; Oct. 11.

Tuttle, Henry A., Taunton, Mass. Reversing-gearing. No. 1,392,982; Oct. 11.

Tuttle, Henry A., Taunton, Mass. Reversing-gearing. No. 1,392,983; Oct. 11.

Tuttle, Henry A., Upton, Mass. Reversing-gearing. No. 1,392,984; Oct. 11.

Tuttle, Henry A., Upton, Mass. Reversing-gearing. No. 1,392,985; Oct. 11.

Tuttle, Henry A., Upton, Mass. Reversing-gearing. No. 1,392,986; Oct. 11.

Tuttle, William R., Rochester, N. Y., Dispensing-machine. No. 1,393,588; Oct. 11.

Tuttle, William R., Rochester, N. Y. Dispensing-machine. No. 1,393,589; Oct. 11.

Ulli, Albrecht, Le Locle, Switzerland. Hat-fastening device. No. 1,393,186; Oct. 11.

Ulrich, John, St. Louis, Mo. Vent-valve. No. 1,393,653; Oct. 11.

Underwood Computing Machine Company. (See Pitman, Henry L., assignor.)

Underwood Computing Machine Company. (See Waldheim, John, assignor.)

Underwood Typewriter Company. (See Helmond, William F., assignor.)

Underwood Typewriter Company. (See Smith, Jesse A. B., assignor.)

Underwood Typewriter Company. (See Stickney, Burnham C., assignor.)

United Electric Company, The. (See Paulus, George R., assignor.)

United Shoe Machinery Corporation. (See Beaumont, Ernest C., assignor.)

United Shoe Machinery Corporation. (See Black, George H., assignor.)

United Shoe Machinery Corporation. (See Johnson, Merton E., assignor.)

United Shoe Machinery Corporation. (See Pym, Charles F., assignor.)

United Shoe Machinery Corporation. (See Winkley, Erastus E., assignor.)

United States Gauge Company. (See Nelson, E. M., and Aschenbach, assignors.)

United States Ordnance Company. (See Smith, George L., assignor.)

Union Special Machine Company. (See Chalman, John E., assignor.)

Union Switch & Signal Company, The. (See Day, Albert Y. T., assignor.)

Universal Chain Co. (See Robertson, C., and Laupot, assignors.)

Unruh, Albert A., Salem, Oreg. Automobile-brake. No. 1,392,987; Oct. 11.

Upham, William P., Keene, N. H., assignor to Ros-Aux Company, Boston, Mass. Sizing and making the same. No. 1,392,988; Oct. 11.

Vadea, Willie T., Jr., Dayton, Tex. Mouse and rat poisoner. No. 1,393,590; Oct. 11.

Van der Straeten, Ivan, Liege, Belgium. Trolley-head. No. 1,393,254; Oct. 11.

Van Huele, Maxime L., New York, N. Y. Adjustable hat-lining or bandeau. No. 1,393,652; Oct. 11.

Van Nostrand, Charles H., Orange, and H. E. Schulse, Jersey City, N. J.; said Schulse assignor to said Van Nostrand. Making fibrous filtering films. No. 1,392,989; Oct. 11.

Van Patten, Louis C., and J. B. Wolfe, assignors to Rotary Rod Weeder and Manufacturing Company, Incorporated, Cheney, Wash. Rotary-rod weeder. No. 1,393,068; Oct. 11.

Vaughan, Jay W., Chicago, Ill. Band-saw. No. 1,392,990; Oct. 11.

Veeder, Albert L., Idaho Falls, Idaho. Haystacker. No. 1,392,991; Oct. 11.

Venugraph Company, The. (See Venuti, P. B., and Arnold, assignors.)

Venuti, Peter B., and C. H. Arnold, assignors to The Venugraph Company, Dayton, Ohio. Multiple-view camera. No. 1,393,411; Oct. 11.

Victor Talking Machine Company. (See Moyer, William W., assignor.)

Victory Hammered Piston Ring Company. (See Kistner, Herman, assignor.)

Vincent, Jesse G., assignor to Packard Motor Car Company, Detroit, Mich. Clutch. No. 1,393,056; Oct. 11.

Voglmayer, Adolf. (See Magerle, E., and Martinek, assignors.)

Vollmer, John, Essen, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Gun-barrel with a breech-piece screwed on an A tube. No. 1,393,057; Oct. 11.

Von Recklinghausen, Max, assignor to Air Reduction Company, New York, N. Y. Heat-interchanger. No. 1,393,462; Oct. 11.

Voss & Stern. (See Katz, Max, assignor.)

Waechtler, William G. (See Shear, E. E., and Waechtler.)

Wald Manufacturing Company. (See Pawsat, Ewald F., assignor.)

Waldheim, John, Elizabeth, N. J., assignor to Underwood Computing Machine Company, New York, N. Y. Combined typewriting and computing machine. No. 1,393,187; Oct. 11.

Wales Company, The. (See Wales, Nathaniel B., assignor.)

Wales, Nathaniel B., Boston, Mass., assignor, by mesne assignments, to The Wales Company, Kalamazoo, Mich. Automatic heating system. No. 1,393,654; Oct. 11.

Waller, Robert H., assignor, by mesne assignments, to Quickmafe Manufacturing Company, Nashville, Tenn. Can-opener. No. 1,393,412; Oct. 11.

Wallentz, Frank, Chicago, Ill. Container. No. 1,393,413; Oct. 11.

Walter, Robert, St. Louis, Mo. Container. No. 1,393,591; Oct. 11.

Warner, Leroy J., Toledo, Ohio. Garden-tractor. No. 1,392,992; Oct. 11.

Warner Manufacturing Company. (See Cadman, Addi B., assignor.)

Washburne, James V., Fulton, N. Y. Two-part dispensing desk device. No. 1,392,993; Oct. 11.

Washington Iron Works. (See Berger, Knute, assignor.)

Waterbury Farrel Foundry and Machine Company, The. (See Candee, Zenas P., assignor.)

Watkinson, Albert, Kyneton, Australia. Indicator means for use on recreation-grounds or race-courses. No. 1,393,414; Oct. 11.

Watres, Lewis S., Scranton, Pa., assignor of one-half to R. C. Adams, Forest Hills, N. Y. Throttle-valve indicator. No. 1,392,994; Oct. 11.

Wayne Oil Tank and Pump Company. (See Baker, Linnaeus E., assignor.)

Weaver, S. Fullerton, *et al.*, trustee. (See Milliken, Foster, assignor.)

Weber, Jacob H., Brooklyn, N. Y. Phonograph-cabinet. No. 1,393,470; Oct. 11.

Wegel, Raymond L., assignor to Western Electric Company, Incorporated, New York, N. Y. Submarine signaling. No. 1,393,471; Oct. 11.

Welch, Jerome W., Sergeant Bluff, Iowa. Concrete structure having waterproofing reinforcement. No. 1,393,592; Oct. 11.

Welch, Walter J., and A. H. Tracy, assignors to H. M. Byllesby & Company, Chicago, Ill. Electrical insulator. No. 1,393,330; Oct. 11.

Welch, W. M., Manufacturing Company. (See Brown, Hugh E., assignor.)

Wenschow, Karl. Berlin-Lichterfelde, assignor to A. Deichmann, Cologne, Germany. Forming relief-maps, pictures, and the like. No. 1,393,255; Oct. 11.

Wessel, Caper J. (See Adair, Elmer, assignor.)

Western Electric Company. (See Clausen, Henry P., assignor.)

Western Electric Company. (See Dodge, William L., assignor.)

Western Electric Company. (See Egerton, Henry C., assignor.)

Western Electric Company. (See Goodrum, Charles L., assignor.)

Western Electric Company. (See Hosford, William F., assignor.)

Western Electric Company. (See McQuarrie, James L., assignor.)

Western Electric Company. (See McQuarrie, J. L., and Goodrum, assignor.)

Western Electric Company. (See Sperry, Arthur B., assignor.)

Western Electric Company. (See Taggart, Dawson M., assignor.)

Western Electric Company. (See Wegel, Raymond L., assignor.)

Westinghouse Electric & Manufacturing Company. (See Brahmer, Leland F., assignor.)

Westinghouse Electric & Manufacturing Company. (See Hall, Arthur J., assignor.)

Westinghouse Electric & Manufacturing Company. (See Hellmund, Rudolf E., assignor.)

Westinghouse Electric & Manufacturing Company. (See Kemp, Robert, assignor.)

Westinghouse Electric & Manufacturing Company. (See Mills, Chester B., assignor.)

Westinghouse Electric & Manufacturing Company. (See Richards, Howard N., assignor.)

Westinghouse Electric & Manufacturing Company. (See Rowe, Bertrand P., assignor.)

Westinghouse Electric & Manufacturing Company. (See Smith, Benjamin H., assignor.)

Westinghouse Electric and Manufacturing Company. (See Storer, N. W., and Hellmund, assignors.)

Wheeler Condenser and Engineering Company. (See Christie, Evi W., assignor.)

Wheeler, Portius R., Peoria, Ill. Internal-combustion engine. No. 1,393,593; Oct. 11.

Wheeler, Seth, Castleton, N. Y. Machine for producing interfolded paper-packages. No. 1,393,415; Oct. 11.

Whitacre, James E., Rockford, Ill. Humidifier. No. 1,393,058; Oct. 11.

Whiteman, Allen C., La Crosse, Kans. Lacing device. No. 1,393,188; Oct. 11.

Whitney, Maurice P., assignor to Eclipse Machine Company, Elmira, N. Y. Engine-starter. No. 1,392,995; Oct. 11.

White, Albert J., Toronto, Ontario, Canada. Picture-frame vise. No. 1,393,059; Oct. 11.

White, Everett H., St. Paul, Minn. Heat-regulator. No. 1,393,060; Oct. 11.

White, S. S., Dental Manufacturing Company, The. (See Heck, George D., assignor.)

White, William C., Schenectady, N. Y., assignor to General Electric Company. Means for producing high-frequency oscillations. No. 1,393,594; Oct. 11.

Wickstrom, Alfred, assignor of one-fourth to F. Bain and one-fourth to J. E. Bain, Minneapolis, Minn. Block-forming machine. No. 1,393,189; Oct. 11.

Wilkie, Robert J., Newton, assignor to Stowe & Woodward Company, Newton Upper Falls, Mass. Bowling-pin. No. 1,393,655; Oct. 11.

Willey, Charles E., Louisville, Ky. Electric-generator brush-holder. No. 1,392,996; Oct. 11.

Willey, Frank E., Claremont, N. H., assignor to Sullivan Machinery Company. Electric fuse. No. 1,393,281; Oct. 11.

Willis, William C. (See Martin, H. L., and Willis.)

Williams, Clarence C., Acting Chief of Ordnance, trustee. (See Sutton, Francis A., assignor.)

Williams, Edward T., Brooklyn, N. Y., assignor to Simplex Refrigerating Corporation. Refrigerating-machine. No. 1,392,997; Oct. 11.

Williams, Frank P., assignor to E. E. Gudka Mfg. Co., Detroit, Mich. Metal desk. No. 1,392,998; Oct. 11.

Williams, Harold E., Carthage, Mo. Tag-holder. No. 1,392,999; Oct. 11.

Williams, Harry, Return, Va. Tide-motor. No. 1,393,472; Oct. 11.

Williams, Samuel B., Jr., Brooklyn, assignor to Western Electric Company, Incorporated, New York, N. Y. Call-distributing system. No. 1,393,727; Oct. 11.

Williams, Samuel B., Jr., Brooklyn, assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. No. 1,393,728; Oct. 11.

Wilson, Samuel T., Brooklyn, N. Y. Matrix-scorching oven. No. 1,393,473; Oct. 11.

Wilson, Dalton K., Waterloo, Iowa. Cultivator. No. 1,393,001; Oct. 11.

Wilson, Robert E., Cambridge, Mass., assignor to Pittsburgh Plate Glass Company, Pittsburgh, Pa. Manufacture of lead arsenate. No. 1,393,474; Oct. 11.

Wilson, Walter W., San Francisco, Calif. Combined spout and valve for liquid-containers. No. 1,393,331; Oct. 11.

Wimmer, Hugo, Bath, Me. Rotary brush. No. 1,393,332; Oct. 11.

Winkley, Erastus E., Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Machine for operating on heel-lifts or the like. No. 1,393,062; Oct. 11.

Winkley, Erastus E., Lynn, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J. Trimming-machine. No. 1,393,656; Oct. 11.

Wirth-Frey, Elias, Aarau, Laurenzvorstadt, Switzerland. Heat-interchange device. No. 1,393,475; Oct. 11.

Wodrich, Frank W., Evanston, Ill. Formograph. No. 1,393,000; Oct. 11.

Wolfe, Joel B. (See Van Patten, L. C., and Wolfe.)

Wolff, Frank W., New Kensington, Pa., assignor to W. P. Murphy, New York, N. Y. Railway-car. No. 1,393,333; Oct. 11.

Wolfram, Andrew, Dormont, Pa. Machine for making nuts. No. 1,393,063; Oct. 11.

Wolffsohn, Lionel M., (now by judicial change of name Lionel M. Woolson,) Hoboken, N. J., assignor, by mesne assignments, to Bijur Motor Appliance Company. Engine-starting apparatus. No. 1,393,595; Oct. 11.

Wolffsohn, Lionel M., (now by judicial change of name Lionel M. Woolson,) Union, N. J., assignor, by mesne assignments, to Bijur Motor Appliance Company. Electric system for motor-vehicles and the like. No. 1,393,596; Oct. 11.

Wood, Louis E., Farrell, Pa. Oil and grease gun. No. 1,393,001; Oct. 11.

Wood, Walter W., Seattle, Wash. Gravity-hinge. No. 1,393,190; Oct. 11.

Woodland, William C. (See Steere, F. W., and Woodland.)

Woodward, Arthur C., Cranford, assignor to The A. & F. Brown Company, Elizabethport, N. J. Shaft-coupling. No. 1,393,064; Oct. 11.

Wright, Chester D., Denver, Colo. Bicycle-pedal. No. 1,393,256; Oct. 11.

Wright, James C., Colorado Springs, Colo. Rock-drill. No. 1,393,257; Oct. 11.

Würth, Paul & Compagnie (Societe en Commandite par Actions). (See Zender, Pierre, assignor.)

Young, Ernest A., Cleveland, Ohio. Welting. No. 1,393,476; Oct. 11.

Young, Ernest A., Cleveland, Ohio. Making welts. No. 1,393,477; Oct. 11.

Young, Ernest A., Cleveland, Ohio. Welt or rand. No. 1,393,478; Oct. 11.

Young, Walter J., St. Louis, Mo. Individual-record ejector for graphophone-cabinets. No. 1,393,065; Oct. 11.

Youngquist, Henry W., Manchester, N. H., assignor to Draper Corporation, Hopedale, Mass. Rocker-shaft support for looms. No. 1,393,416; Oct. 11.

Zaremba Company. (See Hughes, Burton S., assignor.)

Zarucha, Robert M., Waterbury, Conn. Radiator for motor-vehicles. No. 1,393,479; Oct. 11.

Zeits, Ernest. (See Heindl, Stephen O., assignor.)

Zender, Pierre, assignor to Paul Würth & Compagnie (Societe en Commandite par Actions), Luxemburg-Hollerich, Grand Duchy of Luxemburg. Apparatus for charging shaft-furnaces. No. 1,393,480; Oct. 11.

Zoda, Michael. (See Pantaleone, J., and Zoda.)

Zulver, Cornelis. (See Smith, L. E. Zulver, and Thompson.)

ALPHABETICAL LIST OF PATENTEES OF DESIGNS.

Adriance, Adrian D., Brooklyn, N. Y. Toy bow. No. 59,317; Oct. 11.
Akron Universal Tire and Rubber Company, The. (See Baker, Corol E., assignor.)
Allen, John E., Big Creek, Calif. Automobile-body. No. 59,318; Oct. 11.
American Chain Company. (See Benton, Donald L., assignor.)
American Gas-Accumulator Company. (See Meden, Elof H., assignor.)
Andrews, Frank W., Wapakoneta, Ohio. Fire-extinguisher. No. 59,319; Oct. 11.
Attwood, Charles F., Grand Rapids, Mich. Automobile window-bracket. No. 59,320; Oct. 11.
Badge, Francis J. (See Keller, J. F., and Badge.)
Baker, Corol E., Akron, assignor to The Akron Universal Tire and Rubber Company, Medina, Ohio. Rubber-tire casing. Nos. 59,321–2; Oct. 11.
Bartolowsky, Jerome, Oakland, Calif. Toy whistle. No. 59,323; Oct. 11.
Bauer, Frederick C., Sr., Camden, N. J. Spike. No. 59,324; Oct. 11.
Bellows, Warren S., Worcester, Mass. Tool. No. 59,325; Oct. 11.
Benbow, John, and E. Mason, assignors of one-third to W. R. Stanfield, Union, Iowa. Drain-cock-opening tool. No. 59,326; Oct. 11.
Benton, Donald L., Adrian, Mich., assignor to American Chain Company, Inc. Automobile-buffer. No. 59,327; Oct. 11.
Berge, Joseph, assignor to Champion Ignition Company, Flint, Mich. Speedometer face-plate. No. 59,328; Oct. 11.
Carlson, John W., Chicago, Ill., assignor to Chicago Novelty Mfg. Co. Toy. No. 59,329; Oct. 11.
Cavanaugh, James P., and S. C. Porter, assignors of one-third to I. Z. Dunwoody, Denver, Colo. Radiator-cap. No. 59,330; Oct. 11.
Caviness, Edwin A., Battle Creek, Mich. Phonograph-cabinet. Nos. 59,331–2; Oct. 11.
Champion Ignition Company. (See Berge, Joseph, assignor.)
Chicago Novelty Mfg. Co. (See Carlson, John W., assignor.)
Clark, George S., Kalamazoo, and P. B. Snyder, East Lansing, Mich.; said Clark assignor to said Snyder. Thermometer. No. 59,333; Oct. 11.
Clonser, Clarence J., Columbus, Ohio. Toy rocker. No. 59,334; Oct. 11.
Cobb, William M., assignor to Zion Institutions and Industries, Zion, Ill. Child's velocipede. Nos. 59,335–6; Oct. 11.
Conley, Edward R., Springville, N. Y. Phonograph-cabinet. No. 59,337; Oct. 11.
Cooper, Frank J., San Francisco, Calif. Folder. No. 59,338; Oct. 11.
De Tamble, Edward S., assignor to Racine Accessories Manufacturing Co., Racine, Wis. Whistle. No. 59,340; Oct. 11.
Desha, Orville U., Fort Collins, Colo. Frame for spectacles. No. 59,339; Oct. 11.
Dunwoody, Isaac Z. (See Cavanaugh, J. P., and Porter, assignors.)
Duples, Victor J., Dallas, Tex. Automobile-radiator cap. No. 59,341; Oct. 11.
Fageol, Rollie B., Oakland, Calif. Motor-vehicle fender. No. 59,342; Oct. 11.
Fahys, Joseph & Company. (See Gordon, Peter T., assignor.)
Ferry, Eudora B., Murray, Idaho. Wheeled toy. Nos. 59,343–4; Oct. 11.
Gaisman, Henry J., New York, N. Y. Safety-razor blade. No. 59,345; Oct. 11.
Gill, Helon V., Spring Valley, Minn. Bolt. No. 59,346; Oct. 11.
Gordon, Peter J., Sag Harbor, assignor to Joseph Fahys & Company, New York, N. Y. Handle for a spoon, fork, or similar article. No. 59,347; Oct. 11.
Hebert, Joseph H., Columbus, Ohio. Cleaning-tool. No. 59,348; Oct. 11.
Hermanovich, Charles, Chicago, Ill. Automobile-truck body. No. 59,349; Oct. 11.
Hillman, Ernest C., Los Angeles, Calif. Sun and rain shield. No. 59,350; Oct. 11.
Hine, William C., Cleveland, Ohio. Pressed-metal wheel. No. 59,351; Oct. 11.
House, Henry A., Jr., assignor to Wire Wheel Corporation of America, Buffalo, N. Y. Hub-shell for wire wheels. No. 59,352; Oct. 11.
International Silver Co. (See Prétat, Frederick E., assignor.)
International Silver Co. (See Strohbaker, Gustave, assignor.)
James, Sidney, Niagara Falls, N. Y., assignor to Simeon L. and George H. Rogers Company. Handle of a spoon, a knife, or a fork. Nos. 59,352–4; Oct. 11.
Kaftting, Herbert A., Galt, Ontario, Canada. Blind-holding windshield-clip. No. 59,355; Oct. 11.
Kallander, Gustaf J., Seattle, Wash. Teetering toy. No. 59,356; Oct. 11.
Kalenborn, Arlon, San Francisco, Calif. Cabinet. No. 59,357; Oct. 11.
Kapey, Carl, Philadelphia, Pa. Gear-cover. No. 59,358; Oct. 11.
Kawanami, James M., Stockton, Calif. Automobile. No. 59,359; Oct. 11.
Keller, Joseph F., New York, and F. J. Badge, Woodhaven, assignors to Keller Mechanical Engraving Co., Brooklyn, N. Y. Circular slide-rule. No. 59,360; Oct. 11.
Keller Mechanical Engraving Co. (See Keller, J. F., and Badge, assignors.)
Klems, Albert A., Detroit, Mich. Grease-gun. No. 59,361; Oct. 11.
Larkins, William B., San Rafael, Calif. Corner-piece for vehicle-tops. No. 59,362; Oct. 11.
Litchfield, Amon L., Toledo, Ohio. Radiator-cap. No. 59,363; Oct. 11.
Low, Arthur B., Denver, Colo. Casing for tire-gages. No. 59,364; Oct. 11.
Lynch, Charles H., Seattle, Wash. Name-plate. No. 59,365; Oct. 11.
Martin, Patrick A., Birmingham, England. Golf-ball. No. 59,366; Oct. 11.
Mason, Edwin. (See Benbow, J., and Mason.)
McCarthy, William B., assignor to The Rostand Manufacturing Company, Milford, Conn. Tubing for automobile-windshield frames. No. 59,367; Oct. 11.
Meden, Elof H., Short Hills, assignor to American Gas-Accumulator Company, Elizabeth, N. J. Welding-blowpipe or similar article. No. 59,368; Oct. 11.
Metallic Industries. (See Tully, James K., assignor.)
Moffat, Frederick W., Weston, Ontario, Canada. Sectional support for electric heating elements. Nos. 59,369–70; Oct. 11.
Nelson, Charles, Hoffman, Minn. Wrecking-bar. No. 59,371; Oct. 11.
Newman, Arthur S. (See Oster, John H., assignor.)
Oster, John H., assignor to A. S. Newman, Cleveland, Ohio. Cuff-button. No. 59,372; Oct. 11.
Patterson, John M., Rochester, N. Y. Automobile license-plate. No. 59,374; Oct. 11.
Pfeiffer, William L., assignor to W. J. Woerner, Rochester, N. Y. Dish-wheel. No. 59,375; Oct. 11.
Porter, Samuel C. (See Cavanaugh, J. P., and Porter.)
Prétat, Frederick E., Waterbury, assignor to International Silver Co., Meriden, Conn. Handle for a spoon, fork, or similar article. No. 59,376; Oct. 11.
Racine Accessories Manufacturing Co. (See De Tamble, Edward S., assignor.)
Rapattoni, Ernest, Los Angeles, Calif. Automobile-body. No. 59,373; Oct. 11.
Rogers, Simeon L. and George H., Company. (See James, Sidney, assignor.)
Rostand Manufacturing Company, The. (See McCarthy, William B., assignor.)
Rush, Clara O., assignor to M. A. Rush, San Francisco, Calif. Automobile-steering-wheel lock. No. 59,377; Oct. 11.
Rush, Milton A. (See Rush, Clara O., assignor.)
Saul, Tom W., Seattle, Wash. Milk-bottle-stopper remover. No. 59,378; Oct. 11.
Schofield, George L., Frederick, Md. Traction-tread. No. 59,379; Oct. 11.
Serafin, Romano, Hartford, Conn. Power-stick clamp for looms. No. 59,380; Oct. 11.
Shipherd, Neva A., Omaha, Nebr. Computing apparatus. No. 59,381; Oct. 11.
Shirley, George E., Alba, Mo. Fine-cleaning blade. No. 59,382; Oct. 11.
Sholin, Charles, San Francisco, Calif. Washboard. No. 59,383. Oct. 11.
Sleicher, William N., Troy, N. Y. Anchor-yoke for non-skid chains. No. 59,384; Oct. 11.
Smith, Irving V., assignor to The Williams Brothers Manufacturing Company, Glastonbury, Conn. Handle for a spoon, fork, and similar article. No. 59,385; Oct. 11.
Snyder, Plummer B. (See Clark, G. S., and Snyder, assignors.)
Squire, Clark, Puyallup, Wash. Name-plate for automobiles. No. 59,386; Oct. 11.
Standard Brass Casting Co. (See Wuesthoff, Maximillian W., assignor.)
Standeld, William R. (See Benbow, J., and Mason, assignors.)
Stewart-Warner Speedometer Corporation. (See Van Guilder, Walter, assignor.)

Stewart-Warner Speedometer Corporation. (See Whittington, Frederik G., assignor.)
Strohbaker, Gustave, Wallingford, assignor to International Silver Co., Meriden, Conn. Handle for a spoon, fork, or similar article. No. 59,387; Oct. 11.
Tkachuk, Leon Aldergrove, British Columbia, Canada. Sled. No. 59,388; Oct. 11.
Tully, James K., assignor to Metallic Industries, Inc., St. Louis, Mo. Child's velocipede. No. 59,389; Oct. 11.
Universal Shoe Plate Company, The. (See West, Mansfield M., assignor.)
Van Guilder, Walter, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Radiator-cap. Nos. 59,390–1; Oct. 11.
Van Guilder, Walter, assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Radiator-cap with temperature-indicator. No. 59,392; Oct. 11.
Weldon, Green J., Anniston, Ala. Vehicle-body. No. 59,393; Oct. 11.
West, Mansfield M., assignor to The Universal Shoe Plate Company, Cleveland, Ohio. Shoe-plate. No. 59,394; Oct. 11.
Whittington, Frederik G., assignor to Stewart-Warner Speedometer Corporation, Chicago, Ill. Radiator-cap. No. 59,395; Oct. 11.
Williams Brothers Manufacturing Company, The. (See Smith, Irving V., assignor.)
Williams, John G., West Brownsville, Pa. Tool. No. 59,396; Oct. 11.

ALPHABETICAL LIST OF INVENTIONS

FOR WHICH

PATENTS WERE ISSUED ON THE 11TH DAY OF OCTOBER, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Accounting system, Means employed in. F. Geits, Jr. No. 1,392,930; Oct. 11.
Adjustable chair. O. H. Schram. No. 1,393,457; Oct. 11.
Adjustable stand. T. H. Rhedmon. No. 1,393,165; Oct. 11.
Adjustable window-screen. S. G. Foster. No. 1,393,616; Oct. 11.
Aerial ropeways, Differential clip for. Y. Tamamura. No. 1,392,678; Oct. 11.
Aeroplane. C. C. Medberg. No. 1,393,150; Oct. 11.
Air-brake-piston-leather-expanding ring. S. G. Clayback. 1,393,664; Oct. 11.
Air device, Auxiliary. W. C. Dillon. No. 1,392,922; Oct. 11.
Air-lines, Water-trap for. C. E. Atkinson. No. 1,393,066; Oct. 11.
Aircraft such as aeroplanes, Means for indicating direction applicable for use with. T. W. Saxton. No. 1,393,318; Oct. 11.
Alarm: *See*—
Pneumatic alarm.
Alloy. F. Milliken. No. 1,393,388; Oct. 11.
Aluminum nitrid and other chemical substances, Apparatus for making. W. Hoopes. No. 1,393,371; Oct. 11.
Aluminum nitrid and other chemical substances, Making. W. Hoopes. No. 1,393,370; Oct. 11.
Aluminum nitrid and other chemical substances, Making. W. Hoopes. No. 1,393,372; Oct. 11.
Amusement device. H. D. Bryant. No. 1,393,494; Oct. 11.
Amusement device. H. Halfpenny. No. 1,393,117; Oct. 11.
Animal-trap. J. R. and G. W. Elder. No. 1,393,516; Oct. 11.
Annunciator. H. A. Frans. No. 1,393,275; Oct. 11.
Annunciator-drop. C. J. Henschel. No. 1,393,685; Oct. 11.
Arc device and starting same, Inclosed-. E. Friederich. No. 1,393,520; Oct. 11.
Arm, Small-. P. T. Godsal. No. 1,393,112; Oct. 11.
Armature-coils, Press for. S. W. Morris. No. 1,393,035; Oct. 11.
Article, Coated. J. C. Embardt. No. 1,393,355; Oct. 11.
Article of merchandise. W. E. Boyce. No. 1,393,608; Oct. 11.
Auto-treadmill. C. E. Anderson. No. 1,393,600; Oct. 11.
Auto-wheel protector. J. F. Halbach. No. 1,393,528; Oct. 11.
Automobile-body with traveling and housekeeping conveniences. R. L. Martin. No. 1,392,955; Oct. 11.
Automobile-brake. A. A. Unruh. No. 1,392,987; Oct. 11.
Automobile-lock. F. B. Leonard. No. 1,393,552; Oct. 11.
Automobile-lock. E. T. Tanner. No. 1,393,182; Oct. 11.
Automobile-locking device. J. W. Hughes. No. 1,393,022; Oct. 11.
Automobile running-boards, Demountable baggage-rack for. C. M. Buebke. No. 1,393,200; Oct. 11.
Automobile-windlass. M. A. Davis. No. 1,393,349; Oct. 11.
Automobile-window-operating device. E. Balough. No. 1,393,484; Oct. 11.
Automobiles, Balanced-gear drive for. O. F. Erickson and H. P. Olson. No. 1,393,208; Oct. 11.
Automobiles, Combination-lock for. M. T. Dowdy. No. 1,393,676; Oct. 11.
Automobiles, Disk wheel for. J. T. Pickering. No. 1,393,729; Oct. 11.
Automobiles, Easy-starting device for. E. T. Crown. No. 1,393,268; Oct. 11.
Automobiles, Heating device for. A. Denman-Jones. No. 1,393,093; Oct. 11.
Automobiles, Radiator-drawing attachment for. G. J. Krenzer. No. 1,393,549; Oct. 11.
Auxiliary arch-bar. P. Swanson. No. 1,393,716; Oct. 11.
Axle support, Vehicle-. C. M. Billings. No. 1,393,004; Oct. 11.
Bait, Artificial. J. Frame. No. 1,393,617; Oct. 11.
Baker's peel. A. L. Hapner. No. 1,393,683; Oct. 11.
Balance staffs and wheels, Calipers for pivot testing, truing, and poising of. C. Culman. No. 1,393,203; Oct. 11.
Bale-tie machine. J. Sommer. No. 1,393,178; Oct. 11.
Ball-bearing string-proof wheel. J. L. Chesnutt. No. 1,392,912; Oct. 11.
Balls or pellets, Method and apparatus for making small. C. E. Linebarger. No. 1,393,383; Oct. 11.
Bar: *See*—
Auxiliary arch-bar.
Bathtub. M. Abraham and L. J. Dennis. No. 1,393,482; Oct. 11.
Bathtub. E. Adair. No. 1,392,901; Oct. 11.
Bathtub. E. L. D. Palmer. No. 1,393,310; Oct. 11.
Battery-connector. W. S. Doe. No. 1,393,674; Oct. 11.
Battery switch-lock. V. Carouso. No. 1,393,259; Oct. 11.
Bead and weather-strip, Combined parting-. W. W. Cole. No. 1,393,264; Oct. 11.
Bearing for Ford motor-shafts, Thrust-. J. C. Mullins, Jr. No. 1,393,305; Oct. 11.
Bearings, Cage for anti-friction-. C. A. Dane and A. A. Kraemer. No. 1,392,920; Oct. 11.
Bed-spring. J. B. and J. Magariello. No. 1,392,954; Oct. 11.
Bedclothes-clamp. L. J. Keene. No. 1,393,137; Oct. 11.
Bicycle-pedal. C. D. Wright. No. 1,393,256; Oct. 11.
Bicycles, Flashlight-bracket for. E. F. Pawsat. No. 1,393,158; Oct. 11.
Billet-casting. R. E. Bradley. No. 1,393,195; Oct. 11.
Billiard-cue holder. A. E. Cooper. No. 1,393,265; Oct. 11.
Block-forming machine. A. Wickstrom. No. 1,393,189; Oct. 11.
Block-molding machine. H. S. Downard. No. 1,393,270; Oct. 11.
Board: *See*—
Muster-check board.
Boats and like light vessels, Construction of bodies of flying-. H. Scott-Paine. No. 1,393,645; Oct. 11.
Bodies, Device or arrangement for the continuous movement of rolling or sliding. E. Magerle and H. Martinek. No. 1,393,231; Oct. 11.
Bog-cutter, grubber, and weeder. C. A. Ambrose. No. 1,392,900; Oct. 11.
Boiler. F. B. Howell. No. 1,393,622; Oct. 11.
Booth, Knockdown voting-. W. H. Joy and H. G. Porter. No. 1,393,224; Oct. 11.
Bottle-capping apparatus. S. W. Taylor. No. 1,392,980; Oct. 11.
Bottles and other containers, Apparatus for the progressive heating or cooling of milk-. G. M. S. Talt. No. 1,393,717; Oct. 11.
Bowling-pin. R. J. Wilkie. No. 1,393,655; Oct. 11.
Box: *See*—
Phonograph sound-box.
Boxes, Machine for sealing. B. Heinrichs. No. 1,393,122; Oct. 11.
Brake: *See*—
Automobile-brake. Differential brake.
Centrifugal brake. Truck-brake.
Brake mechanism. C. W. Parker. No. 1,393,390. Oct. 11.
Broom. W. Gray. No. 1,393,215; Oct. 11.
Brush, Electric. W. E. Schwarzmann. No. 1,393,704; Oct. 11.
Brush, Electrical. H. R. Mondy. No. 1,393,635; Oct. 11.
Brush, Fountain-feed rotary. W. A. Carver. No. 1,393,663; Oct. 11.
Brush-holder, Electric-generator. C. E. Willey. No. 1,392,996; Oct. 11.
Brush, Rotary. H. Wimmer. No. 1,393,332; Oct. 11.
Brush, Vacuum-cleaner. G. R. Paulus. No. 1,393,695; Oct. 11.
Buckle. C. P. Kuehn. No. 1,393,143; Oct. 11.
Buckle, Belt-. S. Buchsbaum. No. 1,393,425; Oct. 11.
Buckle, Belt-. L. Jaroli. No. 1,393,222; Oct. 11.
Buckle, Belt-. L. F. Otten. No. 1,393,721; Oct. 11.
Bulkheads and plastic filling compound therefor, Multiple-cable gland for. J. H. Collie. No. 1,393,089; Oct. 11.
Bumper and tire-carrier. D. B. Goss. No. 1,393,113; Oct. 11.
Burglar-trap. J. A. Tate. No. 1,393,183; Oct. 11.
Burner: *See*—
Fuel-oil burner.
Burner. O. F. Carlson. No. 1,392,909; Oct. 11.
Burner and gas-generator, Combined. A. E. Grant. No. 1,393,358; Oct. 11.
Burner-regulation System. J. Good. No. 1,393,280; Oct. 11.
Cabinet, Advertising-. C. E. Closson. No. 1,393,665; Oct. 11.
Cabinet, Automatic type-. W. S. Russell. No. 1,393,317; Oct. 11.
Cabinet, Phonograph-. J. H. Weber. No. 1,393,470; Oct. 11.
Cable-holding device. J. H. Rosemeyer. No. 1,393,245; Oct. 11.

Cableways, Slack-puller for. K. Berger. No. 1,393,604; Oct. 11.
Caliper, Micrometer-. G. Cousins. No. 1,393,266; Oct. 11.
Call distributing system. S. B. Williams, Jr. No. 1,393,727; Oct. 11.
Camera, Multiple-view. P. B. Venuti and C. H. Arnold. No. 1,393,411; Oct. 11.
Can-bodies and positioning ends thereupon, Apparatus for truing. A. Johnson. No. 1,393,134; Oct. 11.
Can-charging apparatus. B. E. Taylor. No. 1,393,406; Oct. 11.
Can-opener. G. N. Nutwell. No. 1,393,639; Oct. 11.
Can-opener. R. H. Waller. No. 1,393,412; Oct. 11.
Can-tops, Machine for cutting. C. Percy and W. Mills. No. 1,393,159; Oct. 11.
Canning machinery. F. O. Hutton. No. 1,393,288; Oct. 11.
Candy, Machine and method of making. W. B. Laskey. No. 1,393,144; Oct. 11.
Car-coupling. W. A. Hayworth. No. 1,393,364; Oct. 11.
Car-railway. F. W. Wolff. No. 1,393,333; Oct. 11.
Car, Railway motor-. W. C. Lipe and L. H. Kirk. No. 1,393,146; Oct. 11.
Car, Scale and transfer. H. C. Hettelsater and E. K. Scott. No. 1,393,017; Oct. 11.
Car-seal. H. L. Martin and W. C. Willis. No. 1,393,033; Oct. 11.
Cars, Support for elevator-. J. M. Murphy. No. 1,392,962; Oct. 11.
Carbureter. L. S. Campbell. No. 1,393,426; Oct. 11.
Carbureter. R. I. Henderson. Nos. 1,393,566–7; Oct. 11.
Carbureter. C. F. Schultz. No. 1,393,044; Oct. 11.
Card-counter. C. E. Carroll. No. 1,393,009; Oct. 11.
Card, Post-. A. Gilbert. No. 1,393,213; Oct. 11.
Carrier: *See*—
Folding luggage-carrier.
Pneumatic-despatch-tube carrier.
Cart, Harrow-. J. J. Kovar. No. 1,392,946; Oct. 11.
Case: *See*—
Filing-appliance case.
Caster, Swivel-. J. L. Chesnutt. No. 1,392,911; Oct. 11.
Caster, Swivel-. J. L. Chesnutt. Nos. 1,392,913–4; Oct. 11.
Casting apparatus. R. Gutmueller. No. 1,393,216; Oct. 11.
Centrifugal brake. H. A. Johnson. No. 1,393,269; Oct. 11.
Chain, Antiskid-. F. C. Gray. No. 1,393,523; Oct. 11.
Chain-links, Apparatus for making. C. Robertson and L. Laupot. No. 1,393,041; Oct. 11.
Chain-shackle. A. S. Remsberg. No. 1,393,568; Oct. 11.
Chains, Attaching means for antiskidding. G. H. and E. B. Ebert. No. 1,393,099; Oct. 11.
Chair: *See*—
Adjustable chair.
Rolling chair.
Change-making machine. G. J. Brockhagen. No. 1,393,424; Oct. 11.
Check and receipt service. A. N. E. Boos. No. 1,393,489; Oct. 11.
Chenille-strip distribution. E. F. Hathaway. No. 1,392,939; Oct. 11.
Chili-mold. F. Cordes. No. 1,393,666; Oct. 11.
Chimney-cleaner. J. G. Koudelka. No. 1,393,548; Oct. 11.
Chocolate bonbons, Machine for coating. A. Sonsthagen. No. 1,393,460; Oct. 11.
Chuck, Staybolt-. G. Cousins. No. 1,393,267; Oct. 11.
Chuck, Tool-. J. Carr. No. 1,393,260; Oct. 11.
Cigar-mold. A. A. Charbonneau. No. 1,393,067; Oct. 11.
Cigarette-machines, Tipping mechanism for. W. F. Grape. No. 1,393,526; Oct. 11.
Cigarettes for packeting, applicable also to analogous purposes, Apparatus for feeding, or both feeding and counting. W. Rose. No. 1,392,642; Oct. 11.
Cinder-guard. C. W. Kennon. No. 1,393,627; Oct. 11.
Cinematographic targets, Shutter control for. H. Hirsch. No. 1,392,941; Oct. 11.
Clamp: *See*—
Bedclothes-clamp.
Clamp. J. L. Taylor. No. 1,393,718; Oct. 11.
Clasp: *See*—
Napkin-clasp.
Cleaner: *See*—
Chimney-cleaner.
Knife-cleaner.
Cleaning apparatus. T. H. Richardson. No. 1,393,641; Oct. 11.

Plug-gage. A. A. Martell. No. 1,393,233; Oct. 11.
Pneumatic alarm. S. Kushner. No. 1,393,382; Oct. 11.
Pneumatic-despatch-tube carrier. F. R. Talsey. No. 1,393,466; Oct. 11.
Pneumatic vehicle-wheel. A. W. Eckhardt. No. 1,393,514; Oct. 11.
Potassium bromid, Making. E. O. Barstow and C. W. Jones. No. 1,392,905; Oct. 11.
Powder charge, Propellent smokeless-. C. I. B. Henning. No. 1,393,623; Oct. 11.
Power-head. P. A. Myers. No. 1,393,306; Oct. 11.
Power plant. O. Kraus. No. 1,392,947; Oct. 11.
Power-shovel. H. H. Harris. Nos. 1,393,361-2; Oct. 11.
Power-transmitting mechanism. E. B. Allen. No. 1,393,417; Oct. 11.
Press: *See*—
Metal-extrusion press.
Presses, Billet and rod handling means for metal-extrusion. F. G. Schrang. No. 1,393,580; Oct. 11.
Pressure-gage. R. M. Nelson and E. L. Aschenbach. No. 1,393,155; Oct. 11.
Printing-machines, Transfer mechanism for. L. E. Morrison. No. 1,393,036; Oct. 11.
Printing-machines, Tripping mechanism for. L. E. Morrison. No. 1,393,037; Oct. 11.
Propeller mechanism. J. E. Ollivier. No. 1,393,157; Oct. 11.
Puller: *See*—
Pin-puller.
Pulley. A. W. L. Schermuly. No. 1,393,723; Oct. 11.
Pulley and sheath therefor. F. E. Matthews. No. 1,392,957; Oct. 11.
Pump. M. E. Goss. No. 1,392,928; Oct. 11.
Pump. J. M. Kelley. No. 1,393,138; Oct. 11.
Pump, Rotary. W. J. Platt. No. 1,393,698; Oct. 11.
Pumping-trap, Duplex. F. C. Farnsworth. No. 1,392,924; Oct. 11.
Punch and die retainer. C. C., C. A., and O. K. Richard. No. 1,393,040; Oct. 11.
Punch-presses, Guard for. M. J. Dubisky. No. 1,393,516; Oct. 11.
Puzzle. G. A. Parmenter. No. 1,393,565; Oct. 11.
Rack: *See*—
Material-rack.
Radiant heater. M. H. Shoenberg and G. J. Henry. No. 1,393,321; Oct. 11.
Radiator-core. W. Sackren. No. 1,393,042; Oct. 11.
Radiators, Shutter apparatus for. J. F. Raleigh. No. 1,393,161; Oct. 11.
Railway safety appliance. E. E. Shear and W. G. Waechter. No. 1,393,173; Oct. 11.
Railways, Safety electric signal for. L. Sanchez. No. 1,393,701; Oct. 11.
Railway-spike. W. C. Clark. No. 1,393,343; Oct. 11.
Railway-tickets, Machine for printing and issuing. F. L. Fuller. No. 1,392,920; Oct. 11.
Railway-traffic-controlling apparatus. A. V. T. Day. No. 1,393,011; Oct. 11.
Raisins, Apparatus for cap-stemming. T. B. Hunter. No. 1,393,287; Oct. 11.
Range and bearing indicator. E. Meltner. No. 1,392,959; Oct. 11.
Ratchet mechanism. F. A. Ost. No. 1,393,692; Oct. 11.
Razor, Folding safety-. A. M. J. E. Reboul. No. 1,393,700; Oct. 11.
Razor-grinder. S. O. Heindl. No. 1,393,283; Oct. 11.
Razor-hone. T. A. McCulley. No. 1,393,297; Oct. 11.
Reach, Adjustable. F. H. Bittner. No. 1,393,661; Oct. 11.
Reaming-tool. G. Mizzell. No. 1,392,960; Oct. 11.
Receptacles, Means for sealing. C. Hammer. No. 1,393,016; Oct. 11.
Reclaiming by-products, Process and apparatus for. P. A. Paulson. No. 1,393,241; Oct. 11.
Recreation-grounds or race-courses, Indicator for use on. A. Watkinson. No. 1,393,414; Oct. 11.
Reel: *See*—
Film-reel.
Reeling-machine. W. F. Hosford. No. 1,393,280; Oct. 11.
Reflector, Radiant. G. J. Henry. No. 1,393,368; Oct. 11.
Refrigerating-machine. E. T. Williams. No. 1,392,997; Oct. 11.

Turner, Sheet-. G. B. Semley. No. 1,393,400; Oct. 11.
Type and type holders, Making. C. A. Neyland. Nos. 1,393,307–8; Oct. 11.
Typewriter. E. Berneburg. No. 1,393,194; Oct. 11.
Typewriter and computing-machine, Combined. H. L. Pitman. No. 1,393,244; Oct. 11.
Typewriting and computing machine, Combined. J. Waldheim. No. 1,393,187; Oct. 11.
Typewriting-machine. W. F. Helmond. No. 1,392,940; Oct. 11.
Typewriting-machine. J. A. B. Smith. No. 1,393,177; Oct. 11.
Typewriting-machine. B. C. Stickney. No. 1,392,975; Oct. 11.
Typewriting-machines, Platen-clutch for. C. Gabrielson. No. 1,393,277; Oct. 11.
Typist's copy-stand. C. F. Guthridge. No. 1,393,116; Oct. 11.
Undergarment. B. W. Thayer. No. 1,393,468; Oct. 11.
Unwinding device. W. E. Seed. No. 1,393,705; Oct. 11.
Urea, Producing tetra-substituted. T. J. Albert, Jr. No. 1,393,597; Oct. 11.
Vacua, Method of and means for obtaining high. I. Langmuir. No. 1,393,550; Oct. 11.
Valve attachment. G. R. Davenport. No. 1,393,348; Oct. 11.
Valve, Automatic pressure-regulated air-. G. W. Daggett. No. 1,393,204; Oct. 11.
Valve for water-tanks. O. Linstadt. No. 1,393,384; Oct. 11.
Valve-grinder. N. J. Peterson. No. 1,393,567; Oct. 11.
Valve indicator, Throttle-. L. S. Watres. No. 1,894,904; Oct. 11.
Valve-lifter. C. T. Stubbs. No. 1,393,180; Oct. 11.
Valve, Magnetically-operated. M. W. Llak. No. 1,392,952; Oct. 11.
Valve, Puppet-. C. A. Pfanstiehl. No. 1,393,726; Oct. 11.
Valve, Safety-. A. B. Carhart. No. 1,393,258; Oct. 11.
Valve-spring lifter. L. J. Davies. No. 1,393,669; Oct. 11.
Valve, Vent-. J. Ulrich. No. 1,393,655; Oct. 11.
Vault, Sectional burial-. J. D. Barber. No. 1,393,485; Oct. 11.
Vehicle-body, Convertible. E. L. Hamilton. No. 1,393,440; Oct. 11.
Vehicle brake mechanism. F. Tamberello. No. 1,393,051; Oct. 11.
Vehicle, Child's. R. J. Schneider. No. 1,392,973; Oct. 11.
Vehicle-drive. W. C. Klein. No. 1,393,543; Oct. 11.
Vehicle, Dumping hoist-. H. B. Miller. No. 1,393,151; Oct. 11.
Vehicle-frame suspension. C. Andreason. No. 1,393,589; Oct. 11.
Vehicle headlight, Motor-. F. G. Gauntt. No. 1,393,278; Oct. 11.
Vehicle, Motor parcel-. C. M. Billings. No. 1,393,005; Oct. 11.
Vehicle-spring. F. R. Chandet. No. 1,393,088; Oct. 11.
Vehicle-spring. H. E. Smith. No. 1,392,974; Oct. 11.
Vehicle, Trackless power-driven. A. E. Arons. No. 1,392,904; Oct. 11.
Vehicle-wheel. D. Collins. No. 1,393,504; Oct. 11.
Vehicle-wheel. R. W. Padden. No. 1,393,694; Oct. 11.
Vehicles, Collapsible light and rain shield for. E. E. Butts. No. 1,393,080; Oct. 11.
Vehicles, Combined spring and spring and lever suspension for. C. Drabek. No. 1,393,095; Oct. 11.
Vehicles, Electric system for motor-. L. M. Wolfsohn. No. 1,393,596; Oct. 11.
Vehicles, Radiator for motor-. R. M. Zarucha. No. 1,393,479; Oct. 11.
Vehicles, Rear signal device for. F. C. S. Knowles. No. 1,393,291; Oct. 11.
Vehicles, Spring-mount for. H. B. Bacon. No. 1,393,068; Oct. 11.
Vehicles, Sunshade for. J. P. Humphrey. No. 1,393,130; Oct. 11.
Vending-machine. D. A. McCowan. No. 1,393,147; Oct. 11.
Ventilator: *See*—
Window-ventilator.
Vessel, Navigable. C. P. M. Jack. No. 1,393,587; Oct. 11.
Vise. W. A. Campbell. No. 1,393,088; Oct. 11.
Vise, Picture-frame. A. J. White. No. 1,393,059; Oct. 11.
Voting apparatus, Electrically-operated. A. C. Becker. No. 1,393,074; Oct. 11.
Vulcanizer. G. H. Bunnell and B. E. Titus. No. 1,393,495; Oct. 11.
Vulcanizer. P. Crosley, Jr. No. 1,393,091; Oct. 11.
Wagon-dump. H. E. Surface. No. 1,393,464; Oct. 11.
Washing-machine. J. M. Baker. No. 1,393,659; Oct. 11.
Washing-machines, Automatic reversing device for. P. C. Mosmer. No. 1,392,961; Oct. 11.
Watering-bowl or drinking-fountain, Automatic. W. L. Martin. No. 1,393,303; Oct. 11.
Wax-melting machine, and seal-maker. J. A. Clifton. No. 1,393,263; Oct. 11.
Weeder, Rotary-rod. L. C. Van Patten and J. B. Wolfe. No. 1,393,055; Oct. 11.
Well-boring machine. J. E. Kellar. No. 1,392,945; Oct. 11.
Well-drilling machine. E. L. Dillon. No. 1,393,350; Oct. 11.
Wells, Method and means for facilitating sealing deep. H. C. Pendleton. No. 1,393,311; Oct. 11.
Welt or rand. E. A. Young. No. 1,393,478; Oct. 11.
Welts, Making. E. A. Young. No. 1,393,477; Oct. 11.
Welting. E. A. Young. No. 1,393,476; Oct. 11.
Wheel: *See*—
Ball-bearing string-proof wheel. Traction-wheel.
Pneumatic vehicle-wheel. Tractor-wheel.
Resilient wheel. Vehicle-wheel.
Spring-wheel. Wire-spoked wheel.
Wheel. C. E. Stalley and E. H. Blazer. No. 1,393,711; Oct. 11.
Wheel-fender. A. M. Hudson. No. 1,393,020; Oct. 11.
Wheels, Mud-lug for automobile-. F. W. McGinn. No. 1,393,450; Oct. 11.
Winch. G. Ferland. No. 1,393,436; Oct. 11.
Wind-deflector. G. Glaudel. No. 1,393,682; Oct. 11.
Wind-screen. F. E. Morriss. No. 1,393,239; Oct. 11.
Window-guard. J. E. Baker. No. 1,393,192; Oct. 11.
Window or key lock. B. Leichter. No. 1,393,628; Oct. 11.
Window-screen. B. J. Marriott. No. 1,393,560; Oct. 11.
Window-ventilator. P. Lynn. No. 1,393,556; Oct. 11.
Windshield, Auxiliary. G. Glaudel. No. 1,393,681; Oct. 11.
Wire, Method and apparatus for drawing. R. D. Conner. (Reissue.) No. 15,205; Oct. 11.
Wire-spoked wheel, Detachable. W. H. Heales. No. 1,393,441; Oct. 11.
Wires, Connecting device for. J. W. Fuller. No. 1,393,107; Oct. 11.
Wrench: *See*—
Pliers and end wrench.
Wrench. J. L. Barnes. No. 1,393,070; Oct. 11.
X-ray-film-developing tank, Daylight. J. B. Garrett. No. 1,393,108; Oct. 11.

ALPHABETICAL LIST OF DESIGNS.

Automobile. J. M. Kawanami. No. 59,359. Oct. 11.
Automobile-body. J. E. Allen. No. 59,318; Oct. 11.
Automobile-body. E. Rapattoni. No. 59,373; Oct. 11.
Automobile-buffer. D. L. Benton. No. 59,327; Oct. 11.
Automobile license-plate. J. M. Patterson. No. 59,374; Oct. 11.
Automobile-radiator curtain-hood. C. C. Woodberry. No. 59,398; Oct. 11.

Toilet preparations. Madam C. J. Walker Manufacturing Co. No. 140,764; Oct. 11.
Toy animals, balloons, &c. H. R. Colwell. No. 146,794; Oct. 11.
Toy balloons. Richard D. Bakrow & Son. No. 143,154; Oct. 11.
Toy furniture, vehicles, &c. Rogers Construction Company. No. 143,709; Oct. 11.
Toy, Mechanical. Unique Art Manufacturing Co. No. 149,493; Oct. 11.
Toy pistols and rifles. Edwards Manufacturing Co. No. 152,004; Oct. 11.
Toys, Art. Wadart Company. No. 140,554; Oct. 11.
Toys known as scooters, Wheeled. L. J. Picha. No. 140,960; Oct. 11.
Transparent covers, &c., for use in record, &c., devices and the transparent sheets from which same are made. American Kardex Company. No. 133,242; Oct. 11.
Tray for ice-cream cones. J. W. Hoodwin Company. No. 150,194; Oct. 11.
Trucks, Motor-. Power Truck and Tractor Company. No. 143,804; Oct. 11.
Trunks. Abramovitz & Schwartz. No. 147,494; Oct. 11.
Trunks. Butterfield Trunk Co. No. 144,604; Oct. 11.
Tulles, muslins, crepes, &c. "Dynamo" Tulle Importing Co. No. 147,555; Oct. 11.
Twines. California Cotton Mills Company. No. 151,257; Oct. 11.
Typewriter-ribbons and carbon-paper. Chas. A. Foyer & Company. No. 140,489; Oct. 11.
Underwaists, Children's. W. T. Grant Co. No. 146,906; Oct. 11.
Union-suits, Boys'. Cartersville Mills. No. 146,816; Oct. 11.
Vegetables. I. H. New. No. 146,027; Oct. 11.
Watches, clocks, and parts thereof. Meyer & Stödell, Societe Anonyme. No. 142,024; Oct. 11.
Watches, watchcases, and watch-movements. B. Gutter & Sons. No. 139,524; Oct. 11.
Watches, watchcases, and watch-movements. B. Gutter & Sons. No. 139,526; Oct. 11.
Watches, watchcases, and watch-movements. B. Gutter & Sons. No. 139,528; Oct. 11.
Well-drilling and milling tools. Williams-Koen-McManis Co. No. 139,412; Oct. 11.
Wire rope. Macwhyte Company. No. 141,005; Oct. 11.
Wool and hair. A. O. Trostel. No. 144,754; Oct. 11.
Woolen piece goods. S. Stein & Co. No. 152,186; Oct. 11.
Yarns and threads. Cherokee Spinning Co. No. 120,788; Oct. 11.
Yeast and yeast mixtures, Compressed. Fleischmann Company. No. 147,822; Oct. 11.

CLASSIFICATION OF PATENTS

ISSUED OCTOBER 11, 1921.

NOTE.—First number—class, second number—subclass, third number—patent number.

1— 6: 1,393,886
56: 1,393,451
2— 75: 1,393,609
90: 1,392,935
113: 1,393,652
144: 1,393,498
149: 1,393,025
4— 27: 1,392,901
1,393,310
1,393,482
5— 13: 1,393,619
22: 1,393,137
65: 1,392,964
8— 8: 1,393,641
9— 18: 1,393,117
10— 72: 1,393,093
123: 1,393,340
154: 1,393,104

ALPHABETICAL LIST OF PATENTEES

TO WHOM

PATENTS WERE ISSUED ON THE 18TH DAY OF OCTOBER, 1921.

NOTE.—Arranged in accordance with the first significant character or word of the name. (In accordance with city and telephone directory practice.)

Abbott, Charles C., Pittsfield, Mass., assignor to General Electric Company. Electric-heating unit. No. 1,393,732; Oct. 18.

Aberle, Edward, Nutley, N. J. Folding box. No. 1,394,134; Oct. 18.

Abrasive Machine Tool Co. (See Lant, George W., assignor.)

Acme Card System Company. (See Soans, Cyril A., assignor.)

Adair Machine Company. (See Adair, M., and Snyder, assignors.)

Adair, Montague, Brooklyn, and W. P. Snyder, New York, assignors to Adair Machine Company, Brooklyn, N. Y. Machine for hemstitching fabrics. No. 1,394,244; Oct. 18.

Adell, John A., assignor to The Adell Manufacturing Company, Orange, Mass. Jack for automobiles and the like. No. 1,394,263; Oct. 18.

Adell Manufacturing Company, The. (See Adell, John A., assignor.)

Adler, Charles, Jr., Baltimore, Md. Roadway-crossing signal. No. 1,394,264; Oct. 18.

Albonesi, Charles, Dumont, N. J. Sash-lock construction. No. 1,394,513; Oct. 18.

Alden, Beth F., San Francisco, and H. C. Eddy, Los Angeles, Calif.; said Eddy assignor to Petroleum Rectifying Company of California. Process and apparatus for refining liquid mixtures. No. 1,394,462; Oct. 18.

Alger, Harley C., Oak Park, Ill. Liquid-meter. No. 1,393,931; Oct. 18.

Allen, Andrew J., La Grange, Ill. Basket. No. 1,394,463; Oct. 18.

Allen, Charles H., Chicago, Ill. Headlight. No. 1,393,877; Oct. 18.

Allen, Edward B., Bridgeport, Conn., assignor to The Singer Manufacturing Company. Buttonhole-sewing machine. No. 1,394,135; Oct. 18.

Allis-Chalmers Manufacturing Company. (See Newhouse, Ray C., assignor.)

Alsatian Machine Company. (See Tunstall, Harry, assignor.)

American Assembling Machine Company. (See Juengst, Charles A., assignor.)

American Balsa Company. (See Lundin, Andreas P., assignor.)

American Can Company. (See Nowack, Charles H., assignor.)

American Can Company. (See Rogers, Arthur R., assignor.)

American Metal Company, The. (See Carstens, Alexander B., assignor.)

American Optical Company. (See Tillyer, Edgar D., assignor.)

American Steel Foundries. (See Lamont, John A., assignor.)

American Telephone and Telegraph Company. (See Blackwell, Otto B., assignor.)

American Telephone and Telegraph Company. (See Demarest, Charles S., assignor.)

American Thermo-Ware Company. (See Marshutz, Herbert S., assignor.)

American Thermophone Company. (See Van Doorn, Anthonius M., assignor.)

American Warp Drawing Machine Company. (See Lea, Charles, assignor.)

Anderson-Barngrover Mfg. Co. (See Thompson, Albert R., assignor.)

Anderson, Robert W., Liverpool, England. Weather screen or hood for motor-cars. No. 1,393,734; Oct. 18.

André, Achille, Ixelles, Brussels, Belgium. Scaffolding. No. 1,393,932; Oct. 18.

Andrews, James A., and J. W. Herbert, Biddeford, Me. Pick-stick check. No. 1,394,265; Oct. 18.

Angier, Edward H., Framingham, Mass. Wrapping or packaging machine. No. 1,394,266; Oct. 18.

Angle, Lloyd A. (See Stanforth, R., and Angle.)

Anselmi, Carlos, and M. Viturro, Buenos Aires, Argentina. Apparatus for projection of motion-pictures. No. 1,393,735; Oct. 18.

Apple, Vincent G., Dayton, Ohio. Building commutators. No. 1,393,878; Oct. 18.

Appleby, Thomas. (See Knoll, Lloyd M., assignor.)

Armington, Arthur A., *et al.*, executors. (See Wardwell, Simon W.)

Armitage, Marjorie B., Colorado Springs, Colo. Safety-bar. No. 1,393,733; Oct. 18.

Armour Fertilizer Works. (See Shoeld, Mark, assignor.)

Armstrong, Edwin J., assignor to Ball Engine Company, Erie, Pa. Steam-engine. No. 1,393,736; Oct. 18.

Art In Buttons, Inc. (See Stanforth, R., and Angle, assignors.)

Atlas Railway Signal Company. (See Loughridge, Matthew H., assignor.)

Aurand, Arthur G., Los Angeles, Calif. Constructing building-frames. No. 1,393,933; Oct. 18.

Austin, Frederick C. (See Seidler, Alexander, assignor.)

Automatic Electric Company. (See Martin, Talbot G., assignor.)

Autosales Corporation. (See Potts, E. B., and Grover, assignor.)

B.-M. Products Company, The. (See Bull, Charles A., assignor.)

Babcock & Wilcox Company, The. (See Pratt, Arthur D., assignor.) (Reissue.)

Backlund, Oscar T., Deer Lodge, Mont. Sleigh attachment for autovehicles. No. 1,394,514; Oct. 18.

Baesel, William C., Providence, R. I. Washing-machine. No. 1,394,267; Oct. 18.

Balcker, Martin. (See Glasner, R. W., and Balcker.)

Balk, Fred C., *et al.* (See Donner, Stephen, assignor.)

Balkey, George J., Glenshaw, Pa. Thimble. No. 1,394,394; Oct. 18.

Ball Engine Company. (See Armstrong, Edwin J., assignor.)

Ballantyne, John A., London, England. Toy engine. No. 1,394,136; Oct. 18.

Ballenger, Daniel, assignor of one-half to J. B. Williams, Greeley, Colo. Calk-fastener. No. 1,393,934; Oct. 18.

Ballman, Edwin C., assignor to S. A. Whitten, St. Louis, Mo. Electric meter. No. 1,393,737; Oct. 18.

Ballow, B. A., & Co. (See Morehouse, Eugene, assignor.)

Bardsley, Willard W., *et al.*, executors. (See Wardwell, Simon W.)

Barnes, Joseph. (See Veilleux, L., Leveque, and Barnes.)

Baron, Mary C., Hampden Meadows, R. I. Brooder. (Reissue.) No. 15,207; Oct. 18.

Barrett, Clarence E. (See Mooney, Frank H., assignor.)

Basinger, Perry. (See Wilson, Samuel J., assignor.)

Bastian, Charles L., Chicago, Ill. Fluid-pressure-regulating valve. No. 1,394,395; Oct. 18.

Batcheider, Asa F., Schenectady, N. Y., assignor to General Electric Company. Locomotive or car. No. 1,394,059; Oct. 18.

Bates, Lindon W., Mount Lebanon, N. Y. Fireproof-storing mobile fuel. No. 1,394,069; Oct. 18.

Bauer & Black. (See Dorran, Charles A., assignor.)

Baumann, Gilbert A. (See Carpenter, A. H., and Baumann.)

Beadle, Bailey O., Atlantic, Iowa. Non-skid device. No. 1,394,268; Oct. 18.

Beattie Manufacturing Company, The. (See Beattie, Walter J., assignor.)

Beattie, Walter J., assignor to The Beattie Manufacturing Company, Cohoes, N. Y. Needle and oil guard for sewing-machines. No. 1,394,396; Oct. 18.

Beckwith, Louis I. (See Towle, James M., assignor.)

Beecher, Milton F. (See Purdy, R. C., Beecher, and Klein.)

Behn, Guido G., *et al.* (See Hargreaves, Robert C., assignor.)

Bekkerus, Ole T., Hurdsfield, N. D. Rotary snowplow. No. 1,393,935; Oct. 18.

Bell, John E., Brooklyn, N. Y. Cement-kiln plant and operating the same. No. 1,393,738; Oct. 18.

Benjamin Electric Manufacturing Company. (See Benjamin, Reuben B., assignor.)

Benjamin Electric Manufacturing Company. (See Osbun, B. M., and Walker, assignors.)

Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Electric-switch mechanism. No. 1,394,397; Oct. 18.

Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Electric-switch mechanism. No. 1,394,398; Oct. 18.

Benjamin, Reuben B., assignor to Benjamin Electric Manufacturing Company, Chicago, Ill. Headlight. No. 1,394,399; Oct. 18.

Benner, Raymond C., and H. F. French, Fremont, Ohio, assignor to National Carbon Company, Inc. Electric battery. No. 1,393,739; Oct. 18.

Bentley, Alfred D., assignor of one-half to United Enterprises Limited, Toronto, Ontario, Canada. Aileron-hinge. No. 1,394,464; Oct. 18.

Benton, James, East Palestine, Ohio. Die and process for making cup-handles. No. 1,394,465; Oct. 18.

Berg, Andrew P., Staten Island, N. Y. Rubber-tire setter. No. 1,394,400; Oct. 18.

Berger, Samuel, New York, N. Y. Motor mechanism for mechanical toys. No. 1,393,936; Oct. 18.

Berlin, George C. (See Sebree, C. H., and Berlin.)

Bernard, Pierre J. H., Montreal, Quebec, Canada. Radiator. No. 1,393,740; Oct. 18.

Bernstein, Abraham, Cincinnati, Ohio. Mattress. No. 1,394,061; Oct. 18.

Berry, George W., Kane, Pa. Hydraulic hoist for dumping vehicles. No. 1,394,245; Oct. 18.

Berry, Hiram H., New York, N. Y. Film-winding means for cameras. No. 1,394,401; Oct. 18.

Bethlehem Steel Company. (See Lachman, Laurence S., assignor.)

Bethlehem Steel Company. (See Lachman, Maurice, assignor.)

Beu, Frank, assignor of one-fourth to W. M. McEwan, Chicago, Ill. Oil-burner. No. 1,393,937; Oct. 18.

Birchfield, Robert W., Waukegan, Ill. Boiler. No. 1,393,741; Oct. 18.

Birkigt, Marc, Bois-Colombes, France. Brake-drum, pulley, or the like. No. 1,394,402; Oct. 18.

Blackledge, John W., Chicago, Ill. Shock-absorber. No. 1,393,938; Oct. 18.

Blackwell, Otto B., Garden City, N. Y., assignor to American Telephone and Telegraph Company. Means for and method of reducing cross-talk in four-wire circuits. No. 1,394,062; Oct. 18.

Blair, Robert S., Sound Beach, Conn. Composite-joint construction. No. 1,394,137; Oct. 18.

Blaney, Thomas, and D. W. Walton, Liverpool, assignors of one-half to The Equipment and Engineering Company, London, England. Overhead trolley or collector for electric tramway and railway vehicles. No. 1,393,950; Oct. 18.

Blanke, Henry. (See Mensch, Arthur J., assignor.)

Blaser, Emmer H. (See Stalley, C. E., Blaser, and Monson.)

Bleick, William D. (See Camp, Edgar M., assignor.)

Blevins, Emory L., Pattonhill, Mont. Air-compressor. No. 1,393,742; Oct. 18.

Bliss, William L., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y. System of electrical distribution. No. 1,393,940; Oct. 18.

Blodgett, William G., and M. H. Roach, Los Angeles, Calif. Exhibiting device. No. 1,393,743; Oct. 18.

Blue, John, Laurinburg, N. C. Planter. No. 1,393,744; Oct. 18.

Boll, Oscar, West Hoboken, N. J. Flashing. No. 1,394,403; Oct. 18.

Boll, Oscar, West Hoboken, N. J. Flashing. No. 1,394,404; Oct. 18.

Bolling, Baltzar E., Racine, Wis. Die-casting ejector. No. 1,394,246; Oct. 18.

Bolling, Baltzar E., Racine, Wis. Die-block. No. 1,394,247; Oct. 18.

Bordwell, Lavern, New York, N. Y. Beater. No. 1,393,941; Oct. 18.

Bost, William D., and H. M. Miller, Los Angeles, Calif.; said Bost assignor to said Miller. Peeling fruits and vegetables. No. 1,394,138; Oct. 18.

Boston Time Stamp Company. (See Levy, Joseph, assignor.)

Bourdeau, Leon N., Rock Island, Ill. Grease-cup. No. 1,393,879; Oct. 18.

Bourdet, André P. E., Paris, France. Apparatus with several tubes for treating pulverulent materials. No. 1,394,269; Oct. 18.

Boyer, Harry L., assignor to Joseph Stokes Rubber Company, Trenton, N. J. Storage-battery separator and producing same. No. 1,394,466; Oct. 18.

Brandenberger, Jaques E., Neuilly-sur-Seine, France. Artificial textile fabric and its manufacture. No. 1,394,270; Oct. 18.

Brandt, Edmund S. R., Newport, R. I. Torpedo. No. 1,394,271; Oct. 18.

Brennan, William F., Collinsville, Ill. Efficiency-table. No. 1,394,405; Oct. 18.

Bright, Claude H., Jr., Memphis, Tenn. Combined stopper and cleaning device. No. 1,394,139; Oct. 18.

Brook, John H. (See Ritz, F., and Brook.)

Brown, Stewart, Chicago, Ill. Frame for games and other purposes. No. 1,394,140; Oct. 18.

Browne, Vere B., Tarentum, Pa. Producing silicon-steel sheets. No. 1,393,880; Oct. 18.

Brunell, Homer A. (See Burtnett, Everett R., assignor.)

Bruninga, John H., assignor to Champion Shoe Machinery Company, St. Louis, Mo. Fastener and slug inserting machine. No. 1,394,467; Oct. 18.

Bruninga, John H., and H. H. Reiss, assignors to Champion Shoe Machinery Company, St. Louis, Mo. Fastener and slug inserting machine. No. 1,394,468; Oct. 18.

Bryan, Aaron G., East St. Louis, Ill. Railway-tie. No. 1,394,272; Oct. 18.

Buck, Abton A., Zurich, Switzerland. Rotary electric switch. No. 1,394,515; Oct. 18.

Bull, Charles A., assignor to The B.-M. Products Company, Inc., Albion, Nebr. Tire-chain guard. No. 1,393,745; Oct. 18.

Bunting Iron Works. (See Driscoll, Dennis J., assignor.)

Burg, Bertha R., San Diego, Calif. Buckle. No. 1,393,881; Oct. 18.

Burkholder, John H., assignor to Elite Manufacturing Company, Ashland, Ohio. Jack. No. 1,394,141; Oct. 18.

Burlat, Antoine, and A. Renaudin, Lyon, France. Motorcycle. No. 1,394,516; Oct. 18.

Burns, James, & Sons. (See Greene, Richard A., assignor.)

Burtnett, Everett R., assignor of one-half to H. A. Brunell, Los Angeles, Calif. Valve for internal-combustion engines. No. 1,394,248; Oct. 18.

Bushnell, John S., New York, N. Y. Calipers. No. 1,393,746; Oct. 18.

Buxton, Thomas C. (See Roby, Edmund T., assignor.)

Cadillac Motor Car Company. (See Snell, Lyle K., assignor.)

Calvert, Elnathan, Des Moines, Iowa. Building block and wall. No. 1,394,406; Oct. 18.

Camp, Edgar M., assignor, by mesne assignments, to W. D. Bleick, Newark, N. J. Dash-pot. No. 1,394,063; Oct. 18.

Canniaaro, James V., New York, N. Y. Milk-bottle retainer. No. 1,394,142; Oct. 18.

Cannon, Frederick L., Bedford, Ohio. Roof-coating applicator. No. 1,393,747; Oct. 18.

Capstaff, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Drier for motion-picture films. No. 1,394,249; Oct. 18.

Capstaff, John G., assignor to Eastman Kodak Company, Rochester, N. Y. Registering projected images. No. 1,394,504; Oct. 18.

Carolina Motor Company. (See Sills, Frederick R., assignor.)

Carpenter, Arthur H., and G. A. Baumann, assignors to The Colorado Vanadium Corporation, Sawpit, Colo. Treating vanadium ores and solutions. No. 1,393,748; Oct. 18.

Carrier, Albert H., Asheville, N. C., assignor of one-half to E. W. Grove, St. Louis, Mo. Producing laths. No. 1,394,273; Oct. 18.

Carstens, Alexander B., Monterey, Mexico, assignor to The American Metal Company, Limited. Blast-furnace. No. 1,393,749; Oct. 18.

Carter, Hilton P. M., Montreal, Quebec, Canada. Sector-cable. No. 1,393,750; Oct. 18.

Case, Arold M., Bridgeton, Ind. Rug storing and display rack. No. 1,394,469; Oct. 18.

Casgrain, Charles E., Chicago, Ill. Counting attachment. No. 1,394,274; Oct. 18.

Cashner, Roy C., assignor to L. B. Lewis, Kansas City, Mo. Toy vehicle. No. 1,394,275; Oct. 18.

Cassidy, Robert, Mansfield, Ohio. Reel. No. 1,394,276; Oct. 18.

Casell, Caesar. (See Jones, Edward F., assignor.)

Cesare, Castellari, Montreal, Quebec, Canada. Cigarette-making machine. No. 1,394,250; Oct. 18.

Chadwell, Samuel A., Sugar Grove, Ohio. Vapor-tension-measuring apparatus. No. 1,393,942; Oct. 18.

Champion Shoe Machinery Company. (See Brunings, J. H., and Reiss, assignors.)

Champion Shoe Machinery Company. (See Brunings, John H., assignor.)

Champion Shoe Machinery Company. (See Debyne, Stephen A., assignor.)

Chapin, Charles H. B., Englewood, N. J. Tray for electric heating appliances. No. 1,393,751; Oct. 18.

Chapin, Roy D., *et al.* (See Hargreaves, Robert C., assignor.)

Chapman, William H., Portland, Me. Printing-press attachment. No. 1,394,064; Oct. 18.

Chapman, William L., assignor to Merritt & Chapman Derrick & Wrecking Company, New York, N. Y. Pipe-laying apparatus. No. 1,393,943; Oct. 18.

Chapman, William M., Hartford City, Ind. Mail-box. No. 1,393,944; Oct. 18.

Charles, Henry L., New York, N. Y. Furnace. No. 1,394,470; Oct. 18.

Charles, Henry L., New York, N. Y. Ore-smelting furnace. No. 1,394,471; Oct. 18.

Charles, Henry L., New York, N. Y. Smelting of ores. No. 1,394,472; Oct. 18.

Charles, Henry L., New York, N. Y. Ore-smelting furnace. No. 1,394,473; Oct. 18.

Charles, Henry L., New York, N. Y. Ore-smelting furnace. No. 1,394,474; Oct. 18.

Charls, George H., Canton, Ohio. Rust-resisting alloy of iron. (Reissue.) No. 15,208; Oct. 18.

Chemical Works formerly Sandos. (See Stoll, Arthur, assignor.)

Cherniavsky, Abraham, Los Angeles, Calif. Attachment for stringed instruments. No. 1,394,407; Oct. 18.

Chester, Frank R., Asbury Park, N. J. Amusement apparatus. No. 1,394,277; Oct. 18.

Chojnik, Joseph, Whiting, Ind. Gymnastic toy. No. 1,394,065; Oct. 18.

Christensen, Carl V. J., *et al.*, executors. (See Wardwell, Simon W.)

Christie, Walter, Weehawken, N. J. Aerial-gun tractor. No. 1,394,066; Oct. 18.

Chrysler, Edward E. (See Mariner, G. P., and Chrysler.)

Cirac, George C., Fallon, Nev. Door opening and closing device. No. 1,394,278; Oct. 18.

Clark, John D. (See Ireland, E. G., and Clark.)

Clark, Le Roy G., Detroit, Mich. Electroller. No. 1,393,945; Oct. 18.

Clausen, Henry P., Mount Vernon, assignor to Western Electric Company, Incorporated, New York, N. Y. Telephone-exchange system. No. 1,393,946; Oct. 18.

Cleveland Tractor Company, The. (See Morgan, Mathew B., assignor.)

Coates, Frederick, Wyoming, assignor to The Federal Products Company, Cincinnati, Ohio. Machine for making flanged heads or ends for paper or pulp containers. No. 1,393,752; Oct. 18.

Colbert, Clarence F., Hoopeston, assignor to Sprague Canning Machinery Company, Chicago, Ill. Can feeding and righting machine. No. 1,393,947; Oct. 18.

Coleman, Frank A., and J. J. Hoffmann, Denver, Colo. Separator-plate for storage batteries. No. 1,394,279; Oct. 18.

Collier, Guy B., Kinderhook, N. Y. Aeroplane-propeller. No. 1,393,753; Oct. 18.

Colorado Vanadium Corporation. (See Carpenter, A. H., and Baumann, assignors.)

Colstad, Charles N., Norfolk Downs, assignor to Masters Manufacturing Company, Boston, Mass. Automobile lock. No. 1,393,754; Oct. 18.

Combustion Control Company. (See Potter, Frederick D., assignor.)

Combustion Engineering Corporation. (See Skelly, John S., assignor.)

Condit, Sears B., Jr. (See Schiffert, Daniel M., assignor.)

Conlan, George A., assignor of one-half to A. C. Thompson, Toronto, Ontario, Canada. Mattress and the like. No. 1,393,755; Oct. 18.

Conner, Eli T., administrator. (See Conner, Harry M.)

Conner, Harry M., deceased, by E. T. Conner, administrator, Scranton, Pa. Rear-loading scoop. No. 1,394,067; Oct. 18.

Cook, Frank, Council Bluffs, Iowa. Coating composition. No. 1,394,280; Oct. 18.

Cook, Joseph F., San Francisco, Calif. Trap-nest. No. 1,393,756; Oct. 18.

Cook, Paul L., Chattanooga, Tenn. Umbrella. No. 1,394,408; Oct. 18.

Coolidge, William D., Schenectady, N. Y., assignor to General Electric Company. X-ray apparatus. No. 1,394,143; Oct. 18.

Coolidge, William D., Schenectady, N. Y., and E. A. Wagner, Fort Wayne, Ind., assignors to General Electric Company. Incandescent-cathode apparatus. No. 1,394,144; Oct. 18.

Coolidge, William D., Schenectady, N. Y., assignor to General Electric Company. Thermionic discharge apparatus. No. 1,394,145; Oct. 18.

Cooper, Claude H., Yonkers, N. Y. Kitchenette-cabinet. No. 1,394,146; Oct. 18.

Corcoran-Victor Company, The. (See Smith, William B., assignor.)

Cornell, Luella, Brooklyn, N. Y. Operating appliance for angle-cocks for air-hose. No. 1,393,882; Oct. 18.

Costello, Thomas W., San Francisco, Calif. Tire-rim for use on automobiles and other vehicles. No. 1,394,252; Oct. 18.

Costello, William, Jr., Philadelphia, Pa. Coating-machine. No. 1,394,281; Oct. 18.

Cousins, Benjamin, Tulsa, Okla. Hoisting-hook. No. 1,394,068; Oct. 18.

Coxe Traveling Grate Company. (See Lloyd, William, assignor.)

Crane, Frederick D., Montclair, N. J. Electrolytic refining of metals. No. 1,394,147; Oct. 18.

Crease, Walter E., East Greenwich, R. I. Beehive. No. 1,393,757; Oct. 18.

Creighton, Elmer E. F., Schenectady, N. Y., assignor to General Electrical Company. Resistor. No. 1,394,187; Oct. 18.

Creveling, John L., Auburn, N. Y. Electric regulation. No. 1,394,148; Oct. 18.

Crompton, George, Jr., Worcester, Mass. Recoil picking mechanism for looms. No. 1,393,758; Oct. 18.

Crosby, Edward H., assignor to The Veeder Manufacturing Company, Hartford, Conn. Counter for locks. No. 1,394,475; Oct. 18.

Crosby, William H., Corning, N. Y. Washing device for autos. No. 1,394,282; Oct. 18.

Crowley, Joseph P., assignor to The Libbey-Owens Sheet Glass Company, Toledo, Ohio. Method and apparatus for drawing sheet-glass. No. 1,394,283; Oct. 18.

Crown Cork and Seal Company of Baltimore City, The. (See Kryzanowsky, Constant J., assignor.)

Crown Cork and Seal Company of Baltimore City, The. (See Swinscoe, John, assignor.)

Cumfer, Harry, Chicago, Ill., and O. D. McFarland, Mishawaka, Ind., assignors of one-fourth to C. F. Hofmann and one-fourth to G. P. Heppes, Chicago, Ill. Making prepared roofing. No. 1,394,149; Oct. 18.

Currier, James S., Newport, R. I., assignor to the Government of the United States. Torpedo. No. 1,394,284; Oct. 18.

Cutler-Hammer Mfg. Co., The. (See Meyer, Friedrich W., assignor.)

Cutler-Hammer Mfg. Co., The. (See Peoples, John S., assignor.)

Dahlgren, Matts, Falköping-Ranten, Sweden. Window-catch. No. 1,394,253; Oct. 18.

Dake, Charles W., Chicago, Ill. Adjustable hub-plate. No. 1,393,883; Oct. 18.

Dake, Charles W., Chicago, Ill. Adjustable hub-plate. No. 1,393,884; Oct. 18.

Damon, William H., Los Angeles, Calif. Sun and rain shield for automobiles. No. 1,394,254; Oct. 18.

Daniels, Harry H., Winthrop, Mass. Attacher for button-fasteners. No. 1,394,476; Oct. 18.

Daningburg, William J., Windsor, Ontario, Canada. Electric sheet-drier. No. 1,393,759; Oct. 18.

Dautor, Ella A. (See McLeod, J. A., and Dautor.)

Davenport, Thomas L., Everett, Wash. Oil-burner. No. 1,394,188; Oct. 18.

Davies, John J., Jr. (See Zubler, Camp M., assignor.)

Davis, Helen M., Washington, D. C. Testing-mold. No. 1,394,255; Oct. 18.

Davis, Ida, San Antonio, Tex. Milk-bottle cap. No. 1,394,409; Oct. 18.

Davis, William J. (See Hiatt, C. E., and Davis.)

D'Avy, Yves, Opelousas, La. Brick-machine. No. 1,394,285; Oct. 18.

Dayton Steel Foundry Company, The. (See Walther, G., and Klinger, assignors.)

Dayton Steel Foundry Company, The. (See Walther, George, assignor.)

Dean, John, Racine, Wis. Collar-fastener. No. 1,393,760; Oct. 18.

Decker, Otto F. (See Starkey, Luella, assignor.)

De Grasse, George F., Los Angeles, Calif. Tilting bed. No. 1,393,885; Oct. 18.

De Laval Separator Company. (See Leitch, Meredith, assignor.)

De Long, Willard W., and J. A. Rook, Berkeley, Calif. Vehicle-wheel. No. 1,394,286; Oct. 18.

Demarest, Charles S., New York, N. Y., assignor to American Telephone and Telegraph Company. Repeater-controlling system for four-wire circuits. No. 1,394,189; Oct. 18.

Demarest, Charles S., Ridgewood, N. J., assignor to American Telephone and Telegraph Company. Testing system for four-wire circuits. No. 1,394,190; Oct. 18.

Demuth, Alfred M., assignor to Demuth Manufacturing Company, Chicago, Ill. Cooking apparatus. No. 1,393,761; Oct. 18.

Demuth, Alfred M., assignor to Demuth Manufacturing Company, Chicago, Ill. Cooking apparatus. No. 1,393,762; Oct. 18.

Demuth, Alfred M., assignor to Demuth Manufacturing Company, Chicago, Ill. Cooking apparatus. No. 1,393,763; Oct. 18.

Demuth Manufacturing Company. (See Demuth, Alfred M., assignor.)

Denning, Patrick F., Cleveland, Ohio. Automobile robe-rail. No. 1,394,287; Oct. 18.

Denver Rock Drill Manufacturing Company, The. (See Oldham, Edward L., assignor.)

Derick, Clarence G., W. M. Ralph, and L. H. Flett, Buffalo, assignors to National Aniline & Chemical Co., Inc., New York, N. Y. Production of m-nitro-p-cresol. No. 1,394,150; Oct. 18.

Dickerson, Walter H., Muskegon, Mich., assignor, by mesne assignments, to E. J. Koehler. Treating waste sulfite liquor and compound obtained therefrom. No. 1,394,151; Oct. 18.

Dickey, Edward P., Harvey, Ill. Wheel. No. 1,394,477; Oct. 18.

Dickinson, Fredrick S., New York, N. Y., and J. Springer, Bradley Beach, N. J., assignors to said Dickinson. Constructing pneumatic tires. No. 1,394,069; Oct. 18.

Diffany, Henry, Newark, N. J. Shaving mirror and stand. No. 1,394,070; Oct. 18.

Dobyne, Stephen A., assignor to Champion Shoe Machinery Company, St. Louis, Mo. Fastener and slug inserting machine. No. 1,394,478; Oct. 18.

Dodenhof, John M., St. Louis, Mo. Plane. No. 1,393,991; Oct. 18.

Dodge, J. W. (See Little, Bert A., assignor.)

Dodge Tool Company. (See Larson, Arvid G., assignor.)

Doerr, Harry E., assignor to Scullin Steel Co., St. Louis, Mo. Rail-joint. No. 1,393,764; Oct. 18.

Domestic Electric Company, The. (See Mace, Arthur T., assignor.)

Donner, Stephen, assignor of one-fourth to C. W. Felgner, and three-fourths to F. C. Balk, Toledo, Ohio. Beet-blocker. No. 1,394,152; Oct. 18.

Donohue, John M., assignor to Eastman Kodak Company, Rochester, N. Y. Cellulose-ether solvent and composition. No. 1,394,505; Oct. 18.

Doran, Charles A., assignor to Bauer & Black, Chicago, Ill. Washer-saturating machine. No. 1,394,153; Oct. 18.

Dorrance, Charles J., Chicago, Ill. Trolley-harp carrier. No. 1,394,507; Oct. 18.

Dossett, Clifford B., Janesville, Minn. Radiator-cap. No. 1,394,288; Oct. 18.

Doty, Walter G., assignor to The Wagner Engineering Company, Dayton, Ohio. Machine element. No. 1,393,886; Oct. 18.

Dragorits, Charles A., Cincinnati, Ohio. Radiator. No. 1,393,765; Oct. 18.

Driscoll, Dennis L., Coalinga, assignor of one-half to Bunting Iron Works, San Francisco, Calif. Fishing-tool for use in drilling operations. No. 1,394,071; Oct. 18.

Du Bois, Daniel S., Portland, Oreg. Manifold for internal-combustion motors. No. 1,393,887; Oct. 18.

Du Charme, William S., Cleveland, Ohio. Portable pipe-vise stand. No. 1,393,766; Oct. 18.

Du Puy, John W., Beaver Falls borough, Pa. Stove. No. 1,394,508; Oct. 18.

Dutes, Maurice, assignor to La Societe Dutes, Doublet & Cie., Levallois-Perret, Seine, France. Magneto-armature. No. 1,394,229; Oct. 18.
Dyte, Norman V., Highgate, London, England. Trousers and like press. No. 1,394,290; Oct. 18.
Eastern Manufacturing Company. (See Howe, Henry P., assignor.)
Eastman, Henry P., Livingston Manor, N. Y. Collapsible box. No. 1,394,154; Oct. 18.
Eastman Kodak Company. (See Capstaff, John G., assignor.)
Eastman Kodak Company. (See Donohue, John M., assignor.)
Eastman Kodak Company. (See Frederick, Charles W., assignor.)
Eastman Kodak Company. (See Parkinson, William J., assignor.)
Eastman Kodak Company. (See Swann, Sydney C., assignor.)
Eddy, Harold C. (See Alden, S. F., and Eddy.)
Egbert, Charles C., Niagara Falls, N. Y. Pressure-relief device. No. 1,394,072; Oct. 18.
Elite Manufacturing Company. (See Burkholder, John H., assignor.)
Enfield Cycle Company Limited, The. (See Smith, Frank W., assignor.)
Equipment and Engineering Company, The. (See Blaney, T., and Williams, assignors.)
Ersin, Harold O., Anoka, Minn. Bed-spring frame. No. 1,394,155; Oct. 18.
Essex Motors. (See Fekete, Stephen I., assignor.)
Essex Motors. (See Whisler, Ralph H., assignor.)
Estes, Ralph D., Estes, Va. Corn-thinner. No. 1,394,201; Oct. 18.
Eustis, George P., Washington, D. C. Shade for headlights. No. 1,394,156; Oct. 18.
Evans, Floyd W., and A. A. Miller, Buffalo, N. Y. Kerosene-burner. No. 1,394,073; Oct. 18.
Everett, Edwin, *et al.* (See Perkins, George E., assignor.)
Evslin, Leo E., New York, N. Y. Dental-bridge construction. No. 1,393,767; Oct. 18.
Ewald, Frederick W., Brooklyn, and H. G. Thomson, New York, N. Y.; said Ewald assignor to said Thomson. Gate. No. 1,394,479; Oct. 18.
Ewart, William, Niagara Falls, Ontario, Canada. Pipe. No. 1,394,292; Oct. 18.
Fairbanks, Morse & Co. (See Heath, William C., assignor.)
Faltin, Bernard P., Bareville, Pa. Dispensing-pump. No. 1,394,191; Oct. 18.
Farkas, Eugene J., Detroit, assignor to Ford Motor Company, Dearborn, Mich. Radiator-filler cap. No. 1,393,992; Oct. 18.
Farmer, Clyde C., Edgewood, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa. Locomotive brake equipment. No. 1,394,074; Oct. 18.
Farnham, Hubert J., West Haven, assignor to The Price & Lee Company, New Haven, Conn. Card-holder. No. 1,394,157; Oct. 18.
Farnsworth, Francis B., Montreal, Quebec, Canada. Cigar-lighter. No. 1,393,888; Oct. 18.
Farrington Manufacturing Company. (See Greenwood, Oliver P., assignor.)
Fasting, Johan S., Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Grinding in ball-mills. No. 1,394,294; Oct. 18.
Fasting, Johan S., Valby, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y. Drum for burning and agglomerating. No. 1,394,293; Oct. 18.
Fearn, William R., Camden, N. J. Kaleidoscope. No. 1,394,480; Oct. 18.
Federal Products Company, The. (See Coats, Frederick, assignor.)
Federal Products Company. (See Rowland, Andrew J., assignor.)
Fehling, Christian F., Juneau, Wis. Folding box or crate. No. 1,394,295; Oct. 18.
Fehring, Adolph G., Minneapolis, Minn. Grain-separator. No. 1,393,993; Oct. 18.
Feifer, Abraham, Philadelphia, Pa. Wrapping-machine. No. 1,393,768; Oct. 18.
Fekete, Stephen I., assignor to Essex Motors, Detroit, Mich. Stove for intake-manifolds of internal-combustion engines. No. 1,393,994; Oct. 18.
Feigner, Charles W., *et al.* (See Donner, Stephen, assignor.)
Fenton, James T., Salt Lake City, Utah. Cracking and distilling oil. No. 1,394,481; Oct. 18.
Ferester, Henry, Brooklyn, N. Y. Control device. No. 1,394,158; Oct. 18.
Fessenden, Reginald A., Brookline, Mass., assignor to Submarine Signal Company, Portland, Me. Submarine signaling. No. 1,394,482; Oct. 18.
Fessenden, Reginald A., Chestnut Hill, Mass., assignor to Submarine Signal Company, Portland, Me. Method and apparatus for submarine signaling. No. 1,394,483; Oct. 18.
Fibre Corporation Limited, The. (See Michot, Georges, assignor.)
Figaro Chemical Co. (See Pletcher, Lyle J., assignor.)
Finch, John S., Bridgeport, Conn., assignor to The Singer Manufacturing Company. Sewing-machine. No. 1,394,075; Oct. 18.
Firestone Tire and Rubber Company, The. (See Maranville, H. F., and Stevens, assignors.)
Fish, Edward. (See Novick, A., and Fish.)
Fisher, Charles M. (See Graff, E. F., and Fisher.)
Fisher, Elbert W., Toledo, Ohio. Glass composition and making same. No. 1,394,296; Oct. 18.
Fitts, Walter H., assignor to The Foxboro Company, Foxboro, Mass. Thermometer. No. 1,394,484; Oct. 18.
Fitz Gibbon, Edward L., Brooklyn, N. Y. Motor-vehicle. No. 1,394,076; Oct. 18.
Fitzpatrick, George A. (See Fitzpatrick, John A. and G. A.)
Fitzpatrick, John A. and G. A., Santa Ana, Calif. Drilling wells. No. 1,394,192; Oct. 18.
Flaherty, Edward B., Denver, Colo. Hatpin. No. 1,394,297; Oct. 18.
Fleming, Melvin J., Indianapolis, Ind. Laundry apparatus. No. 1,394,159; Oct. 18.
Flett, Lawrence H. (See Derick, C. G., Ralph, and Flett.)
Flintkote Company, The. (See Overbury, Frederick C., assignor.)
Foore, William E., Nogales, Ariz. Framing-tool. No. 1,394,298; Oct. 18.
Foote, Charles E., assignor to The Foote Company, Nunda, N. Y. Power-operated discharge mechanism for concrete-mixers. No. 1,394,160; Oct. 18.
Foote, Charles E., assignor to The Foote Company, Nunda, N. Y. Power-operated discharge mechanism for concrete-mixers. No. 1,394,161; Oct. 18.
Foote Company, The. (See Foote, Charles E., assignor.)
Forbes Tubular Products Corporation. (See Hendane, Emil, assignor.)
Ford, Henry, Detroit, Mich. Belt-adjusting means. No. 1,393,990; Oct. 18.
Ford Motor Company. (See Farkas, Eugene J., assignor.)
Forster, Albert O. and P. M., Berkeley, Calif. Trap-nest. No. 1,394,485; Oct. 18.
Forster, Percy M. (See Forster, Albert O. and P. M.)
Foster, Arthur B., Washington, D. C. Treating oils. No. 1,394,486; Oct. 18.
Foster, Joseph B., Roanoke, Va. Attaching means for artificial teeth. No. 1,394,299; Oct. 18.
Foute, Raymond R., assignor to Lakeside Supply Company, Chicago, Ill. Phonograph. No. 1,393,769; Oct. 18.
Fox, Gustave, Company, The. (See Laws, Edward H., assignor.)
Foxboro Company, The. (See Fitts, Walter H., assignor.)
Francis, Earl H., Mount Washington, Mo. Film-winding apparatus. No. 1,394,077; Oct. 18.
Franchaeris, Emile, San Francisco, Calif. Check-hinge. No. 1,393,889; Oct. 18.
Franklin, John B., Brockville, Ontario, Canada. Trackweeder. No. 1,394,193; Oct. 18.
Fraser, James, Wilmington, Del., assignor to The Geometric Tool Company, New Haven, Conn. Collapsing tap. No. 1,393,995; Oct. 18.
Frederick, Charles W., assignor to Eastman Kodak Company, Rochester, N. Y. Focusing lens-mount and assembling same. No. 1,394,078; Oct. 18.
Fregonara, Charles Lyon, France. Removable construction. No. 1,393,996; Oct. 18.
French, Charles M., Seymour, Conn. Igniter. No. 1,393,487; Oct. 18.
French, Edward H., Kingsport, Tenn. Fractionally distilling mixtures containing hydrocarbons. No. 1,394,488; Oct. 18.
French, Harry F. (See Benner, R. C., and French.)
Friedman, Jacob, New York, N. Y. Preparing cereal food. No. 1,393,997; Oct. 18.
Fuchs, Ernest, assignor to L. Renault, Billancourt, France. Apparatus for use in calibrating and rifling the bore of firearms. No. 1,394,079; Oct. 18.
Fuhr, Conrad, Milwaukee, Wis. Gas-stove lighter. No. 1,393,890; Oct. 18.
Fuller, Franz A., assignor to J. E. Mergott Company, Newark, N. J. Bag-fastener. No. 1,393,770; Oct. 18.
Fuller, Fred E. (See McNeal, Charles A., assignor.)
Fuller, Frederick L., Bridgeport, Conn., assignor to The National Cash Register Company, Dayton, Ohio. Cash-register. No. 1,394,256; Oct. 18.
Fulton, William H., Irvington, N. J. Manufacture of tires. No. 1,393,998; Oct. 18.
Funkhouser, Vernon E., Kansas City, Mo., and A. M. Meyers, Merriam, Kans. Motor-vehicle turner. No. 1,394,489; Oct. 18.
Gagnon, Joseph H., assignor of two-thirds to V. Geoffrion, Montreal, Quebec, Canada. Combination kitchen utensil. No. 1,394,194; Oct. 18.
Gammeter, John R., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Reinforced rubber article. No. 1,394,300; Oct. 18.
Garceau, Theode, Three Rivers, Quebec, Canada. Buckle. No. 1,394,195; Oct. 18.
Garnett, Thomas W., Topeka, Kans. Attachment for blow-torches. No. 1,393,999; Oct. 18.
Garrett, Berton A., Ballston Spa, N. Y., assignor to General Electric Company. Gearing. No. 1,394,060; Oct. 18.
Garson, Peter M., Philadelphia, Pa. Emergency-tire. No. 1,394,410; Oct. 18.
Gas Research Company, The. (See Smith, Harry F., assignor.)
Geake, Harry J., Victoria, British Columbia, Canada. Auxiliary exhaust-port. No. 1,394,411; Oct. 18.
Gebhardt, William, San Antonio, Tex. Making stock food from cactus. No. 1,394,162; Oct. 18.

General Electric Company. (See Abbott, Charles C., assignor.)
General Electric Company. (See Batchelder, Asa F., assignor.)
General Electric Company. (See Coolidge, W. D., and Wagner, assignors.)
General Electric Company. (See Coolidge, William D., assignor.)
General Electric Company. (See Creighton, Elmer E. F., assignor.)
General Electric Company. (See Garrett, Berton A., assignor.)
General Electric Company. (See Halvorson, Cromwell, A. B., Jr., assignor.)
General Electric Company. (See Sclater, Ivanhoe H., assignor.)
General Electric Company. (See Stephens, Howard O., assignor.)
General Electric Company. (See White, William C., assignor.)
General Motors Company. (See Short, Charles R., assignor.)
General Motors Corporation. (See Marinier, G. P., and Chrysler, assignors.)
General Ordnance Co., The. (See Giles, Julian A., assignor.)
Gentner, William H., Farmington, Iowa. Currency. No. 1,394,081; Oct. 18.
Geoffrion, Victor. (See Gagnon, Joseph H., assignor.)
Geometric Tool Company, The. (See Fraser, James, assignor.)
George, Enoch Jr., assignor to The McConway & Torley Company, Pittsburgh, Pa. Draft-yoke. No. 1,394,163; Oct. 18.
Georger, Clifford H., Buffalo, N. Y. Vehicle-signal. No. 1,394,000; Oct. 18.
Gerrard, Thomas, assignor of one-half to D. Kernan, Cortland, N. Y. Oil-burning furnace. No. 1,394,164; Oct. 18.
Gibson, Calder C., Buffalo, N. Y. Seal-press. No. 1,394,165; Oct. 18.
Gibson, Norman R., Niagara Falls, Ontario, Canada. Apparatus for obtaining pressure time diagrams. No. 1,394,001; Oct. 18.
Gibson, Thomas C., Forsyth, Ga. Penknife. No. 1,394,166; Oct. 18.
Giles, Harvey C., Rochester, N. Y. Riveting-machine. No. 1,394,506; Oct. 18.
Giles, Julian A., Derby, assignor to The General Ordnance Co., Groton, Conn. Non-recoil gun. No. 1,394,490; Oct. 18.
Gill, Joseph W. (See Sullivan, A. C., and Gill.)
Gisholt Machine Company. (See Godfriaux, Louis E., assignor.)
Glasner, Rudolph W., and M. Balcker, assignors to Marquette Tool & Manufacturing Company, Chicago, Ill. Weighing and sorting machine. No. 1,394,167; Oct. 18.
Godfriaux, Louis E., assignor to Gisholt Machine Company, Madison, Wis. Force-feed oiler. No. 1,394,168; Oct. 18.
Goedde, Edward C., Chicago, Ill. Phonograph-record holder. No. 1,393,771; Oct. 18.
Goldsmith, William M., Cincinnati, Ohio. Insert for plastic materials. No. 1,394,002; Oct. 18.
Gondolf, Nicholas J., New Orleans, La. Axle-mounting. No. 1,394,491; Oct. 18.
Goodrich, B. F., Company, The. (See Gammeter, John R., assignor.)
Goodrich, B. F., Company, The. (See Pierson, Robert M., assignor.)
Goodwin, William B., Columbus, Ohio. Cushion vehicle-wheel. No. 1,394,492; Oct. 18.
Goodyear Tire & Rubber Company, The. (See Weatherill, Ambrose, assignor.
Gore, Charles, Los Angeles, Calif. Mechanically-operated safety zone. No. 1,394,003; Oct. 18.
Gould, Harry V., Bridgeport, Conn. Parallel clamp for holding jig and fixture buttons. No. 1,394,004; Oct. 18.
Government of the United States, The. (See Currier, James S., assignor.)
Graf, Siegfried. (See Raddick, David J., assignor.)
Graff, Edwin E., and C. M. Fisher, South Bend, Ind. Spring for chair-backs and the like. No. 1,394,005; Oct. 18.
Graff, William D. (See Theberath, Joseph C., assignor.)
Grasse, Charles J., assignor of one-half to T. Treganowan, Pittsburgh, Pa. Combination automobile-creeper. No. 1,394,493; Oct. 18.
Green Engineering Company. (See Marsh, Thomas A., assignor.)
Green Engineering Company. (See Poppenhusen, H. A., and Strong, assignors.)
Green, G. Marvin, Kissimmee, Fla. Dish-washer. No. 1,394,169; Oct. 18.
Green, Samuel G., U. S. Army. Safety and guide attachment for machine-gun magazines. No. 1,394,494; Oct. 18.
Greene, Richard A., Brooklyn, N. Y., assignors to Jabez Burns & Sons. Nut-mill. No. 1,394,082; Oct. 18.
Greenick, Arthur A., Buffalo, N. Y. Roaster. No. 1,394,412; Oct. 18.
Greenwood, Oliver P., Billerica, assignor to Farrington Manufacturing Company, Boston, Mass. Machine and process for altering covering material to forms. No. 1,393,772; Oct. 18.
Grieve, Rafael E., and R. Johnson, Los Angeles, Calif. Bumper. No. 1,394,170; Oct. 18.
Griffiths, Harry A., Birmingham, and R. H. Griffiths, Sutton Coldfield, England. Sheet-metal-blank feeder. No. 1,394,006; Oct. 18.
Griffiths, Ira H., Syracuse, N. Y. Gun-mounting. No. 1,394,083; Oct. 18.
Griffiths, Richard H. (See Griffiths, Harry A. and R. H.)
Grill, Enoch, Grand Rapids, Mich. Tire. No. 1,393,773; Oct. 18.
Gross, George G., Columbus, Ohio. Windshield attachment. No. 1,394,084; Oct. 18.
Grover, Albert D. (See Potts, E. B., and Grover.)
Grove, Edwin W. (See Carrier, Albert H., assignor.)
Gruenberg, Walter A., Birmingham, assignor to J. L. Marcero, Pontiac, Mich. Clay-working machinery. No. No. 1,394,495; Oct. 18.
Gullas, John. (See Piscek, Joseph Y., assignor.)
Gushman, Joseph F., Toledo, Ohio. Swing. No. 1,393,774; Oct. 18.
Gymnaitis, Dimitrios. (See Machado, William C., assignor.)
H. R. Manufacturing Company. (See Saxton, A. G., and Menard, assignors.)
Hale, Russell E. (See Seward, H. L., and Hale.)
Hall, Mary E., Chicago, Ill. Electric needle. No. 1,394,171; Oct. 18.
Hall, Mary L., Louisville, Ky. Collapsible wardrobe. No. 1,394,007; Oct. 18.
Halvorson, Cromwell A. B., Jr., Lynn, Mass., assignor to General Electric Company. Metal mirror. No. 1,394,085; Oct. 18.
Handley Page Limited. (See Page, Frederick H., assignor.)
Hansen, Sofus E., Seattle, Wash. Bearing-board. No. 1,393,891; Oct. 18.
Hanson, George, Wilmington, N. C. Ventilator. No. 1,393,775; Oct. 18.
Hardesty, Frederick J. (See Heeter, T. E., and Hardesty.)
Harding, Lewis W., Norfolk, Va., assignor of one-half to J. A. Lesner. Safety-flap pocket registry-envelop. No. 1,393,776; Oct. 18.
Hardinge Brothers. (See Hardinge, Franklin, assignor.)
Hardinge, Franklin, assignor to Hardinge Brothers, Inc., Chicago, Ill. Method of and apparatus for lining furnace-fireboxes. No. 1,393,777; Oct. 18.
Hargreaves, Robert C., assignor of one-third to R. D. Chapin and one-third to G. G. Behn, Detroit, Mich. Toy. No. 1,394,008; Oct. 18.
Harriman National Bank of the City of New York, trustee. (See Nedel, Louis D., assignor.)
Harris, Carl C., Orange, Mass., assignor to Rivet-O-Manufacturing Company. Moistening device. No. 1,394,196; Oct. 18.
Hartman, Maurice. (See Wachtel, Charles, assignor.)
Hauffe, Chester N., Columbus, Ohio. Tire-rim. No. 1,394,009; Oct. 18.
Hawkins, Wilford J. (See Steele, Archie W., assignor.)
Hayes, George A., Fort Lee, N. J. Paint-pot hanger. No. 1,394,301; Oct. 18.
Heath, William C., Beloit, Wis., assignor to Fairbanks, Morse & Co., Chicago, Ill. Engine-mechanism assembly. No. 1,393,778; Oct. 18.
Heckmann, William, Irvington, N. J. Sealing-cap-attaching apparatus. No. 1,394,086; Oct. 18.
Heeter, Thomas E., St. Louis, and F. J. Hardesty, Maplewood, Mo. Liquid-dispensing device. No. 1,394,010; Oct. 18.
Heinrich, Walter A., assignor to W. N. Matthews and Brother, Inc., St. Louis, Mo. Cut-out switch. No. 1,394,087; Oct. 18.
Heinse, John O., assignor to Traction Engine Company, Boyne City, Mich. Motor-vehicle. No. 1,393,779; Oct. 18.
Heinse, John O., assignor to Traction Engine Company, Boyne City, Mich. Tractor. No. 1,393,780; Oct. 18.
Heller, Benjamin, Chicago, Ill. Insect-destroyer. No. 1,394,497; Oct. 18.
Heller, John W., Buena, N. J. Folding rule. No. 1,394,088; Oct. 18.
Hendler, Max. (See Tamarin, Abraham and F., and Hendler.)
Henry, Theophilus P. (See Nail, J. E., and Henry.)
Heppes, George P., *et al.* (See Cumfer, H., and McFarland, assignors.)
Herbert, John W. (See Andrews, J. A., and Herbert.)
Hering, Max, Ronneburg, Germany. Locking device for detachable wheel-hubs. No. 1,394,257; Oct. 18.
Herman, Claude A., Bridgeport, Conn. Power-driven screwdriver. No. 1,394,089; Oct. 18.
Herrington, H. L. (See Leavitt, James Q., assignor.)
Hewlett, Palmer B., Hollister, Calif. Milking-machine. No. 1,393,781; Oct. 18.
Hiatt, Cassius E. and W. J. Davis, London, England. Valve of wireless transmission systems. No. 1,394,090; Oct. 18.
Hill, Theodore M., Shubert, Nebr. Nut-lock. No. 1,394,012; Oct. 18.

Hillard, Frederic W., Tottenville, N. Y., assignor of one-half to M. R. Hillard, Middlebury, Conn. Typewriting machine. (Reissue.) No. 13,360; Oct. 18.
Hillard, Mary R. (See Hillard, Frederic W., assignor. (Reissue.)
Hills, Frank. (See Tierney, J. W., and Hills.)
Hills, Harry B., Tompkinsville, assignor to Steward Davit & Equipment Corporation, New York, N. Y. Ship's davit. No. 1,394,091; Oct. 18.
Hills, Henry A. Grand Rapids, Mich. Filter for gasoline-tanks. No. 1,394,011; Oct. 18.
Hinsdale, Winfield E., and M. W. Lansing, assignors to Trenton Potteries Company, Trenton, N. J. Sanitary fixture. No. 1,394,302; Oct. 18.
Hobbs, Frank K., Guymon, Okla. Clamp. No. 1,394,413; Oct. 18.
Hoener, Samuel T., Slater, Mo. Front-wheel drive for vehicles. No. 1,394,013; Oct. 18.
Hoffmann, Joseph J. (See Coleman, F. A., and Hoffmann.)
Hofmann, Carl F., et al. (See Cumfer, H., and McFarland, assignors.)
Hogan, Joseph E., New York, N. Y. Belt. No. 1,394,414; Oct. 18.
Holt, Samuel E., Rhinebeck, N. Y. Work-support for grinders. No. 1,394,014; Oct. 18.
Hopkins, Hubert J., San Francisco, Calif. Ladder-raising device. No. 1,394,498; Oct. 18.
Horan, George F., Rutland, Vt. Train-stop. No. 1,394,303; Oct. 18.
Horvath, Gesa, Highland Park, Mich. Automatic accelerator and fuel-regulator. No. 1,394,015; Oct. 18.
Howard, Bloomfield H., Washington, D. C., and R. J. Turner, Pittsburgh, Pa. Feeder for ingot-molds. No. 1,394,415; Oct. 18.
Howe, Henry P., Steep Falls, Me., assignor, by mesne assignments, to Eastern Manufacturing Company, Boston, Mass. Machine for surface-finishing paper. No. 1,394,016; Oct. 18.
Hult, Oscar W., Stockholm, Sweden. Balancing device for explosion or internal-combustion motors. No. 1,393,782; Oct. 18.
Handley, James, Columbus, Ohio. Making steel. No. 1,394,172; Oct. 18.
Huntley, Charles W., et al. (See Morgan, John H., assignor.)
Hurd, George H., Georgetown, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sewing-machine. No. 1,393,783; Oct. 18.
Hurd, Leigh G., Los Angeles, Calif. Hatpin-fastener. No. 1,394,304; Oct. 18.
Hurley, Albert B., Wilmington, assignor to L. W. Hurley, Seaford, Del. Educational device. No. 1,394,305; Oct. 18.
Hurley, L. W. (See Hurley, Albert B., assignor.)
Huseby, Albert A., Chicago, Ill. Automatic starting and stopping device for talking-machines. No. 1,394,173; Oct. 18.
Hutton, Edward S., Lapel, Ind. Machine for making hollow glassware. No. 1,394,092; Oct. 18.
Hyatt Bearings Division, General Motors Corporation. (See Knoth, Conrad, assignor.)
Hynes, Dibrell P., Evanston, Ill. Flotation-machine. No. 1,394,306; Oct. 18.
Iannelle, Louis, Boston, Mass. Detachable shoe-heel. No. 1,393,784; Oct. 18.
Illinois Tool Works. (See Olson, Carl G., assignor.)
Imperial Brass Manufacturing Company, The. (See Rudolph, Walter J., assignor.)
Ingram, Joseph D., Amarillo, Tex. Engine. No. 1,393,785; Oct. 18.
Ingstrum, Phineas C., Rochester, N. Y. Jointer-guard. No. 1,394,499; Oct. 18.
International Motor Company. (See Matthews, Joseph L., assignor.)
Ireland, Edwin G., and J. D. Clark, Clayburn, British Columbia, Canada. Hacksaw. No. 1,394,174; Oct. 18.
Jackson, Edward, New York, N. Y. Printer's case. No. 1,394,307; Oct. 18.
Jackson, Frank, Denver, Colo. Pressure-operated grease-injecting device or grease-gun for automobile service. No. 1,394,017; Oct. 18.
Jackson, Isaac S., assignor to The Rossendale-Reddaway Belting & Hose Co., Newark, N. J. Conveyer-belt. No. 1,394,018; Oct. 18.
Jackson, Merritt T., Faber, Va. Automatic switch-operating means. No. 1,394,416; Oct. 18.
Jackson, Simeon S., assignor to The Stafford Company, Readville, Boston, Mass. Weft-replenishing loom. No. 1,394,175; Oct. 18.
Jackson, William G., Pompton Lakes, N. J. Ball-game apparatus. No. 1,394,308; Oct. 18.
Janney, Robert E. L., Chicago, Ill. Damper for talking-machines. No. 1,394,176; Oct. 18.
Jaques, C. F. (See Merritt, James M., assignor.)
Jensen, Herman A., Castle Rock, Wash. Cable-coupling. No. 1,394,019; Oct. 18.
Jewett, Sherman S., Buffalo, N. Y. Oven-burner. No. 1,393,786; Oct. 18.
John, Elmer N., assignor to Reliable Knitting Works, Milwaukee, Wis. Knitted cap and making the same. No. 1,394,003; Oct. 18.
Johnson Automobile Lock Co. (See Johnson, Calvin L., assignor.)
Johnson, Colvin L., assignor to Johnson Automobile Lock Co., Chicago, Ill. Automobile-tire-lock cable. No. 1,394,259; Oct. 18.
Johnson, Colvin L., assignor to Johnson Automobile Lock Co., Chicago, Ill. Gear-shift-lever lock. No. 1,394,258; Oct. 18.
Johnson, Merton E., Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J. Sole and making. No. 1,393,787; Oct. 18.
Johnson, Raymond. (See Grieve, R. H., and Johnson.)
Johnson, Tomlinson F., Jr., Atlanta, Ga. Insulator-changer. No. 1,394,020; Oct. 18.
Johnson, Wesley J., Chicago, Ill. Duplex grating for pipeless furnaces. No. 1,394,260; Sept. 18.
Jones, Edward F., assignor of one-half to C. Casell, San Antonio, Tex. Locking device for automobiles. No. 1,394,021; Oct. 18.
Jones, Owen H., Hartford, Conn. Ball-cock. No. 1,394,022; Oct. 18.
Jones, Robert W., Wilkes-Barre, Pa. Retaining means. No. 1,394,177; Oct. 18.
Juengst, Charles A., Croton Falls, N. Y., assignor to American Assembling Machine Company, Inc., Memphis, Tenn. Cutting mechanism. No. 1,394,309; Oct. 18.
Justice, Ithamar M., assignor to The Manufacturers Equipment Company, Dayton, Ohio. Process in direct-action driers. No. 1,393,788; Oct. 18.
Kantner, Washington C., Reading, Pa. Sound-box. No. 1,394,427; Oct. 18.
Kantner, Washington C., Reading, Pa. Sound-box. No. 1,394,428; Oct. 18.
Keeline, Mrs. W. F., administratrix. (See Keeline, William F.)
Keeline, William F., deceased, by Mrs. W. F. Keeline, administratrix, El Centro, Calif. Fruit-picker's bag. No. 1,394,197; Oct. 18.
Keenan, Charles W., Tucson, Ariz. Envelop-vending machine. No. 1,394,429; Oct. 18.
Kellenberger, Leonard, St. Gallen, Switzerland. Mandrel-press. No. 1,393,789; Oct. 18.
Kellogg Switchboard and Supply Company. (See Yanochowski, George A., assignor.)
Kempkey, Augustus, Brentwood, Calif. Irrigation gate-post. No. 1,394,023; Oct. 18.
Kenney, Harry J., Seattle, Wash. Trolling-spinner. No. 1,393,790; Oct. 18.
Kernan, Daniel. (See Gerrard, Thomas, assignor.)
Kershaw, Edwin T., Denver, Colo. Internal-combustion engine. No. 1,394,024; Oct. 18.
Kessler, Frank, Sr., Milwaukee, Wis. Cooking-oven. No. 1,394,310; Oct. 18.
Kimball, Wallace D., New York, N. Y., and C. G. Mortimer, East Orange, N. J., assignors to National Binding Machine Company, New York, N. Y. Spliced joint for balebands. No. 1,393,791; Oct. 18.
Kindser, Alexander, Canon City, Colo. Resilient wheel. No. 1,394,024; Oct. 18.
King, Clarence R., assignor to Norton Company, Worcester, Mass. Making abrading-tools. No. 1,394,500; Sept. 18.
Kiefe, Abraham A. (See Pardy, R. C., Beecher, and Kiefe.)

Kluga, Felix. (See Kluga, Vincent and F.)
Kluga, Vincent and F., Niagara Falls, N. Y. Automobile water-pump. No. 1,394,025; Oct. 18.
Knapp Brothers Manufacturing Company. (See Knapp, George A., assignor.)
Knapp, George A., Chicago, Ill., assignor to Knapp Brothers Manufacturing Company. Metal facing for inside of window-openings. No. 1,393,792; Oct. 18.
Knoll, Lloyd M., assignor of one-fourth to T. Appleby, Philadelphia, Pa. Radio system. No. 1,394,026; Oct. 18.
Knoth, Conrad, Hillside, assignor to Hyatt Bearings Division, General Motors Corporation, Harrison, N. J. Roll-winding machine. No. 1,394,095; Oct. 18.
Koehler, Edward J. (See Dickerson, Walter E., assignor.)
Komfytite Spring and Bed Corporation. (See Tamarin, Abraham and F., and Hendler, assignors.)
Koon, William F. (See Nordberg, C. E., and Koon.)
Koster, George M. A., Eccles, near Manchester, England. Scooter. No. 1,394,430; Oct. 18.
Kring, Edward A., Pasadena, Calif. Supporting structure for packing-boxes. No. 1,394,028; Oct. 18.
Kroth, John, Forks, N. Y. Power-wheel. No. 1,394,417; Oct. 18.
Kryzanowsky, Constant J., Mount Washington, assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md. Camera. No. 1,393,793; Oct. 18.
Kuhlman, Carl H., Toledo, Ohio. Switch-box. No. 1,393,794; Oct. 18.
L-W-F Engineering Company. (See Willard, Charles F., assignor.)
Lacey, Edyth, New York, N. Y. Toy. No. 1,394,096; Oct. 18.
Lachapelle, Cyrille, St. Paul l'Ermite, Quebec, Canada. Planter. No. 1,394,097; Oct. 18.
Lachman, Maurice, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa. Metal wheel. No. 1,393,795; Oct. 18.
Lachman, Laurence S., New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa. Metal vehicle-wheel. No. 1,393,796; Oct. 18.
Lachman, Maurice, New York, N. Y., assignor, by mesne assignments, to Bethlehem Steel Company, Bethlehem, Pa. Metal wheel. No. 1,393,797; Oct. 18.
Lake, John L., and F. D. McMahon, Cleveland, Ohio. Tractor. No. 1,394,098; Oct. 18.

Lakeside Supply Company. (See Foute, Raymond R., assignor.)
Lamont, John A., assignor to American Steel Foundries, Chicago, Ill. Six-wheel equalising-truck. No. 1,393,798; Oct. 18.
Lang, Frederick F., Detroit, Mich. Radiator-core. No. 1,394,311; Oct. 18.
Lansden, John M., New York, N. Y. Motor-vehicle and axle therefor. No. 1,394,009; Oct. 18.
Lansing, Martin W. (See Hinsdale, W. E., and Lansing.)
Lant, George W., Providence, assignor to Abrasive Machine Tool Co., East Providence, R. I. Grinding-machine. No. 1,394,418; Oct. 18.
Larson, Arvid G., assignor to Dodge Tool Company, Grinnell, Iowa. Radial engine. No. 1,394,419; Oct. 18.
Larsson, Carl H., Seattle, Wash. Scaffold-jack. No. 1,394,178; Oct. 18.
La Société Duten, Doublet & Cie. (See Duten, Maurice, assignor)
Laurick, Carl, Berlin, Germany. Mixing, kneading, and the like machine. No. 1,393,799; Oct. 18.
Lawrence, Oscar A, San Francisco, Calif. Door-buffer No. 1,394,420; Oct. 18.
Lawrence, William, Harcourt, Iowa. End-gate. No. 1,394,108; Oct. 18.
Laws, Edward H., assignor to The Gustave Fox Company, Cincinnati, Ohio. Plate-attaching means. No. 1,394,029; Oct. 18.
Lea, Charles, assignor to American Warp Drawing Machine Company, Boston, Mass. Reed for spacing warp-threads. No. 1,394,431; Oct. 18.
Leary, John S., North Cambridge, Mass. Clasp for hose-supporters. No. 1,394,199; Oct. 18.
Leavitt, James O., assignor of one-half to H. L. Herrington, Ogden, Utah. Label-feed device. No. 1,394,432; Oct. 18.
Leech, Edward W., Jr., Baltimore, Md. Non-skid tire-protector. No. 1,394,312; Oct. 18.
Leeper, Henry T., Fredonia, Ky. Artificial bait. No. 1,394,313; Oct. 18.
Leinbrock, Oskar, Gottleuba, Germany. Intermediate belt-gearing. No. 1,394,100; Oct. 18.
Leitch, Meredith, Poughkeepsie, assignor to The De Laval Separator Company, New York, N. Y. Milking-machine. No. 1,394,433; Oct. 18.
Lemon, Frederick M., Oklahoma, Okla. Automatic opener for parachutes. No. 1,394,201; Oct. 18.
Leo, Frank, assignor of one-half to F. Sage, Milwaukee, Wis. Hair-clippers. No. 1,393,948; Oct. 18.
Le Pul, Henry J., New York, N. Y. Aeroplane. No. 1,394,314; Oct. 18.
Lesner, John A. (See Harding, Lewis W., assignor.)
Leumann, Richard, Chailly-sur-Lausanne, Switzerland. Automatic sheet-feeding device. No. 1,394,202; Oct. 18.
Leveque, Philip H. (See Veilleux, L., Leveque, and Barbes.)
Levy, Joseph, assignor to Boston Time Stamp Company, Boston, Mass. Time-stamp. No. 1,394,179; Oct. 18.
Lewis, Claude L., Omaha, Nebr. Agitator. No. 1,394,315; Oct. 18.
Lewis, G. B., Company. (See Swann, Henry C., assignor.)
Lewis, Le Grand B. (See Cashner, Roy C., assignor.)
L'Heureux, Joseph H., Lowell, Mass. Garment-supporter. No. 1,394,316; Oct. 18.
Libbey-Owens Sheet Glass Company, The. (See Crowley, Joseph P., assignor.)
Lillie, Samuel M., Philadelphia, Pa. Conserving heat in steam-power plants. No. 1,393,800; Oct. 18.
Little, Bert A., assignor of one-half to J. W. Dodge, Tulsa, Okla. Electric handlamp. No. 1,394,101; Oct. 18.
Lloyd, William, Hazleton, assignor to Coxe Traveling Grate Company, Port Carbon, Pa. Furnace. No. 1,394,421; Oct. 18.
Lofker, Charles L., Minneapolis, Minn. Band-cutter. No. 1,394,434; Oct. 18.
Long, Edward C. (See Miller, L. G., and Long.)
Long, Willard O., Mansfield, Ohio. Harrow. No. 1,394,030; Oct. 18.
Longfellow, Harry S. (See Medine, Frank J., assignor.)
Lovell, Christopher H., assignor, by mesne assignments, to T. M. Webster, St. Louis, Mo. Envelop-fastener. No. 1,393,801; Oct. 18.
Loughridge, Matthew H., Bogota, N. J., assignor to Atlas Railway Signal Company. Embossing-machine. No. 1,394,261; Oct. 18.
Loutrel, Cyrus H., South Orange, N. J., assignor to The National Lock Washer Company, Newark, N. Y. Sash-fastener. No. 1,394,317; Oct. 18.
Lowe, Harry W., Omaha, Nebr., assignor, by mesne assignments, to Sprague Canning Machinery Co. Finishing-machine. No. 1,393,949; Oct. 18.
Luden, Jacob C., Reading, Pa. Dust-collecting machine. No. 1,393,802; Oct. 18.
Lundin, Andreas P., Bayside, N. Y., assignor to American Balsa Company, Inc. Life-preserver. No. 1,394,180; Oct. 18.
Lundin, Mattias O., Los Angeles, Calif. Liquid-level gage. No. 1,394,031; Oct. 18.
Lupton, Benjamin M., Jr., Jersey City, N. J. Rotary engine. No. 1,393,802; Oct. 18.
Lutterbach, Henry, Armstrong, Ind. Steering device for tractors. No. 1,394,203; Oct. 18.
McArthur, John O., Milwaukee, Wis. Piston. No. 1,394,204; Oct. 18.
McCauley, Terence, Warren, Ohio. Roll scraper. No. 1,394,102; Oct. 18.
McConway & Torley Company, The. (See George, Enoch, Jr., assignor.)
McCullagh, John K., Toronto, Ontario, Canada. Automobile lamp and license-plate holder. No. 1,394,017; Oct. 18.
McCullough, J. W., et al. (See Perkins, George E., assignor.)
McEwen, Willard M. (See Ben, Frank, assignor.)
McFarland, Owen D. (See Cumfer, H., and McFarland.)
McFeely, William C., New York, N. Y. Auxiliary car-step. No. 1,393,893; Oct. 18.
McGill, Daniel F., Portland, Oreg. System of raising sunken ships. No. 1,393,894; Oct. 18.
McGlynn, Joseph B., assignor to The West Steel Casting Company, Cleveland, Ohio. Preparing steel for casting. No. 1,394,103; Oct. 18.
McGuire, Ottis M., Bridgeport, Nebr. Wheel-holder for railway-cars. No. 1,394,318; Oct. 18.
McKeown, Samuel C., assignor to Splitdorf Electrical Company, Newark, N. J. Electric-circuit-controlling device. No. 1,394,032; Oct. 18.
McKim, Alexander, deceased, by K McKim, administratrix, Wilkinsburg, Pa. Nut. No. 1,393,803; Oct. 18.
McKim, Katherine, administratrix. (See McKim, Alexander.)
McLeod, Edison, Banta, Calif. Tightener-yoke for friction-clutch segments. No. 1,393,895; Oct. 18.
McLeod, John A., and E. A. Dautor, Chicago, Ill. Adjustable jar-cover opener. No. 1,394,033; Oct. 18.
McMahon, Francis D. (See Lake, J. L., and McMahon.)
McNeal, Charles A., assignor of one-half to F. E. Fuller, Columbus, Ohio. Headlight-reflector. No. 1,394,319; Oct. 18.
McVicker, John A., New York, N. Y. Molding wax records. No. 1,394,034; Oct. 18.
MacDonald, Donald N., Boston, Mass. Transparent glass screen for transmitting substantially white light from incandescent electric lamps. No. 1,393,804; Oct. 18.
Mace, Arthur T., assignor to The Domestic Electric Company, Cleveland, Ohio. Driving mechanism for sewing-machines. No. 1,394,320; Oct. 18.
Machado, William C., Montecito, assignor of one-half to Dimitrios Gymnaitis, Santa Barbara, Calif. Automatic grease-cup. No. 1,394,435; Oct. 18.
MacLachlan, John C., assignor to Standard Food Products Company, St. Paul, Minn. Granular food product. No. 1,394,035; Oct. 18.
Main, Alfred, Aberdeen, Scotland. Tip-up seat. No. 1,394,036; Oct. 18.
Malcolm, Ormond C., Auburn, N. Y. Brush-holder. No. 1,394,205; Oct. 18.
Mallory, George P., Yorklyn, Del., assignor, by mesne assignments, to Sanitary Products Corporation of America, Philadelphia, Pa. Apparatus for making paper spoons and other flat paper utensils. No. 1,394,037; Oct. 18.
Manufacturers Equipment, The. (See Justice, Ithamar M., assignor.)
Maranville, Harvey F., and H. D. Stevens, assignors to The Firestone Tire and Rubber Company, Akron, Ohio. Rubber-punching machine. No. 1,394,422; Oct. 18.
Marcero, Joseph L. (See Gruenberg, Walter A., assignor.)
Mariner, Gilbert P., and E. E. Chrysler, Pontiac, assignors to General Motors Corporation, Detroit, Mich., Car-loading system. No. 1,394,038; Oct. 18.
Marquette Tool & Manufacturing Company. (See Glasner, R. W., and Balcker, assignors.)
Marsden, James, Wigan, England. Sewing-machine. No. 1,394,039; Oct. 18.
Marsh, Thomas A., Chicago, Ill., assignor to Green Engineering Company, East Chicago, Ind. Fire-arch. No. 1,393,805; Oct. 18.
Marshuts, Herbert S., assignor to American Thermo-Ware Company, New York, N. Y. Hydrometer-syringe. No. 1,394,322; Oct. 18.
Marsico, Gerard R., assignor to Puriton Manufacturing Corporation, Brooklyn, N. Y. Signal. No. 1,393,896; Oct. 18.
Marsico, Gerard R., assignor to Puriton Manufacturing Corporation, Brooklyn, N. Y. Signal. No. 1,393,897; Oct. 18.
Marsico, Gerard R., assignor to Puriton Manufacturing Corporation, Brooklyn, N. Y. Signal. No. 1,393,898; Oct. 18.
Marsico, Gerard R., assignor to Puriton Manufacturing Corporation, Brooklyn, N. Y. Signal. No. 1,393,899; Oct. 18.
Martin, Stanley E., Bloom, Kans. Windmill-power engine. No. 1,394,104; Oct. 18.
Martin, Talbot G., assignor to Automatic Electric Company, Chicago, Ill. Automatic telephone system. No. 1,393,806; Oct. 18.
Martini, Frank. (See Massi, A., and Martini.)
Mason, William H., Leesburg, Ohio. Fence-gripping device. No. 1,393,807; Oct. 18.
Masters Manufacturing Company. (See Colstad, Charles N., assignor.)
Mathieu, Fred L., South Bend, Ind. Massage-brush. No. 1,394,206; Oct. 18.
Matson, Frederick, Redlands, Calif. Square. No. 1,394,323; Oct. 18.
Mandel, Jacob, New York, N. Y. Sheet-metal-backing frame. No. 1,394,321; Oct. 18.

Matthews, Joseph L., Highland Park, N. J., assignor to International Motor Company, New York, N. Y. Gear-testing machine. No. 1,394,324; Oct. 18.

Matthews, W. N., and Brother. (See Heinrich, Walter A., assignor.)

Mazzi, August, and F. Martini, Vineland, N. J. Device for calibrating transparent tubes. No. 1,394,423; Oct. 18.

Medine, Frank J., assignor of one-half to H. S. Longfellow, Los Angeles, Calif. Cut-out. No. 1,394,207; Oct. 18.

Melvin, Albert L., Detroit, Mich. Anchor-post. No. 1,393,809; Oct. 18.

Menard, Henry J. (See Saxton, A. C., and Menard.)

Mensch, Arthur J., Glenbeulah, assignor of one-half to H. Blanke, Plymouth, Wis. Cheese-holder. No. 1,393,950; Oct. 18.

Mergott, J. E., Company. (See Fuller, Frans A., assignor.)

Merritt & Chapman Derrick & Wrecking Company. (See Chapman, William L., assignor.)

Merritt, James M., Los Angeles, assignor of forty-one per cent. to C. F. Jaques, San Francisco, Calif. Automatic stove or the like. No. 1,394,424; Oct. 18.

Metcalf, Nathan T., Kingston, N. Y. Jar-holder. No. 1,394,105; Oct. 18.

Metsner, Albert W. (See Sherman, J. Q., and Metsner.)

Metsner, Albert W., assignor to The Standard Register Company, Dayton, Ohio. Autographic register. No. 1,394,436; Oct. 18.

Meyer, Friedrich W., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Frequency-changer. No. 1,394,325; Oct. 18.

Meyer, John, Gray, Iowa. Control apparatus for tractors. No. 1,394,209; Oct. 18.

Meyer, William, Crystal Lake, Ill. Safety device for automobiles. No. 1,394,437; Oct. 18.

Meyerhols, Rheinier I., Cupertino, Calif. Automobile-robe. No. 1,394,208; Oct. 18.

Meyers, Alfred M. (See Funkhouser, V. E., and Meyers.)

Michot, Georges, Dromara, Ireland, assignor to The Fibre Corporation Limited, London, England. Flax-pulling machine. No. 1,393,951; Oct. 18.

Mikiel, Sabin, Elizabethport, N. J. Portable bed-spring. No. 1,394,326; Oct. 18.

Milkes, Leah G., Minneapolis, Minn. Child's sleeping-garment. No. 1,393,900; Oct. 18.

Miller, Amandus A. (See Evans, F. W., and Miller.)

Miller, Arthur E., Sacramento, Calif. Safety lock mechanism. No. 1,394,327; Oct. 18.

Miller, Charles E., Anderson, Ind. Tire-casing. No. 1,393,952; Oct. 18.

Miller, Edwin S., Massillon, Ohio. Vehicle-drive. No. 1,394,328; Oct. 18.

Miller, Frank J., Wichita Falls, assignor, by mesne assignments, to Frank Miller Plunger Company, Dallas, Tex. Pump-plunger. No. 1,393,953; Oct. 18.

Miller, Frank, Plunger Company. (See Miller, Frank J., assignor.)

Miller, Harry M. (See Bost, W. D., and Miller.)

Mills, James E., St. Louis, Mo. Screwdriver. No. 1,394,438; Oct. 18.

Miller, John A., Tarrytown, N. Y. Oven-wall construction. No. 1,393,954; Oct. 18.

Miller, Louis G., and E. C. Long, Westmont borough, Pa. Cross-tie for railway-cars. No. 1,394,425; Oct. 18.

Miller, William S., San Diego, Calif. Coffee-can and attachment. No. 1,394,210; Oct. 18.

Mischke, Reinhardt C., New York, N. Y. Unhairing-machine. No. 1,393,809; Oct. 18.

Mitchell, John K., Rosemont, Pa. Reclaiming waste leather. No. 1,394,329; Oct. 18.

Momeyer, Aimee H. and G. M., Brooklyn, N. Y. Wheel-rim. No. 1,394,330; Oct. 18.

Momeyer, George M. (See Momeyer, Aimee H. and G. M.)

Monk, Thomas H., Tallahassee, Fla. Cotton-stalk puller. No. 1,393,955; Oct. 18.

Monroe, George A. C., Geneva, Ill. Collapsible bed. No. 1,394,331; Oct. 18.

Monson, Hiemer W. (See Stalley, C. E., Blaser, and Monson.)

Mooney, Frank H., Hinsdale, assignor to C. E. Barrett, Chicago, Ill. End-face grinder. No. 1,393,956; Oct. 18.

Moran, William F., Chicago, Ill., assignor to Y. B. M. Company. Driving mechanism for washing-machines. No. 1,393,957; Oct. 18.

Morehouse, Eugene, assignor to B. A. Ballow & Company, Inc., Providence, R. I. Pin. No. 1,393,901; Oct. 18.

Morgan, John H., Holyoke, assignor of one-third to B. Webster, Springfield, and one-third to C. W. Huntley, Holyoke, Mass. Apparatus for discharging static charges. No. 1,394,211; Oct. 18.

Morgan, Mathew B., Cleveland Heights, assignor to The Cleveland Tractor Company, Euclid, Ohio. Belt-guide for tractors. No. 1,394,106; Oct. 18.

Morrison, Lewis E., Newark, assignor to himself, and S. H. Plum, 2nd, Madison, N. J. Paper separating and feeding mechanism. No. 1,394,161; Oct. 18.

Morrison, Lewis E., Newark, assignor to himself, and S. H. Plum, 2nd, Madison, N. J. Jogger mechanism for printing-presses. No. 1,394,162; Oct. 18.

Morrison, Lewis E., Newark, assignor to himself, and S. H. Plum, 2nd, Madison, N. J. Gripping mechanism for printing-machines. No. 1,394,163; Oct. 18.

Morse, Alfred B., assignor, by mesne assignments, to J. A. Morse, South Easton, Mass. Universal joint. No. 1,394,164; Oct. 18.

Morse, Julia A. (See Morse, Alfred B., assignor.)

Mortimer, Charles G. (See Kimball, W. D., and Mortimer.)

Moss, Charles, assignor to Mesgrip Co., Inc., New York, N. Y. Auxiliary attachment for vehicle-wheels. No. 1,393,819; Oct. 18.

Mesgrip Co. (See Moss, Charles, assignor.)

Mossbacher, Walter, and G. J. Shultz, Mount Vernon, Ohio. Hose-clamp. No. 1,393,811; Oct. 18.

Mountford, Frederick, Northfield, and E. Standen, Small Heath, Birmingham, England. Die-head for screw-cutting. No. 1,394,107; Oct. 18.

Mousseaux, Eugene, Le Mans, France. Stock for single-barreled or double-barreled guns. No. 1,393,812; Oct. 18.

Muck, John, Milwaukee, Wis. Roller-skate. No. 1,393,813; Oct. 18.

Mueller, Herman C., Milwaukee, Wis. Four-pole magneto-generator. No. 1,394,108; Oct. 18.

Munro & Harford Company, The. (See Schulman, David D., assignor.)

Murray, Donald, London, England, assignor to The Western Union Telegraph Company. Code-transposing apparatus for telegraph systems. No. 1,394,439; Oct. 18.

Myer, Claus D., West Hoboken, N. J. Emergency-valve. No. 1,394,332; Oct. 18.

Nadel, Louis D., Newark, N. J., assignor, by mesne assignments, to Harriman National Bank of the City of New York, trustee. Tone-arm. No. 1,394,509; Oct. 18.

Nagy, John, West View, assignor to Pittsburgh Stamp Company, Pittsburgh, Pa. Stamping-machine. No. 1,394,333; Oct. 18.

Nall, Joseph E., and T. P. Henry, Eden, Tex. Plow. No. 1,394,510; Oct. 18.

Narum, Otto, Staunton, Va. Eyeglasses. No. 1,394,100; Oct. 18.

National Aniline & Chemical Co. (See Derick, C. G., Ralph, and Flett, assignors.)

National Binding Machine Company. (See Kimball, W. D., and Mortimer, assignors.)

National Carbon Company. (See Benner, R. C., and French, assignor.)

National Cash Register Company, The. (See Fuller, Frederick L., assignor.)

National Lock Washer Company, The. (See Loutrel, Cyrus H., assignor.)

Nelson, Jan G., Rockford, Ill. Antifriction-bearing. No. 1,394,110; Oct. 18.

Neumann, Samuel, New York, N. Y. Water-motor. No. 1,394,212; Oct. 18.

Newhouse, Ray C., Wauwatosa, assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis. Comminuting-mill. No. 1,394,334; Oct. 18.

Nichols, Harry J., Washington, D. C. Marker-shell. No. 1,394,335; Oct. 18.

Noll, Charles, assignor of one-third to I. A. Reader and one-third to E. C. Reader, Cleveland, Ohio. Plastic composition. No. 1,393,814; Oct. 18.

Nordberg, Carl R., Altoona, and W. F. Koon, Duncansville, Pa. Automatic cylinder-cock. No. 1,394,337; Oct. 18.

Norton Company. (See King, Clarence R., assignor.)

Norton Company. (See Purdy, R. C., Beecher, and Klein, assignors.)

Novick, Abraham, Brooklyn, and E. Fish, New York, assignors to F. L. Smithe, New York, N. Y. Gage. No. 1,394,336; Oct. 18.

Nowack, Charles H., Chicago, Ill., assignor to American Can Company, New York, N. Y. Container. No. 1,393,815; Oct. 18.

Nyman, John O., and J. P. Pearson, Canton, Ohio. Sheet-metal locker. No. 1,394,338; Oct. 18.

O'Connor, James, New York, N. Y. Labeling-machine. No. 1,394,339; Oct. 18.

Oehm, William N., and G. Powell, Michigan City, Ind. Nailing-machine. No. 1,393,816; Oct. 18.

Ohrenstein, Valérie D., Elmhurst, Ill. Infant's garment. No. 1,394,213; Oct. 18.

Oishei, John R., Buffalo, N. Y. Adjustable support or bracket. No. 1,394,440; Oct. 18.

Oldham, Edward L., assignor to The Denver Rock Drill Manufacturing Company, Denver, Colo. Drill-sharpener. No. 1,394,214; Oct. 18.

Olds, Alfred W., Windsor, Conn. Electric switch for operating automobile speed-signals. No. 1,394,111; Oct. 18.

Olshaskie, Benjamin, Pana, Ill. Coffeepot. No. 1,394,040; Oct. 18.

Olson, Carl G., assignor to Illinois Tool Works, Chicago, Ill. Grinder-spindle. No. 1,393,817; Oct. 18.

Olson, Carl G., assignor to Illinois Tool Works, Chicago, Ill. Rectified-tooth hob. No. 1,393,818; Oct. 18.

Onan, David W., Minneapolis, Minn. Magneto-testing machine. No. 1,394,215; Oct. 18.

O'Neill, Frank, Jr., Philadelphia, Pa. Apparatus for decorticating fibrous plants. No. 1,393,819; Oct. 18.

Orcutt, Charles C. (See Reed, Frederic P., assignor.)

Ordal, Albert J., Colton, S. D. Nut-lock. No. 1,393,958; Oct. 18.

Osborne, Frank M., Butte, Mont. Airplane. No. 1,393,820; Oct. 18.

Osbun, Benjamin M., and H. D. Walker, Chicago, Ill., assignors to Benjamin Electric Manufacturing Company. Machine for making tinsel and the like. No. 1,394,340; Oct. 18.

Otsuka, Yeikichi, Tokyo, Japan. Apparatus for concentrating ores by flotation. No. 1,393,821; Oct. 18.

Ouellette, John, New Bedford, Mass. Stop mechanism for looms. No. 1,394,341; Oct. 18.

Overbury, Frederick C., Hillsdale, N. J., assignor to The Flintkote Company, Inc., Boston, Mass. Machine for making shingle-strips. No. 1,394,342; Oct. 18.

Pabst, Josef, Zerich, Switzerland. Safety-holder for neckties. No. 1,394,441; Oct. 18.

Packer, Eben E., New Rochelle, N. Y. Railway snow-dangler. No. 1,394,112; Oct. 18.

Page, Frederick H., assignor to Handley Page Limited, London, England. Wing and similar member of aircraft. No. 1,394,343; Oct. 18.

Page, Frederick H., assignor to Handley Page Limited, London, England. Wing and similar member of aircraft. No. 1,394,344; Oct. 18.

Page, Harry, Newark, Ill. Dumping-wagon. No. 1,394,113; Oct. 18.

Page, Stanley H., San Francisco, and J. B. Struble, Oakland, Calif. Controlling means for motor-temperatures. No. 1,393,902; Oct. 18.

Parker, Horace F. (See Quimby, G. B., and Parker.)

Parker, John B., Brookland, D. C. Electric switch. No. 1,393,822; Oct. 18.

Parker, William H., and G. L. Smyth, Montreal, Quebec, Canada. Sliding door. No. 1,394,216; Oct. 18.

Parkinson, William J., assignor to Eastman Kodak Company, Rochester, N. Y. Press-guard. No. 1,394,501; Oct. 18.

Parret, Milton L., Marshalltown, Iowa. Moving-picture-machine support. No. 1,394,217; Oct. 18.

Parsons, Theodore C., Oak Park, Ill. Blank for insurance-accounting. No. 1,393,823; Oct. 18.

Pearson, John P. (See Nyman, J. O., and Pearson.)

Peecher, Mack, Denver, Colo. Razor-strop. No. 1,394,845; Oct. 18.

Penny, Lonnie T., Raleigh, N. C. Car-door-operating mechanism. No. 1,393,959; Oct. 18.

Penschuck, William R., St. Paul, Minn. Combination pen and brush. No. 1,393,960; Oct. 18.

Peoples, John S., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis. Apparatus for proportioning streams of fluid. No. 1,393,824; Oct. 18.

Peres, Henry L., Yonkers, N. Y., and T. Veitch, Englewood, N. J. Fountain-pen. No. 1,393,903; Oct. 18.

Perkins, George E., assignor of one-fourth to E. Everett and one-fourth to J. W. McCullough, Atkinson, Ill. Sealing composition for radiators. No. 1,393,961; Oct. 18.

Perryman, Ignatius P., Memphis, Tenn. Attachment for motor-vehicles. No. 1,394,346; Oct. 18.

Pershing, Hazel B., San Francisco, Calif. Piston-ring. No. 1,393,904; Oct. 18.

Petroleum Rectifying Company of California. (See Alden, S. F., and Eddy, assignors.)

Pierson, Robert M., Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Tire-calipers. No. 1,394,347; Oct. 18.

Pietrowski, John, Chicago, Ill. Ventilation adjustment for shoe-caps. No. 1,394,348; Oct. 18.

Pinet, William, Vonda, Saskatchewan, Canada. Grain-car door. No. 1,393,962; Oct. 18.

Placek, Joseph Y., assignor of one-half to J. Gullas, Gallup, N. Mex. Condensing apparatus. No. 1,394,502; Oct. 18.

Pittsburgh Stamp Company. (See Nagy, John, assignor.)

Pletcher, Lyle J., Berwyn, Ill., assignor to Figaro Chemical Co., Dallas, Tex. Covering for meats. No. 1,394,849; Oct. 18.

Plum, S. Haines, 2nd. (See Morrison, Lewis E., assignor.)

Porharty, Fredrick, San Francisco, Calif. Valve for rotating drums. No. 1,393,825; Oct. 18.

Poppenhusen, Herman A., Hammond, Ind., and A. P. Strong, Chicago, Ill., assignors to Green Engineering Company, East Chicago, Ind. Valve mechanism for ash-conveying or like systems. No. 1,393,905; Oct. 18.

Potter, Arthur C., Mission, Tex. Orchard-heater or smudge-pot. No. 1,394,218; Oct. 18.

Potter, Frederick D., Linden, N. J., assignor to Combustion Control Company, Inc., New York, N. Y. Means for combustion control. No. 1,393,826; Oct. 18.

Potts, Edwin B., Jersey City, N. J., and A. D. Grover, New York, N. Y., assignors to Autoseles Corporation. Vending-machine indicator. No. 1,393,964; Oct. 18.

Powell, Gomert. (See Oehm, W. N., and Powell.)

Powers, Hines A., Farry, Okla. Excavating-machine. No. 1,394,350; Oct. 18.

Pratt, Arthur D., Short Hills, assignor to The Babcock & Wilcox Company, Bayonne, N. J. Superheater-boiler. (Reissue.) No. 15,210; Oct. 18.

Pribnow, Louis C. W., assignor to P. G. Schilling, Norfolk, Nebr. Lawn-mower. No. 1,394,351; Oct. 18.

Price & Lee Company, The. (See Tarnham, Hubert J., assignor.)

Purdy, Ross C., Buffalo, N. Y.; M. F. Beecher and A. A. Klein, assignors to Norton Company, Worcester, Mass. Bonded article of magnesia and alumina. No. 1,394,442; Oct. 18.

Puritan Manufacturing Corporation. (See Marsico, Gerard R., assignor.)

Purtle, Albert D., Marietta, Ohio. Brass liner stuffing-box head. No. 1,394,114; Oct. 18.

Quimby, George R., and H. F. Parker, Bondsville, Mass. Belt-shipper. No. 1,394,352; Oct. 18.

Quiros, Francisco A., Mexico, Mexico. Oil-burner. No. 1,394,115; Oct. 18.

Raddick, David J., assignor of one-half to Siegfried Graf, San Francisco, Calif. Wheel-lock. No. 1,394,219; Oct. 18.

Ralph, Walter M. (See Derick, C. G., Ralph, and Flett.)

Ramsey, Clifford H., Glen Rock, N. J. Speed-changing unit. No. 1,393,906; Oct. 18.

Ransom, George H., Northfield, Birmingham, England. Adjustable pivot-bearing. No. 1,393,965; Oct. 18.

Raymond, Paul C., U. S. National Army. Recording system and selector mechanism therefor. No. 1,393,443; Oct. 18.

Reader, Edward C., et al. (See Noll, Charles, assignor.)

Reader, Irwin A., et al. (See Noll, Charles, assignor.)

Rearick, Charles B., Covington, Va. Carriage and swivel cutting-head for planers. No. 1,394,443; Oct. 18.

Reed, Frederic P., East Orange, assignor, by mesne assignments, to C. C. Orcutt, Long Branch, N. J. Method of and apparatus for coating paper. No. 1,394,444; Oct. 18.

Reichmann, Fritz, New York, N. Y. Weighing device. No. 1,393,828; Oct. 18.

Reimer, Irving, Seattle, Wash. Floating fish-trap. No. 1,393,907; Oct. 18.

Reinwald, Paul, Menlo Park, Calif. Rake. No. 1,394,353; Oct. 18.

Reiss, Harry H. (See Bruninga, J. H., and Reiss.)

Reliable Knitting Works. (See Joha, Elmer N., assignor.)

Renaudin, Alfred. (See Burlat, A., and Renaudin.)

Renault, Louis. (See Fuchs, Ernest, assignor.)

Rendano, Emil, assignor to Forbes Tubular Products Corporation, Brooklyn, N. Y. Machine for forming tubular bodies. No. 1,394,116; Oct. 18.

Rice, Percy F., Tustin, Calif. Engine-lubricating device. No. 1,394,117; Oct. 18.

Richman, Wallace C., Butte, Mont. Concrete building structure. No. 1,393,966; Oct. 18.

Ringe, John C., Stratford, Conn., assignor to The Singer Manufacturing Company. Multiple-needle sewing-machine. No. 1,394,118; Oct. 18.

Rink, Peter, Cresco, Iowa. Disk-sharpener. No. 1,393,967; Oct. 18.

Rishel, Harry A., Philadelphia, Pa. Temperature-indicator for automobiles. No. 1,393,968; Oct. 18.

Rits, Frank, and J. H. Brook, assignor to The Sun Electro Works, Toronto, Ontario, Canada. Washing-machine. No. 1,393,969; Oct. 18.

Rivet-O Manufacturing Company. (See Harris, Carl C., assignor.)

Roach, Mahlon H. (See Blodgett, W. G., and Roach.)

Robbins, Evelyn, Richmond, Calif. Irrigating device. No. 1,394,041; Oct. 18.

Robert, Joseph C., Jr., Agricultural College, Miss. Lamp-wick regulator. No. 1,394,354; Oct. 18.

Roberts, James H., Charleston, S. C. Geometrical tool. No. 1,393,970; Oct. 18.

Roberts, William, Winnipeg, Manitoba, Canada. Baking-oven. No. 1,394,220; Oct. 18.

Robinson, Boyden C., Long Lake, N. Y. Belt-fastener. No. 1,394,355; Oct. 18.

Robinson, Harold E., and R. M. Van Cleve, Lockport, N. Y. Display device for automobile license-plates. No. 1,393,971; Oct. 18.

Roby, Edmund T., assignor of one-half to T. C. Buxton, Decatur, Ill. Carbureter. No. 1,394,356; Oct. 18.

Rockwell, Byrd C., Camden, Ark. Skeleton core for veneering. No. 1,394,119; Oct. 18.

Rockwell, Byrd C., Camden, Ark. Veneered flooring-lumber and manufacturing same. No. 1,394,120; Oct. 18.

Rogers, Arthur R., Jonesport, Me., assignor to American Can Company, New York, N. Y. Fish-cutting machine. No. 1,394,185; Oct. 18.

Rogers, Charles O., William Penn, Pa. Egg testing and sorting machine. No. 1,394,445; Oct. 18.

Rolkjer, Andrew H., Boise, Idaho. Camera. No. 1,393,829; Oct. 18.

Ronning, Adolph. (See Ronning, Andrean G. and A.)

Ronning, Andrean G. and A., Minneapolis, Minn. Tractor-truck. No. 1,393,972; Oct. 18.

Rook, James A. (See De Long, W. W., and Rook.)

Rose, Thomas, Philadelphia, Pa. Gear-shift lock. No. 1,394,357; Oct. 18.

Rosenfeld, Mortimer C., Cleveland, Ohio. Pipe-bending tool. No. 1,393,830; Oct. 18.

Rosick, Joseph, Dawson, N. Mex. Cushion-tire for vehicle-wheels. No. 1,394,358; Oct. 18.

Ross, David E., assignor to Ross Gear & Tool Company, La Fayette, Ind. Steering-gear. No. 1,393,973; Oct 18.

Ross, David E., assignor to Ross Gear & Tool Company, La Fayette, Ind. Steering-gear. No. 1,393,974; Oct. 18.

Ross Gear & Tool Company. (See Ross, David E., assignor.)

Rossendale-Reddaway Belting & Hose Co., The. (See Jackson, Isaac S., assignor.)

Rossman, Allen M., Wilmette, Ill. Internal-combustion engine. No. 1,393,831; Oct. 18.

Rowland, Andrew J., assignor to The Federal Products Company, Cincinnati, Ohio. Coating and impregnating agent and making it. No. 1,393,832; Oct. 18.

Rowland, Andrew J., assignor to The Federal Products Company, Cincinnati, Ohio. Coating and impregnating agent and making it. No. 1,393,833; Oct. 18.

Rowley, Frank, London, England. Lining for garments and analogous purposes. No. 1,393,975; Oct. 18.

Rudolph, Walter L., assignor to The Imperial Boiler Scouring Company, Chicago, Ill. Apparatus for pressure compounds. No. 1,304,220; Oct. 18.

Sabo, Frank. (See Lee, Frank, assignor.)

Saltzer, Louis, Vallejo, Calif. Vise-operator. No. 1,304,304; Oct. 18.

Saltzer, Andrew. (See Sheak, A. M., and Saltzer.)

Saltzer, Louis. (See Sheak, A. M., and Saltzer.)

Sanitary Products Corporation of America. (See Bradley, George P., assignor.)

Sapper, Ralph J., Los Angeles, Calif., assignor to Wilson & Company, Chicago, Ill. Salting device. No. 1,304,221; Oct. 18.

Saul, Anton H., Welby, Colo. Mechanical attachment. No. 1,303,977; Oct. 18.

Saulsberry, Joseph, Peoria, Ill. Cushion-tire. No. 1,303,940; Oct. 18.

Saunders, Benjamin P., Weston, Mo. Oil-can. No. 1,303,978; Oct. 18.

Saxton, Augustus C., and H. J. Menard, assignors to H. B. Manufacturing Company, Chicago, Ill. Lost-for controlling levers. No. 1,304,300; Oct. 18.

Sayre, George, Orleans, Ind. Table. No. 1,304,222; Oct. 18.

Schechter, Joseph, Brooklyn, N. Y. Lock mechanism. No. 1,303,835; Oct. 18.

Schiffert, Daniel M., assignor to S. B. Condit, Jr., Boston, Mass. Electric switch. No. 1,303,836; Oct. 18.

Schilling, Paul G. (See Prifrecr, Louis C. W., assignor.)

Schlater, Ivanhoe H., Pittsfield, Mass., assignor to General Electric Company. Electrical apparatus. No. 1,304,121; Oct. 18.

Schmidgall, Frederick, Cincinnati, Ohio. Latch mechanism. No. 1,304,126; Oct. 18.

Schneider, William A., Glen Ridge, N. J. Safety device for clothes-wringers. No. 1,304,260; Oct. 18.

Schneider & Cie. (See Schneider, Eugène, assignor.)

Schneider, Eugène, assignor to Schneider & Cie., Paris, France. Telemotor. No. 1,303,837; Oct. 18.

Schoemert, Carl, Newark, N. J. Lock-washer. No. 1,303,910; Oct. 18.

Schorpp, Jean M., Easton, Pa. Ornamental rope covering for furniture and other articles. No. 1,304,361; Oct. 18.

Schulman, David D., deceased, Brooklyn; F. E. Schulman, administratrix, assignor to The Munro & Harford Company, New York, N. Y. Letter-sheet. No. 1,304,382; Oct. 18.

Schulman, Florence E., administratrix. (See Schulman, David D.)

Schumaker, Lawrence A., Michigan City, Ind. Automobile-door latch. No. 1,303,911; Oct. 18.

Schweinfurth, Lokomotiv & Maschinenfabrik. (See Wladerkehr, Hans, assignee.)

Scollan, John J., Newark, N. J. Releasing device for launching-cradles. No. 1,304,223; Oct. 18.

Scott, Milton D., Kewanee, Ill. Rolling crutch. No. 1,304,224; Oct. 18.

Scott, Sibyl A., New York, N. Y. Block-pack. No. 1,304,303; Oct. 18.

Scullin Steel Co. (See Doerr, Harry E., assignor.)

Searle, Elbert H., Bridgeport, Conn. Firing mechanism. No. 1,303,912; Oct. 18.

Sebree, Charles H., and G. C. Berlin, Caldwell, Idaho. Deflation-alarm for tires. No. 1,304,304; Oct. 18.

Seibert, Albert E., Frankfort, Mich. Extension-step. No. 1,304,305; Oct. 18.

Seidler, Alexander, assignor to F. C. Austin, Chicago, Ill. Oil-gas-making apparatus. No. 1,304,446; Oct. 18.

Seward, Hyram L., and E. E. Hale, Kansas City, Mo. Fuel cut-out and compression-release for gas-engines. No. 1,303,838; Oct. 18.

Shannon, Henry F., Moose, Saskatchewan, Canada. Transmission. No. 1,304,122; Oct. 18.

Sharp, George M., Washington, D. C. Headdress. No. 1,304,306; Oct. 18.

Sheak, Adolphus M., and A. and L. Saltzer, Calexico, Calif.; said A. Saltzer and said L. Saltzer assignors of one-sixth of the entire right to said Sheak. Wrench. No. 1,304,225; Oct. 18.

Sheak, Adolphus M., and A. and L. Saltzer, Calexico, Calif.; said A. Saltzer and said L. Saltzer assignors of one-sixth of the entire right to said Sheak. Wrench. No. 1,304,226; Oct. 18.

Shenton, James H., Nashua, N. H. Heating or ventilating register. No. 1,304,227; Oct. 18.

Sheridan, James B., Pittsburgh, Pa. Burner. No. 1,304,228; Oct. 18.

Sherman, John Q., and A. W. Metzner, Dayton, Ohio; said Metzner assignor to said Sherman. Autographic register. No. 1,304,447; Oct. 18.

Sheold, Mark, assignor to Armour Fertilizer Works, Chicago, Ill. Phosphate-rock-calcining process. No. 1,303,839; Oct. 18.

Sheold, Mark, assignor to Armour Fertilizer Works, Chicago, Ill. Apparatus for calcining phosphate rock. No. 1,303,840; Oct. 18.

Short, Charles E., assignor to General Motors Company, Detroit, Mich. Hydrocarbon-motor. No. 1,303,913; Oct. 18.

Short, Charles E., assignor to General Motors Company, Detroit, Mich. Hydrocarbon-motor. No. 1,303,914; Oct. 18.

Showalter, Roy C., Altoona, Pa. Measuring instrument. No. 1,304,229; Oct. 18.

Shults, Gordon J. (See Mossholder, W., and Shultz.)

Shultz, Gordon J., and Mossholder, W., Flint, Mich. Fastener for spoken bolts. Reissue 12,787; Oct. 18.

Siebenthal, Carl E., Chicago, Ill., assignor to Consulting Motor Co. [illegible]. No. 1,304,307; Oct. 18.

Siemens, Alexander, Berlin, Germany. Resistance material. No. 1,304,123; Oct. 18.

Simmons, Frank A., Chicago, Ill. Forming blocks of cheese. No. 1,303,915; Oct. 18.

Simpson, George W., Hanover, Ohio. Tube-cutting device. No. 1,304,124; Oct. 18.

Sims, Reuben H., Gilbert, Ala. Cultivator attachment. No. 1,304,307; Oct. 18.

Singer Manufacturing Company, The. (See Allen, Edward B., assignor.)

Singer Manufacturing Company, The. (See Finch, John C., assignor.)

Singer Manufacturing Company, The. (See Ringe, John C., assignor.)

Sittney, Massey, Brooklyn, N. Y. Clutch mechanism. No. 1,304,443; Oct. 18.

Skelly, John S., Monongahela, Pa., assignor to Combustion Engineering Corporation, New York, N. Y. Stoker-furnace. No. 1,304,979; Oct. 18.

Slater, Guy P., Tulsa, Okla. Derrick. No. 1,303,842; Oct. 18.

Smidth, F. L., & Co. (See Fasting, Johan E., assignor.)

Smith & Watson Iron Works. (See Sullivan, A. C., and Gill, assignors.)

Smith, Charles P., New York, N. Y. Mail-bag exchange. No. 1,303,909; Oct. 18.

Smith, Edwin C., et al., executors. (See Wardwell, Simon W.)

Smith, Frank W., assignor of one-half to The Enfield Cycle Company Limited, Redditch, England. Oil-pump for internal-combustion engines. No. 1,304,042; Oct. 14.

Smith, Harry F., assignor, by mesne assignments, to The Gas Research Company, Dayton, Ohio. Gas generation. No. 1,304,043; Oct. 18.

Smith, Herbert T., Toronto, Ontario, Canada. System of transportation control. No. 1,304,363; Oct. 18.

Smith, Joseph H., Denver, Colo. Garment holder or hanger. No. 1,303,843; Oct. 18.

Smith, Theodore C., Philadelphia, Pa. Luminous pile. No. 1,304,440; Oct. 18.

Smith, William B., Norwood, assignor to The Cavcorna-Victor Company, Cincinnati, Ohio. Dies for drawing and upsetting metal forms. No. 1,303,916; Oct. 18.

Smithe, Ferdinand L. (See Novick, A., and Fish, assignors.)

Smyth, George L. (See Parker, W. H., and Smyth.)

Snell, Lyle R., assignor to Cadillac Motor Car Company, Detroit, Mich. Air-flow-controlling mechanism for internal-combustion-engine radiators. No. 1,303,917; Oct. 18.

Snyder, William P. (See Adair, M., and Snyder.)

Soana, Cyril A., Chicago, Ill., assignor, by mesne assignments, to Acme Card System Company. Listing device. No. 1,304,231; Oct. 18.

Spencer, Wilfred L., Edinburgh, Scotland. Steering mechanism for vehicles. No. 1,303,961; Oct. 18.

Sperry, Elmer A., Brooklyn, N. Y. Observation apparatus for submarines. No. 1,303,844; Oct. 18.

Sperry, Elmer A., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y. Gyroscope. No. 1,303,845; Oct. 18.

Sperry Gyroscope Company, The. (See Sperry, Elmer A., assignor.)

Spinello, Mathew, Kansas City, Mo. Elevator-hatchway-door-operating device. No. 1,303,918; Oct. 18.

Splitdorf Electrical Company. (See McKeown, Samuel C., assignor.)

Sprague Canning Machinery Company. (See Colbert, Clarence F., assignor.)

Sprague Canning Machinery Co. (See Lowe, Harry W., assignor.)

Sprague, Horace M., Denver, Colo. Quick-adjustment wrench. No. 1,304,309; Oct. 18.

Springer, John. (See Dickinson, F. S., and Springer.)

Stafford Company, The. (See Jackson, Simeon S., assignor.)

Stanley, Charles E., R. H. Blaser, and H. W. Monson, Portsmouth, Ohio. Transmission mechanism. No. 1,304,125; Oct. 18.

Standard Food Products Company. (See MacLachlan, John C., assignor.)

Standard Register Company. (See Metzner, Albert W., assignor.)

Standen, Robert. (See Mountford, F., Standen.)

Stanforth, Richard, and L. A. Angle, assignors to Art In Buttons, Inc., Rochester, N. Y. Button-blank gage. No. 1,303,846; Oct. 18.

Stanbery, Lestis, assignor of one-half to O. F. Decker, Enid, Okla. Corset-top pad. No. 1,304,370; Oct. 18.

Stebbings, Eugene. (See Meines, Iowa. Coupon system. No. 1,304,302; Oct. 18.

Steele, Archie W., Bloomfield, assignor to W. J. Hawkins, Montclair, N. J. Electric fuze. No. 1,303,963; Oct. 18.

Stephens, Howard O., Pittsfield, Mass., assignor to General Electric Company. Water-cooled transformer. No. 1,304,044; Oct. 18.

Stevens, Arthur, Buffalo, N. Y. Separating partly miscible compounds. No. 1,304,232; Oct. 18.

Stevens, Horace D. (See Maranville, H. F., and Stevens.)

Steward Davit & Equipment Corporation. (See Hills, Harry B., assignor.)

Stirling, George, East Chicago, Ind. Cleaner. No. 1,303,847; Oct. 14.

Stoltz, Joseph, Rubber Company. (See Boyer, Harry L., assignor.)

Stoll, Arthur, assignor to Chemical Works, assembly Sanders, Bessel, and Hamburg, all in Germany. Preparation of urea and barbituric acid. No. 1,304,233; Oct. 18.

Stone, Clarion, Detroit, Mich. Gear-wheel. No. 1,304,127; Oct. 18.

Stone, Martin J., St. Louis, Mo. Phonograph. No. 1,303,919; Oct. 18.

Strauss, Albert A., New York, N. Y. Machine for slitting tear and other fasteners. No. 1,304,371; Oct. 18.

Streeb, Arthur J., Seattle, Wash. Windshield. No. 1,304,045; Oct. 18.

Strickland, William P., Chicago, Ill. Nipple-grip. No. 1,303,920; Oct. 18.

Strits, Charles P., Minneapolis, Minn. Bread-toaster. No. 1,304,309; Oct. 18.

Strong, Arthur P. (See Pappenheimer, H. A., and Strong.)

Strong, Edwin H., New York, N. Y. Neck-tie-stretcher. No. 1,303,848; Oct. 18.

Struble, Joseph B. (See Page, S. H., and Struble.)

Submarine Signal Company. (See Tannenberg, Reginald A., assignor.)

Sullivan, Alan C., and J. W. Gill, Portland, Oreg., assignors to Smith & Watson Iron Works. Two-speed street-drive internal-engine. No. 1,304,451; Oct. 18.

Sullivan, Charles A., Detroit, Mich. Wheel. No. 1,303,972; Oct. 18.

Sun Electro Works, The. (See Ritz, F., and Brock, assignors.)

Swanel Packing Company. (See Wolf, Henry N., assignor.)

Swab, Herbert H., Grand Rapids, Mich. Tire. No. 1,304,049; Oct. 18.

Swaney, Clarence B., Los Angeles, Calif. Rear light for automobiles and the like. No. 1,304,046; Oct. 18.

Swain, Henry C., Spokane, Wash., assignor to G. B. Lewis Company, Watertown, Wis. Electrical interrupting-knife. No. 1,303,921; Oct. 18.

Swain, Sydney C., Richmond, Va., assignor to Eastman Kodak Company, Rochester, N. Y. Camera. No. 1,304,047; Oct. 18.

Swain, Sydney C., Richmond, Va., assignor to Eastman Kodak Company, Rochester, N. Y. Reel-actuating device for cameras and the like. No. 1,304,048; Oct. 18.

Swanson, John, assignor to The Crown Cork and Seal Company of Baltimore City, Baltimore, Md. Camera-shutter. No. 1,303,963; Oct. 18.

Taft Carburetor Company, The. (See Taft, Walter H., assignor.)

Taft, Walter H., Providence, R. I., assignor to The Taft Carburetor Company, Hartford, Conn. Carburetor. No. 1,304,050; Oct. 18.

Taletta, Carmine, Clementon, Pa. Changeable indicator. No. 1,304,324; Oct. 18.

Tamarin, Abraham and F. T., and M. Hendler, assignors to Komfytite Spring and Bed Corporation, Hudson, N. Y. Fastening. No. 1,304,311; Oct. 18.

Tamarin, Abraham and F. T., and M. Hendler, assignors to Komfytite Spring and Bed Corporation, Hudson, N. Y. Adjustable Bedstead. No. 1,304,312; Oct. 18.

Tamarin, Frank. (See Tamarin, Abraham and F., and Hendler.)

Tate-Smith, Mary D., West Orange, N. J. Bracelet. No. 1,304,235; Oct. 18.

Taylor, Edwin N., Cedar Rapids, Iowa. Ladder-support. No. 1,304,325; Oct. 18.

Taylor, George L., Rochester, N. Y. Graduating-machine. No. 1,303,923; Oct. 14.

Taylor, Raymond E., Rochester, N. Y. Dental X-ray-film packet. No. 1,304,236; Oct. 18.

Tellefsen, Karl E., Brooklyn, N. Y. Reversing mechanism for chains. No. 1,304,373; Oct. 18.

Thackray, George E., Westmont Borough, Pa. Draft-rigging. No. 1,304,374; Oct. 18.

Thalerath, Joseph C., assignor of one-third to W. D. Graf, Lakewood, Ohio. Signature-collecting mechanism. No. 1,303,924; Oct. 18.

Thomas, Thomas H., Edgewood, assignor to Westinghouse Air Brake Company, Wilmerding, Pa. Empty and load brake. No. 1,304,049; Oct. 18.

Thompson, Alan C. (See Coulan, George A., assignor.)

Thompson, Albert E., assignor to Anderson-Baragrover Mfg. Co., San Jose, Calif. Filling-valve for syrupers. No. 1,304,455; Oct. 18.

Thompson, Arthur T., Hightstown, N. J. Tuft-yarn spring-clip. No. 1,304,050; Oct. 18.

Thompson, Theodore F., Astoria, S. D. Sprayer attachment for cultivators. No. 1,303,850; Oct. 18.

Thomson, Herbert G. (See Ewald, F. W., and Thomson.)

Thorndike, Herbert A., Washington, D. C. Jack. No. 1,303,851; Oct. 18.

Tierney, John W., Ashtree, and F. Hills, Upton, London, England. Pneumatic drilling-machine. No. 1,303,852; Oct. 18.

Tillyer, Edgar D., assignor to American Optical Company, Southbridge, Mass. Lens. No. 1,303,853; Oct. 18.

Tiselli, Casten I., Stockholm, Sweden. Explosive and manufacturing it. No. 1,303,964; Oct. 18.

Togane, Meijire, Tokyo, Japan. Quick method for brewing soy. No. 1,304,236; Oct. 18.

Tomlinson, Tori, Lake City, S. D. Jack. No. 1,304,378; Oct. 18.

Torbit, Milan M., West Somerville, assignor of one-half to L. Bassett, Boston, Mass. Distributer-head. No. 1,303,971; Oct. 14.

Townsend, Harry T., Brentwood, N. Y. Closure. No. 1,304,129; Oct. 18.

Townshend, Aaron E., Jr., Washington, D. C. Direction-indicator. No. 1,303,854.

Traction Engine Company. (See Helmig, John O., assignor.)

Trent & Hine Mfg. Co., The. (See Wardner, Oel E., assignor.)

Tregurtha, Titus. (See Grimes, Charles J., assignor.)

Trenton Potteries Company. (See Hinchliffe, W. H., and Lansing, assignees.)

Tripp, Henry C., Auburn, N. Y. Windshield-cleaner. No. 1,304,052; Oct. 18.

Tripp, Henry C., Auburn, N. Y. Windshield-cleaner. No. 1,304,053; Oct. 18.

Trostrup, Harry, Fairhaven, assignor to Alestrup Machine Company, Boston, Mass. Polishing roll-section for coating-machines. No. 1,304,054; Oct. 18.

Turbayne, William A., assignor to U. S. Light & Heat Corporation, Niagara Falls, N. Y. Lamp-voltage regulator. No. 1,303,855; Oct. 18.

Turner, Ernest J. (See Howard, B. H., and Turner.)

Turtlehill, James B. (See Wallace, G. T., and Turtlehill.)

U. S. Light & Heat Corporation. (See Bliss, William L., assignee.)

U. S. Light & Heat Corporation. (See Turbayne, William A., assignor.)
